> "Routes are available to and from points in the northwest area over the Union Pacific from and to Ogden and the Rio Grande and its eastern connections beyond, but generally shippers must pay combination rates when using such routes. The maintenance of those rates produces higher charges than those resulting from the joint rates maintained by the defendants over other routes. The higher rates and charges act as deterrents to shippers and, in effect, close the Ogden gateway in a commercial sense. We are asked to exercise our authority under section 15(3) of the act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest."

The Commission's power to require a reduction in rates found unreasonable is conferred by Section 15(1) of the Act. It was that power which the Rio Grande asked the Commission to invoke to equalize its rates via Union Pacific routes. But, while the instant case was pending decision before the Commission, this Court on June 2, 1952, held that the Commission's power under Section 15(1) to determine and prescribe reasonable rates could not be used to equalize rates on different routes or to defeat the requirement of Section 15(3) and (4) of the Act, *Thompson v. United States*, 343 U. S. 549. In that case, the Commission ordered local grain rates of the Missouri Pacific and the Burlington railroads from Lenora, Kansas, via Concordia, Kansas, to Omaha, reduced to the extent that those rates exceeded rates on grain from the same origins via the Missouri Pacific to Kansas City. This would, on traffic from Lenora to Omaha, short haul the Missouri Pacific from Concordia to Omaha. Through routes and joint rates had not been published to Omaha, but the Commission held that through routes between the Missouri Pacific and the Burlington from Lenora to Omaha already existed because their tracks connected at Concordia and that, therefore, it was not required to make findings under Section 15(3) as limited by paragraph (4) of that section. Shippers could use the route via the Missouri Pacific and Burlington if they elected to pay the higher combination rates in effect over such routes. *Omaha Grain Exc. of Omaha, Nebr. v. Missouri Pac. R. Co.*, 278 I. C. C. 519, 523. This Court enjoined and annulled the Commission's order because it "in effect, establishes a new through route without complying with the requirements of Section 15(3) and (4) of the Act," (p. 554). At pages 559-560 the Court said:

> "* * * the Commission under its present theory would never have to establish through routes under Section 15(3) and (4) but could divert traffic to any

route between two points by ordering reduction of the sum of the local rates over that route. Acceptance of this argument would mean that Congress insistence on protecting carriers from being required to short haul themselves could be evaded whenever the Commission chose to alter the form of its order. The Commission by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of Section 15(4), before the Court in *United States v. Great Northern R. Co.*, 343 U. S. 562 (decided this day). In short, acceptance of the Commission's argument would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage."

Faced with this decision, and being prevented by it from using its rate-reducing power to require exact equalization of rates via the Rio Grande with those via Union Pacific routes and thus "in effect," establishing a new through route, the Commission turned to its through routes authority under Section 15(3) and (4) to compel the reduction in the Rio Grande's combination rates and to equalize them with rates via Union Pacific routes.

Section 15(3) and (4) confers no power upon the Commission to require rate reductions or to equalize rates via different routes. Those provisions, as noted above, do not concern the reasonableness or unreasonableness, *per se*, of rates. They are concerned with public and shipper "need" for through routes which railroads have not voluntarily established. In other words, those provisions concern the adequacy, efficiency and economy of transportation routes, services and facilities. Where, as in the instant case, only a reduction or equal-

ization in rates is sought, Section 15(3) and (4) are not available and provide no power in the Commission to accomplish the sought reduction or equalization.

While Section 15(3) empowers the Commission, after finding a new through route is "necessary or desirable in the public interest" to establish joint rates "or the maxima or minima, or maxima and minima, to be charged" over the new through route, it does not authorize the Commission to compel a rate reduction via one route to equalize rates maintained over other routes.

Nor may the Commission invoke its through route and joint rate powers to prescribe the exact remedy it wants for a violation of Section 3 of the Act. The remedy for a violation of that section is an order to "cease and desist" from the unlawful practice. Such order must leave to the carriers "discretion to determine how the discrimination should be removed," *American Express Co. v. Caldwell*, 244 U. S. 617, 625. In *Texas & Pacific Ry. Co. v. U. S.*, 289 U. S. 627, at page 650, this Court held:

> "Where an order is made under § 3 an alternative must be afforded. The offender or offenders may abate the discrimination by raising one rate, lowering the other, or altering both. Compare *American Express Co. v. Caldwell*, 244 U. S. 617, 624; *United States v. Penna. R. Co.*, 266 U. S. 191; *Chicago, I. & L. Ry. Co. v. United States*, 270 U. S. 287, 292; *Minneapolis & St. L. R. Co. v. Peoria & Pekin U. R. Co.*, 270 U. S. 580, 582. The situation must be such that the carrier or carriers if given an option have an actual alternative.
>
> "The principle has been approved in decisions of this court with respect to practices. *Interstate Commerce Comm'n v. Diffenbaugh*, 222 U. S. 42; *Central Railroad of New Jersey v. United States*, 257 U. S. 247, and rates, *East Tenn. V. & G. Ry. Co. v. Interstate Commerce Comm'n*, 181 U. S. 1; *Penn Re*

fining Co. v. Western N. Y. & P. R. Co., 208 U. S. 208, 221."

Where, as here, Congress has provided direct remedies for violations of Sections 1 and 3, the Commission may not resort to its through route powers under Section 15(3) and (4) to prescribe the exact remedy it wants. *Central R. R. Co. v. United States*, 257 U. S. 247, 258.

The "alternative order" principle of the Court decisions has been championed and consistently adhered to by the Commission. *Fort Smith & W. Ry. Co. v. Atchison, T. & S. F. Ry. Co.*, 216 I. C. C. 411, 433; *Quanah, A. & P. Ry. Co. v. Atchison, T. & S. F. Ry. Co.*, 205 I. C. C. 253, 261; *Nicholson Universal S. S. Co. v. Pennsylvania R. Co.*, 203 I. C. C. 637, 647.

Counsel for the Rio Grande has contended in this proceeding that the "alternative order" principle laid down in the cited cases has been overruled or modified by *State of New York v. United States*, 331 U. S. 284, and *Ayrshire Corp. v. United States*, 335 U. S. 573. The contention is based on a misunderstanding or misstatement of those cases. The limited power to require through routes and joint rates was not involved in either of those cases. Neither of those cases involved the intermingling and alternative use of different provisions of the Act and powers thereunder to find first a violation of one provision and then to seize upon another provision to prescribe the remedy most suitable to the Commission. Neither of the decisions may be construed as holding that the Commission may use its through routes powers under Section 15(3) and (4) to require the remedy it would like to impose for a violation of Section 1 or Section 3.

The "alternative" order principle is not a mere academic matter—it is a right of great benefit to carriers ordered to "cease and desist" from violations of Section 3. In the instant case, to cure undue prejudice to shippers, and apart from the Commission's erroneous conclusion that "the same" rates must apply over the longer and "more onerous" Rio Grande routes as over the Union Pacific's shorter and more efficient routes, rates could be equalized over the two routes by reducing the Rio Grande's combination rates, or by raising the rates of the Union Pacific routes, or by altering both the combination rates and the joint rates to the point where an exact equality is reached. Raising the joint rates via Union Pacific routes would be particularly just and appropriate in this case because, as the report shows, the joint rates are subnormal, depressed rates resulting from water, truck and other competitive forces, and are too low to be spread over the longer and "more onerous" Rio Grande route (R. 67).

By its commingling and confusion of its powers, and its unexplained and inexcusable departure from the settled "alternative order" principle which it has long championed, the Commission would, by resorting to its through route powers, deprive the appellants and other railroads of any chance to preserve their revenues or safeguard their earning capacity, as they have a right to do, *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 277, or to prevent or offset, by increasing the joint rates via the Union Pacific routes, the revenue losses which they will most certainly suffer if they are to be short hauled as permitted by the order.

The Commission's commingling of separate and independent sections of the Act and its use of its through

routes and joint rates powers to effect the exact equalization of the Rio Grande's rates with those of Union Pacific routes has not only confused and led the majority of the district court into the error pointed out above, but has also confused and misled counsel for the Government and the Rio Grande into the error of suggesting that the order requiring through routes and joint rates can be sustained upon the Commission's findings of unreasonable rates in violation of Section 1(5) and undue prejudice and preference in violation of Section 3(1). At page 10 of the Government's jurisdictional statement (No. 119) it is asserted that:

> "An independent basis of the Commission's order establishing through routes was its finding that the combination rates between the Union Pacific and the Rio Grande were, to the extent that they exceeded the joint rates via the Union Pacific routes to the same points, unjust and unreasonable and unduly prejudicial of shippers and receivers using the Rio Grande, and unduly preferential of shippers and receivers using the Union Pacific routes, in violation of Section 3(1) of the Act."

The Rio Grande's jurisdictional statement states at pages 12 and 13 that the short-haul prohibition of Section 15(4) does not apply "[w]here discrimination and undue prejudice is found under Section 3 of the Interstate Commerce Act."

Thus, counsel for both the Government and the Rio Grande ask the Court in this case to do the very thing it refused to do in *Securities Comm'n v. Chenery Corp., supra,* namely, to sustain the validity of the order upon grounds or standards other than those of Section 15(4)(b) which the Commission expressly and avowedly invoked. While we demonstrate elsewhere in this brief that find-

ings of a violation of Section 3 afford no basis for compelling through routes and joint rates that short haul existing routes, the point here is that even if the Commission could order through routes upon findings under Section 3, it did not purport to do so in this case but instead expressly declared that in ordering through routes and joint rates it was acting upon the authority, standards and requirements of Section 15(4)(b). "Since the decision of the Commission was explicitly based upon the applicability of" those standards and requirements "its validity must likewise be judged on that basis", first *Chenery* case, 318 U. S. 80, page 87.

The Commission having departed from, misapplied and failed to meet the requirements of the standards it explicitly invoked, this Court will not attempt to sustain the order by searching for or spelling out a different or "a more adequate or proper basis" for it, second *Chenery* case, 332 U. S. 194, page 196; *Florida v. United States*, 282 U. S. 194, 215; *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 488-489.

Neither Section 1 nor Section 3 authorizes the Commission to order through routes and joint rates. The provisions of those Sections concern the reasonableness of carriers' charges for hauling freight and the fairness or equality to shippers by a carrier or carriers when shippers' circumstances are substantially similar. The specific purposes of those provisions, as noted elsewhere in this brief, bear no relationship to the adequacy and efficiency of transportation facilities and service or other circumstances which constitute the power to require through routes and joint rates. If, as the majority of the district court held and counsel for the Government and the Rio Grande now urge, a finding of a violation of either or both sections 1 and 3 may serve as the basis

or an independent or secondary basis for an order requiring through routes and joint rates, then as said by this Court in *Thompson v. United States, supra*, page 560:

> "* * * the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage."

8. In condemning Union Pacific routes as "inadequate" because (1) they have lower rates and are "not available" at points served only by the Rio Grande, and (2) on the theory that shippers from the northwest area are "debarred" from effective participation in the marketing system for perishable products because they must pay higher rates when they ship via the Rio Grande than when they ship via the shorter, adequate and efficient Union Pacific routes, the Commission misconstrued and misapplied Section 15(4)(b) and departed without justification from the norms of its prior decisions.

The rule and norm of the Commission's prior decisions has been that the Act does not require it to order through routes and joint rates in all instances where carriers have refused to do so but empowers the Commission to order through routes and joint rates for the purpose of securing reasonable facilities to the public. In *New York Dock Ry. v. B. & O. R. R. Co.*, 32 I. C. C. 568, in dismissing a complaint of a railroad demanding joint rates to improve its financial position, the Commission said at page 575:

> "* * * we cannot view with favor an effort to require the establishment of such routes and rates merely to enable a carrier to wrest from its connections, or an agent to wrest from its principal, greater compensation."

In *Lehigh Portland Cement Co. v. Lehigh Valley R. Co.*, 238 I. C. C. 199, the Commission said at page 201:

> "The statute makes it the duty of common carriers subject to the act to establish through routes and just and reasonable rates applicable thereto. Where this duty has been fully met and discharged and there exists both such reasonable through routes and joint rates, and other routes by combination over which no joint through rates apply, the carriers in our opinion are not required to maintain a parity of rates over both such routes, but may properly maintain through joint rates over joint through routes that are somewhat less than the combination of locals used to make the through rates applicable over the combination through routes; provided that neither rate, under all the facts and circumstances, is more than just and reasonable for the service performed."

In *Kansas City Hay Dealers Asso. v. C. G. W. R. R. Co.*, 49 I. C. C. 372, the Commission said at page 377:

> "To compel the application of short-line rates over indirect and longer routes, merely as a means of providing a channel of doubtful benefit to comparatively few shippers, would lay an unnecessary expense upon the railroads against the interest of the public as a whole. When joint rates that are neither unreasonable nor unduly prejudicial are maintained over direct routes adequate response is made to the reasonable requirements of the public, and carriers should not be required to perform wasteful transportation by maintaining the same rates over indirect and more circuitous routes."

In the instant case the joint rates over existing through routes of the Union Pacific and its connections are neither unreasonable nor unduly prejudicial. In fact, they are expressly found by the Commission to be reasonable, and the direct routes over which they apply are found adequate to haul any foreseeable volume of traffic.

On the other hand, the combination rates via the indirect and longer Rio Grande routes are found both unreasonable and unduly prejudicial.

Keeping in mind that the proceeding before the Commission is an effort of the Rio Grande to enhance its financial position by the simple expedient of having the traffic move over its line instead of the Union Pacific and that the only difference that would result if the order becomes effective would be a rate reduction via the Rio Grande in the amount of the difference between its combination rates and the joint rates via the Union Pacific on whose route the shippers now have every privilege they would have on the Rio Grande, the following language of the Commission in *C. & C. Traction Co. v. B. & O. S. W. R. R. Co.*, 20 I. C. C. 486, 492, is very pertinent:

> "* * * we have little sympathy with, and will not ordinarily lend our aid to, an effort by one road to secure traffic that is reasonably tributary to another road by compelling the latter to join with it in through routes and rates. * * *"

Improvement of the Rio Grande's financial position and reductions in transportation costs of shippers are not measures of a carrier's duty to establish "reasonable through routes," required by Section 1(4) of the Act. In *Beaver Sand Co. v. Director General*, 66 I. C. C. 285, the Commission dismissed a complaint demanding through routes and joint rates, saying at page 289:

> "In *C. & M. Elec. R. R. Co. v. Illinois Central R. R. Co.*, 13 I. C. C. 20, in discussing a suggestion that the then existing provision of the law with respect to the establishment of through routes and joint rates was mandatory, we said:
>
> "'We are unable to perceive the force of this suggestion. It proceeds apparently on the

> theory that the sole object of the provision above quoted was to afford a means by which new lines, with the aid of the Commission, may profitably force their way into shipping districts built up and already well and adequately served by older lines, and thus seize and divide with the latter such traffic as may be offered for movement. If that be the import of the clause in question, it is too well concealed to be readily discernible.' * * *"

In *Fort Smith & W. Ry. Co. v. Atchison, T. & S. F. Ry. Co.*, 216 I. C. C. 411, at page 431, the Commission, in rejecting a contention of shippers supporting the railroads' complaint that partial-unloading privileges on that line in connection with transcontinental joint rates was needed to further economical distribution of canned goods and dried fruit, pointed to the depressed level of canned goods and dried fruit rates and said:

> "While the establishment of the transit service on these commodities would result, in many instances, in a saving in transportation costs to these shippers, such saving which would be at the expense of the carriers cannot be said to be a commercial necessity."

In short, the rule and norm of the Commission's prior decisions has been consistent with the statutory standard and requirement of Section 1(4) that carriers shall establish "reasonable through routes" and with the rule laid down by this Court that "[t]he law exacts only what is reasonable from such carriers", *Midland Valley R. R. v. Barkley*, 276 U. S. 482, 485.

Decisions of the Commission since enactment of clause "(b)" in 1940, summarized in *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I. C. C. 331, disavow any departure from the statutory standard and requirement of

"reasonable through routes". At pages 333-334 of the *Adrian* case, the Commission said:

> "Section 15(4) of the act has been in its present form since September 18, 1940. In several proceedings since then, reasonable through routes which short haul one or more carriers have been prescribed. See *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 255 I. C. C. 333 (sustained in *Pennsylvania R. Co. v. United States*, 323 U. S. 588); *Allied Mills, Inc., of Virginia v. Alton R. Co.*, 272 I. C. C. 49; *California Milling Corp. v. Atchison, T. & S. F. Ry. Co.*, 269 I. C. C. 725 and 274 I. C. C. 120. In the first two of those proceedings it appeared that the routes required to be established eliminated expensive out-of-line hauls, and in the latter proceeding the routes required were shown to be shorter in many instances than those which had existed. In all of those proceedings the routes required were at least as economical, from the standpoint of the carriers as well as of the shippers, as were most of the existing routes.
>
> "The instant situation differs. All of the routes sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic transportation. In addition, because of the circumstances here present, we believe a requirement that the routes sought be established would not 'give reasonable preference' to the originating carrier."

In the instant case the Commission condemns Union Pacific routes as "inadequate", not because they are longer, inefficient or unable to haul any foreseeable volume of traffic, but because "at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply" (R. 70). And, in an apparent effort to justify short-hauling Union Pacific routes, the Commission asserts that shippers of perishable products from the northwest

area "are debarred" from effective participation in the marketing system for such products, obviously for the sole reason that, although those shippers have available a multitude of Union Pacific routes at lower rates, they must pay higher rates if they ship over the Rio Grande route.

Both reasons upon which the Commission thus attempts to condemn Union Pacific routes as inadequate are clearly based upon its assertion that perishable products require "as many routes as possible." Since Section 15(4)(b) clearly lays down the standard of "adequate" transportation and Section 1(4) requires only "reasonable through routes", it is plain that the Commission has grossly misinterpreted and misapplied the standards of both sections, in addition to departing from the rule and norm of its prior decisions. Circuit Judge Johnsen's dissenting opinion aptly appraises this phase of the Commission's report as follows:

> "The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them 'from effective participation in the widespread system developed for the marketing of such commodities.' In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given 'as many routes as possible' and 'as much flexibility as possible in the distribution process,' because otherwise they will be 'debarred from effective participation in * * * the marketing of such commodities.' * * *" (R. 171)

"Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to 'as many routes as possible' and 'as much flexibility as possible in the distribution process,' so that on this basis, and without regard to any other factor, any existing through route can be called inadequate, because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad, serving as a bridge line, and further such new route can be declared to provide 'more economic transportation,' because, by placing joint rates in effect the cost of using such new through route for its transit facilities will be less than under the general combination rates previously existing, then the railroads of the country may as well forget section 15(4) entirely, as affording them any protection whatsoever against depriviation of their long hauls." (R. 172-173).

It may not be gainsaid that if the Commission may short haul Union Pacific routes either because they are "not available" at points served only by the Rio Grande or on the theory that shippers are "debarred" from effective participation in markets simply because they must pay higher rates when they ship via the Rio Grande to eastern and southeastern markets, then the Commission has at last invented an interpretation of the short-haul prohibition of Section 15(4) and the exceptions thereto which accomplishes the complete deletion of the short-haul prohibition as effectively as if it had succeeded in persuading Congress to repeal that prohibition. *Thompson v. United States*, 343 U. S. 549, 555.

III.

The District Court Erred in Refusing to Hold That the Entire Order is Void Because the Basic Facts Found by the Commission Contradict and are Inconsistent With its Conclusions, and Afford no Rational or Valid Basis for the Ultimate Conclusions and Order; and Because the Commission did not Make Findings Essential to the Validity of the Order.

Tested by the rule that the Commission's report must set forth a logical and rational basis for the order, *Miss. Valley Barge Co. v. U. S.*, 292 U. S. 282, 287; *Sec'y of Agriculture v. United States*, 347 U. S. 645, 654, examination of the inconsistent, contradictory and irrational conclusions in the report will demonstrate that the report and order here are far more vulnerable than the Commission's order which this Court enjoined in *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, saying at page 511:

> "We must know what a decision means before the duty becomes ours to say whether it is right or wrong."

It is found in the Commission's report that articles of the perishable and semi-perishable nature named in the order must be moved to markets "with expedition and care" (R. 70); that Union Pacific routes are as much as 50 per cent shorter than Rio Grande routes (R. 71); that facilities of Union Pacific routes "are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future"; that Union Pacific has surplus capacity, is efficiently operated (R. 62) and furnishes as good service as any that could be provided by the Rio Grande (R. 70); that the Rio Grande is

"less favorably situated" than the Union Pacific (R. 62); that operating conditions on the Rio Grande are "more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein" (R. 70); and that traffic routed over the Rio Grande as a bridge line would require at least 24 hours more time in transit than when routed over the Union Pacific, and would require one or two more terminal yard services (R. 62).

To borrow a word from the court's decision in *Watson Bros. Transp. Co. v. United States*, 59 F. Supp. 762, 778, one who reads and understands those findings of fact from the standpoint of adequate, efficient and economic transportation must be "scandalized" upon reading the Commission's conclusions that Union Pacific routes are "inadequate" for transporting the perishable articles named in the order from the northwest area to eastern points and that through routes and joint rates via the longer, slower and "more onerous" Rio Grande are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" for those articles which "must be moved to market with expedition and care." In short, "the facts found do not, as a matter of law, support the order made", *Int. Com. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88, 91.

Despite the fact found in the report that the Union Pacific's direct single line between McCammon, Idaho, and Omaha, for example, is 219 miles shorter than the Rio Grande route, at least 24 hours faster in transit time, and would require no interchange with other lines, the order would short haul the Union Pacific 925 miles so that the traffic may move via the longer and slower Rio Grande line, leaving the Union Pacific a haul of 111 miles from McCammon to Ogden in lieu of the direct single

line haul of 1,036 miles from McCammon to Omaha (R. 40).

Despite the fact that the purpose of Congress in adding clause "(b)" to Section 15(4) in 1940 was to accord shippers the benefits of shorter and more efficient through routes than routes that give carriers their long haul, the Commission here uses the power granted by clause "(b)" to short haul the Union Pacific's shorter, faster routes 925 miles, by requiring routes that are as much as 50 per cent longer via the Rio Grande's "less favorably situated" and "more onerous" line.

Although unable to find that public need for the Rio Grande route is sufficient to cause any of the traffic to move via that line except such as might move as result of "active solicitation" by the Rio Grande "to persuade" and to "induce" shippers to use its line as "an overhead or bridge route" and for "transit facilities" on that line, the Commission nevertheless finds it "necessary and desirable in the public interest in order to provide adequate and more economic transportation," that the Union Pacific and other lines join in through routes and joint rates so as to permit the Rio Grande to solicit, persuade and induce shippers to divert traffic and revenues from the shorter and faster Union Pacific routes to the Rio Grande's longer and slower route. And this incongruous conclusion is reached in the face of the Commission's settled administrative ruling that "[s]hippers who have to be importuned to use a railroad have no urgent need for it," *Tonopah & T. R. Co., Abandonment*, 240 I. C. C. 145, 149, citing *Mississippi Valley Co. Abandonment*, 145 I. C. C. 289, 293; *Batesville S. W. R. Co. Abandonment*, 170 I. C. C. 269, 277; and *Seaboard Air Line Ry. Co. Abandonment*, 184 I. C. C. 575, wherein the Commission said at page 580:

"When urgent solicitation is required to hold traffic to the railroad at noncompetitive points, it is apparent that there is no substantial necessity for the line."

Regardless of the admission in the report that many examples were shown in computations, based on cost scales prepared by the Commission's own Bureau of Accounts and Cost Finding, that, for instance, on a carload of potatoes weighing 45,120 pounds from Idaho Falls to Chicago the joint rate of $1.14 per 100 pounds via Union Pacific route, 1,597 miles, would yield a net profit of only $1.97 per car, and a net loss of $62.93 per car if routed over the Union Pacific to Ogden, the Rio Grande to Denver, and the Burlington, 1,809 miles (R. 67), the Commission erroneously asserts that there is no claim that any of the joint rates are below a minimum reasonable level and that they "must be regarded as reasonable rates" (R. 68).

The Rio Grande's complaint alleged that the combination of local rates via its line and the lines of the defendants named in its complaint to and from the northwest area were unreasonable and discriminatory in violation of Sections 1 and 3 of the Act. It alleged that maintenance by the Union Pacific and certain other railroads of joint rates for the traffic in question, while refusing to establish the same joint rates with the Rio Grande, discriminated against the Rio Grande in violation of Section 3 of the Act. It did not allege that its rates were unduly prejudicial or preferential as between shippers.

The Commission finds that because of dissimilarities in transportation conditions on the Rio Grande's "more onerous" line compared with conditions on the Union Pa-

cific, the evidence fails to prove discrimination against the Rio Grande, but, as pointed out by Circuit Judge Johnsen, it brushes the dissimilarities aside for the purpose of finding undue prejudice against shippers who might desire to use the Rio Grande. It finds that the Rio Grande's combination rates are unreasonable in violation of Section 1, and unduly prejudicial to shippers using the Rio Grande, and preferential of shippers using Union Pacific routes in violation of Section 3 of the Act, but, incredibly, the order inflicts no punishment on the Rio Grande for maintaining unreasonable and unduly prejudicial rates but, would punish railroads named as defendants in the Rio Grande's complaint by requiring them to establish through routes and joint rates with the Rio Grande "the same" as their own joint rates, thus short-hauling themselves to permit diversion of the traffic and revenues from their lines to the Rio Grande.

Despite the fact that "the defendants named in the complaint" do not demand or collect rates that exceed their own joint rates for the transportation of the specified commodities, they are, nevertheless, ordered to cease, desist and abstain from publishing, demanding or collecting rates that exceed their own joint rates which they now demand and collect.

Regardless of the fact that the Commission has complete power under Section 15(1) to prescribe the reasonable rate to be charged in lieu of a rate found unreasonable, and to require a carrier found guilty of practicing undue prejudice and preference, to "cease and desist" from such practice, the Commission ignores those direct powers to remedy the violations found, and seizes upon its through route power under Section 15(3) and (4) to require the "defendants named in the complaint" to

remedy the Rio Grande's violations as well as their own by joining with it in through routes and joint rates which will enable that violator to increase its revenues and improve its financial position by diverting traffic and revenues from the other carriers.

Regardless of the fact that all of the shippers in the northwest area are located on Union Pacific routes, and all of them have exactly the same privilege and choice of routing over the Rio Grande at its higher rates or over the Union Pacific at lower rates, the Commission concludes that shippers "using, or desiring to use the Rio Grande" are unduly prejudiced when they use the Rio Grande because the Union Pacific routes with lower rates are available to them; in other words, the shippers using the Rio Grande are found to be unduly prejudiced because they voluntarily choose that line instead of electing to route via the Union Pacific at lower rates.

Despite the undisputed testimony, not mentioned in the report, of the shippers in the northwest area, including those found to be unduly prejudiced as well as those unduly preferred, that they ship their commodities to markets in all 48 states and to Canada, South Pacific, South America, Cuba, South Africa and other foreign countries (V. I, 246), the Commission asserts (R. 70) that those shippers "are debarred from effective participation" in the marketing of their commodities, and this, merely because their shipments of potatoes, for example, can move from Idaho origins to Chicago over shorter mileage of Union Pacific routes in 24 hours less time and at lower rates than if moved via the Rio Grande.

Faced with the decision of this Court in *Thompson v. United States*, 343 U. S. 549, that the Commission could

not use its power to prescribe reasonable rates so as to equalize rates via two different routes and, thus, "in effect" establish through routes and joint rates, without complying with the requirements of Section 15(3) and (4), the Commission now seizes upon the through routes power to equalize rates which it could not do under its reasonable rate powers.

Faced with the holding of this Court in *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, 277, that "the purpose" of the prohibition against compelling through routes that short haul carrier "is to protect the long haul routes of carriers," the Commission now seizes upon the 1940 clause "(b)" amendment to Section 15(4) as its authority to rearrange the railroads by chopping the Union Pacific in two and tying the separate pieces to the Rio Grande's line at Ogden and Denver to enable it to participate in the traffic and revenues.

Despite the fact that the Rio Grande's President testified that its sole purpose in filing the complaint was to increase its revenues and improve its financial position, and the fact that the order will accomplish this purpose, the Commission would evade and escape the provision in Section 15(4) that prohibits it from compelling through routes to aid a carrier financially, by the simple expedient of denying that in reaching its conclusions it gave any consideration to the Rio Grande's financial needs.

Regardless of the fact that the order requires "the same", and not lower, rates via the Rio Grande as the rates via Union Pacific routes, and the further facts shown by undisputed testimony that the average cost of hauling a carload of freight from Pocatello to the Missouri

River is $124.33 greater via the longer Rio Grande route than via the Union Pacific, the Commission finds that the Rio Grande route is necessary to provide adequate and "more economic" transportation.

Despite the obvious and unalterable physical and geographical fact that towns and communities served exclusively by the Rio Grande are not located on Union Pacific routes, the Commission holds that Union Pacific routes are "inadequate" because they are "not available" at points on the Rio Grande (R. 70) for transit privileges which the Commission finds to be "commercial operations" (R. 48) and not transportation service.

The Commission correctly states (R. 72) that it cannot find discrimination against the Rio Grande because there is no evidence of record as to transportation conditions over the routes allegedly committing the discrimination, but despite the absence of such evidence, the Commission proceeds (R. 73-74) to find undue prejudice and preference between shippers even though such finding cannot be made without evidence showing that transportation conditions affecting both the alleged unduly prejudiced and preferred shippers are substantially similar. Not only is the finding of undue preference and prejudice among shippers precluded by the absence of evidence showing that transportation conditions affecting them are substantially similar, but it is also precluded by the Commission's own finding (R. 70) that transportation conditions on the Rio Grande are "more onerous" than those on the lines of any of the other transcontinental railroads, and by the finding (R. 71) that the differences in transportation conditions are "substantial." Having thus found dissimilarities in transportation conditions, the Commission was under the plain

duty to make a finding that the evidence did not prove undue prejudice and preference between shippers, *Texas & Pac. Railway v. Interstate Com. Com.*, 162 U. S. 197.

Despite its findings that dissimilarities in transportation conditions resulting from the Rio Grande's longer and more onerous route must be given effect in rates for shorter hauls, but not for hauls of "great lengths" (R. 72), the order would give effect to those dissimilarities in hauls via the Rio Grande as long as 3,044 miles from Seattle, Wash., to Sault Ste. Marie, Michigan, but would ignore the same dissimilarities and require equal joint rates via the Rio Grande in hauls, for example, from Brigham City, Utah, to Omaha, 1187 miles, to Kansas City, 1267 miles, to St. Joseph, Missouri, 1269 miles, and many other hauls that are far shorter than many of the hauls in which the order gives effect to the dissimilarities by not requiring rate reductions.

Although the report states (R. 70) that "adequate transportation facilities and services are required for the proper functioning of the system" which has been evolved for orderly distribution of perishable food products, it contains no finding that physical transportation facilities of Union Pacific routes are incapable of hauling efficiently and economically the articles specified in the order between the originating area and points in the southern and eastern part of the country; on the contrary, the report finds (R. 62) that transportation facilities of Union Pacific routes "are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future."

Although the report states (R. 70) that perishable articles require a number of services, "not only at origin

and destination, but en route, which are not usually required in the movement of ordinary traffic," it refrains from disclosing in that connection the fact that all of such services such as reconsignment, refrigeration and transit privileges are available at lower rates on the shorter Union Pacific routes.

The report shows that (R. 70) all of the "in-transit privileges and services" are now available at points on the Rio Grande, and as there is no finding that any new or additional privileges or services will be made available at origins or destinations or en route via the Rio Grande between the northwest area and points in the southern and eastern part of the country, it results that so far as shippers are concerned, the only effect of the order is a reduction in the Rio Grande's rates to equalize them with rates via Union Pacific routes.

We submit that the findings made by the Commission not only fail to support or furnish a rational basis for the order but that they compel the conclusion that Union Pacific routes provide adequate, efficient and economic transportation service for the traffic, including the commodities specified in the order, between points in the northwest and points in the eastern and southern parts of the country and that less adequate, less efficient, and less economic service would be provided by the Rio Grande.

Indeed, every fact stated and found in the report (apart from mere unfounded assertions made as conclusions) with respect to the Union Pacific routes, leads logically and rationally to the dismissal of the Rio

Grande's complaint. Not one fact stated or found with respect to the Rio Grande could possibly lead to the conclusion that its line is necessary to provide adequate and more efficient or more economic transportation of the traffic it seeks.

In addition, the Commission did not make findings of fact that are essential and would naturally be expected on the subject of the necessity of adding the Rio Grande's longer routes to existing routes which the Commission finds adequate to haul the present volume of traffic and any additional volume that might be offered in the foreseeable future. In *F. C. C. v. RCA Communications, Inc.*, 346 U. S. 86, 97, this Court said that findings of the Commission "must at least warrant, as it were, that competition would serve some beneficial purpose such as maintaining good service and improving it." The basic findings must be of such nature that the ultimate conclusion or finding in the language of the statute will logically flow and be inferred from them. The findings of fact must be "logically related" to the ultimate conclusion on which the order rests, *Tri-State Broadcasting Co. v. Federal C. Com'n*, 96 F. (2d) 564, 567, in which the United States Court of Appeals for the District of Columbia held at page 568:

> "The findings of basic fact which would naturally be expected on the subject of need of an additional station where a community already has radio service would be those concerning the adequacy of the existing service, and in particular in this case concerning the adequacy of the service of the primary stations KTSM and WDAH. The existing radio service might be inadequate in financial stability, equipment, or management; or it might be adequate in such respects and still be inadequate in the sense that the stations, although operating at full capacity, are unable to supply the demands of advertisers and

performers in the community. The Statement of Facts and Grounds for Decision on the part of the Commission contains no finding that the existing service is inadequate in any such particulars as are above mentioned. If there is evidence in the record warranting finding of inadequacy of the present service the Commission should make and state such findings. It was the intention of Congress in requiring findings of fact that the Commission should disclose the facts which cause it to reach its decision, and that it should not reach a decision without facts."

As noted earlier, the report says (R. 33) the order must be "grounded" upon findings required by Section 15(3) and (4) that the routes sought are "necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation". But the Commission has not made this essential jurisdictional finding. Instead, it finds merely that the Rio Grande route is necessary and desirable in the public interest "in order to provide adequate and more economic transportation." It is not found that the route is "needed" or that it will provide "more efficient" transportation.

There is no finding that diverting the traffic and revenues from Union Pacific routes to the Rio Grande "would serve some beneficial purpose such as maintaining good service and improving it," *F. C. C. v. RCA Communications, Inc., supra*, p. 97.

It is not found or stated in the report that the Rio Grande has surplus capacity or ability to haul any additional volume of traffic or that it is efficiently operated, or furnishes good or satisfactory service.

There is no finding that inclusion of the Rio Grande for a "bridge" haul in the through transportation will gen-

erate new or additional traffic, and the report shows that it would merely redistribute present traffic and revenues.

There is no finding that the over-all transportation system or those using it would benefit by including the longer Rio Grande line in present routes for a "bridge" haul over its line.

There is and could be no finding that the order will give shippers lower rates than they now have via Union Pacific routes, for, the purpose and requirement of the order is merely to make the Rio Grande's rates "the same" as those of Union Pacific routes.

There are no findings of basic fact on the questions whether the combination rates via the Rio Grande are unreasonable or whether the joint rates of Union Pacific routes are reasonable for application via the longer and more onerous Rio Grande routes.

There are no basic findings of fact to show how or in what manner shippers from the northwest area are unduly prejudiced if they elect to use the Rio Grande with its higher rates instead of Union Pacific routes which those same shippers now use at lower rates for the through traffic.

The order will aid the Rio Grande financially but will be detrimental to carriers participating in the Union Pacific routes, for every dollar the Rio Grande gains will be lost by the Union Pacific and other carriers participating in the present routes.

Diverting the traffic to the Rio Grande will slow up rather than speed up its movement.

There is no finding that present transportation facilities in the northwest area, or between that area and the eastern and southern part of the country are insufficient or incapable of moving all of the traffic, including the commodities specified in the order, as promptly and expeditiously as it could move via the Rio Grande; on the contrary, the report shows there are abundant facilities of several railroads in active competition in the northwest area that are hauling and could haul any foreseeable volume of traffic between that area and the east and south, faster, over shorter routes and at lower rates than the Rio Grande.

There is no finding that present transportation service of carriers that would lose the traffic and revenues could be maintained, or that the over-all service would be improved or that the general public would benefit by diverting the traffic to the Rio Grande.

There is no finding that the Rio Grande will contribute additional facilities in the northwest or in the east or south—indeed, the report finds that the Rio Grande wants to divert the traffic merely for a "bridge" haul over its line between Ogden and Denver.

There is no finding that any complaint has been made by shippers against the service rendered by Union Pacific routes, and the record shows that no such complaints have been made since those routes were established some 50 years ago.

There is no finding that anticipated future developments in the northwest area may reasonably require additional transportation facilities, and if there were, the order would not alleviate that situation, for the Rio Grande proposes, and the order requires merely that the

traffic be diverted to the Rio Grande for a haul over its longer line en route from or to the northwest area.

The facts found by the Commission and those it did not, and could not, find in this case presents a situation similar to that in which this Court in *F. C. C. v. RCA Communications*, 346 U. S. 86, declined to approve an order of that commission authorizing an additional radio-telegraph circuit to compete with existing circuits. The basic and underlying facts found by that commission in that case were almost identical in substance to the facts found in the instant case. In that case, as in this, there was no finding that the competition of the additional circuit would be of benefit to the public. The Court remanded the case to give that commission an opportunity to determine, if it could, from the evidence whether the competition of the additional radio-telegraph circuit "would serve some beneficial purpose such as maintaining good service and improving it." Mr. Justice Douglas agreed that such finding, "measured by the public interest" was necessary to justify the order, but dissented from the remand and held that the order should be set aside because the facts of record "are so unequivocal that there is no apparent way for the Commission to meet the standard approved both here and below." At page 99, he summarized those facts as follows:

> "* * *—existing facilities are in excess of those required to handle present and expected traffic;
>
> "—the proposed operations will redistribute present traffic rather than generate new traffic;
>
> "—the proposed service will not lower rates nor speed up transmission nor improve the existing service in any respect;
>
> "—the proposed service will aid Mackay financially and be detrimental to RCA;

"—this is a field where without the proposed service there is active competition and an excess of facilities to meet present or expected needs."

Keeping in mind that the question here is whether there is a "need", for example, for a carload of potatoes shipped from a station on the Union Pacific in Idaho to New York to move via the longer line of the Rio Grande between Ogden and Denver instead of moving over the Union Pacific's 219-mile shorter, direct single line to the Missouri River, and observing the Commission's finding (R. 62) that the Union Pacific has lower rates and is "adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future," we submit that it is wholly illogical, irrational and a mere "artificial use of words" for the Commission to assert that Union Pacific routes for the commodities named in the order are "inadequate and less economical than are the Rio Grande routes." This assertion becomes even more irrational when we observe the Commission's finding (R. 70) that the perishable commodities named in the order "must be moved to market with expedition and care," and the further finding (R. 62) that "bridge" traffic moved over the Rio Grande en route to eastern destinations "would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services."

The Report will be searched in vain for any finding or statement of fact which could possibly justify the conclusion (R. 70) that Union Pacific routes "are inadequate and less economical than are the Rio Grande routes." Having correctly held (R. 69) that the Rio Grande route could not be required "unless the existing

routes can be found not to provide 'adequate' transportation," and (R. 62) that facilities of Union Pacific routes "are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future," the Commission, in its desperation, condemns the Union Pacific routes as "inadequate" simply by saying (R. 70) that they "are not available, and higher rates apply" *at points on the Rio Grande* for shipments reconsigned or accorded "transit privileges" at such points on that line. If such reasoning were sound, the Rio Grande route should also be condemned because it is "not available" at points on the lines of the Union Pacific or other railroads. Indeed, upon that theory, all through routes in the country are "inadequate" and therefore may be short hauled because they are "not available" at points not located upon them.

Nor is the fact that "higher rates apply" via the Rio Grande a logical or rational basis for condemning the Union Pacific routes as "inadequate." Where, as here, existing routes are shorter in both mileage and in "running time," are capable of hauling all of the traffic offered and no fault can be found with the *transportation service* they perform, a mere "declaration" by the Commission that such routes are "inadequate" is "an artificial use of words" and will not justify an order requiring an additional short-hauling route, *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 545.

The order clearly should be enjoined and annulled in its entirety because the findings made by the Commission do not, as a matter of law, support the order or afford any rational basis for it, and because the Commission did not and could not make findings essential to the validity of the order.

IV.

The District Court Erred in Refusing to Enjoin the Entire Order Because the Commission's Ultimate Findings and Conclusions and the Order are not Supported by the Evidence and are Contrary to the Overwhelming Preponderance of the Evidence.

1. **The evidence on which the Commission based its conclusions and order is without credibility or probative force, and affords no support for the order, because it was admittedly solicited and procured by the Rio Grande to help it win its case.**

As shown in the Commission's report (R. 35-36), there have never been any through routes and joint rates between the Union Pacific and other railroads with the Rio Grande via Ogden and Denver on the traffic to and from the northwest area except during a short period beginning in 1897 when the Union Pacific, Oregon Short Line Railway Company and the Oregon-Washington Railroad & Navigation Company were in separate receiverships. After these receiverships ended, the joint rates with the Oregon Short Line Railway Company were cancelled in 1906, and those with the Oregon-Washington Railroad & Navigation Company were cancelled in 1912, with the approval of the Commission. *Lumber Rates, Oregon and Washington to Eastern Points*, 29 I. C. C. 609, 31 I. C. C. 191; *The Ogden Gateway Case*, 35 I. C. C. 131.

In the 40-year period since the joint rates were cancelled no shipper or any representative of the public has filed with the Commission or any of the state commissions any complaint, request or demand for the through routes and joint rates sought by the Rio Grande. In other words, there has been a complete absence of any manifestation of shipper or public interest in the objective sought by the Rio Grande to divert traffic to its longer, slower

and more onerous route from the shorter, faster and direct route of the Union Pacific and connecting lines over which the traffic moves (V. I, 766-784; V. II, 913-999; 1181-1199; 1318-1331).

Realizing that it had no legal right to demand that the Union Pacific and other railroads join in through routes and joint rates via its line, and that such routes and joint rates could be compelled only upon a showing that they are "in the public interest", the Rio Grande contrived to gain its objective by pleading public interest in its complaint and by soliciting and procuring testimony of shipper and other public witnesses so as to help it win its case.

After thus intermingling and confusing its financial objective with rights of shippers and the public, the Rio Grande planned and executed a most vigorous and vicious campaign in an effort to stimulate and create an interest in its undertaking among shippers and the general public, particularly in communities and areas served by the Union Pacific in the northwest in Idaho, Montana, Oregon and Washington, at some points almost 1,000 miles from any area served by the Rio Grande. This campaign was publicly launched immediately upon the filing of its complaint on August 1, 1949, and the fact that it was conducted for the purpose indicated is admitted by the President of the Rio Grande, by its counsel, and by stipulation in the record (V. I, 48, 61; V. II, 964). The fact thus admitted was also shown by the testimony of numerous shippers, state commissions and others who were solicited by the Rio Grande to testify for it as public witnesses or not to testify against it.

In its campaign of agitation and solicitation to obtain witnesses so as to prosecute its complaint under the

guise and pretense of a public interest, the Rio Grande's representatives publicly condemned and vilified the Union Pacific, sought to persuade shippers and the public that they were suffering from "discriminatory freight rates of the Union Pacific," charged that shippers located on the Union Pacific were deprived of their right to select routes of their own choice, were denied access to markets, denied the use of transit privileges, denied a full supply of cars, and asserted that shippers would receive much better service from the Union Pacific if they would join with the Rio Grande pretending a public interest and testifying in such a way as to help it win its case. The Rio Grande charged the Union Pacific with a transportation "monopoly" in the northwest area despite the fact that a half dozen other railroads serve that territory and despite the fact that the Rio Grande did not and does not propose to perform any transportation service beyond the termini of its own present lines (original I. C. C. Ex. 30).

Finding itself unable to sustain the Rio Grande's case (R. 72, 33), the Commission turned to the testimony of shippers so solicited, procured and produced as witnesses by the Rio Grande in support of its complaint. The Commission's ultimate findings, conclusions and order are based entirely upon that testimony. Upon that testimony the Commission based its findings and conclusions that the through routes and joint rates required by the order are "necessary and desirable in the public interest, in order to provide adequate and economic transportation", as well as its findings that the combination rates via the Rio Grande are unduly prejudicial to shippers desiring to use the Rio Grande for the through traffic involved and unduly preferential of those same shippers when they route their traffic over the Union Pacific.

The Union Pacific contended before the Commission and the district court that testimony so procured by the Rio Grande *in its efforts* to prosecute its case under the guise of public interest, could legally be given no weight or probative effect, and that the Rio Grande's action and activities in soliciting, persuading and procuring witnesses to testify for it so as to help it win its case vitiated and nullified the proceeding, and called for dismissal of the complaint.

The Commission disposed of the contention by saying merely that both the Rio Grande and the Union Pacific sought to interest the public in their respective sides of the controversy and that there was no indication in the record that the witnesses admittedly persuaded and procured by the Rio Grande "had been stimulated in any questionable manner.". The Commission seemed to think that the admitted solicitation and procurement of witnesses by the Rio Grande to help it win its case in the belief gained from the Rio Grande that they, too, would profit if the joint and collusive effort succeeded, is not "questionable" and does not destroy or detract from the weight, credibility or legal effect of that testimony. The majority of the district court merely said "[w]e do not find justification for serious consideration of that question" (R. 48, 165).

The courts of this country and the statutes of the land, and even the common law, have long since condemned and refused to tolerate the procurement of witnesses by a party to testify in such a way as to help him maintain and win his case. Even attempts to do so by any method are not only "improper" but also contrary to law. There is no "proper" method by which witnesses may be persuaded and procured to testify in such a way as to

help a party maintain and win his suit. The fact that the witnesses were "procured" is the vitiating circumstance. Such activities have been held to require courts to dismiss proceedings and refuse to become organs of perversion of justice, and that it is the duty of our tribunals to resist and strike down collusive and conniving contrivances in litigation, by refusing to lend their functions in such situations.

This intolerance of "procured" witnesses and proceedings in which such "procured" testimony is attempted to be used, has its basis in the ancient common law and more modern statutory law against champerty and maintenance.

Champerty and maintenance are defined in the Restatement of the Law of Contracts (Section 540(1) and (2)), as follows:

> "'Maintenance' means the maintaining, supporting or promoting of litigation of another person.
>
> "'Champerty' is the division of the proceeds of litigation between the owner of the litigated claim and a party supporting or enforcing the litigation."

In *United States v. Call*, 287 Fed. 520, the 5th Circuit Court of Appeals, page 521, says:

> "Champerty is the unlawful maintenance of a suit in consideration of some bargain to have a part of the thing in dispute or some profit out of it."

The following definitions are found in *Breeden v. Frankfort Marine, Accident & Plate Glass Ins. Co.*, 85 S. W. 930 (Mo.):

> "Maintenance is one of the old actions at common law, the right of which exists to this day. Brad-

laugh v. Newdegate, 11 Q. B. Div. 1. It is defined as an 'officious intermeddling in a suit that no way belongs to one, by assisting either party, with money or otherwise, to prosecute or defend.' And it is said to be an offense against good morals, in that it keeps alive strife, and perverts the remedial powers of the law into an engine of oppression.' 5 Am. & Eng. Ency. of Law (2d Ed.) 815. The offense may be committed by stepping in after litigation has been begun, as by encouraging and aiding its origin. Bradlaugh v. Newdegate, 11 Q. B. Div. 9. Champerty is generally treated by text-writers in connection with maintenance, and it also is one of the old common-law actions which yet subsist. Duke v. Harper, 66 No. 51, 37 Am. Rep. 314. These old actions, though akin, are unlike in many particulars. The champertor has in view a profit to himself, in a share of the spoils of the litigation. The maintainer is more of a voluntary intermeddler, and stirrer up of strife for the love of it. He is described as an 'officious' intermeddler. In other words, he interferes where he has no business."

In *Casserleigh v. Wood*, 119 F. 308 (8th C. C. A.), the Court dismissed a suit in which both parties expected to profit by evidence "procured" by plaintiff to help win the case. The Court said the arrangement to procure witnesses was "opposed to public policy," and that (p. 315):

> "We are also of opinion that, even if an action at law could be maintained for a breach of the contract, yet it is so far meretricious and tainted with illegality that a court of equity ought not to enforce it specifically."

It is enough if the understanding "savored of the character of champerty," *Jamison Coal & Coke Co. v. Goltra*, 143 F. 2d 889, 895; and the courts will raise the question *sua sponte* when grounds to do so appear.

Curry v. Dahlberg, 110 S. W. 2d 742 (Sup. Ct. Mo.); *Barker v. Barker*, 14 Wis. 142; *Miles v. Mutual Reserve Fund Life Ass'n*, 84 N. W. 159, 164 (Sup. Ct. Wis.), holding that when a court discovers that a suit on trial before it is "tainted with champerty, a failure to refuse to proceed therein in effect makes such a court a party to the illegal transaction," and that a court should not "permit itself to become the organ or instrument of carrying out the champertous agreement, but it should repel the plaintiff and his suit."[29]

We appreciate that the Commission is not a court. It has been called a "quasi-judicial" tribunal in some of

---

29 *Quirk v. Muller* (14 Mont. 471), 36 Pac. 1077 (Supreme Court of Montana, 1894), appears to be one of the leading cases on the offense of procuring and suborning witnesses. At page 1078 the Supreme Court of Montana held:

"Indeed, the contract, brought down to a simple statement, is that plaintiff agreed, for a consideration to procure testimony that would win the lawsuit. He procured the testimony, and it won the suit. We do not hold the contract void because it was an agreement to procure perjury, or because it did procure perjury; but the contract had the tendency and opened the very strong temptation to the procurement of perjury. Mr. Bishop says: 'The mere tendency of a contract to promote unlawful acts renders it illegal, as against the policy of the law, without regard to any circumstances indicating the probable commission of such acts.' Bish. Cont. § 476."

Citing several cases, the Montana Supreme Court said at page 1080:

"We fully concur in the views expressed in these cases, and we are of opinion that the contract under consideration falls within the objectionable class. To be sure, under the contract the plaintiff, Quirk, may have performed only innocent acts, and there is nothing to indicate that both his intentions in making the contract and his acts in carrying it out were other than wholly innocent and lawful. But the contract was just such a one as to encourage an unlawful act. It invited subornation of perjury. It held out a large reward for success. * * * There is here too close an approach of the evil maxim, sometimes quoted: 'Get money; honestly, if you can; but get money.' The contractor in plaintiff's position could only too easily be led to say to his conscience: 'I will procure the necessary testimony; honestly, if I can; but I will procure the testimony.'"

its functions. It was none the less its duty under the law to hold that testimony so "procured" is without credibility or probative force, that the Rio Grande's deliberate procurement of the testimony vitiated and nullified the proceeding, and to demonstrate, by dismissing the complaint that the Commission will not, as said in *Miles v. Mutual Reserve Fund Life Ass'n*, 84 N. W. 159, 164, "permit itself to become the organ or instrument of carrying out" schemes and efforts to wrest a favorable decision from it, regardless of the lack of merit in the Rio Grande's own cause.

In a basically comparable situation, the Florida Railroad and Public Utilities Commission, on June 30, 1955, dismissed a proceeding[30] brought as the result of agitation, connivance and collusion between several parties with a view to profiting from refunds of electric rates they expected to prove had been excessive. In condemning as "champertous," the collusive activities which led to the filing of the complaint, the Florida Commission said:

> "Another feature of a champertous contract that is boldly evident in this case and one of the features condemned by law is that in which a person, for his own selfish gain, and a stranger to the subject matter, stirs up strife and litigation by bringing a proceeding which a party in interest might not do if left to his own judgment and not induced by the fact that the litigation would be carried on at the expense of another for what he may acquire from the action maintained.
>
> * * * * *
>
> "It is not difficult to stir up and foment rate dissatisfaction when the intermeddler agrees to pay all costs incurred in bringing about a rate investigation on

30 "Order No. 2200, Docket No. 4046-EU, In Re: Complaint of various subscribers against Florida Power & Light Company seeking a reduction in electric rates and charges."

the promise that he will receive nothing more than a portion of any rebate or saving that may be obtained. If this scheme of developing rate investigations is recognized and encouraged, there will be no end to the investigations this commission will be called upon to conduct in order that such intermeddlers may remain in business."

2. **The Commission's conclusion, on which the order rests that the required through routes and joint rates "are necesary and desirable in the public interest, in order to provide adequate and more economic transportation" is based on (a) solicited and procured testimony that legally has no probative value, (b) is contrary to the overwhelming preponderance of the evidence, and (c) is the result of the Commission's arbitrary and biased treatment of the evidence.**

While this Court has held that "the credibility of witnesses", and "conflicts in the testimony", are for the Commission, it has laid down the rule that "the legal effect of evidence is a question of law" and that an order of the Commission is void if "contrary to the 'indisputable character of the evidence'," *Int. Comm. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88, 91-92. The Court has held that whether an order is supported by "substantial" evidence is also a question of law; that "substantiality of evidence must take into account whatever in the record fairly detracts from its weight"; that an administrative tribunal's order must be set aside unless "justified by a fair estimate of the worth of the testimony of witnesses", and that, in resolving these questions, the courts must "consider the whole record" and determine whether the evidence is substantial "when viewed in the light that the record in its entirety furnishes, including the body of evidence opposed" to the administrative tribunal's decision. *Universal Camera Corp. v. Labor Bd.*, 340 U. S. 474, 488-490.

(a) The "indisputable character" of the testimony on which the order is based.

As shown above, the Commission expressly stated that any order requiring through routes and joint rates in this case "must be grounded upon findings, as specified in Section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation", but that such findings would not be "determinative" unless Union Pacific routes could be found not to provide "adequate" transportation (R. 69).

The Commission found that for the commodities named in the order, through routes and joint rates in connection with the Rio Grande are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" (R. 73). Although not conforming to the standards and criteria expressly invoked by the Commission, as we have already demonstrated, the finding made is the legal basis on which the Commission says it pivots the order. The order thus purportedly rests upon the finding of "public interest", necessity and desirability for adequate and more economic transportation. Therefore, unless that finding is supported by substantial evidence, the order can not be sustained.

The only tesimony mentioned by the Commission in attempting to support its order, and, in fact, the only "public" testimony of record that purported to advocate even the desirability of the through routes and joint rates ordered by the Commission, is that, discussed above, of some 50 shipper or "public" witnesses whose testimony the Rio Grande admitted it solicited and procured to be submitted so as to help it win its case.

Upon authorities cited above, we submit that the "indisputable character" of solicited and procured testimony as such, as a matter of law, as to deprive it of any credibility or probative force, and that, in basing its order upon that testimony the Commission has not only failed and refused to consider and give effect to the "indisputable character" of that testimony, but also to consider "whatever in the record fairly detracts from [the] weight" of such testimony, and failed to fairly estimate "the worth of the testimony of witnesses" solicited and procured by the Rio Grande to help it win its case.

In these circumstances, without more, the order is void because it lacks support not merely of "substantial" evidence, but of any evidence that could legally have any weight, credibility or probative force.

But even if the testimony on which the order rests had not been solicited and procured by the Rio Grande, it is so lacking in substance and probative force that it does not begin to establish the criteria of Section 15(4)(b) which the Commission invoked as the legal basis of the order. In the first place, the Commission frankly and correctly concedes that:

> "There is no contention here by complainant [Rio Grande] that the present routes of the defendants are not adequate for the traffic hauled, and no finding is sought by complainant to that effect." (R. 69)

Undaunted by that fact, and still pursuing its ancient determination to evade completely or limit "the impact of the short-hauling restriction on its power to establish through routes", *Thompson v. United States*, 343 U. S. 549, 555, the Commission embraced the testimony of the Rio Grande's solicited and procured shipper witnesses and said that the testimony of those shippers "does *raise a*

question as to the need for *more* adequate and economic service than afforded by existing routes with respect to some commodities" (R. 69; Italics added).

Before discussing the testimony of those witnesses, we observe that all of them testified for the Rio Grande concerning their desires for *all possible routes* at *equal rates* without any routing restrictions whatever, for fresh fruits and vegetables, ordinary livestock, wheat, dried beans, lumber and forest products, commodities for cold storage, farm implements, monuments and steel for fabrication. Those witnesses were located in Kansas, Colorado, Utah, Idaho and Oregon, and they ship, receive or "handle" an estimated volume of about 28,000 carloads annually of the commodities just named.

However, the through routes and joint rates required by the order are limited to—

> "* * * granite and marble monuments [in carloads] *from origins* in Vermont and Georgia to *destinations in the* * * * *northwest area* * * * and * * * ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, *from origins* in the described excluded territory [*northwest area*] to destinations in the United States [in the] south and east * * *." (Italics added). (V. II, 1595)

Thus, the order is clearly designed for the benefit of shippers in and from the "originating" area in Utah north of Ogden and Idaho, Montana, Oregon and Washington (which the Commission's report refers to as the "excluded territory", the "originating area" and "the northwest area or territory") (R. 26, 70, 71).

Although the report discusses at length and in detail the situations of numerous witnesses located outside

the "originating" or "northwest area" in Utah south of Ogden and in Colorado and Kansas, the order does not include them, hence, search for evidential support, if any, for the order must be confined to testimony of Rio Grande shipper witnesses located in the "originating" or northwest area described above, and who ship commodities on which the order requires through routes and joint rates. Only 15 such shippers are located in the northwest area, of whom 12 are shippers of fresh fruits and vegetables *from origins* in the northwest area, 2 are shippers of livestock and 1 is a receiver of monuments. The estimated volume of their traffic is about 10,000 carloads. All of those shippers are located exclusively on the shorter, faster Union Pacific routes and they enjoy the lower joint rates and full transit privileges of those routes. Thus, the order rests upon the testimony of 15 of the Rio Grande's solicited and procured witnesses who handle about 10,000 carloads annually of the articles on which the order requires through routes and joint rates in connection with the Rio Grande's longer, slower and more onerous route.

But not one of the Rio Grande's shipper witnesses testified that present services of Union Pacific routes are "inadequate" for the traffic hauled. Indeed, their testimony was not concerned with the adequacy, efficiency or economy of Union Pacific routes, but with the fact that they must pay higher rates if they ship via the Rio Grande than when they ship via Union Pacific routes which they now use, and with their *desire* for removal of *all* routing restrictions which protect carriers' right to their long hauls, "a right guaranteed by Section 15(4)". *Thompson v. United States*, *supra*, 559.

Reference to the testimony of a few of the Rio Grande's shipper witnesses will serve to illustrate and

demonstrate the "indisputable character" of their testimony, the vague, untenable and irrelevant reasons given by them for desiring longer routes via the Rio Grande and the lack of credibility, probative force or merit in their testimony individually and collectively.

The Secretary of Agriculture, for example, who intervened in support of the Rio Grande in the proceeding before the Commission and as a defendant in the district court, is in complete disagreement with the Congressional policy, insofar as it relates to agricultural commodities, of affording carriers protection under Section 15(4) against short-hauling under compelled through routes. A witness for the Secretary testified that he was opposed to any routing restriction on any agricultural commodity regardless of any consequences that might be inflicted upon carriers that would be short hauled or upon their ability to render adequate and efficient service generally to shippers located on their lines (V. II, 1077). This disagreement with the Congressional legislative policy and his support of the Rio Grande in this case directly opposes the position and testimony of some 85 shippers and producers most of whom are in the northwest area who testified against the Rio Grande and who ship about 136,000 carloads of freight annually, of which nearly 50 per cent consists of agricultural commodities and livestock. The testimony for the Secretary also contradicts testimony of witnesses for the public service commissions of Montana, Washington, Oregon, Wyoming and Nebraska who also oppose the Rio Grande's complaint. In supporting the Rio Grande's complaint, the Secretary disregards and stands in opposition to the overwhelming majority of shippers and public representatives in the northwest.

A. G. Stanger, of Idaho Falls, Idaho, *served only* by Union Pacific, ships potatoes, onions and turkeys to the Southwest, Middlewest and East. He believes shippers owning their products should have the right "to route them as we see fit" and that this is in keeping with the principle which "has founded and helped to build this country by free enterprise." He wants "flexible" diversion or reconsigning privileges *on various routes to "try" markets* and failing to sell at one, then move on to other points at joint through rates. He says "competition is the life blood of American business" (V. I, 254, 253, 256).

This witness finally stated his real reason for supporting the Rio Grande.

> "If the Union Pacific or the carriers fail to give us cars with which to move this produce then, *as retaliation, or to help to put the Union Pacific on their toes*, we can take the freight away from them and ship it over the D&RG, which at the present time we cannot under circumstances unless we are penalized" (by the combination rates via D&RG). (V. I, 257; Italics added.)[31]

He thinks the sought routes and rates via the Rio Grande might induce the Union Pacific to "help develop" the Idaho territory, apparently for the purpose of creating more traffic to be diverted to the Rio Grande.

---

31 During periods of "peak" traffic when there are not enough cars to supply all shippers with all cars they order, the Union Pacific distributes without preference or discrimination the available cars proportionately among shippers based upon each shipper's past need for and ability to load cars, a method approved and required by the Interstate Commerce Commission. Obviously, this witness had been misled to believe that the Union Pacific would or could furnish more than his equitable proportion of cars merely upon his threatened "retaliation" to route his traffic away from the Union Pacific to the Rio Grande.

Union Pacific built lines in Idaho about 1880 when there was nothing to haul and the total population of the Idaho territory was only 32,000, and many shipper witnesses highly commended Union Pacific for its cooperative part in developing Idaho and contributing to its improvement and economic welfare (V. I, 260, 261).

Witness Bass, another Idaho potato shipper, supports the Rio Grande because he says he cannot sell in certain markets "with safety", that he is "very much in favor of free enterprise" and thinks closed gateways restrict our freedom." His company did not decide they wanted routes with equal rates via the Rio Grande until after they heard the propaganda and promises of Rio Grande's representatives, and it is certain from his testimony that neither his Company nor Idaho produce shippers generally have suffered for the lack of through routes and joint rates via Ogden and the Rio Grande, since Idaho ships to all markets in the 48 states, and exports to Canada, South Pacific, South America, Cuba, South Africa and other points (V. I, 243, 244, 246).

Witness Davis, Idaho Falls Chamber of Commerce, testified (V. I, 225) that he wanted all gateways open "that restrict the economy of eastern Idaho", but he did not explain in what manner, if any, the economy of Eastern Idaho is restricted by the present lack of longer routes via Ogden with the Rio Grande or how it would be improved by taking millions of dollars in revenues from the Union Pacific, and passing those millions to the Rio Grande.

L. E. Stephens, potato shipper and dealer in grain and feed, whose potato markets cover the entire United States with the exception of Maine" (V. I, 247), supports

the Rio Grande, but has never shipped to any market on the Rio Grande except Denver (V. I, 247), which is also served by a shorter line of the Union Pacific. He claims he has suffered at times from lack of cars (V. I, 248), but witness Hanson shows that Stephens misstated his car supply situation, and, in fact, along with other Idaho potato shippers, inflated or overstated the number of cars they could load during car shortages, a trick or subterfuge among shippers, well known to railroad officials and to the Commission itself (V. I, 650). Stephens said there are certain markets which are "closed" and "a shipper is not too familiar with the tariffs, and will get into a market of this type unknowingly and then will be unable to get out." He could not name any such market except Wichita, Kansas (V. I, 249), but witness Stilling demonstrated that Stephens was in error with respect to Wichita being a "closed market," and, in fact, that the alleged "pocket market" situations mentioned by some of the witnesses "does not actually exist" (V. I, 851), and the Commission's report shows (R. 57) that the shipments could have been reconsigned from Wichita to destinations in the southwest at joint rates. Stephens did not explain how he expected his alleged car shortages to be relieved if the Rio Grande obtained the routes and rates sought in this case, nor could he make such explanation because the Rio Grande does not propose to transport anything to or from points north of Ogden or to extend its transportation services in any way. The implication is that with the same rates via the Rio Grande, he could and would follow witness Stanger's purpose to route against the Union Pacific in "retaliation" if the Union Pacific was unable to furnish him cars as and when he wanted them.

Witness Harris, a wheat farmer and dealer in implements and hardware at Rexburg and St. Anthony,

Idaho, thinks the Union Pacific has a "monopoly" upon the traffic of shippers which it serves exclusively, and believes that gateway problems "are barriers entered against our freedom of competition." He apparently was not speaking of the Ogden gateway but of "[t]he gateways in Kansas, in Nebraska and in Colorado." He was entirely unable to describe what restrictions, if any, he is under with the present rate situation and could give no specific illustration. He is located on the Union Pacific, has lower rates than the Rio Grande, and his inbound shipments of hardware and gasoline move direct to Idaho from Rock Island or Chicago, Illinois, or Salt Lake City, respectively (V. I, 233, 236).

Witness Higgins, a member of the Executive Committee, Idaho State Grange, made it quite clear that the members of the grange had not felt the need for the sought routes and rates via the Rio Grande until after its complaint was filed. Some of the resolutions from the local granges stated that opening the Ogden gateway might "possibly open up new markets and create better facilities for handling the produce" but "they never specified any particular markets"; they thought "they would possibly have better service" but "they didn't state in the resolution why they thought they would have better service" (V. I, 265). Higgins said opening the Ogden gateway *might* give Idaho shippers competitive rates to new markets and that "competition, in my estimation, does a lot of things, and I thought possibly it would help to eliminate the shortage of cars and give us better servige than we had previously" (V. I, 267).

Witness Adams, a "buying agent for jobbers throughout the country" including the buying and shipping of

potatoes, supports the Rio Grande in order "to bring about a competitive effort", and he thinks the opening of the Ogden gateway would eliminate considerable "discrimination" in times of car shortage because "*it would be used as a competitive weapon or a weapon in competition*" (V. I, 475-476).

Despite the fact that Idaho producers ship to markets in all 48 states and 5 or more foreign countries (V. I, 246), witness W. B. Long, produce shipper at Twin Falls, Idaho, said "I am not just here in the belief that they should open the Ogden gateway. *I think all gateways should be opened*, so that perishables may move when and where you want to move them" (V. I, 478) (Italics added).

Witness Titus, Executive Vice President, Western Forest Industry Association, Portland, Oregon, testified that his Association supports the Rio Grande because it is "necessary to carry out the national transportation policy," although his Association was interested in only two or three items of forest products (V. I, 214). Asked what need there was for the routes and joint rates via the Rio Grande and Union Pacific and what use of them would be made by shippers in his Association, and he answered: "No, I don't think anyone knows, until the situation is such that it could be utilized, no one is going to develop the territory." He further said "our shippers like to be free to ship in all directions, and over all lines." He did not know whether any members of his Association were interested in routes via the Rio Grande or whether a single carload of lumber might move over such routes if established (V. I, 218).

Witness Miller, manager of a canning company at Milton, Oregon, testified that "we resent the discrimina-

tory practices that make us ship over certain routes" (V. I, 540), but that "the strongest argument" in favor of the Rio Grande's complaint in this case is that "it would give us another route in the event storm areas would develop along the Union Pacific" (V. I, 539), although he never knew the Union Pacific to be blocked by storms except once and then some of his shipments were rerouted via the Rio Grande at the same rates he had via Union Pacific (V. I, 540).

(Of course, such emergency use of all railroads is expressly provided for by the last sentence of Section 15(4) of the Act.)

Witness Lau, farmer and President Idaho Farm Bureau Federation, asked by his counsel why he favored "the opening of the Ogden gateway", said "[p]ersonally, it doesn't make any difference to me" (V. I, 554), but that his board of directors sent him to state its "stand" which was (V. I, 554).

> "* * * that by opening this gateway it will create competition which our people have always thought develops good business. They feel that if there is competition created, it is going to bring about better service, and they also feel that they should have the satisfaction themselves in where they ship their products, over what roads, without being penalized."

He did not say that Union Pacific routes are inadequate or inefficient, or that better service was expected from the Rio Grande's longer and "more onerous" route. He thinks he might benefit "indirectly" if the sought routes and rates were established (V. I, 559), but he "never even had thought of it up until that time" (V. I, 557), when he said there was a car shortage which the Rio Grande apparently refused to alleviate because it

wouldn't get the traffic. He said it would be detrimental to him and his Federation if diversion of traffic to the Rio Grande resulted in curtailment of Union Pacific's main line train service, an increase in its rates to offset loss of revenue from the diversion, less frequent switching and spotting of cars for loading and unloading, or payment of less taxes by Union Pacific to the state and counties of Idaho (V. I, 559).

Witness Batt, shipper of produce from Caldwell, Idaho, supports the Rio Grande because it is his "conviction" that "any obstacle, natural or artificial, which interrupts the free flow of those agricultural products does not serve the best interest of the community or the area in which I operate." His principal market is Chicago, then Kansas City and next St. Louis, with a substantial volume of shipments to New York, to all of which markets the Union Pacific, which originates the traffic at Caldwell, is the shortest, the direct and single-line route to the Missouri River. The bulk of his commodities are marketed east of the Missouri River and in the northern part of the country, mostly in the Chicago area. He thought that through routes and joint rates via the Rio Grande would reduce the activities of "an unscrupulous receiver" who refuses a car in order to get an unjust allowance for claimed but faked damage, and that he would not have testified if he had not thought that such unscrupulous practices would be reduced or partially eliminated. This desire for protection from unscrupulous dealers "is the principal reason that I am here, sir." He said that he had made the statement in defense of the Union Pacific in discussing this case that while competition can be beneficial "it can also be destructive" and that he was not testifying in this case to produce additional competition or routes (V. I, 421-424).

Witness Rosenblatt, whose business is warehousing and manufacturing iron and steel articles at Salt Lake City, which is served by Union Pacific lines to the east, north and south, was asked whether his company would benefit by the through routes and joint rates sought by the Rio Grande, and he answered (V. 1, 223):

> "Only to the extent that we would be in position to repay the D&RG and their urgent solicitation for our business as a reward for the very good service they give us for handling in and out cars at our plant."

The Commission's report states (R. 51, 70) that a "fabricator and wholesaler" of monuments at Brigham City, Utah, on *the Union Pacific*, 21 miles north of Ogden, has "a special need" for through routes and joint rates on granite and marble monuments from Georgia and Vermont to destinations in the northwest area and that the need is "urgent" to enable the Brigham City dealer to fabricate stone at that point and ship in less-than-carload quantities at carload rates to a retailer at Grand Junction on the Rio Grande and to stop to partly unload at intermediate points on the Rio Grande. On such fabricated stone the shipments would move from Vermont or Georgia to Brigham City and, under the Commission's order, would move in less-than-carload quantities, presumably at the balance of joint through rates, in a *backhaul* of 332 miles from Brigham City to Grand Junction.

The "fabricator and wholesaler" at Brigham City is witness Bott who stated that his entire business which he distributes to retailers in various states *would not exceed four carloads a year* (V. 1, 393) and the report shows that the business of the retailers is so small that they cannot deal in carload lots.

The report says the Brigham City dealer has "keen" competition with a like dealer at Salt Lake City. But,

since both of these dealers are located at points served by the Union Pacific they have identical rates and transit privileges. The Brigham City dealer testified that he has complete transit privileges on all shipments that move via Union Pacific to destinations on its line (V. I, 392) and as Salt Lake City is on the line of the Union Pacific, both the dealer at that point and the dealer at Brigham City may fabricate or transit stone and move it on into Idaho at equal joint rates to points on the Union Pacific. Since the joint rates do not apply via the Rio Grande, neither of these dealers can ship "bridge" traffic via that line at joint rates and transit privileges. As to the less-than-carload retailer located on the Rio Grande, his situation is simply that of less-than-carload shipments hauled at carload rates. It is not the duty of the Union Pacific or any other railroad to equalize a retailer with a wholesaler for this Court has held that, "[t]he law does not attempt to equalize fortune, opportunities or abilities", *Interstate Com. Comm. v. Diffenbaugh*, 222 U. S. 42, 46. If this were not the law, then every less-than-carload shipper would be entitled to rates and privileges that would equalize him with carload shippers.

The report states (R. 52) that "[a] substantial portion of this traffic has been lost to the trucks", but this fact is irrelevant to a finding of public "need", under Section 15(4) for an additional railroad route or inadequacy of existing routes. While the witness said that the monument business was going to trucks, he made it plain that from the railroads "we don't get the service that the truck people give us"; that his competitor trucks stone from the West Coast and from Wisconsin and Minnesota in "duplex trucks" and that he cannot compete with those conditions (V. I, 390). It is indisputable that the truck competitive conditions could

not be met or overcome by establishing an additional through route over the Rio Grande's 219 mile longer and more onerous line. Since the total business of this Brigham City wholesaler would not exceed four carloads per year and his retailers can handle only less-than-carloads, it is the height of frivolity for the Commission to assert that such testimony proves an "urgent" and "special" need for through routes and joint carload rates via the Rio Grande on this commodity, especially since nothing will be accomplished except to furnish distributor service by rail of less-than-carload lots at carload rates. Regardless of the desire of these dealers to increase their profits to that extent, the fact remains that the Brigham City dealer is at no disadvantage whatever compared to his alleged competitor at Salt Lake City and it results that there is no possible evidential basis for a finding of a public "need" for routes via the Rio Grande.[32] . . .

Witnesses for the Rio Grande brotherhoods and employees resorted to repeating what they had learned in its propaganda campaign. Witness Warner explained his presence by saying: "We are very much interested in a good old American principle, * * * free enterprise * * * "

32 Circuit Judge Johnsen properly evaluated this monument dealer's situation as follows (R. 174):

"I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one of 'urgent need' (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country."

(V. II, 1306); and witness McDonald also for Rio Grande brotherhoods said "there is a principle involved here of free enterprise and competition" (V. II, 1313).

Witness Chipman, also testifying for the Rio Grande brotherhoods, hits at "monopoly" and "discrimination", the very words Rio Grande representatives used so freely and constantly in their campaign of accusation against the Union Pacific and agitation among shippers to obtain their support. Chipman thought if the "monopoly is dissolved" the Rio Grande's traffic solicitors could obtain enough Union Pacific business to make secure the employment of the Rio Grande employees for whom he was speaking (V. II, 1217).

When pressed for facts to support their desires or beliefs that they should have the same rates via the longer Rio Grande that they have via the shorter Union Pacific routes, the Rio Grande shipper witnesses resorted to irrelevant conclusions, generalities concerning economic welfare of their states and the country, and even the legal conclusion taught them by Rio Grande propaganda and persuasion that the Union Pacific holds a harmful "monopoly" over the transportation of communities located exclusively on its route and of commodities which originate or terminate on its line, or, in other words, that every railroad has a "monopoly" of transportation at points on its line unless those points are also served by another railroad. Those witnesses were unable to state facts to show how they were damaged or handicapped by having lower rates and shorter routes via the Union Pacific, or what necessity if any, there might be for through routes and equal rates via the longer, slower and more onerous Rio Grande route.

Indeed, such facts as they stated squarely contradict their pretense for a need of the Rio Grande route. For example, witness Bass, supporting the Rio Grande, testified that shipments of his producers organization move to markets in "the entire forty-eight states" and to Canada, South Pacific, South America, Cuba, Africa and other points (V. I, 246). The Commission's report ignores these undisputed facts and the legal effect of them. In the face of such facts it says (R. 70) that those shippers "are debarred from effective participation in the widespread system developed for the marketing of such commodities." Obviously ignoring the national and international distribution by Idaho producers, the Commission quite apparently rests its conclusion upon the witnesses' belief in "free enterprise" and their thought that "all gateways should be opened."

At least 15 of the Rio Grande shipper witnesses characterized their testimony by insisting upon abstract and general principles of "free enterprise," elimination of "monopoly," "freedom of competition," "free flow of goods," "free markets," routing traffic to the Rio Grande in "retaliation" against the Union Pacific, desirability of equal rates via the Rio Grande for use as "a competitive weapon or a weapon in competition" in periods of car shortages.

The testimony of all of the Rio Grande's shipper witnesses rests upon the basic proposition that Congress is and always has been wrong in affording carriers any protection against being compelled to join in through routes that short haul them.

Such testimony, in addition to the fact frankly admitted by Rio Grande that it was obtained by solicita-

tion and persuasion to help the Rio Grande win its case, obviously is without "rational probative force," and is not "such relevant evidence as a reasonable mind might accept to support a conclusion," *Edison Co. v. Labor Board*, 305 U. S. 197, 229, 230, that there is public necessity or need for shippers to have equal rates via the Rio Grande's longer line to provide adequate and more economic transportation than the same shippers have via the shorter and faster Union Pacific.

The term "public interest" has "direct relation to adequacy of transportation service to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities," *N. Y. Central Securities Co. v. U. S.*, 287 U. S. 12, 25, but the testimony of the Rio Grande's solicited and procured shipper witnesses clearly is devoid of any such relation. The vague and irrelevant reasons given by the witnesses for the longer, slower and "more onerous" Rio Grande route are squarely contrary to the "primary aim" of the Congressional "policy to secure the avoidance of waste," which, "as well as the maintenance of service, is viewed as a direct concern of the public," *Texas v. United States*, 292 U. S. 522, 530.

To require through routes and joint rates that short-haul existing routes upon such evidence; as the Commission does in this case, is to ignore the Congressional concern with the "preservation of the earning capacity, and conservation of the financial resources of individual carriers" that will lose the traffic and revenues for the benefit of the Rio Grande. *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 277.

Examination of "the whole record" will compel the decision that the Commission's order is not "justified

by a fair estimate of the worth of the testimony," and that the Commission has failed completely to take into account the circumstances, recited above, that detract from and destroy the weight of the Rio Grande's shipper testimony on which the order rests, *Universal Camera Corp. v. Labor Bd.*, 340 U. S. 474, 482, 488.

(b) The Commission arbitrarily ignored, distorted and gave no weight to the overwhelming preponderance of evidence against the Rio Grande.

Against the testimony of the witnesses supporting the Rio Grande, 120 shipper and public witnesses testified in opposition to the Rio Grande's complaint, of whom 85 are shippers who ship and receive approximately 136,000 carloads of traffic annually. Some 70 of these witnesses ship or receive a total of about 65,000 carloads annually of the commodities on which the Commission's order requires through routes and joint rates in connection with the Rio Grande from the northwest area.

Their evidence established the undisputed fact (not disclosed in the Commission's report) that since 1906 and 1912 when through routes and joint rates between the Oregon Short Line Railroad Company with the Rio Grande via Ogden were cancelled, there have been no complaints or demands by shippers to state commissions or the Interstate Commerce Commission or the railroads for establishment of such through routes and joint rates. This is shown by undisputed testimony of the state commissions of Montana, Washington, Oregon, Wyoming, and Nebraska (V. II, 988, 915, 954, 1322, 1183).

The complete absence of shipper or public demand for the through routes and joint rates sought by the Rio Grande was ignored by the Commission, but it demon-

states not only that there was no public interest in the Rio Grande's proposal, but also that it was only by its propoganda campaign of agitation that the Rio Grande was able to inject into the case procured shipper testimony on which the Commission has based its order, after finding that the record did not justify any findings favorable to the Rio Grande upon its own testimony.

Since public interest is to be determined by weighing and appraising the interests, circumstances and activities of all of those for whom testimony was submitted, it is appropriate to point to the fact that the public service commissions of the States of Washington, Oregon, Montana, Wyoming, and Nebraska, which intervened in opposition to the Rio Grande's demands as shown in the report (R. 65), represent the interests of all citizens in those States and must be considered as having spoken in behalf of the entire population of those States, with the exception of those few individuals who were procured by and appeared in support of the Rio Grande. Attention is called to the fact that the total population of the intervening states opposing the Rio Grande was nearly 7,000,000 people as of 1940 and we think the Commission was extremely arbitrary in refusing to give effect to the interventions and testimony of those States as expressing the interests, needs and desires of this great number of people. The interests of many of them were voiced again through commercial or other organizations of which they are members and many others personally testified with respect to their own individual interests.

Of the shipper and public witnesses who testified in opposition to the Rio Grande—[33]

---

33 Several of these witnesses were shippers of two or three commodities, which accounts for an apparent larger number who testified about particular commodities, than the total number who testified against the Rio Grande.

—33 testified on behalf of state public service commissions, chambers of commerce, farm organizations, labor unions and various civic or commercial groups.
—29 were shippers of livestock.
—37 were shippers of fruits and vegetables.
— 6 were grain shippers.
— 9 were lumber shippers.
— 3 were seed shippers.
— 4 were shippers of farm machinery and supplies.
— 7 were shippers of products of mines.
— 1 was a shipper of building materials.
—30 were shippers of miscellaneous articles, such as paper products, beer, honey, aircraft parts, wool, general merchandise, groceries, contractors' supplies, etc.

Shippers opposing the Rio Grande ship and receive from and to the northwest area about 136,000 carloads annually of the same commodities shipped by witnesses supporting the Rio Grande, and all of them ship to and from the same general markets and areas.

The evidence submitted by the shipper and public witnesses opposing the Rio Grande established the following facts (V. II, 913-1068; 1082-1126; 1181-1203; 1281-1293; 1318-1515):

(1) Transportation facilities, service and routes of the Union Pacific are entirely adequate and satisfactory.

(2) Through routes and joint rates sought by the Rio Grande have never been needed or requested and are not necessary now or for any time in the foreseeable future, and would not be used by shippers now using the Union Pacific because the Rio Grande's routes would be longer, delaying their shipments in transit, and would require additional interchanges between carriers contributing to loss and damage to their commodities.

(3) If the Rio Grande should take any appreciable volume of traffic and revenues from the Union Pacific, the result would be retrenchments by the Union Pacific to save operating expenses, curtailment of train service to shippers and abandonment of branch lines, and these results would seriously and injuriously affect the business activities of shippers and the welfare of the general public along its line.

(4) The Union Pacific has co-operated and aided in the building and development of the communities it serves, has built branch and feeder lines to develop many areas for the purpose of retaining its full main line haul of such traffic and it would be unjust at this late day to permit the Rio Grande, without contributing any facilities or service in the northwest, to divert any of such traffic away from the Union Pacific.

(5) The Union Pacific contributes greatly to the economic welfare of the communities served by it in investments in those communities, employment of large numbers of people, payment of large amounts of taxes that go to the maintenance of schools and all other public institutions in those States and communities.

(6) Anything that prejudices or injures the Union Pacific is detrimental and injurious to individual shippers served by it and to the general economic welfare and public interests of those communities.

(7) While they will continue using the Union Pacific for traffic over which they control the routing, most of them ship and receive perhaps the bulk of their traffic over which control of routing is in the hands of their customers in many distant parts of the country who might be persuaded by Rio Grande solicitors and those of its

connections to route the traffic via the Rio Grande without realizing the serious detriment that would result to the shippers and communities on the Union Pacific through the latter's loss of the traffic.

(8) It would be unjust and unreasonable for the Rio Grande and its shipper witnesses seeking only financial gain for their individual selfish reasons with no proposal to contribute any public benefit as an offset to the Union Pacific or the shippers and citizens along its lines, to undermine and jeopardize transportation service of the witnesses supporting the Union Pacific who are fighting to retain good transportation service and to prevent any potential deterioration or curtailment of the service or in the ability of the Union Pacific to contribute to the communities in the form of future investment and developments and expansions in employment, in taxes to the States, counties and cities and to the general economic prosperity of the communities it serves.

(9) Rio Grande's livestock shipper witnesses misled the Commission to believe that they are at a competitive disadvantage because of their inability to buy and ship livestock out of Idaho and the Northwest for feeding or breeding in transit on the Rio Grande and southern Colorado at the same rates that apply when livestock from that area is shipped via and fed in transit on the Union Pacific. Those Rio Grande shippers have considerably lower rates with feeding in transit privileges on livestock from Colorado, New Mexico and the southwest than the rates applicable on cattle from that area for feeding on the Union Pacific, and because of the increasing demand for livestock on the Pacific Coast there is practically no available feeder stock supply in Idaho and the Northwest area for stock feeders on the Rio Grande and in southern Colorado.

(10) Stock feeders on the Union Pacific in Idaho, Wyoming and Nebraska buy livestock from the southwest and all other places where available regardless of through rates and transit privileges, and that privilege is not controlling. They pay combination of feeder rates inbound and fat cattle rates outbound on much of the livestock handled by them.

(11) Bean processors on the Rio Grande would gain an unduly preferential advantage over dealers located on the Union Pacific and the Burlington if the prayer of the Rio Grande is granted.

(12) No "pocket markets", as claimed by Rio Grande's witnesses to result from present routes and rates, have been discovered or encountered by these shipper witnesses south or east of Denver or elsewhere in shipping some 136,000 carloads annually of potatoes, onions, fruits and vegetables and others of the same products shipped by Rio Grande's shipper witnesses to the extent of about 28,000 carloads annually.

(13) There are no markets along the Rio Grande for Idaho vegetables and other perishables because those products are grown along that railroad.

(14) Union Pacific tariffs afford a "variety" of ample routes and transit privileges for fruits, vegetables and other products to markets throughout the United States and foreign countries, and in many years' experience shipping such products no need has ever been felt for routing them via the Rio Grande.

(15) Fruits and vegetables, and other perishable articles should move to markets as expeditiously as possible by the most direct route with the fewest interchanges

between carriers. The longer time in transit and the additional interchanges via the Rio Grande would result in deterioration or damage to such articles and loss to shippers and their customers.

(16) Even though through routes are made via the Rio Grande, shippers in Idaho and the northwest will still be dependent on the Union Pacific for refrigerator cars and other equipment, as the Rio Grande does not propose to serve them with its own tracks and facilities.

(17) Union Pacific service has been "highly satisfactory" from the standpoint of car supply, transit time, diversion orders, etc.

(18) Shippers located on the Union Pacific in Idaho and the northwest cannot expect Union Pacific to continue to spend money to give good service if, after it has furnished the cars and borne the expense of assembling the traffic, it is faced with the constant threat of diversion of a large part of the traffic from it to the Rio Grande.

(19) Prompt and dependable rail service is absolutely necessary to the shipping and marketing of the perishable commodities grown in Idaho. The Rio Grande cannot contribute to such service, but on the other hand, will have serious adverse effects upon it.

(20) Time is "of the essence" in handling, assembling and transporting perishable commodities to market, and the Rio Grande's longer route would delay rather than speed up the movement of the traffic.

(21) Shippers located on the Union Pacific in the northwest know from experience that present good serv-

ice of that line cannot be maintained if it is deprived of substantial traffic and revenues by diversion to the Rio Grande.

While in procuring shippers to support its case, the Rio Grande accused the Union Pacific of having a "monopoly" on the traffic which it originates and terminates at points on its line in the northwest area, the undisputed evidence of shippers and others clearly shows that the traffic sought by the Rio Grande in the northwest area is already supplied with abundant transportation service and routes. Moreover, it should be remembered in this connection that the Rio Grande does not propose to construct trackage or to add anything to transportation facilities in the northwest.

The northwest area is served not only by the Union Pacific, but also by the Great Northern, the Northern Pacific, the Milwaukee, the Southern Pacific, the Spokane, Portland and Seattle and numerous short lines of railroad. Transportation by water, coastwise, intercoastal, foreign and Columbia River barges, is available. In fact, the availability and use of water transportation for traffic to and from the northwest has given the shippers very low and depressed rail rates.

The adequacy and sufficiency of rail transportation for the traffic the Rio Grande seeks is admitted by the Commission where it says in its report (R. 62) the Union Pacific facilities are "adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future," and that the evidence shows the Union Pacific "has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line."

In addition to the several transcontinental railroads and short lines, the northwest area is, of course, supplied with the customary motor carrier transportation, both public and private. In Idaho alone, for example, there were 64,151 trucks and 32,607 trailers registered in 1949. These included private, commercial and common carrier vehicles (V. I, 779).

With respect to the adequacy of existing rail transportation facilities and service in that area and their present unused capacity, Witness W. F. Kirk, a Railroad Operations Consultant with more than 50 years of practical experience in railroad operations and in transportation work, including the position of Regional Director of the Railroads, in 24 states as Agent of the Commission and the Office of Defense Transportation during World War II (V. I, 891, 892), testified as follows:

> "Railroad service available to shippers in the States of Idaho, Montana, Oregon and Washington, served by the Milwaukee, Great Northern, Northern Pacific and Union Pacific which were operating with less than a capacity load during the war period, was uniformly good although, due to some local and brief interruptions, it was necessary infrequently to divert some traffic as between these four railroads. However, it was never necessary or logical to reroute any noticeable amount of traffic, either originating or terminating in the above-mentioned states to the D&RGW through the Salt Lake or Ogden gateway.
>
> * * * * *
>
> "The four transcontinental railroads serving the states of Idaho, Montana, Oregon and Washington have maintained through freight schedules with connecting lines to and from the east, south and west for many years. These through schedules afford frequent and dependable service to their patrons in those states."

The record shows that some 50 witnesses who supported the Rio Grande ship and receive only about 28,000 carloads annually, and that 120 public and shipper witnesses, shipping 136,000 carloads of freight annually, testified against the Rio Grande.

While the Commission admits (R. 65) that "a large number" of shippers, representatives of state commissions and other organizations opposed the Rio Grande and testified as to the adequacy, efficiency and satisfactory character of service over Union Pacific routes, and that they never had any difficulty in reaching markets via those routes, nor felt any need for the Rio Grande route, the Commission minimizes and obscures this large volume of testimony and disposes of it by saying "[i]t is not practicable to deal with all of this evidence in detail" but that it has been "considered." Yet, it devotes 13 pages of its report (287 I. C. C. 634-647, R. 48-61) to a highly detailed statement and discussion of shipper testimony in support of the Rio Grande, emphasizing their particular individual situations and disclosing obvious solicitude for the desire of those shippers to enhance their profits through rate reductions via the Rio Grande regardless of injury resulting from short-hauling the Union Pacific. One who reads the report with knowledge of the testimony of record would be justified in concluding that the report was designedly written so as to leave the impression that the shipper and public testimony submitted in opposition to the Rio Grande was so lacking in substance, merit or credibility as to justify no place, space or discussion, and that only the Rio Grande's shipper testimony deserved full exposure and discussion in the report.

There is no reason why the testimony of the 120 witnesses who testified against the Rio Grande should not be

accepted at full face value equally as the Commission ha accepted the testimony of the 50 witnesses supporting th Rio Grande.

The tenuous, vague and speculative possible prospec tive use that the Rio Grande's procured witnesses woul make of joint rates via that line clearly resolves, at most into a simple desire for equal rates via an additional rout enabling them to divert their traffic from Union Pacifi routes in "retaliation", for some irrelevant, non-trans portation reason. The Commission, nevertheless, give such testimony full weight and credibility while it give no weight or effect to the testimony opposing the Ri Grande of shippers and receivers of 136,000 carloads an nually of the same kind and types of traffic handled b the Rio Grande's shipper witnesses, to and from the sam producing and marketing areas, whose testimony show beyond question that the shippers and receivers of tha far greater volume of traffic have experienced throughou the years none of the alleged handicaps claimed by Ri Grande's witnesses because of lack of joint rates via tha line with the Union Pacific to and from the northwest and that the absence of such joint rates has presented n obstacle or difficulty in the distribution of their com modities or in reaching adequate market areas freely.

The Commission's statement (R. 65) that the oppo sition of this large number of shipper witnesses arise from their fear of "assumed effects of the diversion fro the Union Pacific of the full amount, or a very large por tion, of the traffic estimated by the Rio Grande as the po tential traffic" that it seeks in this case is wholly er roneous and manifests a thoroughly unrealistic and dis torted conception of the facts and circumstances tha should have governed the Commission's decision in th case.

Many statements and findings in the report lead to a wholly erroneous and incorrect impression of the preponderance of the evidence of record. For example, the statement (R. 57) that "Idaho producers" of fruits and vegetables "find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City" obviously is intended to have readers of the report believe that *all* "Idaho producers" testified to that effect.

The facts are that about 12 "Idaho Producers" and shippers who testified for the Rio Grande ship and receive approximately 10,000 carloads annually of fruits and vegetables and their shipment go to all markets in the 48 states and to Canada, South Pacific, South America, Cuba, South Africa and other points (V. I, 246), and that the 37 "Idaho producers" and shippers of fruits and vegetables who opposed the Rio Grande ship and receive annually over 60,000 carloads of these products, and all of them stated that the lack of joint rates between the Union Pacific and the Rio Grande for this through traffic had never handicapped or interfered with free and wide distribution or effective participation in the markets for their fruits and vegetables.

The further and controlling facts are that 5 witnesses from the State Commissions of Montana, Oregon and Washington, some 37 shippers of fruits and vegetables and 29 shippers of livestock, most of whom were from the "originating" or northwest area, and numerous shippers of other commodities testified most emphatically that the lack of through routes and joint rates via the Rio Grande presented no handicap, obstruction to or disadvantage in their distribution to markets throughout the United States.

The report further is misleading and erroneous in making it appear that Rio Grande shipper testimony is not only of substance and unquestionable credibility but also that it is far more voluminous than it is in reality. For example, in speaking of livestock, the report refers to needs of "[a] number of producers in the northwest area," but it then shows that the Rio Grande witnesses from the northwest who testified about livestock were from a small locality in southeastern Idaho, and the record shows that there were not "a number" but *only two*. (V. I, 485, 507). Not one livestock witness from the vast northwest area except those two, testified for the Rio Grande. In fact, even with its propaganda campaign, the Rio Grande was able to procure only two shipper witnesses from Oregon, Washington and Montana. These were W. S. Miller, representing a canning factory at Milton, Oregon, who said that "the strongest argument" he has for the joint rates is that "it would give us another route in the event storm areas would develop along the Union Pacific" (V. I, 539), and R. E. Titus who actually was not a shipper but was an executive of a forest products association who stated that no one could tell whether the members of that association would use the Rio Grande's route, but that he favored the joint rates via that line because he thought such action "necessary to carry out the national transportation policy" (V. I, 214).

The implication in the report (R. 70) that there are substantial markets at points on the Rio Grande to be "tried" or for the actual sale of substantial quantities of carloads of any commodities, is contradicted by the very clear demonstration in the report (R. 50) that the "small dealers" along the Rio Grande are able to handle only less-than-carload quantities. It is further negatived by the fact that, excepting Denver, Salt Lake City, Provo

and Ogden, all of which are served by the Union Pacific, of the 52 stations or points on the main line of the Rio Grande between Ogden and Denver, according to the official 1940 census, four points had no population, one point had 1; 14 points had less than 50; 20 points had less than 100; 31 points had less than 500; 37 points had less than 1,000; 11 points had more than 2,000 and only 3 points had a population of more than 5,000. The record shows no "need" for joint rates to enable a car from Chicago, for example, to partly unload at Pueblo, Colorado Springs, Grand Junction or Price and further movement via the Rio Grande to the northwest area.

In its discussion of the amount of traffic that might be diverted to the Rio Grande, the Commission concludes as follows (R. 46):

> "Whatever the amount, it would be the result mainly of (a) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (b) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it."

This conclusion squarely contradicts and refutes the ultimate finding that the through routes and joint rates are "necessary or desirable in the public interest." Certainly if the routes and rates are not "necessary" or

"needed" to provide adequate and more efficient, or more economic transportation if shippers who have pretended such need must be induced by solicitation and persuasion to use the Rio Grande as a "bridge route" or to use transit privileges on that line in connection with bridge traffic. The statement that growth of traffic "over" that line in the 1934-1948 period indicates the interest of shippers and receivers on the Rio Grande in development of transit activities on that line refutes any "necessity" for the joint rates to increase "bridge" traffic via the Rio Grande, for the "growth of traffic" has taken place in the absence of the sought through routes and joint rates. The growth of "bridge" traffic over that line without the joint rates also demonstrates that the report is misleading and erroneous in placing the emphasis it does on the importance of transit activities on that line. Transit activities on that line is an obvious "smoke-screen" of the Rio Grande and its supporting shippers to disguise the Rio Grande's real purpose to enhance its financial position by diverting bridge traffic from the Union Pacific.

In view of the Commission's definite and positive assurance, indicated in the finding last quoted, that no traffic will be diverted to the Rio Grande unless it can succeed in soliciting, persuading and inducing shippers to use its line as a bridge route and for transit purposes, it necessarily follows that there is no actual, genuine or real "public interest" in having the through routes and joint rates established. If, as the Commission has found, a substantial amount of the traffic will not flow naturally to the Rio Grande because of recognition by shippers of "some actual necessity or some compelling reason" for using that line for the traffic involved, then the routes and the joint rates are not in the "public interest", *Jamestown, N. Y., C. of C. v. Jamestown W. & N. W. R. Co.*, 195 I. C. C. 289, 292.

Despite its efforts to minimize the amount of traffic that may be diverted to the Rio Grande, the validity of the Commission's order must depend on "need" for the routes and joint rates, which is the equivalent of a finding that the amount of such diversion will be "substantial", otherwise, the order is frivolous, capricious and unlawful.

3. The finding that the commodities specified in the order must be moved to market "over as many routes as possible" is contrary to the requirements of the Act, in conflict with other facts found in the report, and is contrary to the evidence.

The Commission, in an obvious effort to create a justifiable basis for ordering through routes and joint rates via the Rio Grande, asserts that the commodities specified in the order "must be moved to market with expedition and care, and over as many routes as possible" (R. 62). The first part of this assertion and its implications are wholly misleading. First, while shippers testified that expeditious movement of perishable articles was necessary, no shipper testified that those articles "must" move over "as many routes as possible," and there is no suggestion in the testimony that those commodities are not now moving "with expedition and care", and, second, that routing the traffic over the Rio Grande would retard rather than expedite its movement is positively shown by the correct finding (R. 62) in the report that:

> "Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services."

The implication that the traffic is not now moving with "care" and that routing via the Rio Grande would

contribute greater "care" in the movement of the traffic is an obvious distortion of the irrefutable fact that the additional interchanges between the Rio Grande and its connections would add to the probability of damage or injury to the shipments as would the greater distance over its "more onerous," mountain route, and, in addition, there is no evidence whatever to support such implication.

The further implication that an adequate number of routes are not available for flexible, orderly and wide distribution of the specified commodities is without evidential support and is in direct conflict with the correct statement in the report (R. 28) that the transcontinental rates on the specified commodities now applicable via Union Pacific routes and which the Rio Grande seeks to make applicable via its line "generally apply over all routes", although there are many exceptions, the Rio Grande being one such exception because all of the traffic originates and terminates on the Union Pacific routes, which are shorter and direct routes between the origins and destinations of the traffic, and because Section 15(4) of the Act gives the Union Pacific the right to haul the traffic as far as it can in the direction of its destination.

The Commission's assertion that the traffic must move "over as many routes as possible" is plainly contrary to applicable provisions of the Act. As noted earlier, Section 1(4) makes it the duty of common carriers "to establish reasonable through routes with other such carriers". This is far from a duty to establish "as many routes as possible." The requirement is only for establishment of "reasonable through routes" regardless of whether the traffic is of a "general perishable nature" or whether it is ordinary "dead" freight. "The law exacts only what is reasonable from such carriers." *Midland Valley R. R. v. Barkley*, 276 U. S. 482, 485.

No case has been found in which either the Commission or a court has construed the Act as requiring "as many routes as possible" for any traffic of any nature. On the other hand, the assertion that portable traffic must move over as many routes as possible is not only contrary to the plain language of the Act but is also contrary to the Commission's settled administrative interpretations. For example, in *New York Dock Ry. v. P. & O. R. R. Co.*, 32 I. C. C. 568, in dismissing a complaint of a railroad demanding joint rates to improve its financial condition, the Commission held at page 573:

> "The law does not require us to establish through routes and joint rates in all instances where carriers have neglected or refused to do so, but does empower us to do so in proper cases, with the manifest intent of giving effect to the general purposes of the act by securing reasonable facilities to the public. * * *"

At page 575, the Commission said:

> "* * * we can not view with favor an effort to require the establishment of such routes and rates merely to enable a carrier to wrest from its connections, or an agent to wrest from its principal, greater compensation."

In *Lehigh Portland Cement Co. v. Lehigh Valley R. Co.*, 38 I. C. C. 199, the Commission said at page 201:

> "The statute makes it the duty of common carriers subject to the act to establish through routes and just and reasonable rates applicable thereto. Where this duty has been fully met and discharged and there exists both such reasonable through routes and joint rates, and other routes by combination over which no joint through rates apply, the carriers in our opinion are not required to maintain a parity of rates over both such routes, but may properly maintain through joint rates over joint through routes that are somewhat less than the combination of locals used to make

the through rates applicable over the combination through routes, provided that neither rate, under all the facts and circumstances, is more than just and reasonable for the service performed."

In *Kansas City Hay Dealers Assn. v. C. G. W. R. R. Co.*, 49 I. C. C. 372, the Commission said at page 377:

"To compel the application of short-line rates over indirect and longer routes, merely as a means of providing a channel of doubtful benefit to comparatively few shippers, would lay an unnecessary expense upon the railroads against the interest of the public as a whole. When joint rates that are neither unreasonable nor unduly prejudicial are maintained over direct routes adequate response is made to the reasonable requirements of the public, and carriers should not be required to perform wasteful transportation by maintaining the same rates over indirect and more circuitous routes."

In the instant case the joint rates over existing through routes of the Union Pacific and its connections are "neither unreasonable nor unduly prejudicial." In fact, they are expressly found to be reasonable, and the direct routes over which they apply are found adequate to haul any foreseeable volume of traffic (R. 62). On the other hand, the combination rates via the indirect and longer Rio Grande routes are found both unreasonable and unduly prejudicial.

The Commission's assertion that articles specified in the order must move "over as many routes as possible," directly conflicts with the prohibition in Section 15(4) against compelling through routes that short-haul a carrier. In *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, the Court held at pages 276-277:

"The Act does not give the Commission authority to establish all the through routes it may

deem necessary or desirable in the public interest. The general language of paragraph (5) is limited by paragraph (4). The latter lays down the rule that, subject to specified exceptions, a carrier may not be compelled to participate in a through route which does not include substantially its entire line lying between the termini of the route. The purpose is to protect the long haul routes of carriers."

In the case just quoted, the Commission sought "to limit by construction the impact of the short-hauling restriction on its power to establish through routes", *Thompson v. United States*, 343 U. S. 549, 555. In the latter case, as in the instant case, escape from the prohibition against short hauling was sought by the Commission through the expedient of arbitrary factual conclusions as well as erroneous construction. Here, by mere arbitrary and unsupported assertion that the specified commodities must move "over as many routes as possible", the Commission would completely emasculate the short haul prohibition of Section 15(4), for "as many routes as possible" means, as we have said, that perishable articles and the marketing system for their distribution would require through routes at every point where the lines of two or more carriers connect. Such effort to evade or nullify the mandate against short-hauling a carrier is clearly contrary to the purpose of the mandate, and the order is arbitrary and void.

4. The finding that "the shippers in the originating area" of the specified commodities "are debarred from effective participation" in the system for marketing such commodities, is incorrect, capricious and contrary to the evidence.

The Commission's report states (R. 70):

"The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities."

By that statement the Commission would mislead readers of the report to believe that *all shippers* in the originating area testified to that effect. The facts are that *no shipper from that area made such statement*; that no shipper of butter, eggs, or dried beans from that area submitted any testimony; that only two livestock shippers and about 12 fruit and vegetable shippers from that area testified—*not* that they were "debarred from effective competition" but that (regardless of Section 15(4)) they desired all routing restrictions and "gateways" removed.

As noted earlier, 12 "Idaho producers" and shippers who testified for the Rio Grande ship and receive approximately 10,000 carloads annually of fruits and vegetables and their shipments go to all markets in the 48 states and to Canada, South Pacific, South America, Cuba, South Africa and other points (R. 60).

Thirty-seven "Idaho producers" and shippers of fruits and vegetables who testified against the Rio Grande ship and receive annually over 60,000 carloads of these products and all of them stated that the lack of joint rates between the Union Pacific and the Rio Grande had never handicapped or interfered with free and wide distribution or effective participation in the markets for their fruits and vegetables.

Fruits and vegetables constitute the great bulk of the traffic in the specified commodities from the orig-

mating area. Idaho potatoes are included in that traffic and they in turn make up most of the tonnage, approximating an average of some 40,000 carloads annually. All Idaho producers and shippers of potatoes and other vegetables are located in territory served exclusively by the Union Pacific and all of them have the choice of joint rates and transit privileges via the Union Pacific or combination rates with transit privileges via the Rio Grande. Thus, they have precisely equal opportunity for effective participation in the marketing of their products. As stated above, producers and shippers of some 60,000 carloads annually of these products testified definitely and positively, in opposing the Rio Grande's complaint, that the lack of through routes and joint rates via the Rio Grande did not interfere with flexible distribution and marketing of their products.

That the Idaho shippers of potatoes and other vegetables have not been handicapped in their distribution and marketing by the lack of through routes and joint rates via the Rio Grande and have no need for them in the future, has already been shown by many facts. Particular emphasis is given to this fact by shippers who opposed the Rio Grande and by data on pages 96 and 97 of the Commission's decision in *Idaho Public Utilities Comm. v. Alton R. Co.*, 251 I. C. C. 93. It is there shown that in 1939 Maine shipped 40,462 carloads of potatoes and Idaho, 34,522 carloads, but in markets "far more distant from Idaho than from Maine" the Idaho shippers sold very substantial quantities where Maine sold small or insignificant quantities. At page 96 the report states:

> "At Chicago, where in 1938 and 1939 the totals were 15,863 and 16,506, respectively, there were 5,323 carlot unloads of potatoes from Idaho in 1938 and 5,374 in 1939, and there was but 1 carlot unload of Maine potatoes in 1938 and none from that State in 1939."

The following table and comment at page 97 of that report further shows the freedom of movement and effective participation by Idaho producers in the markets:

"Carlot unloads of potatoes, year 1939

At	From Idaho	From Maine
Atlanta, Ga.	218	197
Detroit, Mich.	651	435
Indianapolis, Ind.	294	66
Louisville, Ky.	102	13
Nashville, Tenn.	279	4

"'For several years, the Idaho potato traffic has increased at most, if not all, of the principal markets. At several cities in the East, South and West, carlot unloads of onions from Idaho exceeded unloads from points in most other States."

Thus, the facts are that the Idaho producers have practically taken over markets throughout the United States for their principal products and are selling them even in several foreign countries. These facts clearly contradict instead of furnishing a basis for the Comsion's assertion that shippers in the originating area "are debarred from effective participation" in markets for their commodities. If participation by Idaho producers in all important markets throughout the United States and in several foreign countries is not "effective", it is necessarily due to something other than the lack of through routes via the Rio Grande for it is indisputable that the Idaho products now participate in those markets via the shorter and faster Union Pacific routes. Equal rates via the Rio Grande could not enable them to sell in any market in which they cannot now sell. If there were markets for their products at points on the Rio Grande, they have joint rates to all such points except those served by the Union Pacific and as to those points they have the single factor local rates of that direct line.

The only effect of the Commission's order would be to permit the Rio Grande to divert Idaho fruits and vegetables over its line as a "bridge route" instead of moving as they now do over the Union Pacific to the distant markets such as Chicago, Detroit, Indianapolis and others mentioned in the above table.

The Commission's assertion that shippers in the "originating area" are debarred from effective participation in the markets is plainly a contradiction of the facts of record and furnishes no support or basis for the order.

5. There is no evidence to justify or support the findings that combination rates via the Rio Grande are unjust and unreasonable and that joint rates now applicable via the Union Pacific are reasonable for application via the Rio Grande, and the latter finding is contrary to the evidence.

The Commission's report states (R. 73-74):

"That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes."

Before reaching its "Conclusions" (R. 73), the Commission said:

"The evidence is convincing that the joint rates sought, which now apply over the Union Pacific routes, would be reasonable for application also over the Rio Grande routes via the Ogden gateway on the traffic, and from and to the points, embraced within the findings of unlawfulness herein made."

The Commission is justified in condemning rates as unreasonable or otherwise unlawful only upon substantial evidence. Nor may the Commission require carriers to establish rates until it has found upon such substantial evidence that such rates are reasonable. Not only must there be substantial evidence, but the Commission has the "duty of deciding in accordance with it," *Chicago Junction Case*, 264 U. S. 258, 265. In *Edison Co. v. Labor Board*, 305 U. S. 197, at page 229, this Court held:

> "Substantial evidence is more than a mere scintilla. It means such relevant evidence as a reasonable mind might accept as adequate to support a conclusion."

The evidence must not only be substantial but of such nature as to enable the Commission "specifically to report the facts and give the reasons" on which it concludes that rates are reasonable or unreasonable, *Beaumont, S. L. & W. Ry. v. U. S.*, 282 U. S. 74, 86. A mere "general statement in the language of the statute" that rates are reasonable or unreasonable is not sufficient in the absence of substantial evidence from which the Commission can make findings of fact which support its ultimate conclusions, *Florida v. United States*, 282 U. S. 194, 213. The evidence must be such as to justify a statement of "[t]he precise grounds for the Commission's determination" and enable it to make "the basic or essential findings required to support the Commission's order," *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 488-489.

The Commission's statement in this case that the combination rates via the Rio Grande are unreasonable and its statement that the joint rates via Union Pacific routes are reasonable for application via the longer Rio Grande route are invalid and void because they were not only made without substantial evidence, but *without any*

evidence upon which the Commission could determine whether the combination rates or the joint rates were reasonable or unreasonable. *The record is wholly devoid of such evidence.* This is made clear by the Commission itself where it points out that although the Rio Grande submitted a large number of rate comparisons these were limited to comparison of the revenues produced on various commodities by the combination rates compared to those produced by the joint rates and the revenue that would be produced by the joint rates if made applicable via the Rio Grande. The report correctly states (R. 67-68):

> "With unimportant exceptions, the only rates of record with which comparison is made by or in behalf of the complainant are the joint rates in effect over routes embracing the lines of the Union Pacific which are sought for application over the lines of the Rio Grande and the Union Pacific via Ogden or Salt Lake City. As above indicated, many of those rates are the result of competition. However, they are the going rates on this traffic and, except for authorized general increases therein, have been in effect for many years. There is no claim that any of those rates is below a minimum reasonable level. It follows that the joint rates sought as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates."

There being no other evidence, it results that the Commission's assertion that the combination rates via the Rio Grande are unjust and unreasonable rests upon the mere fact that they are higher than the joint rates via the Union Pacific, and its assertion that the joint rates are reasonable for application via the Rio Grande rests not upon evidentiary facts concerning their reasonableness, but upon the mere fact that they are lower than the combination rates, that, although the joint rates are admitted by the Commission to be subnormal, depressed

rates resulting from competitive conditions; they are the "going" rates, that they have been established for many years and upon the Commission's erroneous assertion that no one claims the joint rates are below a minimum reasonable level. (For illustrations of the difference between the combination rates and the joint rates, see Appendix to the report (R. 86).)

Plainly, the Commission misconceived and overreached its authority. The combination of local rates may not be condemned as unreasonable merely because it is higher than joint through rates over the same route, and, *a fortiori*, where, as here, the combination rates and the joint rates are not on the same route but the routes of other and different carriers. "A through rate is ordinarily lower than the combination of the local rates," *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 771, footnote; and the "combination rate itself is ordinarily, if not always, higher than the joint through rates." *Brown Lumber Co. v. L. & N. R. Co.*, 299 U. S. 393, 396. "Long hauls have generally been thought entitled to move at a rate less than the sum of the rates for local or short hauls between intermediate points," and this principle of rate-making has "become deeply embedded in the transportation system of the country, and have [has] been approved by the Interstate Commerce Commission, by the federal courts, this one included; and, so far as it has spoken on the subject, by Congress itself," *I. C. C. v. Inland Waterways Corp.*, 319 U. S. 671, 684-685.

Although the Commission finds the joint rates to be reasonable because they are the "going rates," the report does not even suggest any reason why the Commission thinks the combination rates are unreasonable. In fact, throughout the long report there is not a word of discussion concerning the reasonableness or unreason-

ableness of the combination rates or of any evidentiary facts with respect thereto. The subject is not touched upon until the ultimate "conclusion" is stated at the end of the report that the combination rates are unjust and unreasonable (R. 73). This general conclusion in the language of Section 1 of the Act is a complete nullity because the report refers to no basic or evidentiary facts to justify the conclusion, and the record, as we have said, is completely devoid of evidence from which such facts could be stated in the report or from which the conclusion could be drawn. *Florida v. United States*, 282 U. S. 194, 213-215. The mere statement of a conclusion that rates are "unreasonable" must be read in the light of the report as a whole, and is insufficient "unless supported by facts more particularly stated", *U. S. v. Chicago, M., St. P. & P. Ry. Co.*, 294 U. S. 499, 506.

In condemning the combination rates via the longer routes of the Rio Grande because they are higher than the joint rates via the Union Pacific's horter routes and in concluding that the joint rates are reasonable for application via the Rio Grande's longer routes because they are the "going rates," the Commission fails entirely to adjudicate the reasonableness of either of the rates. Even with its administrative "expertise" the Commission is no more capable, under the law, of looking at a rate of "X cents per 100 pounds" and, without more, determining whether the rate is reasonable or unduly prejudicial, than is a jury capable of looking at a defendant accused of crime and, without evidence, determining whether the accused is guilty.

While conceding that rate comparisons may be of some probative value under certain circumstances, for instance when upon adequate evidence one of the rates

has been found reasonable by the Commission, this Court had the following to say on the subject in *Louis. & Nash. R. R. v. United States*, 238 U. S. 1, at page 12:

> "The same is true of determining, by comparison, the reasonableness of freight charges. Until some standard is adopted they may prove nothing—even where the two hauls are over the same mileage. For the rate attacked may tend to show that the others are too low—while they in turn might be relied on to prove that the first is too high. Both may be unreasonably high, or too low because compelled by conditions over which the carrier had no control. Water competition, rail competition, and competition of markets enter so largely into the establishment of rates that mere distance is not necessarily a determining factor—indeed the statute itself recognizes that there may be circumstances under which it is lawful to charge less for a long haul than for a short haul over the same road."

The foregoing quotation is controlling of the situation under discussion because neither the combination rates nor the joint rates required by the order have been determined by the Commission to be reasonable except rates on livestock which it prescribed over 20 years ago. In fact, as shown in the Commission's report, page 654, most of the joint rates which the order would require for application via the Rio Grande are subnormal, depressed rates compelled by water and truck competition. Many of them are lower than rates which the Commission has found reasonable, and others have been specifically found by the Commission to be considereably less than "reasonable maximum" rates which the railroads normally would be entitled to charge. *Lettuce from Idaho, Montana, Nevada, and Oregon*, 229 I. C. C. 572, and *Fresh Green Vegetables from Idaho and Oregon*, 253 I. C. C. 143.

As stated in the report (R. 54), the rates on livestock were prescribed in 1931 by the Commission in *Livestock-Western District Rates*, 176 I. C. C. 1, a mileage scale of rates having been prescribed with rates predicated upon the shortest routes between origins and destinations, but the Commission expressly relieved the carriers from maintaining the rates over such short routes where to do so would result in short-hauling them within the meaning of Section 15(4) of the Act. In prescribing those rates the Commission said at page 83 of its report that livestock is a commodity which from its nature "can not sustain a rate level which will produce more than the cost of rendering the service plus a minimum of profit," and that the rates therein prescribed "will do no more than meet these minimum requirements." In other words, the livestock rates prescribed by the Commission were fixed at a subnormal, depressed level because livestock could not bear its "fair share of the transportation burden." Because of the longer distance via the Rio Grande, livestock rates under the Commission-prescribed mileage scale resulted in a rate 19 cents per 100 pounds more than the rate via the shorter route of the Union Pacific on livestock from the northwest area, as shown in its report in the case at bar. In addition, because of its "more onerous" operating conditions, the Commission, as shown in the report (R. 54) authorized the Rio Grande to add an "arbitrary" of 6 cents on livestock moving between points on the line of that railroad. As stated in the report (R. 55), the Union Pacific and other railroads expressed willingness to reduce the 19-cent differential via the Rio Grande to reflect the shorter mileage over that line resulting from its acquisition of a shorter route through the Dotsero cut-off. Despite all of this and without a scintilla of evidence on which to determine whether the livestock rates

it prescribed over 20 years ago have become unreasonable, the Commission's order would require a reduction of 19 cents per 100 pounds in the admittedly depressed, subnormal rates it prescribed on livestock, and a further reduction of 8½ cents discussed in the report on cattle from the northwest area moved via the Rio Grande for feeding or grazing in transit at points on that line or connecting lines east of Denver and Pueblo. A clearer example of arbitrary action by the Commission could hardly be imagined. "A finding without evidence is arbitrary and baseless," *Int. Com. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88, 91.[34]

---

34 Circuit Judge Johnsen correctly condemned the Commission's action with respect to livestock rates as follows:

"Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock; Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15(4) of the statute: In establishing the prescribed rates, the carriers limited their application, as the Commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations." (R. 177.)

Admittedly, there was no evidence on which the Commission could determine whether the combination rates were unreasonable, and the only evidence concerning reasonableness of the depressed subnormal joint rates compels a finding that they are less than minimum reasonable rates for application via the Rio Grande's longer route which the report admits to be "less favorably situated" (R. 62), inferior physically and beset by conditions which make its operations "more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein (R. 70)—facts which the Commission admits it has recognized for many years (R. 71) by granting the Rio Grande higher rates than those of other lines. But here, the Commission ignores all of these difficulties and says the combination rates via the "onerous" Rio Grande routes are unreasonable to the extent they exceed the joint rates via Union Pacific's shorter route which is more favorably situated, without onerous operating conditions and with at least a 24-hour shorter time in transit and one or two fewer interchanges.

The Commission's settled rule is that bare comparison of the earnings of one rate with another does not afford evidence upon which to base a finding under Section 1. In *Memphis Cotton Oil Co. v. I. C. R. R. Co.*, 17 I. C. C. 313, 318, the Commission said:

> "The reasonableness of a rate must of necessity depend upon the conditions surrounding the traffic at the time it moves. The length of the haul; the competition to be met, the cost of the service, the value of the service, the density or volume of the tonnage, as well as the general transportation conditions then existing, are factors that have a more or less definite relation to the rate that a carrier may reasonably demand for a transportation service."

In dismissing a complaint alleging violations of Sections 1, 2, 3, the Commission said in *McHenry-Millhouse Mfg. Co. v. N. L., O. & W. Ry. Co.*, 151 I. C. C. 501, at page 502, that:

> "We have repeatedly said that the existence of a lower rate between the same points over a route other than the route of movement does not of itself establish the unreasonableness of the higher rate."

In *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 192 I. C. C. 192, the Commission said at page 195:

> "A lower rate over other recognized routes and established junctions is not in itself proof that combination rates over the route of movement were unreasonable."

The fact that the joint rates via the Union Pacific are somewhat lower than the combination of rates via the longer Rio Grande line with its dissimilar and costly transportation conditions, conforms to the rule rather than presenting an exception. In *Fargo Commercial Club v. A. & W. Ry. Co.*, 98 I. C. C. 691, the Commission said at pages 723-724:

> "We have consistently adhered to the view in recent years that joint rates should be somewhat lower than the aggregates of the intermediate rates because of the facts that ton-mile earnings should decrease as distance increases and that, as a general rule, a through movement entails less terminal expense than two local movements to and from the intermediate point."

In *Quanah, A. & P. Ry. Co. v. Atchison, T. & S. F. Ry. Co.*, 205 I. C. C. 253, upon the base comparison of "various joint rates over the direct routes with higher combinations resulting if the traffic moved through the Floydada gateway," the Commission held at page 260:

"Usually the combination is higher than the joint rate, and the mere showing of the difference in amount between them is not sufficient to condemn the combination as unreasonable."

In *Cancellation of Rates and Routes via Short Lines*, 245 I. C. C. 183, at page 187, the Commission said:

"* * * the combination rates over a route that short-hauls a carrier may justifiably be higher than the joint rates remaining in effect over other routes. *Routing Grain and Grain Products via Chicago, R. I. & P. Ry. Co., supra; Routing via Quanah, A. & P. Ry. Co., supra; Western Pac. R. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127; *Routing of Ores via Southwest Missouri R.*, 220 I. C. C. 110."

As Union Pacific's routes are shorter and are more direct and efficient than the longer routes via the Rio Grande, the rule stated in the Commission's decision in *Kansas City Hay Dealers Asso. v. C., G. W. R. R. Co.*, 49 I. C. C. 372, at page 377, should govern here:

"To compel the application of short-line rates over indirect and longer routes, merely as a means of providing a channel of doubtful benefit to comparatively few shippers, would lay an unnecessary expense upon the railroads against the interest of the public as a whole. When joint rates that are neither unreasonable nor unduly prejudicial are maintained over direct routes adequate response is made to the reasonable requirements of the public, and carriers should not be required to perform wasteful transportation by maintaining the same rates over indirect and more circuitous routes."

If a combination of rates via one route becomes unreasonable and unlawful simply because it is higher than a joint rate between the same points via some other and in this instance a much shorter route, the only remedy

fies in wide open interchange between all lines via every available junction point, regardless of carriers' rights under Section 15(4) not to be short-hauled, regardless of the Commission's consistent holdings that joint through rates should generally be somewhat lower than the combination of rates between the same points, regardless of increased terminal and interchange costs by including additional carriers, and regardless of the fact that the result would be to wipe out many basic rate-making principles on which the rate structure has been built.

Despite its admission (R. 67) that the joint rates are depressed and subnormal, the Commission uses them merely because they are the "going rates" as the measure by which to condemn the combination rates and to determine reasonable rates for application via the longer Rio Grande line through Ogden. This is "not a full discharge by the commission" of its duty to adjudicate and determine the reasonableness of rates, *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, 510. It is not an adjudication or determination at all. It is simply an arbitrary requirement that the lowest rates charged by carriers over their own routes shall be the maximum rates they may charge over other routes they are forced to establish and which short haul them.

The result of the requirement that the joint rates maintained over the shorter Union Pacific routes be made applicable over the longer Rio Grande routes are portrayed in the following table (original I. C. C. Ex. No. 26), which shows that some of the joint rates are so low that they do not produce a profit even when the traffic moves via the shorter Union Pacific routes while others produce a small profit which would be turned into a considerable loss when spread over the longer mileage of the Rio Grande:

6. There is no basis in law or in facts found by the Commission for its conclusion that combination rates via the Rio Grande are unduly prejudicial to shippers desiring to use that route and unduly preferential of shippers using Union Pacific routes, and the conclusion is contrary to basic findings of fact and the overwhelming preponderance of the evidence.

(a) Are the shippers found to be unduly prejudiced when they ship via the Rio Grande route are the same shippers found to be unduly preferred when they ship via the Union Pacific routes, and since they have the right to select the route of their choice, there is neither a legal nor a factual basis for the Commission's finding of a violation of Section 3(1) of the Act.

It is clear from the statements and findings in the report and from the Commission's ultimate conclusions that the order, as stated earlier, relates entirely to traffic of shippers and receivers located in the so-called "excluded territory" or "northwest area". For example, the report states that shippers and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, "from the excluded territory" are at a serious disadvantage in marketing their products, compared with "competing shippers and dealers located on the Union Pacific" (R. 59), and that "[t]he shippers in the originating area" are debarred from effective participation in the marketing system developed for the specified commodities. Again, under "Conclusions" (R. 73), the westbound monuments are from shippers in Vermont and Georgia to receivers at "destinations in the excluded territory in the northwest area", and the eastbound commodities specified are from shippers at "origins in the excluded territory to destinations" in eastern

and southern United States. The undue prejudice and undue preference of shippers found in the second conclusion is with respect to the specified commodities "from and to the points described in the foregoing finding," that is, the first finding or conclusion that through routes and joint rates are necessary from and to origins and destinations in the "excluded territory," or northwest area.

The shippers and receivers in the "excluded territory" or northwest area include the few who supported the Rio Grande and the far greater number who opposed it. They are *all located on the Union Pacific routes* in the northwest or "excluded territory." All of them have available *the same* Union Pacific routes with *the same* joint rates and *the same* transit privileges, all of them also have available the combination rates with transit privileges via the Rio Grande.

Shippers and receivers located in the northwest area "using, or desiring to use, the Rio Grande routes" have the *same choice* that shippers and receivers "using the Union Pacific routes" have of routing their traffic via either the Rio Grande or the Union Pacific. All of them have the same rates and privileges when they route via the Rio Grande and all of them have the same rates and privileges when they route via the Union Pacific. Clearly the situation thus presented cannot serve as a basis for a lawful finding of undue prejudice and preference within the meaning of Section 3(1) because the *same shippers* and receivers are claimed by the report to be unduly prejudiced when they elect to route their traffic over the Rio Grande and unduly preferred when they elect to route their traffic over the Union Pacific. The undue prejudice found against them in the report when they ship over the Rio Grande is due to the claimed undue preference

they receive when they ship via Union Pacific routes at lower joint rates. In other words, shippers and receivers in the northwest area "using, or desiring to use, the Rio Grande routes," may alternatively prejudice or prefer themselves as and when they choose.

Where, as here, shippers have the choice of becoming at once the prejudiced and the preferred, we submit that their election to become "prejudiced" shippers by routing over the Rio Grande when they have the choice of being the "preferred" shippers by routing over the Union Pacific, does not present a case within the meaning of Section 3(1). It requires unequal treatment of two different shippers to make a violation of Section 3(1)—one who is prejudiced and another who is preferred. The disadvantage and injury of the prejudiced shipper must be shown to result to the advantage and benefit of his commercial competitor claimed to be preferred. *The same shipper cannot be prejudiced or damaged by his own preference or profit.* In short, the Commission cannot make a case of undue prejudice against shippers "using, or desiring to use, the Rio Grande routes" by pointing to the fact that they have lower rates when they elect to route their traffic over the Union Pacific, nor by pointing to other shippers in the northwest area who elect to use the Union Pacific routes instead of the Rio Grande routes with its higher combination rates. The very factual situation affords no basis, to say nothing of "a rational basis" for a finding of undue prejudice or for the order based upon that finding. *Miss. Valley Barge Co. v. U. S.*, 292 U. S. 282, 287.

The very word "preference" carries with it the thought of different treatment of two patrons by the same carrier or carriers and the same is true of the words "prejudice," "advantage" and "disadvantage," used in

Section 3(1). In *Dewey Portland Cement Co. v. Alton & E. R. Co.*, 174 I. C. C. 671, the Commission said at page 685:

> "Undue prejudice under section 3 of the interstate commerce act ordinarily requires the prejudice suffered by one party to be the source of positive advantage to the one alleged to be preferred and that a competitive relationship exists between the parties concerned. *Boston Wool Trade Asso. v. B. & A. R. R. Co.*, 78 I. C. C. 178, 183."

Among numerous other cases in which the Commission has repeated that rule, are *Hess v. Union Pac. R. Co.*, 237 I. C. C. 121, 126-127; *Illinois Coal Traffic Bureau v. Ahnapee & W. Ry. Co.*, 204 I. C. C. 225, 241; *Barrett Co. v. A., T. & S. F. Ry. Co.*, 172 I. C. C. 319; *Evansville Cham. of Com. v. Atchison, T. & S. F. Ry. Co.*, 196 I. C. C. 349, 351; *Welch-Sandler Sand Co. v. Atchison, T. & S. F. Ry. Co.*, 196 I. C. C. 789, 793; and *Fort Smith & W. Ry. Co. v. Atchison, T. & S. F. Ry. Co.*, 216 I. C. C. 411, 433.

No case can be found in which the Commission has attempted to make out a case of undue prejudice against a shipper by pointing to the same shipper's alleged undue preference, nor is there a case, except the instant one, where carriers have been held guilty of granting an undue or unreasonable preference to shippers located on their lines because they offer lower rates over their routes than the *same shippers* have over another route. We repeat that the Commission cannot use the situation of these shippers and receivers in the northwest area to make out a case of undue prejudice against them when routing over the Rio Grande, by pointing to the fact that the *same shippers* enjoy lower rates when they elect to ship via the Union Pacific, and the Commission's finding of a violation of Section 3(1) is null and void.

(b) Refusal of the Union Pacific and other railroads to equalize availability of transit privileges offered by the Rio Grande with those offered by Union Pacific is not, in law, a violation of Section 3(1) of the Act, and the order requiring such equalization is null and void.

The findings in the Commission's report make it definite and certain that the undue prejudice found therein against shippers desiring to use the Rio Grande is based wholly and solely upon the fact that they cannot take advantage of transit privileges on that line at rates as low as the rates with similar transit privileges are available on the Union Pacific; also that the asserted undue preference of shippers using the Union Pacific is due solely to the fact that they have the same transit privileges that shippers have on the Rio Grande, but at lower rates.

Apart from improvement of the Rio Grande's financial position, the reduction in rates via the Rio Grande required by the order is solely for the purpose of enabling shippers desiring to use the Rio Grande to make use of transit privileges on that line at the same rates they pay when they ship via the Union Pacific. This is made clear at many places in the Commission's report. The report states that the amount of traffic that would be diverted from the Union Pacific by the Rio Grande would depend on the latter's persuasion of shippers and receivers to use its line as an "overhead or bridge route", and upon the Rio Grande's ability to "induce shippers to use transit facilities available on that line" (R. 46). The following language in the report shows more specifically the purpose of the order to equalize the availability of transit privileges on the Rio Grande with those on the Union Pacific (R. 47):

"*Transit.*—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be stopped in transit for various commercial operations and reshipped at the balance of the joint rate from the point of origin are of great value to shippers, receivers, and distributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.

"The Rio Grande, like other railroads, offers a large number of such transit arrangements, including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding."

The report further emphasizes equalization with respect to transit (R. 70):

"For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply."

The following language from the report shows that the primary basis for the order is equalization of transit privileges at points on the Rio Grande with those on the Union Pacific (R. 72):

"As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments west-bound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs east-bound, *who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande*, as compared with the lower rates,

together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3(1) of the act." (Italics added.)

Section 1(4) of the Act makes it the duty of every common carrier subject thereto "to provide and furnish transportation upon reasonable request therefor." The "transportation" which common carriers are thus required to furnish is defined in Section 1(3)(a) of the Act as follows:

> "The term 'transportation' as used in this part shall include locomotives, cars, and other vehicles, vessels, and all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, and transfer in transit, ventilation, refrigeration or icing, storage, and handling of property transported."

The definition does not include transit privileges in the "transportation" that carriers are required to furnish. Indeed, the Commission itself correctly concludes that transit privileges are not "transportation", but are "commercial operations" (R. 48). This Court accepted that view in *B. & O. R. Co. v. U. S.*, 305 U. S. 507, 525.

The Commission finds (R. 73) that the through routes and joint rates required by its order are necessary and desirable in the public interest in order to provide adequate and more economic "transportation", but as we have shown, the "transportation" via the Rio Grande would be the same under the order as it is now, the only difference being that such "transportation" would be at lower rates which the Commission believes

the Rio Grande could use to induce shippers to ship via its longer route for the purpose of exercising "transit privileges" offered by that line. But, as these "commercial operations" are not transportation service performed by railroads, but consist of various manufacturing, processing, grazing, fabrication, storage and other activities which take place while commodities are "stopped" at some point along the railroad and held in possession of the shipper *between* the performance by the railroad of two separate movements or transporting services, they do not fall within the "transportation" which the Act requires carriers to furnish. They are beyond reach of the Commission's power and may not be made the basis of a finding of undue preference and prejudice in violation of Section 3(1) of the Act, or an order requiring through routes and joint rates, and the Commission exceeds its power in ordering equalization of the cost of using the Rio Grande's transit privileges with the Union Pacific routes, for the Commission may not lawfully order carriers to provide or offer more than the Act makes it their duty to furnish. Certainly, the Commission is without power to equalize opportunities offered by different railroads for "commercial operations". In *Interstate Com. Comm. v. Diffenbaugh*, 222 U. S. 42, 46, this Court said, "[t]he law does not attempt to equalize fortune, opportunities or abilities."

In *Central R. R. Co. v. United States*, 257 U. S. 247, this Court enjoined and annulled an order issued by the Commission under Section 3(1) of the Act requiring 23 railroads to remove undue prejudice caused by the refusal of the Central of New Jersey and the Pennsylvania to establish a creosoting-in-transit privilege on their lines at Newark, New Jersey, while at the same time participating in through routes and joint rates with

other carriers in the middle west and south which other carriers offered that transit privilege on their lines.

The purpose of the complaint and of the order there, as here, was to *equalize different railroads* in the matter of transit privileges. There the railroads had equal rates but the Central and Pennsylvania refused to grant transit privileges offered by the other railroads. Here, the Union Pacific routes offer the same transit privileges offered by the Rio Grande, but refuse to join in equal rates to equalize transit opportunities of the Rio Grande with those of the Union Pacific for shippers from or to the northwest area.

At pages 255-256, the Court pointed out that whether a transit privilege is granted or withheld is a policy matter to be determined solely by the railroad on which the transit point is located, and that one carrier is powerless to control such determination by another. This being true, the Court said a carrier that refused to establish transit privileges on its line could not be held responsible for unjust discrimination even though it participated in joint rates with carriers that offered such privileges on their lines, saying at pages 259-260, that:

> "If this were not so the legality or illegality of a carrier's practice would depend, not on its own act, but on the acts of its connecting carriers. If that rule should prevail, only uniformity in local privileges and practices or the cancellation of all joint rates could afford to carriers the assurance that they were not in some way violating the provisions of section 3. What Congress sought to prevent by that section as originally enacted was not differences between localities in transportation rates, facilities, and privileges, but unjust discrimination between them by the same carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any

earlier and mandatory legislation has changed in this respect, the purpose or scope of section 3."

If, as in that case, no basis for a finding of unjust discrimination under Section 3 was afforded by the refusal of the Central and Pennsylvania to equalize transit opportunities on their lines with those on connecting lines with which joint rates had already been established; *a fortiori*, no legal basis for a finding under Section 3 is afforded by the Union Pacific's refusal to establish joint rates that short haul it for the purpose of equalizing transit opportunities on the Rio Grande with those on the Union Pacific.

Furthermore, in the instant case the Commission has, without reason or explanation, departed from the norm and principle of its previous decisions with respect to its authority to deal with transit privileges. (See *Sec'y of Agriculture v. United States*, 347 U. S. 645, 653.)

In *Adrian Grain Co. v. Ann Arbor R. R. Co.*, 276 I. C. C. 331, the Commission *refused to require the establishment of joint rates for transit privileges* via through routes that would short haul the Ann Arbor Railroad. All of the new routes sought in that case were longer than existing routes, which is the identical situation in this case. The Commission there expressed the view that the publication of the sought routes would encourage wasteful and uneconomic transportation and would not give reasonable preference to the originating carrier as required by Section 15(4) of the Act. Granting the Rio Grande's demands in this case would likewise encourage from 200 extra miles to as much as 50 per cent more miles of wasteful and uneconomic transportation in addition to short hauling Union Pacific 925 miles on traffic it originates.

In *Laclede-Christy Co. v. Akron, C. & Y. R. Co.*, 276 I. C. C. 519, the Commission dismissed a complaint seeking—

> * * * the *same through charge* on the clay in and the brick out *with transit* at St. Louis as its competitors pay with transit at Mexico, East Mexico, Farber and Vandalia." (p. 525; Italics added.)

The complainant's disadvantage in transportation costs in that case ranged from $47 to $83 per carload more than those of its competitors who had transit privileges at lower rates published by the Gulf, Mobile & Ohio in order "to attract and hold traffic" (p. 524). Finding that longer mileage and greater operating costs—both of which are involved on the Rio Grande—created dissimilarity in transportation conditions with respect to complainant's shipments compared to those of its competitors, the Commission held at page 525:

> "It is not within the province of the Commission to disregard transportation conditions and require an adjustment of rates and charges merely for the purpose of *equalizing or minimizing* the advantages and disadvantages of competing shippers growing out of the geographical locations of plants *for the manufacture of* [sic] *processing of materials in transit. Magor Car Corp. v. Delaware, L. & W. R. Co.*, 144 I. C. C. 135, 138." (Italics added.)

The Commission has always held that transit privileges are purely local to the railroad on which the transit point is located, *Concentration of Cotton at New Orleans*, 83 I. C. C. 18, 20, and it held in *Transit Arrangement on Lumber*, 129 I. C. C. 518, at page 520, that:

> "Connecting lines can not dictate to the road that alone serves the transit point the manner in which joint rates through that point shall be applied

in conjunction with the transit arrangements, so long as they are not deprived of their long haul. *Concentration of Cotton at New Orleans*, 83 I. C. C. 18; *Transit Privileges on Cotton*, 83 I. C. C. 60."

In *Grain From Mobile and New Orleans Transited in South*, 218 I. C. C. 437, at page 440, the Commission said:

> "It is a well-settled principle, however, that the granting or withholding of transit is a matter which may be determined solely by the carrier that serves the transit point. *Transit Privileges on Cotton*, 83 I. C. C. 60; *Transit Privileges on Lumber*, 132 I. C. C. 53; and *Sugar Stored in Transit*, 146 I. C. C. 382. It is clear also that a carrier may not be found guilty of undue prejudice for failing to maintain a transit privilege at points on its line merely because like privileges are in effect at points on the lines of other carriers. *Central R. Co. of New Jersey v. United States*, 257 U. S. 247. In such instances an order requiring the removal of undue prejudice would not permit the carrier an alternative in the method of such removal."

As the carriers comprising Union Pacific routes do not and cannot control either the establishment or cancellation of transit privileges on the Rio Grande or the manner in which rates shall be applied to such privileges, we confidently assert that they have no such legal responsibility for or connection with the alleged disadvantage of shippers using the Rio Grande and its transit privileges as could make out a case of undue prejudice to those shippers or of undue preference of shippers using the Union Pacific within the meaning of Section 3(1). In *Routing Cottonseed to Kansas and Missouri*, 231 I. C. C. 775, at page 779, the Commission held that "a carrier cannot be charged with unlawful prejudice against a community which it does not serve."

(c) Even if the essential foundation existed, which it did not, for finding a violation of Section 3(1), the facts found by the Commission and the testimony of record do not support or justify the conclusion that the combination rates via the Rio Grande are unduly prejudicial to shippers and receivers in the northwest area "using or desiring to use the Rio Grande routes" for westbound shipments of monuments, and eastbound shipments of livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, and butter and eggs, and unduly preferential of shippers and receivers "using the Union Pacific routes."

The majority of the district court held that the "evidence of preference, advantage, prejudice or disadvantage. * * * furnishes no basis for the order under Sec. 3(1)," (R. 164), apparently because "there is no community of interest between the Union Pacific and the Rio Grande" (R. 166).

Circuit Judge Johnsen held that the facts would not permit finding a violation of Section 3(1). He said (R. 178):

> "But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3(1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3(1)."

The Commission in many decisions has pointed out facts which must be clearly shown by evidence in order to enable it to find undue prejudice and undue preference between shippers in violation of Section 3(1) of the Act.

In *Hayes Pump & Planter Co. v. Atchison, T. & S. F. Ry. Co.*, 171 I. C. C. 13, it said at page 19:

> "However, a mere showing of a difference in rates does not establish the existence of undue prejudice or preference. To justify such a finding a competitive relation between the persons, localities, or descriptions of traffic concerned must also be shown."

In *Archer-Daniels-Midland Co. v. Great Northern Ry. Co.*, 171 I. C. C. 192, the Commission said at page 195:

> "Prejudice to be undue and unlawful under section 3 must ordinarily be such that the prejudice suffered by one is a source of positive advantage to another and a competitive relation must exist between the persons or commodities affected."

Definite showing of specific shipments and their origins and destinations must be made to enable the Commission to determine whether one of two competitors is unduly prejudiced. *Kistler Leather Co. v. Baltimore & O. R. Co.*, 171 I. C. C. 669, 673; *Abrasive Co. v. Erie R. Co.*, 183 I. C. C. 103, 106. "Damage by reason of any undue preference which may exist" must be proved. *Alpena Leather Corp. v. Pennsylvania R. Co.*, 185 I. C. C. 106, 108.

Actual competition between the alleged preferred and the prejudiced shippers must be proved before a violation of Section 3(1) can be found. *Dewey Portland Cement Co. v. Alton & E. R. Co.*, 176 I. C. C. 671, 685; *Evansville Chamber of Com. v. Atchison, T. & S. F. Ry. Co.*, 196 I. C. C. 349, 351.

Actual damage through loss of business by reason of unduly prejudicial rate must be proved before a finding can be made that Section 3(1) has been violated, *Barrett Co. v. A., T. & S. F. Ry. Co.*, 172 I. C. C. 319, 332; *E. Cohn & Son v. Cedar Rapids & I. C. Ry.*, 200 I. C. C. 417, 419; *Illinois Coal Traffic Bureau v. Ahnapee & W. Ry. Co.*, 204 I. C. C. 225, 241; *Alphe Lux Co. v. Reading Co.*, 178 I. C. C. 16, 20.

Volume of movement and origins and destinations of actual shipments must be shown. *Abrasive Co. v. Erie R. Co.*, 183 I. C. C. 103, 106.

The Commission cannot make a valid finding of undue prejudice and preference under Section 3(1) unless there is evidence proving that transportation conditions affecting and surrounding both the prejudicial and preferential rate situations are "substantially similar." *Texas & Pac. Railway v. Interstate Com. Com.*, 162 U. S. 197. In *Clover Splint Coal Co., Inc. v. Louisville & N. R. Co.*, 197 I. C. C. 276, the Commission said at page 277:

> "Before a violation of section 2 of the act can be found, it must appear that the circumstances and conditions are substantially similar. And although section 3 is more comprehensive than section 2 and does not contain the phrase embodied in section 2, 'under substantially similar circumstances and conditions,' nevertheless, it contains words of wider scope, 'in any respect whatsoever,' and as a matter of practical application the thought, if not the words, 'under substantially similar circumstances and conditions,' must be present to the mind in considering under section 3 what preferences or advantages are due or reasonable or are undue or unreasonable." *Board of Trade of Carrollton, Ga. v. Central of Georgia Ry. Co.*, 28 I. C. C. 154. So that it is now well settled that sufficient dissimilarity of circumstances and con-

ditions will prevent what would otherwise be a violation of the statute. See *Ragland Coal Co. v. T. Ry. Co.*, 115 I. C. C. 147, and cases cited therein."

A finding of "substantially similar" transportation conditions is precluded in this case by the fact recognized by the Commission and found in the report (R. 72):

> "There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3(4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred. No such a showing has here been made."

That finding obviously made it impossible for the Commission to make a valid finding of undue prejudice and preference between shippers, for similarity of transportation conditions must be proved by the evidence to justify the latter finding as well as a finding of discrimination.

In view of the Commission's own admission that no such evidence appears in the record, its finding of undue prejudice and preference between shippers is clearly invalid.

The shipper testimony fails completely to meet the requirements laid down by the Commission in its prior decisions.

The record contains no evidence whatever to show that shippers "using the Union Pacific routes" have any preference or advantage whatever over shippers "using, or desiring to use, the Rio Grande routes" unless the dif-

ference in rates constitutes an advantage prohibited by Section 3(1), and the Commission decisions cited above hold that it does not. And, since all of the shippers of traffic to or from the originating or northwest area have equal privilege of routing their traffic via either the Rio Grande or the Union Pacific routes, it is impossible to see how any evidence could show any preference or prejudice to any of them by anything the Union Pacific or Rio Grande is doing.

The record does not show that shippers using or desiring to use the Rio Grande routes have lost business to any competing shipper using the Union Pacific routes, and, indeed, the record contains only the merest general statements that any competition exists between any shippers using or desiring to use the Rio Grande routes with those using the Union Pacific routes. Two or three instances of such general statements appear but are not accompanied by any showing that such alleged competition has resulted in injury, loss or damage to shippers using the Rio Grande routes or in any gain of business by shippers using the Union Pacific routes.

There is no evidence whatever of specific shipments, origins or destinations, and none to show the particular shippers who have the alleged advantage or preference that must be shown to establish the undue prejudice found by the Commission against shippers using the Rio Grande routes.

The assertions we make with respect to the absence or lack of evidence obviously cannot be proved by pointing to any particular page or portions of the record. We cannot point to pages of the record where testimony *is not*. If counsel for defendants deny or dispute our assertions that the record is lacking in evidence in the respects men-

tioned above, then it is their burden to point to the pages of the record on which they contend that such evidence may be found.

While the Commission's report labors to make it appear that shippers and receivers in the "excluded territory" may not have made sales of their products at some points in the southwest because of so-called "pocket-markets," the report does not suggest that any shipper located either in the "excluded territory" or on the Rio Grande has ever lost a sale or any business to any alleged competitor located on or using the Union Pacific. In fact, shippers and receivers in the "excluded territory" who are "using, or desiring to use, the Rio Grande routes" being themselves located on the Union Pacific, could not make such contention, for their rates and privileges are identical to those available to whatever competitors, if any, they might have on the Union Pacific. The report states (R. 49) that in some instances a dealer in building materials located at Salt Lake City has had to "forego business" as far east as Glenwood Springs, Colorado, on the Rio Grande "because of the rate situation," but the discussion of that shipper's situation is clearly irrelevant for the Commission does not find a violation of Section 3 with respect to building materials. Since building materials are not included among the commodities specified in the order in connection with the required through routes and joint rates, it is not understandable why the Commission devotes discussion to that shipper's situation unless it is merely an effort to bolster the report by discussing irrelevant and immaterial circumstances. The same is true of the discussion of farm machinery (R. 50), of wheat (R. 59), and of lumber (R. 60),

(d) **The finding that the substantial differences in transportation conditions found in the report to exist in hauls over the Union Pacific and over the Rio Grande via Ogden between the "excluded territory" and points north and west of the southern and eastern boundaries of Kansas, the Missouri River and the lines of the Union Pacific and Chicago and North Western Railroads from Omaha to Chicago "become relatively insignificant" and that "transportation conditions are substantially similar" for hauls between points in the "excluded territory" and points south and east of the line described, is arbitrary, erroneous, contrary to law and the evidence.**

The findings indicated in the above heading relate to the Commission's Section 3(1) finding of undue prejudice to shippers using the Rio Grande and undue preference to those using the Union Pacific.

As shown by decisions cited above, the Commission may not make a finding of undue prejudice and preference without finding that circumstances and conditions are substantially similar with respect to the shippers alleged to be preferred and the shippers alleged to be prejudiced by his competitor's alleged preference.

In *Kauffman Milling Co. v. Mo. Pacific Ry. Co., et al.*, 4 I. C. C. 417, the Commission succinctly stated the rule at pages 435-436:

> "The statute contemplates and clearly provides for dissimilar conditions that may affect the making of rates by carriers, and in a proper case of that nature it is no less the duty of public tribunals to rec-

ognize dissimilarities that justify exceptional rates than to apply the general principles of the law."

The principle of the decisions by the Commission was declared by this Court early in the history of the Commission. In *Texas & Pac. Railway v. Interstate Com. Com.*, 162 U. S. 197, the Commission sought to enforce an order requiring railroads to cease and desist from charging any less or different rate for transportation of imported goods than for domestic goods. The Commission was of the view that the fact of importation did not create a dissimilar circumstance, or that if it did the Commission was without authority to consider such dissimilarity. At page 217 the Court held that, "[i]n so construing the act we think the Commission erred." There can be no question, therefore, that where substantial differences or dissimilarities in circumstances and conditions exist a finding of undue preference and prejudice cannot be justified, nor may the Commission prescribe rates which ignore such dissimilar circumstances.

Demonstrating the dissimilar transportation conditions in the instant case, the report recites the following facts and conclusions (R. 61-62):

> "The Union Pacific operates about 9,724 miles of railroad serving over 1,700 points in 13 States. It reaches the Pacific coast at Seattle, Portland, and Los Angeles, and the Missouri River at Council Bluffs, Iowa, and Kansas City. Its line between Pocatello and North Platte, Nebr., the point of divergence of traffic via Council Bluffs and Kansas City, runs through a substantial portion of the territory principally involved in this proceeding. It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct

routes, the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.

"Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity, and efficiency in operation, shows that the railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line.

"The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. East-bound on the Union Pacific the maximum grade at any point is 1.52 per cent and west-bound 1.55 per cent. The Rio Grande's maximum grade is 2 per cent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union Pacific. The total rise and fall in feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services."

Concerning the Rio Grande the Commission finds (R. 70):

"Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recognized by the Commission in prior proceedings. See *Livestock, Western District Rates*,

supra, and *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486."

In the language quoted next below, the Commission concludes that there are substantial differences or dissimilarities between transportation conditions over Union Pacific routes and those over Rio Grande routes via Ogden, and its order, seemingly on the ground that the hauls are shorter, purports to give effect to the dissimilarities to and from points in the territory roughly north and west of the southern and eastern Kansas borders, west of cities located on the Missouri River and north of points on the line of the Chicago and North Western Railroad from Omaha to Chicago and the upper peninsula of Michigan. But the Commission then proceeds to ignore these same dissimilarities to and from points in the area south and east of the line just described, saying that "spread over hauls of such great length," the dissimilarities "become relatively insignificant" and that, therefore, as between such points "the transportation conditions are substantially similar" (R. 71).

> "We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls between the excluded territory, on the one hand, and points in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago & North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United States east and south of the points and territory above described, *the differences in the transportation conditions* are, in general, *spread over hauls of such great lengths*

that, considered as a whole, they *become relatively insignificant*. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar." (Italics added.)[35]

Thus, by mere "declaration" and "an artificial use of words," *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 545, the Commission seeks to overcome and escape the very dissimilarities in circumstances and conditions which it finds in the "more onerous" operating conditions on the Rio Grande, and to overcome a complete absence of evidence concerning transportation conditions elsewhere than on the line of the Rio Grande and a portion of the Union Pacific line.

Under the theory and requirements of the order, the admitted dissimilarities and "more onerous" operating conditions of the Rio Grande would vanish and transportation conditions would become "substantially similar,"

---

35 Circuit Judge Johnsen's dissent condemns this arbitrary action of the Commission, saying (R. 176-177):

"All that the Commission says, in brushing aside the transportational differences which I have set out * * * is that, when they are spread over hauls of such great lengths as are here involved 'they become relatively insignificant.'

* * * * * *

"I do not believe that without rational demonstration the Commission can say, except arbitrarily, that in relation to hauling distances of 1036 miles (Omaha) or 1153 miles (Kansas City) or 1524 miles (Chicago), the elements of difference which I have set out are so 'relatively insignificant' as to be entitled to be ignored on the question of whether 'more economic transportation' is being provided. And in the absence also of some demonstration or analysis of quantities and destinations as to the various other commodities involved, I do not believe that the Commission can be said to have any less arbitrarily brushed off the facts of the transportational and service differences existing, as related to the question of 'more economic transportation' under the statute, than in the case of livestock, when it merely attempts to push all of the facts abstractly to a far-distant horizon, without establishment of the reality of that horizon for lumping purposes."

for example on the Union Pacific somewhere within the 19 miles between Omaha, Nebraska, where the joint rates *are* required, and Elkhorn, Nebraska, where the joint rates are *not* required.

The dissimilarities in transportation conditions affecting the traffic in question are shown by facts recited in the report to be due entirely to unfavorable and more onerous conditions on the Rio Grande between Ogden and Denver compared to operating conditions on the Union Pacific between McCammon, Idaho, and the Missouri River. Excepting this comparison between conditions on the Rio Grande and the Union Pacific, there is no evidence whatever in the record concerning or comparing transportation conditions on other parts of the Union Pacific or routes in which it participates with other carriers. Therefore, there is not a scintilla of evidence to justify the conclusions (R. 72) that the proved dissimilarity of conditions on the Rio Grande and the Union Pacific "become relatively insignificant" and that "transportation conditions are substantially similar" between points in the northwest area and points south and east of Kansas, the Missouri River and the Chicago and North Western to Chicago.

The conditions on the Union Pacific and the Rio Grande which give rise to the substantial differences found by the Commission in transportation conditions are local to the Rio Grande and the Union Pacific, and those conditions cannot be avoided, eliminated, diluted or made to disappear by the arbitrary and erroneous statement that they "become relatively insignificant" for hauls to the southern and eastern part of the country. The dissimilar conditions are permanently fixed by nature, and even the magic wand of the Commission's "expertise" cannot

make them disappear. No expert can wipe out the "more onerous" Rio Grande location in the Rocky Mountains. There is no escape from the dissimilarities in either long hauls or short hauls, for traffic moved over the Rio Grande must encounter its "more onerous" operating conditions regardless of the length of haul northwest of Ogden or east of Denver. The Commission is without authority to ignore or eliminate these dissimilarities by "spreading" them "over hauls of such great lengths," and the attempt to do so is plainly arbitrary and contrary to the evidence which proves the admitted existence of the dissimilarities.

The Commission's attempt to avoid giving effect to the dissimilarity it found, by the simple expedient of making distance alone controlling in finding undue prejudice, is contrary to law. Even where other relevant circumstances are equal, "mere distance is not necessarily a determining factor—indeed the statute itself (section 4) recognizes that there may be circumstances under which it is lawful to charge less for a long haul than for a short haul over the same road," *Louis. & Nash. R. R. v. United States*, 238 U. S. 1, 12. *A fortiori*, where, as in the instant case, the Commission has expressly found dissimilar conditions in the "more onerous" operating conditions of the Rio Grande, it is precluded from using distance alone as a means of controlling and eliminating, neutralizing or escaping the dissimilar conditions.

In *Wilhoit v. Missouri, Kansas & Texas Ruy. Co.*, 12 I. C. C. 139, at page 140, the Commission held:

> "Distance is something of a factor in the determination of the reasonableness or unreasonableness of a rate, but to permit it to be a sole or controlling factor would be to introduce discrimination, which would create chaotic commercial conditions under

> which irreparable injury would be done to individuals, firms, and communities without any compensating good resulting to the people or the commerce of the country as a whole."

If the Commission were correct in the method used in this case to eliminate or ignore differences in transportation conditions, then any difference in conditions no matter how great could be disregarded if the Commission says the hauls which encounter the differences are long enough. By this arbitrary process the Commission would make the question whether transportation conditions are dissimilar depend entirely upon distance and would disregard the physical and other characteristics which create the differences. Thus, the Commission would change the law and make itself the sole judge as to whether dissimilarities in transportation conditions must be given effect in a particular case. This it may not do. *Texas & Pac. Railway v. Interstate Com. Com.*, 162 U. S. 197.

The dissimilarities correctly found by the Commission are beyond control of or correction by the carriers or the Commission and in the face of them a finding of undue prejudice may not be made. In *East Tenn. &c. Ry. Co. v. Interstate Com.*, 181 U. S. 1, at page 18, this Court held:

> "The prohibition of the third section, when that section is considered in its proper relation, is directed against unjust discrimination or undue preference arising from the voluntary and wrongful act of the carriers complained of as having given undue preference, *and does not relate to acts the result of conditions* wholly beyond the control of such carriers." (Italics added.)

Moreover, even if the Commission were legally sound in its theory that it may ignore dissimilar transportation

conditions when "spread over hauls of such great length," its order does not adhere to that theory, as shown by the following examples:

Joint Rates Via Rio Grande Not Required

From	To	Miles
Seattle, Wash.	Galena, Kansas	2,440.8
do	Milwaukee, Wis.	2,699.3
do	Sault Ste. Marie, Mich.	3,044.5

Joint Rates Via Rio Grande Required

From	To	Miles
Brigham City, Utah	Omaha, Nebraska	1,187.7
do	Kansas City, Mo.	1,267.7
do	St. Joseph, Mo.	1,269.7
McCammon, Idaho	Omaha, Nebraska	1,255.0
do	Kansas City, Mo.	1,352.0
do	Tulsa, Okla.	1,427.0

Thus, in applying its theory, the Commission ignores the "more onerous" transportation conditions of the Rio Grande on hauls to markets on the Missouri River that are less than one-half the length of hauls to Sault Ste. Marie, Michigan, and other points where the dissimilar conditions are given effect by *not* requiring the joint rates to such points.

These inconsistent and absurd situations compel the conclusion that the Commission felt it could escape, avoid or nullify the effect of the Rio Grande's "more onerous" transportation conditions to the better markets and traffic centers in the east by giving "lip service" to the same conditions on hauls to the less important traffic areas and centers.

We submit that the process, method or reasoning by which the Commission concludes that the very dissimilari-

ties it necessarily finds to exist in transportation conditions become substantially similar for hauls between the "excluded territory" and the southern and eastern part of the country is irrational, arbitrary, erroneous and contrary to the facts and law, and the order based thereon is null and void.

7. There is no evidence at all to support or justify the finding that maintenance by the Union Pacific of joint rates with the Bamberger Railroad south of Ogden while refusing to participate in like rates with the Rio Grande discriminates against the latter in violation of Section 3(4) of the Act.

The Bamberger Railroad operates between Ogden and Salt Lake City, Utah, and serves intermediate points, most of which are also served by both the Rio Grande and Union Pacific. Union Pacific's joint rates and through routes with the Bamberger have been in effect many years, and its relations with that line are the same as those between the Bamberger and the Rio Grande.

The report correctly states (R. 72) that to support a finding of discrimination under Section 3(4) of the Act it must be shown that transportation conditions over the route alleged to be discriminated against are no less favorable than over the route said to be preferred, but proceeds to find that the Union Pacific discriminates against the Rio Grande by refusing joint rates with it while maintaining them with the Bamberger Railroad.

No evidence whatever was submitted concerning or comparing transportation conditions on the Bamberger's electric line between Ogden and Salt Lake City with conditions on the Rio Grande. When an order is "rendered without any evidence whatever to support it" it must be

enjoined and annulled, *Florida East Coast Line v. United States*, 234 U. S. 167, 185, 188.

In the absence of any evidence, the Commission attempts to support its finding by saying "there is no apparent reason" why similar arrangements should not apply with the Rio Grande and that "it appears that there is no important dissimilarity" between transportation conditions on the two roads (R. 73).

Even if the Commission had knowledge of facts that would prove "no important dissimilarity", such facts would not support its finding because they are not in evidence. "Facts conceivably known to the Commission but not put in evidence will not support an order," *Chicago Junction Case*, 264 U. S. 258, at page 263. "Nothing can be treated as evidence which is not introduced as such," *U. S. v. Abilene & So. Ry. Co.*, 265 U. S. 274, at page 288.

The burden was on the Rio Grande to submit evidence proving similarity of transportation conditions. Its failure to do so cannot be overcome by what is *not shown* or what might *appear* to the Commission outside the record. The Commission is without power to make a finding without evidence, and an order based on such finding is void. *Int. Com. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88; *Int. Com. Comm. v. Union Pacific R. R.*, 222 U. S. 541.

V.

The Order Should be Annulled and set Aside Because the Commission Acted Arbitrarily and Unlawfully With Respect to the Essential Matters Discussed Under This Heading.

1. **Upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and contrary to law in failing to dismiss the complaint, and, in ordering through routes and joint rates on the theory that because shippers had intervened, the Rio Grande's complaint became a shipper complaint.**

The Rio Grande alleged in its complaint that combination rates via its line "are unjust, unreasonable and discriminatory" and deprive "the public and the complainant [Rio Grande] of the use of available and reasonable through routes at reasonable and non-discriminatory through joint rates which are necessary and desirable in the public interest."

The Rio Grande did not allege that the rates via its line unduly prejudiced or unduly preferred any shippers, nor did it allege that through routes via its line were necessary or desirable in the public interest, or that existing routes of the Union Pacific and other railroads were unreasonably long compared to routes that could be made via the Rio Grande, or that through routes and joint rates via the Rio Grande to and from the northwest area were needed to provide adequate and more efficient or more economic transportation.

The allegation that its own rates were unreasonable is mere surplusage, for obviously a carrier may not be heard to complain against its own rates. Likewise, the Act accords no right in the Rio Grande to through routes or joint rates, and it does not lie with the Rio Grande to

allege or rely upon the "public interest" or discrimination, undue prejudice or undue preference between shippers. In *Interstate Comm. Comm. v. D., L. & W. R. R.*, 216 U. S. 531, this Court annulled and enjoined an order of the Commission because it granted relief to a railroad under a provision of the Act which gave only shippers a right to complain. In *Interstate Comm. Com. v. Chi., R. I. & Pac. Ry.*, 218 U. S. 88, the carriers contended that an order of the Commission which they sought to enjoin was unlawful because it would foster and build up particular localities in production and distribution to the detriment of other persons and localities. At page 109, the Court rejected this contention, saying:

> "That the [railroad] companies may complain of the reduction made by the Commission so far as it affects their revenues is one thing. To complain of it as it may affect shippers or trade centers is another. We have said several times that we will not listen to a party who complains of a grievance which is not his. *Clarke v. Kansas*, 176 U. S. 114, 118; *Smiley v. Kansas*, 196 U. S. 447."

Shippers had intervened in that case as in this case, but the Court said, "[i]t is doubtful if they are properly here, or rather were properly permitted to intervene." In *Arkadelphia Co. v. St. Louis S. W. Ry. Co.*, 249 U. S. 134, at page 149, this Court held that undue discrimination against shippers "was not a matter of which the railways could complain."

Thus, not only was there no issue of undue prejudice against shippers or the "public" in this case, but there was also the inability or disability of the Rio Grande to raise such issues.

The only issue which the Act gives the Rio Grande the right to raise on complaint to the Commission against

other railroads is the issue of discrimination or undue prejudice against it under the provisions of Section 3(4) which declares that carriers "shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper."

As shown above, the Rio Grande did not complain that rates via its line were "discriminatory" against it, but the Commission held that the evidence failed to prove discrimination against the Rio Grande (except at points on the Bamberger Railroad), saying that (R. 72):

> "There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3(4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred. No such showing has here been made."

The Commission found (R. 73) that rates via the Rio Grande on the commodities specified in the order are "unjust and unreasonable" for the commodities named in the order, but this finding affords no legal basis whatever for ordering through routes and joint rates, *Thompson v. United States*, 343 U. S. 549, nor would a legal basis for such order have been afforded even if the Commission had found discrimination against the Rio Grande under Section 3(4) of the Act. *Texas & Pacific Ry. v. U. S.*, 289 U. S. 627, 650.

The Commission agreed that the Rio Grande, being a railroad, could not raise an issue under Section 3(1) of the Act of undue preference and prejudice among

shippers (R. 33), and as we have said, the Commission held that the evidence failed to prove discrimination against the Rio Grande under Section 3(4), (except as to points on the Bamberger Railroad which, of course, would afford no legal basis for the order the Commission issued but would justify only an order that discrimination against the Rio Grande cease and desist at those points).

In these circumstances, the Commission clearly should have dismissed the Rio Grande's complaint. Its authority was "to investigate the matters complained of," Section 13(1), and not to transform the case into a shipper case.

However, the Commission proceeded arbitrarily and erroneously to treat the case as if it were the complaint of shippers whose rights under the Act are totally different from and unrelated to the rights of the Rio Grande. Despite the fact that it permitted intervention of shippers only upon condition that their intervention and participation would not "unduly broaden the issues raised in the complaint", and regardless of its own holdings and the authorities cited above that a railroad may not plead or rely upon the rights of shippers or the public, the Commission held that the intervention of shippers raised an issue of undue preference and prejudice under Section 3(1) of the Act and (R. 33), that testimony of shippers raises "a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities" (R. 69).

Having thus arbitrarily created and set up a new and different case by substituting intervening shippers for the Rio Grande as complainant and injecting issues which the Rio Grande's complaint did not and could not

raise, the Commission concluded that through routes and joint rates via the Rio Grande on the specified commodities are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation," and that the combination rates via the Rio Grande on the specified commodities are and for the future will be "unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes" (R. 73).

To treat the case as a shippers' complaint against undue prejudice, or as a "public interest" case involving through routes was not merely to unduly broaden the issues raised by the Rio Grande's complaint, in violation of Rule 72(e) of the Commission's General Rules of Practice, but to raise new issues involving wholly new and different cases under other and different provisions of the Act.

Counsel for the Rio Grande has argued that the shippers who intervened in support of its complaint "have the same status as they would have as original complainants." The obvious purpose of that contention was to induce the Commission to base its order upon rights of shippers and the public if it found, as it did, that the evidence did not sustain the Rio Grande's own case. But the cases cited by the Rio Grande have no bearing on the position of intervenors generally or of those who intervened before the Commission in support of the Rio Grande. The cases are *Chicago Junction Case*, 264 U. S. 258, and *Youngstown Co. v. U. S.*, 295 U. S. 476. Neither case has any bearing upon the status or rights of interveners in proceedings before the Commission. Both were suits under the special jurisdictional and procedural act

of Congress, invoked in the case at bar, to enjoin and annul orders of the Commission. In those cases it is made plain that the right of an intervenor in such suit rests squarely upon the express provision of the special act of Congress declaring that the Commission and any party to a proceeding before the Commission may, as of right, become a party to "any suit wherein is involved the validity of such order," 264 U. S. 267. In *I. C. C. v. Oregon-Washington R. Co.*, 288 U. S. 14, this Court, again because of the special authorization by the same special Act of Congress, held that the Commission, having intervened as a defendant in the district court, could appeal to this Court after the Attorney General of the United States had refused to appeal, since the statute expressly granted authority to such intervenor "to prosecute, defend or continue the proceeding unaffected by the action or non-action of the Attorney General," 288 U. S. 24.

Intervention "is not an independent action, but is ancillary and supplemental to the existing litigation", and must "be in subordination to, and in recognition of, the propriety of the main proceeding," *Adler v. Seaman*, 266 F. 828, 832 (8th C. C. A.).

"* * * when a person, not a party to a pending suit, who is interested in its subject-matter, desires, for his own protection, to assert his independent rights and raise new issues, he must do so by an original bill," *Leaver v. K. & L. Box & Lumber Co.*, 6 F. 2d 666, 667.

"* * * where the intervener joins either plaintiff or defendant in resisting the claims of the other side, he is not entitled to enlarge the issues," *DeSousa v. Crocker First Nat. Bank*, 23 F. 2d 118, 122.

By confusing and substituting for alleged rights of the Rio Grande, those of its solicited and procured shippers and treating the case as a shipper and public interest complaint, the Commission has given the Rio Grande a large part of its demands, even though it was unable to find from the evidence that the Rio Grande had sustained the allegations of its complaint. By this arbitrary action the Commission also circumvents and evades the provision in Section 15(4) which prohibits it from compelling through routes and joint rates to help a carrier meet its financial needs, and would succeed in severely short-hauling the Union Pacific and other railroads, which it found itself unable to justify upon evidence submitted by the Rio Grande in support of its own complaint and upon the only issues it could raise.

The Commission's effort to evade or circumvent the restrictions of Section 15(4) by resorting to sections of the Act which afford rights to shippers or the "public" and thus to divert traffic from one route to another is thoroughly condemned by this Court's decision in *Thompson v. United States*, 343 U. S. 549, at pages 559-560. Such "tinkering with through routes" by the Commission is prohibited, *U. S. v. Great Northern R. Co.*, 343 U. S. 562, 575.

2. The Commission acted arbitrarily and unlawfully in failing and refusing to give any effect to the requirement in Section 15(4) that reasonable preference be given to the originating carrier.

One of the mandates in Section 15(4) to the Commission is—

> "That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses

(a) and (b), give reasonable preference to the carrier by railroad which originates the traffic."

There is nothing in the report to indicate that the Commission gave the slightest recognition to this statutory mandate. Yet, the report shows that 101,476 carloads *originated* in 1948 on the Union Pacific in the "excluded territory." Of the total traffic, 157,762 carloads originated and terminated on the Union Pacific that year, 46 per cent originated or terminated on 2,913 miles of Union Pacific branch lines in that territory. Of the eastbound tonnage for that year, 50,349 carloads or 43 per cent of the total were products agriculture, including those specified in the order (R. 45). The report shows (R. 62) that the 2,913 miles of branch lines constitutes more than 50 per cent of the total of 5,606 miles of line of the Union Pacific in that territory and that Union Pacific has invested over $600,000,000 in the routes that would be affected by the diversion of the traffic to the Rio Grande. The unusual proportion of branch line mileage was obviously constructed for the purpose of developing and *originating* traffic in this essentially agricultural area in order to obtain a long main-line haul. The eastbound commodities which would be diverted to the Rio Grande under the Commission's order are agricultural products moving under sub-normal and depressed rates (R. 67), and it is inescapable that the effect of such diversions will necessarily tend toward curtailment of service generally and abandonment of the feeder branch lines on which 46 per cent of the total traffic originates and terminates.

The Commission also ignores the fact that, of the total eastbound movement of 6,473 carloads of animals and animal products in 1948 from Idaho, Montana, Oregon and Washington via the Union Pacific, practically

all of which terminated in the northern half of the eastern half of the United States, 5,094 carloads originated on the Union Pacific in Idaho and Montana and that line would receive an extremely short haul and very little revenue if the movement was via Ogden with the Rio Grande. The Commission further ignores the fact that 61 per cent of all traffic originating on the Union Pacific in Idaho is loaded at branch line stations and incurs very high gathering costs ranging from $18.99 to $106.12 per car (V. I, 849; original I. C. C. Ex. 27).

These facts demonstrate the reasons for and the fairness of the legislative mandate requiring the Commission in compelling through routes that short haul a carrier to give reasonable preference to the carrier that originates the traffic. The necessity of revenues from main line movement of such branch-line traffic is too plain for argument unless the Commission is sympathetic with a policy that potentially forces branch line abandonments and weakening of the Union Pacific financially. Such necessity for revenues and continued maintenance of branch lines clearly must be weighed and balanced against the pretended desire of a few shippers for routes which would divert the traffic to the Rio Grande so they may reconsign or take advantage of transit privileges while the traffic is on that line. The Commission has clearly ignored the mandate to give reasonable preference to the Union Pacific in these circumstances, but instead has based its order entirely upon the pretended desire of the few shippers who supported the Rio Grande. It has departed from the rule laid down by this Court that "both interests should be considered and a fair balance found." *Pennsylvania R. Co. v. U. S.*, 363 U. S. 588, 593.

The failure of the Commission to give any preference to the Union Pacific and other carriers that originate

the traffic, is plainly arbitrary and contrary to the statutory mandate that it shall give reasonable preference to the originating carriers. Its order based on such arbitrary and erroneous action is void.

3. The order should be enjoined and set aside because of its uncertainty, indefiniteness, and conflicting requirements, and because the Commission has exceeded its authority by using its through routes power under Section 15(3) and (4) to require a rate reduction under Sections 1 and 15(1) and to remove undue prejudice and discrimination under Section 3(1) and (4), and to equalize rates via the Rio Grande with rates of the Union Pacific routes.

The Court will not sustain the order if it, together with the report, is found to be indefinite or that its requirements are conflicting or if the report fails to make clear and specific the precise grounds on which the order rests and the exact requirements which it purports to make. *American Express Co. v. Caldwell*, 244 U. S. 617, 627; *Georgia Comm. v. United States*, 283 U. S. 765, 770-771, and *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, in which the Court, in concluding to enjoin the Commission's order in that case and in discussing the uncertainty and conflicting inferences of the report, held at pages 510-511:

> "The difficulty is that it has not said so with the simplicity and clearness through which a halting impression ripens into reasonable certitude. In the end we are left to spell out, to argue, to choose between conflicting inferences. Something more precise is requisite in the quasi-jurisdictional findings of an administrative agency. *Beaumont, S. L. & W. Ry. Co. v. United States*, 282 U. S. 74, 86; *Florida v. United States*, 282 U. S. 194, 215. We must know what a decision means before the duty becomes ours to say whether it is right or wrong."

The first paragraph of the order (R. 21) recites that the Commission has found:

> "* * * (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination."

The second paragraph of the order requires that "the defendants named in the complaints' cease and desist:

> "* * * (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph."

The third paragraph of the order requires "said defendants, and the complainant" (Rio Grande) to establish through routes as described therein, and joint rates "the same" as those maintained over the lines of the Union Pacific through Wyoming.

The fourth paragraph of the order requires "said defendants" to establish and—

> "* * * to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue

prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof."

Uncertainty and vagueness of the order lie in the fact that although, as just indicated, the railroads, including the Rio Grande, are required to establish via the Rio Grande through routes and joint rates "the same" as joint rates applicable via Union Pacific routes through Wyoming, yet the next paragraph of the order further requires "said defendants" to establish rates "which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof." It cannot be discerned from the order whether the latter rates shall also be "joint rates" or local rates, or what the level of rates required to prevent undue prejudice, preference and discrimination shall be. One is left to guess whether the joint rates required in connection with the through routes via the Rio Grande will prevent and avoid undue prejudice, etc., or whether that shall be accomplished by publishing rates other than or different from the joint rates required to be established in the public interest in connection with the required through routes.

Clearly, an order of such uncertainty and indefiniteness should not be sustained in view of the fact that Section 16(8) of the Act penalizes railroads and their officers $5,000 for each day they fail to comply with what they must guess or presume that the order requires.

If it be presumed that unreasonableness of the local rates and undue prejudice caused by them will be cured by publishing the joint rates required in connection with the through routes prescribed in the third paragraph of the order, then it results that the Commission has seized upon its through routes power under Section 15(3) and

(4) to prescribe the remedy for rates found unreasonable under Section 1 and 15(1), and for undue prejudice and discrimination found under Section 3(1) and (4).

Any ground that might have existed for contending that the Commission could seize upon its through route power to compel the exact remedy it desires for violations of other provisions of the Act was wiped out when Section 15(3) was amended in 1910. As originally enacted in 1906, Section 15(3) read (34 Stat. L. 590, Sec. 4):

> "The Commission may also, after hearing on a complaint, establish through routes and joint rates as the maximum to be charged and prescribe the division of such rates as hereinbefore provided, and the terms and conditions under which such through rates shall be operated, *when that may be necessary to give effect to any provision of this Act*, and the carriers complained of have refused or neglected to voluntarily establish such through routes and joint rates, provided no reasonable or satisfactory through route exists, and this provision shall apply when one of the connecting carriers is a water line." (Italics added.)

The italicized language was deleted in enacting the 1910 amendment (36 Stat. L. 552, Sec. 12). And see *Thompson v. United States*, *supra*, concerning the independent, separate and special purpose of the Commission's through route power.

That the Commission may not so commingle and confuse separate and independent provisions of the Act or seize upon its powers under one provision indirectly to obtain the result it can not attain by use of its direct powers under the provision which confers its basic authority has been thoroughly and sufficiently demonstrated earlier in this brief at pages 97-107 and to avoid repe-

tition we respectfully request consideration of that discussion in connection with the contention here made with respect to the Commission's arbitrary and erroneous action resulting from such misuse and abuse of its statutory powers.

4. The Commission acted arbitrarily and contrary to law in refusing to give weight and effect to evidence showing that diversion to the Rio Grande of any substantial part of the traffic it seeks would result in wasteful transportation and economic waste, and in serious detriment to Union Pacific service and its employes, to certain other railroads and their employes, to numerous communities, and would do violence to the National Transportation Policy.

The Commission is without power to compel through routes and joint rates without first finding that they are necessary or desirable "in the public interest." In *N. Y. Central Securities Co. v. U. S.*, 287 U. S. 12, this Court, in discussing "public interest" as used in the Transportation Act, 1920, said at page 23: "[t]he public interest is served by economy and efficiency in operation," and, at page 25, that the purpose of Congress in granting by that Act power to the Commission to do specified things in the "public interest" with the ultimate aim of insuring adequate transportation service, was directly related—

> "* * * to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities; * * *."

In *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, at page 277, in construing the 1920 Act, the Court said:

> "By that measure, Congress undertook to develop and maintain, for the people of the United

States, an adequate railway system. It recognizes that *preservation of* the earning capacity, and conservation of the *financial resources, of individual carriers is a matter of national concern;* that the property employed must be permitted to earn a reasonable return; that the building of unnecessary lines involves a waste of resources and that the burden of this waste may fall upon the public; *that competition between carriers may result in harm to the public as well as in benefit; and that when a railroad inflicts injury upon its rival, it may be the public which ultimately bears the loss.* See *Railroad Commission v. Chicago, Burlington & Quincy R. R. Co.*, 257 U. S. 563; *The New England Divisions Case*, 261 U. S. 184; *The Chicago Junction Case*, 264 U. S. 258; *Railroad Commission v. Southern Pacific Co.*, 264 U. S. 331. *The Act sought, among other things, to avert such losses.*" (Italics added.)

The Commission has heretofore adhered to its own rule that in determining questions involving "public interest" it must give consideration to probable detrimental effects as well as alleged benefits and determine "whether the probable benefits overbalance the probable injuries," *Chicago, R. & Q. R. Co. Control*, 271 I. C. C. 63, 146. In *Chicago, R. I. & G. Ry. Co. Trustees Lease*, 233 I. C. C. 21, 25, the Commission emphatically held that:

> "* * * the welfare of the employees affected is one of the matters of public interest which we must consider in proceeding under section 5(4). * * *."

and this holding was long before there was any specific requirement in Section 5(4) (now 5(2)(f)) that the welfare of employes be considered. The Commission's order in that case was sustained by this Court in *United States v. Louden*, 308 U. S. 225, in which the Court said at page 240:

> "If we are right in our conclusion that the statute is a permissible regulation of interstate com-

merce, the exercise of that power to foster, protect and control the commerce with proper regard for the welfare of those who are immediately concerned in it, as well as the public at large, is undoubted."

Probable detrimental or injurious effects upon the public at large as well as those more immediately concerned is decisive of Commission action in many cases. *Chicago, B. & Q. R. Co., Control*, 271 I. C. C. 63, 165; *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266; *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127; and *Pacific Intermountain Exp. Co.—Control and Purchase*, 57 M. C. C. 341.

The "National Transportation Policy" while serving as a guide to the Commission in interpreting and applying the Act in particular cases, is also a directive to the Commission. It states:

> "All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Under the directives of that policy, the burden was upon the Rio Grande to prove to the Commission that granting its full demands would, among other things: (a) Promote safe, adequate, economical and efficient service; (b) Foster sound economic conditions in transportation and among the several carriers; (c) Encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; (d) Encourage fair wages and equitable working conditions; (e) Develop, coordinate and preserve a national transportation system adequate to meet all needs, including national defense.

The Rio Grande did not undertake to submit such proof, but, in the light of the foregoing principles and controlling court decisions, evidence was submitted to the Commission by those who opposed the Rio Grande which showed the transportation and economic waste and the disastrous results upon Union Pacific revenues, service over its routes, and drastic adverse economic effects upon its employes and those of certain other roads, and upon communities served by them, if the Rio Grande succeeded in diverting to its line the entire volume or any substantial part of traffic claimed by it as its "potential". The Commission's report summarizes some of this evidence as follows (R. 65-66):

> "Most of the opposition arises from the assumed effects of the diversion from the Union Pacific of the full amount, or a very large portion, of the traffic estimated by the Rio Grande as the potential traffic that would be subject to solicitation by that carrier for movement over its lines if the joint rates sought should be established. Upon the assumption that the Union Pacific would lose its long haul on the full estimated potential traffic of 101,476 carloads originated and 56,286 carloads terminated annually on the Union Pacific in the four Northwestern States, a total of 157,762, that number was used as a base by the Union Pacific to determine possible revenue losses. These were computed as amounting, in the aggregate, to $49,880,000 yearly.
>
> "Diversion of traffic with such a large loss in revenue would result, according to Union Pacific estimates, in (*a*) the discontinuance of four trains daily east-bound and four trains daily west-bound between Pocatello and North Platte; (*b*) three trains east-bound and three west-bound daily between North Platte and Council Bluffs; and (*c*) one train east-bound and one west-bound daily between North Platte and Kansas City. Extending this loss to show the direct effect upon employment, it was calculated that 1,240 employees, with annual payroll earnings of

$5,000,000 yearly, would be laid off, with additional losses in employment by employees in other departments, bringing the total to about 5,300." Other losses are calculated, such as loss of employment of Union Pacific employees engaged in moving fuel coal from the company's mines in Wyoming. Based on these assumptions, derivative losses were computed by communities and localities on the Union Pacific's line whose local industries and merchants depend more or less upon the wages paid to railroad employees.

"Considerable evidence of the same general character was submitted by representatives of employees of the Union Pacific, to show the effect upon them if all of the potential traffic were routed via Ogden and the Rio Grande. The number of employees that might be laid off was computed at 5,144, with a total loss of wages of $21,080,400. Losses by reason of possible loss of homes due to forced changes in places of employment, decline in real-estate values, and other contingent losses were calculated. Similar figures for possible loss of employment were calculated for certain lines connecting with the Union Pacific, such as the Wabash, the Chicago & North Western, and the Milwaukee.

"The record contains detailed computations and estimates upon all of these matters. Employee representatives contend that if joint rates are required to be established we must determine what would be the probable extent of diversion of traffic from one or more routes to the route via Ogden and the Rio Grande. Based on such a finding, they further contend that we must determine the probable adverse effects of the diversion on employees of the railroads affected and impose measures to compensate or to protect such employees from loss, as conditions upon the establishment of the joint rates and through routes."

But, instead of giving weight and effect to these matters, the Commission plainly sought to evade them.

For example, the report states that there is no specific provision in Section 15(3) or (4) requiring that the welfare of the employes be protected in connection with an order compelling through routes, despite the fact shown above that, regardless of the absence of such specific requirement, the Commission was sustained by this Court in holding that the welfare of employes is a matter of "public interest" which it must consider. *United States v. Lowden, supra.* The Commission next attempts to escape consideration of these matters by saying that it is impossible upon the record to estimate how much traffic might be diverted to the Rio Grande if joint rates were required on all the traffic, or under the terms of its order. "To refuse to consider evidence introduced" or to refuse to decide "in accordance with it" is "arbitrary action," *Chicago Junction Case*, 264 U. S. 258, 265. "Facts and circumstances which ought to be considered must not be excluded," *Morgan v. United States*, 298 U. S. 468, 480.

The Commission's evasion of probable detrimental consequences of its order by asserting its inability to find definitely or to estimate accurately the amount of traffic that might be diverted to the Rio Grande, as well as its statements which imply that little or no traffic will be diverted to the Rio Grande unless its solicitors can persuade and induce shippers to use transit privileges offered by that line in connection with bridge traffic, are diametrically opposed to its ultimate conclusion that the Rio Grande route is "necessary and desirable in the public interest, in order to provide adequate and more economic transportation." If the Commission was unable to ascertain from the record that the Rio Grande route is needed for the movement of a substantial volume of traffic, then there could be no basis for its ultimate conclusion that the route is "necessary" and the order falls

for lack of supporting findings that justify or afford a rational basis for it. The conclusion that the Rio Grande route is "necessary" inevitably implies that a substantial volume of traffic will be diverted over it. The Commission was under the inescapable duty to weigh the injurious and detrimental effects of its order against its expected benefits and to find "a fair balance", *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, 593.

If the required through routes and joint rates are necessary "in the public interest" as the Commission has found, then under the decisions cited above, the same "public interest" required the Commission to weigh the adverse effects as well as alleged benefits and to determine "whether the probable benefits overbalance the probable injuries", *Chicago, B. & Q. R. Co. Control*, 271 I. C. C. 63, 146. In failing and refusing to do so, the Commission acted arbitrarily and unreasonably, and for this reason, in addition to others discussed herein, its order is void.

CONCLUSION

For the reasons stated and discussed above, the Commission's order is unlawful and void in its entirety. The judgment of the district court in Numbers 117 and 119, enjoining and annulling the order in part, should be affirmed and its judgment in Number 118, sustaining the validity of the order in part, should be reversed and the case remanded to the district court with direction to issue the injunction and relief prayed by the plaintiffs in that court.

Respectfully submitted,

ELMER B. COLLINS,
Counsel of Record for Above named Appellants.
1416 Dodge Street,
Omaha, Nebraska.

PROOF OF SERVICE

I, ELMER B. COLLINS, counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 15-24 ~~7th~~ day of March, 1956, I served, on behalf of all Appellants herein, copies of the foregoing brief on the several adverse parties in Nos. 117, 118, 119, 332, 333 and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

and with first-class postage prepaid to:

Donald R. Ross, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Neil Brooks, Esq.
Assistant General Counsel
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who work for The Denver and Rio Grande Western R. R. Co.; National Live Stock Producers Association; Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western

Forest Industries Association; Koppers Company, Inc.; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
728 Majestic Building
Denver 2, Colorado

Lee J. Quasey, Esq.
139 N. Clark Street
Chicago 2, Illinois

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

and with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

6. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

APPENDIX B

The Pertinent Provisions of the Interstate Commerce Act (United States Code, Title 49), Involved in This Case Are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions; —all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1(3)(a)—

"* * * The term 'transportation' as used in this part shall include locomotives, cars, and other vehicles, vessels, and all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, and transfer in transit, ventilation, refrigeration or icing, storage, and handling of property transported. * * *"

Section 1(4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 1(5)—

"All charges made for any service rendered or to be rendered in the transportation of passengers or property, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

Section 3(1)—

"It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port,

port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3(4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15(1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in

violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. * * *"

Section 15(4)—

"In establishing any such through route the Commission shall not (except as provided in section

3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with anotner practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more effieient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

SUPREME COURT, U. S.
MAR 15 1956
HAROLD B. WILLEY, Clerk

No. 118
Consolidated with Nos. 117, 119, 332, 333 and 334

Opinions Below	1
Jurisdiction	1
Statute Involved	4
Questions Presented	4
Position and Interests of These Five Appellant States	11
Statement	14
Summary of Argument	20
Argument	26
I.	
Since the Undisputed Evidence Shows and the Commission Found that (1) Union Pacific Routes are Shorter, Faster, Efficiently Operated, and Have Surplus Capacity to Handle Any Foreseeable Volume of Traffic and (2) Rio Grande Routes Are Over 200 Miles Longer, Require Additional Interchanges, Involve More Onerous Operating Conditions and Maintain Higher Rates, the Record Will Not Support a Jurisdictional Finding That Proposed Rio Grande Routes Are "needed in order to provide adequate and more efficient or more economic transportation" as Required by Section 15(4)(b) of the Act	26
Legislative History of 1940 Amendments Shows That Congress Strengthened Restrictions on Short-Hauling and Made Provision for Establishing Shorter and More Economical Routes	37
II.	
The Commission Failed to Give Effect to Controlling Statutory Prohibitions, Standards and Criteria, and Failed to Apply the Rule and Norm of Its Previous Decisions; and the Court Erred in Sustaining a Part of the Commission's Order on the Erroneous Premise That Through Routes and Joint Rates May Be Established for the Sole Purpose of Making Additional Transit Privileges Available by Equalizing Rates	40
A. Through Routes and Joint Rates Cannot Be Established for the Purpose of Making Additional Transit Privileges Available by Equalizing Rates	41
A Transit Privilege Is a "Commercial Operation" Not Transportation Within the Meaning of Section 1(3) of the Act	42

INDEX—Continued

Page

B. The Criteria That as Many New Routes "as possible" May Be Required to Provide as Much Flexibility and as Many Markets "as possible", Would Nullify the Short-Hauling Restrictions of Section 15(4) 47

C. The Order Is Void Because the Commission Departed From and Failed to Make the Findings Required by the Standards of Section 15(4)(b) Which the Commission Expressly Invoked 50

The Order May Not Be Upheld Upon Grounds Not Invoked by the Commission 54

D. The Order Is Void Because This Is a Financial Needs Case Within the Prohibition of Section 15(4) 55

E. The Commission's Order Disregards and Is Inconsistent With the National Transportation Policy of Congress Which Is a Part of Every Provision in the Act 60

F. Other Inconsistencies and Departures From Prior Decisions 65

III.

Rio Grande Claims of Violations of the Act and the Finding by the Commission of a Violation of Section 3(1) Cannot Be Sustained Upon the Evidence of Record 69

The Finding of the Commission That Present Combination Rates Via the Rio Grande Are Unreasonable Is Unsupported by Evidence 70

Neither a Finding of Undue Prejudice Under Section 3(1) Nor of Unjust Discrimination Under Section 3(4) Can Be Made in View of Admitted Dissimilarity in Transportation Conditions Proved by the Evidence 78

The Proviso to Section 3(1), Added in 1940, Prevents Any Finding of Discrimination Here 82

Legislative History of Section 3(1) Confirms Our Position 83

No Discrimination as to Transit Privileges Can Be Based on Section 3 86

Decisions Relied Upon by Rio Grande Are Inapposite 87

IV.

The Commission Arbitrarily Commingled Various Sections of the Act Which Have Independent Significance, and Mis-

INDEX—Continued

Page

used Sections 1, 3 and Parts of Section 15 in Order to Circumvent the Requirements of Section 15(4) and Provide the Remedy Desired by the Rio Grande 93

Legislative History of the Through Route Provision of Section 15 Confirms Our Position 100

In the Supreme Court of the United States

OCTOBER TERM, 1955

WASHINGTON PUBLIC SERVICE COMMISSION;
PUBLIC UTILITIES COMMISSIONER OF OREGON;
BOARD OF RAILROAD COMMISSIONERS OF THE STATE OF MONTANA;
STATE BOARD OF EQUALIZATION AND PUBLIC SERVICE COMMISSION OF WYOMING;
STATE OF NEBRASKA AND NEBRASKA STATE RAILWAY COMMISSION,

Appellants,

v.

UNITED STATES OF AMERICA;
INTERSTATE COMMERCE COMMISSION,

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA

BRIEF FOR ABOVE NAMED APPELLANTS

OPINIONS BELOW

The majority opinion and the dissenting opinion of the three-judge United States District Court for the District of Nebraska (R. 151) are reported in 132 F. Supp. 72. The report of the Interstate Commerce Commisson (R. 25) appears in 287 I. C. C. 611.

JURISDICTION

This action was brought June 25, 1953, in the United States District Court for the District of Nebraska (R. 3) by the Union Pacific Railroad Company and seven other railroads, against the United States of America and the Interstate Commerce Commission, pursuant to 28 U. S. C. 1336, 1398, 2284 and 2321-2325, to enjoin, annul and set aside the order issued January 28, 1953, by

the Interstate Commerce Commission in a proceeding entitled "Docket No. 30297, Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co., et al." Petitions for reconsideration were denied by the Commission on June 10, 1953 (V. II, 1778)*. These appellants intervened as defendants in the Commission proceeding and as plaintiffs in the district court in support of the railroads' suit to enjoin and annul the Commission's order.

The order was issued upon a complaint filed with the Commission by The Denver and Rio Grande Western Railroad Company ("Rio Grande"), a perennially bankrupt and "financial needs" short line railroad, with its western terminus at Ogden, Utah, and its eastern termini at Denver and Pueblo, Colorado. The order (R. 21) requires, among other things, that the Union Pacific and over 200 other railroads establish in connection with the Rio Grande through routes and joint rates "the same" as the joint rates maintained by them on the several commodities named in the order, which comprise about 57,000 carloads, or one-third of the traffic annually that the Rio Grande seeks to divert for a "bridge"[1] haul

---

* Because of duplication in page numbering the printed records in these cases, this abbreviation will be used to refer to pages of Volumes I & II, proceedings before the Interstate Commerce Commission.

1 The term "bridge traffic" is used to designate traffic hauled by a carrier on whose line the traffic neither originates nor terminates. A "bridge haul" is the transportation of such "bridge" traffic some part of the distance between its point of origin and its final destination. "Bridge" traffic is most attractive because it is generally least expensive to haul since the "bridge" carrier performs none of the expensive branch line, gathering or switching services required at the point of origin and point of final destination. The Rio Grande's President testified that the reason it is pressing for more "bridge" traffic is that "there is more money in it" than in traffic it originates or terminates.

The traffic the Rio Grande seeks to divert to its line is "bridge" traffic which originates and terminates outside of Rio Grande territory: Joint rates already apply to traffic originated at or destined to points on the Rio Grande.

over its line for the admitted purpose of enhancing and improving its financial position. The traffic originates and terminates on through routes of the Union Pacific and other railroads and has been hauled under joint rates maintained over those routes through Wyoming and Nebraska for 75 years between points in the northwest area, embracing the States of Oregon, Washington, Montana and Idaho, and points in the eastern and southern parts of the United States generally east of the Missouri River. The order would result in short-hauling Union Pacific routes at least 925 miles, subjecting them to very large revenue losses.

Ordinarily, demands for an additional route come from shippers on the ground that existing routes are inadequate and that the *proposed* additional route is shorter and is "needed" to provide "adequate and more efficient or more economic" transportation than that provided by existing routes. The order in this case, however, presents the novel and unique situation of an attempt by the Commission and the Rio Grande to short haul Union Pacific routes which are faster, cheaper and shorter (by as much as 50% in some instances) than any route that could be made via the Rio Grande between the origins and destinations of the involved traffic.[2]

Final judgment and decree of the majority of the district court sustaining the validity of the order "in part" and enjoining it "in part" was entered December 20,

---

2 The order here reflects the latest of the Commission's long and persistent efforts to evade or "limit by construction the impact of the short-hauling restriction on its power to establish through routes," recognized and discussed by this Court in *Thompson v. United States*, 343 U. S. 549, at pages 555 and 556.

1954 (R. 229). Notice of appeal was filed February 18, 1955 (R. 230). On March 22, 1955, Circuit Judge Johnsen, presiding member of the district court, entered an order extending to June 1, 1955, the time for filing the record and docketing the cases of all appellants in this Court. The jurisdiction of this Court is conferred by 28 U. S. C. 1253 and 2101(b). Probable jurisdiction was noted by this Court on October 24, 1955.

STATUTE INVOLVED

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out verbatim in Appendix A hereto:

National Transportation Policy (preceding Section 1), and Sections 1(3)(a); 1(4), 1(5), 3(1), 3(4), 15(1), 15(3) and 15(4).

QUESTIONS PRESENTED

(1) Whether the court erred in refusing to hold that, in this proceeding, brought by the Rio Grande for the admitted purpose of enhancing its financial position by diverting for a "bridge" haul over its line transcontinental through traffic now and for some 50 years moved over Union Pacific routes between points on those routes in the far northwest and points in the eastern and southern parts of the United States, the Commission was prohibited from issuing the order in this case by the provision of Section 15(4) of the Interstate Commerce Act that "[n]o through route and joint rates applicable there-

---

3 Jointly with Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, who are filing a brief for those railroads.

to shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs", and that this prohibition may not be evaded or circumvented by the Commission's assertion that in making the order "no consideration has been given to the financial needs" of the Rio Grande.

(2) Whether the court erred in refusing to hold that, in view of the provisions of Section 15(4) of the Interstate Commerce Act (49 U. S. C., § 15(4)), the Commission acted arbitrarily and unlawfully in issuing the order short-hauling Union Pacific routes at least 975 miles, since the Commission found:

(a) That Union Pacific routes have lower rates than the Rio Grande and are shorter, faster, efficiently operated, adequate and have surplus capacity to haul any foreseeable volume of the through traffic involved;

(b) That movement of the same through traffic via the Rio Grande would require over 200 miles additional transportation, at least 24 hours more time in transit, and one or two additional interchange services; and that the Rio Grande maintains higher rates, is less favorably located and has more onerous operating conditions than the Union Pacific or any of the other Western lines.

(3) Whether the court erred in failing to hold that the entire order is void because the Commission misconstrued, departed from and failed to observe the rule and norm of its previous decisions and the controlling statutory standards and criteria of Sections 1(4), 3(1) and (4) and 15(3) and (4), in basing its order:

(a) Upon the premise that the standards and conditions of Section 15(4) (b) [which permit establishment of a proposed route short-hauling ex-

isting routes of other railroads, *only* if "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation"] are lawfully observed and applied by the Commission's findings here:

1. of a need for "more" adequate and economic service than that offered by Union Pacific routes, and

2. that the Rio Grande route is "necessary and desirable" to provide "adequate and more economic transportation",

without any finding by the Commission that the Rio Grande route is "needed" or that it will provide "more efficient" transportation than Union Pacific routes for the involved through traffic between the same origins and the same ultimate destinations;

(b) Upon the premise that the conditions which permit short-hauling other carriers under Section 15(4)(b) can be met and satisfied by merely substituting the lower joint rates applicable over Union Pacific routes for the higher combination rates via the proposed Rio Grande route;

(c) Upon the premise that, under Section 15(4)(b), service over Union Pacific routes may lawfully be condemned and found "inadequate and less economical" than the Rio Grande route for through traffic because, *at points located on and served only by the Rio Grande*, "the Union Pacific routes and the joint rates that apply over them are not available and higher rates apply";

(d) Upon the premise that the Commission may invoke its power under Section 15(3) and (4)(b) for the purpose of making additional transit privileges available by equalizing rates via the Rio Grande with rates applicable over Union Pacific routes;

(e) Upon the criteria that the marketing system for food articles of a perishable nature requires "as wide a distribution as possible", "as many routes as possible", "as much flexibility as possible" and "as many markets and outlets as possible", although Section 1(4) and the prevailing rule of the Commission's prior decisions require carriers to establish only "reasonable" through routes;

(f) Upon the inconsistent criteria that:

1. food articles of a perishable nature must move to markets "with expedition and care" and "without unnecessary interruptions";

2. the longer Rio Grande route is necessary to permit the through transportation of such articles to be interrupted so that the articles may be held as long as 12 months at points on the Rio Grande for "commercial operations" called transit privileges, and

3. ordinary livestock to stop for grazing or feeding, and marble and granite monuments to stop for partial unloading at points on the Rio Grande fall within the category of perishable food articles found by the Commission to require expeditious, careful and uninterrupted transportation;

(g) Upon the premise that the Commission may lawfully invoke its powers under Section 15(3) and (4) to obtain the remedy it desires for rates found violative of Sections 1 and 3, and that findings of violations of the latter sections afford a lawful basis for ordering the through routes and joint rates.

(4) Whether the Commission may require Union Pacific routes to short haul themselves by establishing through routes and joint rates with the Rio Grande for the sole purpose of permitting through traffic to be stopped at points on the Rio Grande, not served by the

Union Pacific, for "commercial operations" (known as transit privileges), such as storing, processing and cattle grazing, at the same rates the same shippers have when using Union Pacific routes between the same points of origin and the same ultimate destinations.

(5) Whether the court's finding that transportation service via the *proposed* Rio Grande route is "inadequate and also inefficient and uneconomical" for through shipments requiring transit at points on the Rio Grande and re-shipment to final destinations beyond its termini, affords a lawful basis for the order short-hauling Union Pacific routes under Section 15(4)(b), which permits short-hauling other railroads only if "the Commission finds that the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation."

(6) Whether the court erred in failing to review and consider the whole record of evidence and all the issues tendered by the pleadings and arguments of the parties, and in failing to hold that the order is entirely null and void, because:

(a) The order is based upon erroneous interpretations of law, and there is no rational basis or support for the order or any part of it, in the evidence or in the findings made by the Commission;

(b) The Commission *did not make*, and the evidence does not justify or support, findings essential to the validity of the order, among others:

1. that Union Pacific routes are inadequate, inefficient and uneconomic for movement of the involved traffic,

2. that the Rio Grande route is "needed", and that it will provide "more efficient" trans-

portation service than Union Pacific routes (Section 15(4)(b)),

3. that diverting traffic and revenues from Union Pacific routes to the Rio Grande would serve such beneficial purpose as maintaining good service or improving it,

4. that the Rio Grande is efficiently operated, furnishes satisfactory service or has surplus capacity or ability to haul any additional volume of traffic,

5. that diverting the traffic to the Rio Grande's longer route will speed up its movement,

6. that the Rio Grande will generate new or additional traffic or contribute additional transportation facilities in the northwest area, or that existing routes are insufficient or incapable of moving the traffic to and from that area,

7. that by including the Rio Grande route shippers to and from the northwest area will have lower rates than they have via Union Pacific routes,

8. that the overall transportation system or shippers using it would benefit by including the longer Rio Grande line in present routes for a "bridge" haul over its line,

9. that shippers have ever made complaint against service rendered by Union Pacific routes for the traffic involved, or demanded that the Rio Grande be included in present through routes;

(c) The evidence does not support or justify the Commission's findings—

1. that the combination of local rates via the Rio Grande are unjust and unreasonable,

2. that the joint rates which now apply over Union Pacific's shorter and more direct

routes are reasonable for application via the longer and more onerous Rio Grande route,

3. that the combination rates via the Rio Grande are unduly prejudicial of shippers and receivers using or desiring to use the Rio Grande route or unduly preferential of shippers and receivers using the Union Pacific routes,

4. that the Union Pacific and other railroads discriminate against the Rio Grande in violation of Section 3(4) in maintaining through routes with the Bamberger Railroad at points on its line between Ogden and Salt Lake City, while refusing to make like joint rates with the Rio Grande at the same points,

5. that through routes and joint rates with the Rio Grande are "necessary and desirable" in the public interest to provide "adequate and more economic transportation",

6. that shippers in the northwest producing area (who testified that they sell their products in all markets in all the 48 states and 5 foreign countries) "are debarred from effective participation" in the marketing system, because they must pay higher rates if they ship through traffic via the Rio Grande than the joint rates available to them via Union Pacific routes for the same through traffic moving between the same origins and the same destinations;

(d) The Commission arbitrarily refused to give effect to the requirement in Section 15(4) that reasonable preference be given the originating carriers;

(e) The Commission refused to consider or give effect to the National Transportation Policy and to the evidence showing that diversion to the Rio Grande of any substantial part of the traffic would result in wasteful transportation and economic

waste and in serious detriment to Union Pacific service and its employees, to certain other railroads and their employees and would inflict serious economic injury to numerous communities and the public served by Union Pacific routes;

(f) The Commission arbitrarily commingled and misused its authority under, and the remedies for violations of the separate and independent provisions of Sections 1(4), 3(1) and (4) and Section 15(3) and (4), and its order is vague, uncertain, indefinite and conflicting in its requirements;

(g) Upon its findings that the Rio Grande had not sustained its complaint, the Commission acted arbitrarily and contrary to law in failing to dismiss the complaint and in ordering through routes and joint rates on the theory that because shippers had intervened and testified, the Rio Grande's complaint became a shipper complaint;

(h) The Commission acted arbitrarily and unlawfully in refusing to dismiss the entire proceeding on the ground that it was vitiated and nullified by the fact that shipper witnesses on whose testimony the order is based were admittedly solicited and procured by the Rio Grande for the purpose of helping it win its case.

POSITION AND INTERESTS OF THESE FIVE APPELLANT STATES

These five States were moved to intervene in the proceeding before the Commission and the court because of the overwhelming detriment the shippers and general public of such States would suffer as a result of the diversion of traffic away from the Union Pacific proposed by the Rio Grande. Any such diversion of traffic would immediately affect the service of the Union Pacific to ship-

pers and would also inflict very serious consequences upon employees of the Union Pacific that are now engaged in the handling of such traffic in these five States. Moreover, such diversion, as shown by testimony reviewed hereafter, would greatly impair the capacity of the Union Pacific to continue to provide at lowest cost the transportation service so essential in all this territory.

It was made indisputably clear by these States that in their area there is no substantial need for the new routes and joint rates proposed by Rio Grande and that the granting of proposed relief to this local mountain railroad of Colorado and Utah would adversely affect the economy of all these intervening States.

These five States, representing territory[4] served by long established Union Pacific routes between the Missouri River and the Pacific northwest, oppose Rio Grande proposals to short haul the shortest, swiftest and most economical route to eastern and southern markets, by requiring Union Pacific and over two hundred other railroads to enter into joint through rates with the Rio Grande whose admitted objective is to divert this traffic, primarily from the Union Pacific, in order to obtain a "bridge" haul and thereby improve its financial position. According to Rio Grande the "potential" volume of such traffic moving from the northwest to the east and south, which would be "available for solicitation", amounts to 101,476 carloads annually.[5]

---

4 The area of the five States approximates 500,000 square miles, or about one-sixth of the total area of the United States. The population of the five States represented by these appellants is nearly seven million people.

5 As indicated by the Commission (R. 45) the bulk of the traffic sought constitutes agricultural and mineral products of the north-

(Continued on next page)

Being distant from the principal markets, the economic life of the northwest depends upon fast, efficient, low cost transportation. Present transportation facilities and routes to and from this area are more than sufficient and Union Pacific alone is shown to possess an unused transportation capacity of 85%. Piling on additional surplus facilities and unneeded routes will, in the opinion of these States, adversely affect the economic future of this territory and violate the manifest policy and intention of Congress."

The present through route provisions of the Act were adopted in 1940 in order to make the "shortest, quickest, and cheapest routes available."[7] Union Pacific routes meet these tests. Rio Grande routes do not.

(Continued from preceding page)

west, which (R. 87) now travel via Union Pacific "because the Union Pacific routes are shorter." The reverse movement west comprises only 56,286 carloads annually and was given little emphasis by Rio Grande. The only westbound articles included in the order were granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the northwest (R. 22).

The traffic east and the traffic west are entirely independent of each other and should have been so considered. The Commission's order which the Court annulled in *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, 273, involved only the establishment of "through routes for westbound freight traffic."

6 Congressional policy since 1920 has stressed as paramount economy and efficiency in transportation facilities. *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 277. The 1940 declaration of Congress (49 U. S. C. preceding § 1) emphasizes "adequate, economical and efficient service" and this declaration controls the "basic power of the Commission," *American Trucking Assns. v. U. S.*, 344 U. S. 298.

7 In its report No. 404, April 22, 1937, on Senate Bill 1261, 75th Congress, 1st Session, the Senate Committee on Interstate Commerce said at page 2:

"Your committee feels that the shippers of the country should be given the right to use the *shortest, quickest, and cheapest routes*

(Continued on next page)

STATEMENT

About 172,000 carloads of traffic originate and terminate annually on the lines of the Union Pacific, Great Northern, Northern Pacific, Milwaukee, Southern Pacific and other railroads that have owned and operated for some 75 years thousands of miles of trackage in the ("northwest") area embracing northern Utah, Idaho, Montana, Oregon and Washington. Most of that traffic originates and terminates on the lines of the Union Pacific[8] and moves over its lines through Idaho, Wyoming, Nebraska and Kansas between points in the northwest area and points in the eastern and southern part of the United States over through routes ("Union Pacific routes") and under joint rates maintained by the Union Pacific and other railroads, including those named above. The joint rates have never applied via the Rio Grande except during a short period in the early part of this century, when Union Pacific and two of its subsidiary lines were in receiverships. Having their own shorter

---

(Continued from preceding page)

available * * *. The bill does not give the Commission power to order the railroads to route shipments in any particular way, but merely provides that *if a shorter route exists*, and if it is in the public interest for the shippers to have this route available, the railroads shall, upon the Commission's order, publish the route and rate in their tariffs. It is not the intention of the committee to interfere with the right of the trunk lines to their long haul, except where this right conflicts with the shippers' right to the *shortest route and lowest rate.* If there is this conflict, the *shipper is merely given the opportunity, if he wishes, of using the shorter or cheaper route.*" (Italics added.)

8 Union Pacific now owns and operates 5,606.7 miles of railroad in that area, of which 2,913.19 miles, or over 50 per cent, consist of numerous branch lines extending from and serving as "feeders" to its main lines. About 50 per cent of the traffic the Rio Grande wants routed via its line originates and terminates on these branch lines. The Rio Grande demands, and the effect of the order is that, all these main and branch lines serve as "feeders" of bridge traffic to its line.

and direct routes connecting at their eastern termini with other railroads forming the through routes for this transcontinental traffic, the Union Pacific and other carriers serving the northwest area have insisted in retaining their long hauls and therefore have refused to establish through routes and joint rates with the Rio Grande for this transcontinental traffic. The only rates applicable via the Rio Grande for this traffic are the combination or the sum of the local rates of each carrier, and those rates are higher than the joint rates over Union Pacific routes.

Since 1935, the Rio Grande management has sought some method by which it could compel carriers comprising the Union Pacific routes to make their joint rates applicable via its longer and more onerous, mountainous route for a "bridge haul" on traffic from and to the northwest area (V. 1, 48). On August 1, 1949, the Rio Grande filed its complaint with the Commission which resulted in the order involved in these appeals. The complaint alleged that the combination of local rates via the Rio Grande for the involved traffic are so much higher than the joint rates maintained via Union Pacific routes as to prevent the movement of the involved traffic via the Rio Grande, thus depriving the Rio Grande of through freight traffic it might obtain if "equal rates" applied via its line. It alleged that the combination rates were unjust and unreasonable, unduly prejudicial to shippers desiring to use the Rio Grande and that the refusal of the Union Pacific and other defendants named in the complaint to establish joint rates in connection with the Rio Grande the same as the joint rates maintained over Union Pacific routes violated Sections 1(4), 3, 15(1) and 15(3) of the Interstate Commerce Act.

Upon filing its complaint, the Rio Grande conducted a vigorous publicity campaign among shippers in the

northwest area and along its own line, condemning the Union Pacific and soliciting and procuring shippers and their organizations to intervene in support of its complaint and testify in such manner as to help it win its case. It succeeded in procuring about 50 of such shippers to intervene and testify, assuring them that by doing so they had nothing to lose but instead they, as well as the Rio Grande, would profit and benefit by an order from the Commission requiring the joint rates demanded by its complaint.

The Rio Grande demanded that the Commission order the Union Pacific and other defendants named in the complaint to establish joint rates on all commodities in connection with the Rio Grande "the same" as the lower joint rates maintained over Union Pacific routes. Realizing that its demands would short-haul the Union Pacific routes 925 miles, Rio Grande's complaint alleged that, as its tracks physically connect with other railroads, through routes "now exist" for the interchange of the involved traffic between its line and the Union Pacific and other railroads and contended that the Commission should prescribe the joint rates without regard to the prohibition in Section 15(4) against short-hauling existing routes. Citing this Court's decision in *Thompson v. United States*, 343 U. S. 549, the Commission rejected that contention and held that prescription of the joint rates demanded by Rio Grande would involve the authority conferred by Section 15(3) as limited by Section 15(4) to prescribe through routes and joint rates.

The Commission found that because of dissimilarities in transportation conditions including the fact that the Rio Grande has "more onerous" operating conditions than any other western line, and that routes via its line would be substantially longer than Union Pacific routes,

the evidence did not prove discrimination against the Rio Grande (except at points on the Bamberger Railroad between Ogden and Salt Lake City). But for the commodities named in the order it found the combination rates via the Rio Grande were unjust and unreasonable and unduly prejudicial to shippers desiring to use that line and unduly preferential to shippers using Union Pacific routes to the extent that the combination rates via the Rio Grande "exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes".

Instead of exerting its direct powers to remedy the violations so found (of Sections 1(4), 3(1) and 3(4) of the Act) the Commission invoked its power under Section 15(3) and 15(4) to order through routes and joint rates, saying that its action here was grounded on the exception to the short haul prohibition in Section 15(4)(b) which permits the Commission to order a new through route short-hauling existing routes if "the Commission finds that the through route, *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation." Purporting to act under that clause, the Commission said a question of "more" adequate transportation was presented as to certain commodities of a perishable nature. It found Union Pacific routes "inadequate" for the novel and untenable reason that they are not available at points located exclusively on the Rio Grande and that the *proposed* Rio Grande route "is necessary and desirable in the public interest, in order to provide adequate and more economic transportation" for the commodities named in the order. It did not find the Rio Grande route was "needed" nor that it would provide "more efficient" or cheaper transportation than that provided by Union Pacific routes.

The order (R. 21) requires the Union Pacific and over 200 other railroads to cease and desist from publishing rates for the articles named in the order in connection with the Rio Grande higher than the rates maintained over Union Pacific routes and from practicing the undue prejudice and preference and unlawful discrimination found in the report. The order further requires the defendants named in the Rio Grande's complaint to establish and maintain "rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination" found in the report. However, neither the report nor the order indicates whether establishment of the rates required will remove the undue prejudice, preference and unlawful discrimination so found, or whether some other and different rates would be necessary to accomplish that result.

In an apparent attempt to justify the use of its through route and joint rates powers the Commission departed from the standards of Section 15(4)(b) which it had expressly invoked, and from the criterion or measure of a railroad's duty under the Act, Section 1(4), which makes it the duty of railroads only "to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto." The report asserts that the present complex and far-flung marketing system for perishable food articles requires that they be moved to market "with expedition and care", and "over as many routes as possible", with "as much flexibility as possible" and without "unnecessary interruptions" (R. 70), to "as many markets and outlets as possible" (R. 56). Thus, the Commission invents a new standard or criterion of as many through routes "as possible" and substitutes that standard for those prescribed by the Act.

The majority of the district court (Circuit Judge Johnsen dissenting on the ground that the order was entirely void because it was based on standards and criteria beyond warrant of the Act) held that there was no evidential or legal basis for the Commission's finding that the combination rates via the Rio Grande are unduly prejudicial or preferential in violation of Section 3(1), and no evidence to support the Commission's finding that the Union Pacific routes are "inadequate and less economical than are the Rio Grande routes", except for shipments actually stopped at points on the Rio Grande (not served by Union Pacific) for certain commercial operations known as "transit privileges", such as grazing cattle, freezing, processing and storing and later reshipment of the articles named in the order to destinations beyond the termini of the Rio Grande. For the latter shipments the court sustained the validity of the order but enjoined and set it aside as to all shipments *not* requiring stoppage for in-transit privileges at points on the Rio Grande.

The Commission held that it could not order through routes and joint rates via the Rio Grande without first finding that the Union Pacific routes were "inadequate" and the court agreed with that view (R. 69, 160).

The Commission condemned Union Pacific routes as "inadequate" on the wholly erroneous ground that they offer lower rates and are not available at points served exclusively by the Rio Grande.

But the majority of the court adopted still another erroneous basis for condemning Union Pacific routes, to the extent it sustained the validity of the order, i. e. that transportation service for shipments of the involved

traffic requiring in-transit privileges *at points on the Rio Grande* was "inadequate and also inefficient and uneconomical" (R. 166), and that for such shipments the through routes and reduced joint rates required by the order were needed to provide adequate and more economic transportation via the Rio Grande.

The majority of the court holds that the absence of transit privileges at points on the Rio Grande justifies the Commission in short-hauling Union Pacific routes by invoking its through routes and joint rates powers and the court further holds that the use of the through routes power is justified as a means of remedying unreasonable rates and unjust discrimination against the Rio Grande at points on the Bamberger Railroad between Ogden and Salt Lake City (R. 167, 168).

SUMMARY OF ARGUMENT

1. This case involves a unique proposal that Rio Grande, with routes from 200 miles to 50 per cent longer than Union Pacific routes, be permitted to short haul the shortest, fastest, most efficient and most economic routes from the Pacific northwest to the eastern markets. The affirmative findings of the Commission as to Union Pacific facilities, service and capacity preclude any jurisdictional conclusion that the proposed route is "needed in order to provide adequate, and more efficient or more economic transportation". Since the undisputed evidence shows Union Pacific routes are "adequate" for the through movement of the involved traffic, there was no occasion to consider the Rio Grande's proposal to establish additional routes via its line.

The majority opinion of the district court concludes that only as to shipments requiring transit on the Rio

Grande is there any basis for a claim of inadequacy. As pointed out hereafter a finding of inadequacy of Union Pacific routes cannot be based on the higher rates charged by Rio Grande in connection with its transit privileges.

Rio Grande, in instituting this action, made no claim that Union Pacific routes are not adequate and has not questioned the economy and efficiency of Union Pacific routes. The Commission findings reflect some of the inefficiency of the mountainous Rio Grande route, but do not portray the full extent of the wastefulness involved in the longer, slower and more circuitous route of the Rio Grande.

The evidence of these five States demonstrates conclusively that the proposed routes are not "needed" and that serious public detriment will be sustained by their establishment. This showing as to "public interest" was given no weight by the Commission.

The shipper testimony, solicited by Rio Grande, is without probative force and is clearly contrary to the overwhelming preponderance of the evidence. Under any reasonable interpretation of statutory requirements the evidential basis or which the order rests is insufficient.

Our contentions are supported by the legislative history of 1940 amendments which demonstrate the intent of Congress to strengthen restrictions on short-hauling, and make it possible for the Commission to establish "shorter" instead of "longer" routes.

2. To construe the statutory provisions as permitting establishment of through routes solely to afford shippers using Rio Grande lower rates in connection with existing transit privileges, will, as held by Circuit Judge

Johnsen in his dissent, make it possible for the Commission to create new routes "from every connecting point in the country against every existing carrier". Transit being a "commercial operation", as held herein by the Commission, and not being a transportation service, the Act cannot be by-passed by sustaining the order on the basis of transit rates. The Commission's authority to deal with transit privileges is wholly independent of its through route and joint rate powers. The decisions uniformly hold that transit is local in character and subject to control by the carrier serving the shipper.

The criteria under which the Commission established through routes here do not conform to the statute. The Act does not authorize as many new routes "as possible" to reach as many new markets and provide as much flexibility "as possible"; and as pointed out below by Judge Johnsen, any such standards would completely destroy the short-haul prohibition in Section 15(4) of the Act.

The Commission failed to find that the proposed route is "needed" or will provide "more efficient" transportation as required by clause "(b)" of Section 15(4) which it expressly invoked. In addition, the Commission distorted the statutory requirement of "adequacy" by a mere finding that addition of the proposed route would make transportation "more adequate".

The Commission's report contains many inconsistent and conflicting findings and even fails to follow and apply the standards and criteria it adopted as the legal basis of its order.

The Commission having invoked the standards of clause "(b)" of Section 15(4) as the basis for its action,

the order must stand or fall under those standards and cannot be sustained at this time under any other standard or provision of the Act. This rule, clearly established by the decisions of this Court, is essential to prevent judicial exercise of "administrative" functions. The effort of Rio Grande and the Government to sustain the order under other provisions of the Act must therefore fail.

The evidence shows that this is a "financial needs" case within the prohibition of Section 15(4) of the Act and for that reason alone the Commission should have dismissed the complaint. Rio Grande could have no other purpose than financial gain in becoming a "bridge"-carrier in the proposed route. Reducing the scope of the Commission's order, as the court below did, does not change the financial gain character of the case.

The Commission's order entirely disregards the requirements of National Transportation Policy established by Congress and this failure, standing alone, invalidates the order under recent decisions of this and other federal courts.

3. The evidence will not support a finding of any violations of the Act by Union Pacific. Moreover, as held by this Court in *Thompson v. United States*, 343 U. S. 549, 560, and other cases, none of the claimed violations of the Act may be used to evade the through route requirements of Section 15(4).

There is an entire absence of evidence to sustain the Commission finding that present combination rates via the Union Pacific are unreasonable. The sole support for such finding in this record is a comparison of commodity rates showing that joint rates on the Union Pacific are

lower than combination rates via the Rio Grande. As this Court has often noted, this is always true and proves nothing. If such a showing justifies establishing a new route, then Section 15(4) is completely nullified.

The rate and other provsions of the Act under a long line of decisions of the Commission and this Court are subordinate to the through routes provision and cannot be used to circumvent the latter requirements.

In view of the admitted dissimilarity in transportation conditions, between the Union Pacific and Rio Grande routes, there can be no finding of undue prejudice under Section 3(1) nor of unjust discrimination under Section 3(4). The burden of proof in this regard was upon Rio Grande and the finding by the Commission of no violation under Section 3(4) required a like finding under Section 3(1). In addition, Section 3(1) gives no rights to Rio Grande since this section is applicable only to shippers and receivers of freight. Intervention of some shippers in support of Rio Grande did not remedy this defect since their intervention was ancillary and in subordination to the rights of Rio Grande.

The proviso to Section 3(1), added in 1940, prevents that section from being used to establish discrimination involving the traffic of "any other carrier". The 1940 legislation expanded Section 3(1) so as to prohibit discrimination against any "region, district" or "territory". The legislative history of this proviso shows that it was added when Section 3(1) was expanded to prevent any such expanded Section 3 from being used to override other provisions of the Act including Section 15(3) and (4). Section 3 cannot be utilized as a basis for any claim of discrimination as to transit privileges.

The decisions relied on by Rio Grande fail to sustain any claim of a violation of the Act. *State of New York v. United States*, 331 U. S. 284, involved "interterritorial class rates" and no question of through routes. The proviso to Section 3(1), added in 1940, was not involved or mentioned in the opinion. *Virginian Ry. v. United States*, 272 U. S. 658; involved claims of discrimination by one railroad of 54 shippers on its own line because their rates were higher than rates of 45 other shippers on the same line of railroad.

4. The Commission has commingled and misused independent provisions of the Act to circumvent Section 15(4). As emphasized by Circuit Judge Johnsen below, this has resulted in great "confusion" in the report and constitutes another "attempt by the Commission to gain a new foot hold, under another disguise". Such scrambling of the provisions of the Act has been condemned by this Court in such cases as *Central R. R. Co. v. United States*, 257 U. S. 247. The Commission has direct and definite powers under Sections 1 and 3. These sections cannot be used to circumvent Section 15(4) and the latter cannot be used to provide reasonable rates under Section 1 or to prevent discrimination under Section 3. An amendment to Section 15 in 1910 eliminated language which prior thereto might have permitted that section to be utilized "to give effect to any provision of this act."

ARGUMENT

I.

Since the Undisputed Evidence Shows and the Commission Found That (1) Union Pacific Routes are Shorter, Faster, Efficiently Operated and Have Surplus Capacity to Handle any Foreseeable Volume of Traffic and (2) Rio Grande Routes are Over 200 Miles Longer, Require Additional Interchanges, Involve More Onerous Operating Conditions and Maintain Higher Rates, the Record Will not Support a Jurisdictional Finding That Proposed Rio Grande Routes are "needed in order to provide adequate and more efficient or more economic transportation" as Required by Section 15(4) (b) of the Act.

The Commission report recognized at the beginning that Rio Grande proposals must satisfy Section 15(4)(b)[9] and that it could not order additional routes via the Rio Grande "unless the existing routes can be found not to provide 'adequate' transportation" (R. 69). The majority of the district court agreed that "only in the event there was inadequacy of transportation can the question of efficiency or economy be reached" (R. 160).

Thereafter the report reviews the evidence and makes affirmative findings as to the efficiency and adequacy of Union Pacific facilities which findings are inconsistent with and contradict the conclusions that Union Pacific routes are "inadequate" and that the proposed new

---

9 "* * * any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation." (R. 619.)

routes are needed as required by Section 15(4)(b)."[10]

The majority opinion of the district court sustains the Commission's order only as to shipments "which require in-transit privileges at points on the Rio Grande." As to all shipments from the northwest to initial destinations east of Denver and shipments west with initial destinations in the northwest territory, the majority opinion concludes that "[t]ransportation service is now adequate between those points."

In the next section of this brief we point out that no part of the order may be sustained upon the basis of in-transit privileges on the Rio Grande. As suggested by the dissenting opinion of Circuit Judge Johnsen,

---

10 The Commission finds that Union Pacific facilities are:
"* * * adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" (R. 62);
that the Union Pacific:
"* * * has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line" (R. 62);
that:
"* * * through service over defendants' [Union Pacific] routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande * * *" (R. 70);
that:
"Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services" (R. 62);
that, because of physical and geographic facts recited in its report and its longer mileage:
"* * * the Rio Grande line is less favorably situated than that of the Union Pacific" (R. 62);
and that:
"* * * as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein." (R. 70.)

Union Pacific routes, may not be declared inadequate upon such a ground.

The very first inquiry, in applying Section 15(4), as this Court said in *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, is to determine whether there "is adequacy of transportation." Unless Union Pacific routes are "inadequate", and there is no evidence to support such a finding herein, a new through route that short hauls the Union Pacific cannot be established.

Having properly made the basic findings of fact that present Union Pacific routes are adequate, the Commission should have ended its inquiry and dismissed the proceeding altogether, for, where existing routes are "adequate" and not unreasonably long, the Commission is without authority to compel other routes that short haul existing routes. Because the Commission ignored the adequacy of existing routes which it undertook to short haul by requiring others, its orders were annulled in *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, and in *United States v. Mo. Pac. R. Co.*, 278 U. S. 269."[11]

There is no room for dispute in this record that the use of the shorter single line system of the Union Pacific results in more efficient transportation than the use of the proposed Rio Grande route, which involves two more interchanges between carriers, as well as traversing a

---

11 The essentiality of a rational and factually sound finding of "inadequacy" of existing routes or service lies in the fact that it is jurisdictional and, therefore, must be made before the Commission can exert the authority to order additional routes or service. *United States v. B. & O. R. Co.*, 293 U. S. 454; *Florida v. United States*, 282 U. S. 194; *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588; *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538; *Hudson Transit Lines v. United States*, 82 F. Supp. 153, 157, aff. 338 U. S. 802.

longer and more difficult terrain. There is no room for dispute that the use of the single line route of the Union Pacific is more efficient and more economic for the same reasons and for the additional reason that it is considerably shorter.

There can be no question that transportation facilities and services in the entire northwest territory are more than adequate. The territory is served not only by the Union Pacific, but also by the Great Northern, the Northern Pacific, the Milwaukee, the Southern Pacific and certain short line railroads as well as by water and motor carrier service.

It is to be noted, in this connection, that in instituting this proceeding before the Commission, the Rio Grande makes no claim whatever that its route is "needed" as required by Section 15(4), or that Union Pacific routes are inadequate. The position and showing of the Rio Grande disregards this section of the Act.

The report of the Commission finds that Union Pacific facilities "are adequate to move over its own direct routes the present volume of traffic and any additional volume that might be anticipated in the foreseeable future"; that it "has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line"; that there is "much greater curvature in the Rio Grande line than in that of the Union Pacific"; that the "total rise and fall in feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific"; that the "Rio Grande as a bridge line would require at least 24 hours additional time in transit * * * and would require one or two more terminal-yard services" (R. 62); and that from Boise, Idaho, for example, to the territory between

Omaha and Chicago "the Rio Grande routes sought via Ogden are longer generally by at least 33 per cent, and range up to more than 50 per cent, than the short routes" (R. 71).

We submit, however, that the full impact of wastefulness established beyond dispute in the record is not portrayed in the report and order. The proof is overwhelming that the Rio Grande is not merely "less favorably situated" but actually "has no value as a service route" on the proposed bridge traffic (V. I, 603). The curvature on the Rio Grande is so great (I. C. C. Ex. 12, p. 9), that a train completes a circle an average of every 5.45 miles. The process of going up and down and around and around the mountains of Colorado, requires 51% more effort from Ogden to Denver, a distance of 606.9 miles, than a trip on the Union Pacific from Pocatello, Idaho, to Cheyenne, Wyoming, a distance of 551.6 miles (V. I, 574).

A particularly significant fact as to wastefulness is the proof relating to average freight car miles per serviceable freight car day which shows that Union Pacific is from 84% to 94% more efficient (I. C. C. Ex. 15, p. 7). This fact, together with the additional interchanges and other delays involved in getting through the Ogden bottleneck, adds up to a tremendous loss. It is conservatively estimated to amount to at least one full day per car (V. I, 641) or a minimum loss of 207,000 car days annually. This waste is estimated to cost $124.33 per car by Witness Oliver or a total of $19,614,549, annually, upon the basis of the full traffic potential claimed by the Rio Grande to be subject to diversion (I. C. C. Ex. 53, p. 3).

Without in any way attempting to exhaust or review all the record upon this subject, we submit that it must be conceded by everyone that the Rio Grande and Union Pacific are not comparable in any sense. The facts concerning the Rio Grande are well known to the public and have been cited by the Commission many times.[12]

The fact is that in practice the Rio Grande route has not been a serviceable route even in emergencies and, for that reason, traffic was not diverted to it during the last

---

12. In *Commercial Club, Salt Lake City v. A., T. & S. F. Ry. Co.*, 19 I. C. C. 218, 221-222, the Commission said:

"The Denver and Rio Grande is situated, for the most part, among the mountains. Its cost of construction was high, and the expense of operation is much greater than that of the Union Pacific. It is the claim of this company that we should determine the reasonableness of these rates with reference to the cost of handling the traffic by its line and with reference to its financial necessities and not with reference to the Union Pacific.

"The Denver & Rio Grande was built for the purpose of handling the local business tributary to its line. No railroad would ever have been built where this one is for the main purpose of handling through business like that under consideration. Today its branch lines aggregate two and one-half times the mileage of its main line, over which this traffic passes. The great bulk of its tonnage today is from local business. Its line is longer than that of the Union Pacific between all points."

In *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, (June 30, 1936), two years after the Dotsero cutoff was established, the Commission described the operating conditions over the Rio Grande as follows:

"The operating conditions on the Denver & Rio Grande Western are unusually severe even for Mountain-Pacific territory; because the difficulties encountered are extreme and extensive. We have frequently in the past recognized these conditions and their effect in increasing the costs of operation on this road * * *. Since the hearing, the financial condition of this road has resulted in the filing of a petition in bankruptcy, and on November 18, 1935, trustees of the property were appointed." (pp. 486-487.)

Due to its geographic location and physical characteristics, the Rio Grande has always claimed that it is entitled to higher rates than other carriers and has secured such rates. *Livestock—Western District Rates*, 176 I. C. C. 1, 55-56, 190 I. C. C. 175, 200 I. C. C. 535.

war (V. I, 890). It was not able to handle the traffic tendered to it during the 1949 blizzard emergency (V. I, 684). The truth is that from a public and shipper standpoint the road and its practices are not desirable because, as shown by the record, it has failed to assume its reasonable responsibilities as a carrier (V. I, 665-672).

The matters heretofore reviewed as to the operations of the Rio Grande are of serious concern to these interveners as representatives of the shippers and general public in the affected States. It is apparent that the Rio Grande, as a marginal railroad, has nothing whatever to offer these States. Adding such a road to our transportation system on a wide-open unrestricted routing basis, will inevitably result in serious rate and service problems for our present carriers.

The public service commissions of these five States offered testimony in this case that carefully reflected the present and future transportation needs and problems of the territory of the Union Pacific extending from the Missouri River to Canada and the Pacific Ocean. This showing included evidence by experts on the staff of these commissions, public officials whose responsibility is to know and represent the public interests of these States. These witnesses came to the hearing supported by exhaustive studies and investigations of the needs and interests of their people. Their testimony was supported and confirmed by other witnesses appearing for cities, traffic associations and by individual shippers from such States. Without exception, these witnesses demonstrated that the present transportation facilities in all this territory are more than "adequate", within the meaning of Section 15(4) of the Act, and that any diversion of traffic to the Rio Grande would have the serious effects mentioned earlier in this brief.

As against the relatively few procured witnesses appearing for the Rio Grande with reference to the "public interest" features of this case, the evidence and showing of these interveners were overwhelming.

Who, may we ask, would be in a better position than the highest railroad regulatory officials of these States to judge, from investigation and experience, whether an additional route via the Rio Grande is "needed" by the shippers and public of Washington, Oregon, Montana and the other States? Whose testimony as to the consequences and effects of putting an unneeded route into competition with existing routes, would be better qualified than that of such officials?

The statement by the Commission that it "considered" "all of this evidence", while inserted to bolster the order, provides no legal support whatever.[13]

It is obvious that the Commission gave no weight whatever to the fact that 120 public and shipper witnesses, who ship 136,000 carloads annually to and from the northwest area, testified in opposition to the Rio Grande that the present Union Pacific routes afford highly satisfactory and fully adequate service for the marketing of their products in all states of the Union and elsewhere and that their own experience had disclosed no handicap or disadvantage in the marketing of their products. Against this overwhelming preponderance of testimony,

---

13 In *Beaumont, S. L. & W. Ry. v. U. S.*, 282 U. S. 74, 86, Mr. Justice Butler made the following pertinent observation, for the Court, in this connection:

"The general statements in the reports to the effect that the Commission in reaching its conclusions considered all the pertinent evidence add nothing to the prima facie presumption that generally attends determinations of the Commission. Bluefield Co. v. Public Service Commission, 262 U. S. 679, 688-689."

the Commission and its counsel rely upon the testimony of 50 Rio Grande procured shipper witnesses who ship some 28,000 carloads annually of the same products and who admitted that they distribute their products via Union Pacific's existing routes to markets in all 48 States and several foreign countries. (V. I, 240). The order is not only without evidentiary support, but is clearly contrary to the overwhelming preponderance of the evidence.

It has been our position throughout this proceeding that the public interest is dominant and controlling in whatever view is taken of this case and that the Commission has not been given any authority to override or sacrifice the public interest of all of these States in order to provide the Rio Grande with some additional "bridge traffic" revenue.

In *N. Y. Central Securities Co. v. U. S.*, 287 U. S. 12, the phrase "public interest" in the Transportation Act of 1920 was explained in language that encompasses the wording of both Section 15(3) and Section 15(4), and supports our contention that the new routes proposed by the Rio Grande do not conform to the "public interest" requirements of the Act.[14]

[14] "The provisions now before us were among the additions made by Transportation Act, 1920, and the term 'public interest' as thus used is not a concept without ascertainable criteria, but has direct relation to adequacy of transportation service, to its essential conditions of economy and efficiency, and to appropriate provision and best use of transportation facilities * * *." (287 U. S. 25.)

It would be necessary before granting any part of the Rio Grande's demands for the Commission to find that there is a real "need" for action "in order to provide adequate, and more efficient or more economic, transportation," and that such relief is "consistent with the public interest." The decision in *Pennsylvania R.*

(Continued on next page)

When the statute uses the term "adequate" in setting up a standard for transportation facilities, it must refer to a reasonable sufficiency of service for the public as a whole. The statute does not contemplate that the "desires" of every last shipper in the northwest territory for additional routes or for as many routes "as possible" must be completely satisfied in order for service to be adequate. *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 545.

When the statute states that through routes may be required if "needed" to provide "more efficient" or more "economic" transportation, the statute certainly contemplates, as any dictionary will verify, that the *proposed* routes must be highly capable, effective in operation and involve a thrifty utilization of resources.[15] The record here, and the Commission's own findings show that the Rio Grande has none of these attributes.

The importance of requiring the proof specified in Section 15(4) is well stated by this Court in *U. S. v. Great Northern R. Co.*, 343 U. S. 562, where the economic

(Continued from preceding page)

Co. v. U. S., 323 U. S. 588 speaks of considering both shippers' and carriers' interests, in connection with the public interest, and striking a "fair balance."

This "balance" might be compared to that involved in abandonment cases. *Colorado v. United States*, 271 U. S. 153, 168.

15 In the case of *Kassebaum v. Nebraska State Railway Commission*, 142 Neb. 645, 7 N. W. 2d 464, the Court considered the purpose of the motor carrier act of Nebraska which specified an intent to "promote adequate, economical and efficient service." It was held (142 Neb. 655) that this language required routing "best suitable to the trip."

consequences of diverting traffic to a financially weak carrier are accurately described.[16]

Thompson v. United States, 343 U. S. 549, 555, 556, 558, 559, makes repeated references to attempts of the Commission to evade and disregard requirements of the statute, and the short-haul restriction of Section 15(4).

The proposed report of the examiner in this case termed the testimony of a few Rio Grande shipper witnesses as "representative", despite the fact that a far greater number of shippers of a much larger volume of traffic opposed the Rio Grande. The Rio Grande seized upon this idea in an attempt to magnify the weight and scope of its evidence so as to comply with the substantial evidence rule. But its testimony was not offered or submitted to the Commission as either "typical" or "representative." It was all the Rio Grande was able to procure from shippers, and a far greater number of shippers contradicted the meager offerings of the Rio Grande's shippers.

Those few witnesses procured by Rio Grande, in view of the record, are neither "representative" nor

16 "It is one form of regulation to redistribute revenues between connecting carriers by determining divisions of revenues received on existing through routes. The economic ramifications are quite different if the Commission establishes through routes which divert traffic to the lines of a financially weak carrier. Such action not only serves to assist that carrier financially but can also, at the same time, cause important changes in the movement of traffic, diverting traffic to a new geographic area at the expense of other carriers and other areas. Congress amended section 15(4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs. But the provisions of section 15(4)—the restrictions against short-hauling, the financial needs prohibition and the emergency route provision—all deal with the Commission's power to establish through routes." (343 U. S. 574-575.)

"typical." In their insistence upon "wide open" routing, they are "exceptional" rather than "representative."

The theory that the testimony of a few procured shippers from this vast area may be multiplied in weight and effect by a so-called "typical" evidence rule is equally untenable as a matter of law. Reliance is placed by Rio Grande in this connection on decisions of this Court under Section 13 of the Act, and in rate division cases. We submit that even if such a rule is proper in such cases, the present situation is not comparable and no such rule can be invoked here. To say that a railroad, in the present proceeding, could establish rights by procuring a few shipper witnesses and then magnifying their testimony into a "typical" showing, is not consistent with ordinary principles of justice.

Legislative History of 1940 Amendments Shows That Congress Strengthened Restrictions on Short-Hauling and Made Provision for Establishing Shorter and More Economical Routes.

The Commission recognized that the amendments of 1940 (now Section 15(4)) strengthened restrictions on short-hauling but failed to give effect to additional limitations on its authority.[17] There is nothing in the legis-

17 The Commission report at page 655 contrasts two cases under earlier statutes, saying:

"Since the two decisions last above referred to, section 15(4) has been amended (in 1940), so that now the prohibition against short-hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the through route proposed to be established is needed in order to provide adequate and more efficient or more economic transportation."

lative history[18] of these amendments to suggest that Congress intended to approve such wasteful and inefficient proposals as those of the Rio Grande in this case.

The discussion of Senator Wheeler, Chairman of the Committee on Interstate Commerce, when the 1940 amendments to the Act were under consideration in Congress, demonstrates that the objective was to permit the Commission to establish shorter and more economical routes. Under prior law this Court had held in *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, that a route 308 miles long could not be established to short haul one 311 miles which already existed. At page 6054 of the Congressional Record May 20, 1939, Senator Wheeler said of the amendment:

> "It leaves the option of routing with the shipper but under the authority now given the Interstate Commerce Commission it cannot establish a route over the shorter way."

He goes on (p. 6058) to point out that the amendment would abolish any "vested right" in the longer route.[19] In the instant case, the "vested right" is claimed

---

18 Consideration of legislative history in this case is appropriate. *Helvering v. Morgan's, Inc.*, 293 U. S. 121.

19 In its report No. 404, on Senate Bill 1261, 75th Congress, 1st Session, the Senate Committee on Interstate Commerce said at page 2:

"Your committee feels that the shippers of the country should be given the right to use the *shortest, quickest, and cheapest routes available* * * *. The bill does not give the Commission power to order the railroads to route shipments in any particular way, but merely provides that *if a shorter route exists*, and if it is in the public interest for the shippers to have this route available, the railroads shall, upon the Commission's order, publish the route and rate in their tariffs. It is not the intention of the committee to interfere with the right of the trunk lines to their long haul, except where this right conflicts with the shippers' right to the *shortest route and lowest rate*. If there is this conflict, the *shipper is merely given the opportunity, if he wishes, of using the shorter or cheaper route.*" (Italics added.)

by the longer Rio Grande to short haul the shorter Union Pacific routes.

It is worthy of note in connection with this legislative history that the American Short Line Railroad Association (intervener in support of the Rio Grande in this litigation) stressed that the *Missouri Pacific* decision prevented the establishment of shorter and more efficient routes and that it was in the public interest to effect such economies.

The history of this legislation contradicts any suggestion that it involved delegation of authority to provide wide-open routing or longer and wasteful routes. It is true that some interests have long espoused unrestricted routing but there was no move following the 1940 amendments to place any such interpretation on the new legislation. Recent decisions of the Commission summarized in *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I. C. C. 331, emphasize the purpose of avoiding wasteful and uneconomic transportation in authorizing short-hauling routes.[20]

---

20 These Commission decisions, in cases since 1940, are reviewed (276 I. C. C. 331) at page 333 as follows:

"Section 15(4) of the act has been in its present form since September 18, 1940. In several proceedings since then, reasonable through routes which short-haul one or more carriers have been prescribed. See D. A. Stickell & Sons, Inc., v. Alton R. Co., 255 I. C. C. 333 (sustained in Pennsylvania R. Co. v. United States, 323 U. S. 588); Allied Mills, Inc., of Virginia v. Alton R. Co. 272 I. C. C. 49; California Milling Corp. v. Atchison, T. & S. F. Ry. Co., 269 I. C. C. 725 and 274 I. C. C. 120. In the first two of those proceedings it appeared that the routes required to be establishd *eliminated expensive out-of-line hauls*, and in the latter proceeding the *routes required were shown to be shorter in many instances* than those which had existed. *In all of those proceedings the routes required were at least as economical, from the standpoint of the carriers* as well as of the shippers as were most of the existing routes.

(Continued on next page)

Instead of approving wide-open routing, therefore, the 1940 amendments strengthened the restrictions against short-hauling and gave the Commission power to establish shorter and more efficient routes. The Commission's order here, requiring longer and more onerous routes via the Rio Grande reverses the purpose of those amendments.

II.

The Commission Failed to Give Effect to Controlling Statutory Prohibitions, Standards and Criteria and Failed to Apply the Rule and Norm of its Previous Decisions; and the Court Erred in Sustaining a Part of the Commission's Order on the Erroneous Premise That Through Routes and Joint Rates may be Established for the sole Purpose of Making Additional Transit Privileges Available by Equalizing Rates.

In the several subdivisions which follow we discuss the various "statutory standards" which have been disregarded, violated or side-stepped by the Commission in this case. In so doing we approach the matter in accordance with the declaration of this Court that where Congress has prescribed the standards pursuant to which "rights are to be determined", the "precise grounds" of the Commission's a tion are to be scrutinized in order to effect a "judicial review"; and such examination includes ascertainment of whether any "erroneous statutory construction lies hidden in vague findings".[21]

(Continued from preceding page)

"The instant situation differs. All of the routes *sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic* transportation. In addition, because of the circumstances here present, we believe a requirement that the *routes sought to be established would not 'give reasonable preference' to the originating carrier.*" (Italics added.)

21 *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 488-489.

We shall also review in this section a number of instances where this Court refused to sustain orders because the Commission "has not adequately explained its departure from prior norms and has not "sufficiently spelled out the legal basis of its decision".[22]

A. Through Routes and Joint Rates Cannot be Established for the Purpose of Making Additional Transit Privileges Available by Equalizing Rates.

The majority opinion of the court below mistakenly assumes that there is an "absence of in-transit privileges" on the Rio Grande. The record, however, shows clearly that shippers on the Rio Grande have "intransit privileges". The sole complaint of the Rio Grande is that the rates to which such privileges apply are too high (R. 28). In establishing the through routes and joint rates requested the Commission has lowered the transportation rates and transit costs of shippers pretending a desire to use the Rio Grande's longer and more onerous route.

That portion of the Commission's order upheld by a majority of the district court is sustained solely on the proposition that the claimed absence of "intransit" privileges may be considered in determining whether present routes are "inadequate" under Section 15(4).[23]

---

22 *Sec'y of Agriculture v. United States*, 347 U. S. 645, 653; *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, 87, 94-95; *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, 504-505, 510-511; *Atchison Ry. v. United States*, 295 U. S. 193, 201-202.

23 "We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. *Pennsylvania R. Co., et al., v. United States, et al.*, 323 U. S. 588, 54 F. Supp. 381."

The dissenting opinion of Judge Johnsen sharply points out that if new routes can be established "in part" to provide additional transit privileges there is no practical limit or restriction on the establishment of new routes by the Commission (R. 173).[24]

The Commission suggested in its report that its "conclusion is also supported" by the "situation with respect to the operation of many of the in-transit privileges and services" (R. 70), but its "conclusons" and findings make no reference to transit. Paragraph 4 of its "conclusions" states that "except as indicated in the preceding findings, the allegations made in the complaint are not sustained" (R. 74).

A Transit Privilege is a "Commercial Operation" not Transportation Within the Meaning of Section 1(3) of the Act.

The statement by the Commission that "transit" constitutes "commercial operations" (R. 48) reflects a conclusion, inescapable from the language in paragraph 3 of Section 1 of the Act, that a "transit privilege" does not constitute transportation which must be furnished by a railroad. This Court approved such conclusion, *B. & O. R. Co. v. U. S.*, 305 U. S. 507, 525. The pertinent language of that paragraph has remained the same since 1906 (34 Stat. 584). Transportation under the Act is defined to include "services in connection with the * * *

24 "If the order is upheld either in whole or in part, on the basis on which the Commission's result has been reached, the Commission can hereafter exercise its power to require through routes and joint rates from every connecting point in the country against every existing carrier, since every new through route necessarily will afford additional transit privileges and every joint rate necessarily will reduce the cost of using the new through route as against the combination rate previously applicable."

transfer in transit * * * of property transported." It is the "transfer" of commodities "in transit" that is declared to be transportation, by this language, and not "commercial operations."[25]

In 1914, after the foregoing language had been in the statute eight years, the Commission said in *The Five Per Cent Case*, 31 I. C. C. 351, 408, that—

> * * * a transit privilege is something offered to the shipper in addition to the transportation service. * * *"

Citing and following several decisions of this Court, *Walling v. Baltimore Steam Packet Co.* (C. A. 4), 144 F. 2d 130, in an opinion by Circuit Judge Parker, declares at page 134 that the phrase "services in connection with" has "uniformly been construed to mean service rendered while a shipment is in the custody and control of the carrier or service which the carrier is legally obligated to perform."

Transportation in the "ordinary sense", as stated in *Cunard S. S. Co. v. Mellon*, 262 U. S. 100, 122, "comprehends any real carrying about or from one place to another."

It is of course presumed that the "ordinary acceptation" of these terms was intended by the Congress.

---

25 Indeed, an "in-transit privilege" is the very opposite of "transit". It is a privilege granted shippers to interrupt the actual transit or movement of their shipments and hold them in their own custody at the point of interruption for periods as long as 12 months for performing such "commercial operations" as grazing cattle, milling grain into flour, storing, etc., and later reshipped to final destination on the through rate as if there had been no interruption to the continuous through transportation movement. This has been called "the fiction of a through rate with transit privilege". *A. T. & S. F. Ry. v. United States*, 279 U. S. 768, 777.

Louisville & Nashville R. R. v. Mottley, 219 U. S. 467, 474. Moreover, it is a rule of construction applicable to "business of a public nature" that the "language of such regulations will not be broadened by implication." *Chesapeake & Potomac Tel. Co. v. Manning*, 186 U. S. 238, 248.

Our position is not based, as suggested by the majority opinion of the lower court, on the ground that the Commission has "no control" over transit in any situation and that the granting of transit is "subject only to managerial discretion." It is simply our position that transit does not constitute transportation within the meaning of the Act and being a "commercial operation" any control that may exist with reference to it may not be used as a basis for ordering through routes and joint rates under Section 15(4). That position is supported by language in *Great Northern Ry. Co. v. United States*, 81 F. Supp. 921,[26] affirmed *per curiam* 336 U. S. 933.

It must be remembered that the secondary meaning of the term "transit" as the "privilege of stopping over goods in course of carriage"; constitutes "almost the reverse of its primary significance."[27]

The position of the Commission heretofore has been that whatever control it may exercise over transit stems

---

[26] The question in that case was whether the Commission's order established a new through route. At page 925 and with reference to transit the opinion said:

"We think that a transit is an accompaniment or supplementary advantage in connection with an existing through route but does not, in itself, create the through route. The existence of a transit implies the existence of the through route. A transit at a particular point is the voluntary or required action of the particular carrier at such point, but a through route is not created by creating a transit."

[27] *Koshland v. Columbia Ins. Co.*, 237 Mass. 467, 130 N. E. 41, 43.

from the 1906 amendment to what is now Section 15(1) of the Act relating to practices.[28] As discussed elsewhere in this brief, Section 15(1) is an independent portion of the Act and contains no authority to override other provisions of the Act such as Section 15(4).

The only authority cited by the majority opinion of the court to support its position that the situation as to transit privileges sustains part of the order is *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588. The opinion of this Court as well as the Commission's report (255 I. C. C. 333) in that case shows that the shipper involved already had ample transit privileges and was located on the Pennsylvania railroad, against which complaint was made, and not, as here, on some other railroad. The facts in the *Pennsylvania* case eliminate it as a precedent for the present case.[29]

The majority opinion of the district court makes a drastic departure from the rule followed by the Commission in previous cases regarding its jurisdiction over transit privileges. Following decisions of this Court, the Commission has repeatedly held that there can be no discrimination levelled at a carrier because some other car-

28. *Spiegle v. S. Ry. Co.*, 25 I. C. C. 71.

29. The through routes required in that case eliminated four extra days' time in transit, a 149-mile out-of-line haul costing 90 cents per ton and two switching interchanges, in contrast with a completely reverse set of facts in the instant case, where the longer Rio Grande route required by the Commission's order would result in some 200 miles of additional transportation over the most "onerous" operating conditions of any western railroad, adding $124 per car to transportation cost, two additional interchanges between carriers at an additional cost of $20.44 per car per interchange, and at least one or two days' more time in transit, and would short-haul existing routes at least 925 miles and would deprive some of the appellant railroads of their entire hauls.

rier with which it connects fails to grant equal transit privileges. These former decisions all recognize that transit is local in character and subject to control through the carrier which serves the shipper.[30]

The rule that "transit privileges are treated as a matter local to the railroad on which the transit point is situated", is well settled.[31] No reason is shown in the

30 In *Federal Products Co. v. I. C. R. R. Co.*, 107 I. C. C. 271, a complainant attempted (as in the case at bar) to obtain what the opinion referred to at page 274 as "rate advantage" by the "establishment of similar transit arrangements at Cincinnati". In denying relief the opinion states:

"The Supreme Court of the United States has held that a line which participates in a joint rate is not guilty of undue prejudice in failing to accord a transit service at a point on its line merely because another carrier party to the same joint rate does not accord transit service. Central R. R. Co. v. United States, 257 U. S. 247. In view of that decision the Big Four, which is the only defendant serving both Pekin and Cincinnati, could not be found guilty of undue prejudice. The record shows that it does not grant a similar transit privilege at any point on its lines. The lines which serve Cincinnati in respect of traffic from New Orleans, such as the Louisville & Nashville and the Southern, do not reach Pekin with their own rails and had no voice in the establishment of the transit arrangements at that point. Conversely, the Illinois Central which serves Pekin, does not serve Cincinnati and would be powerless to remove the alleged undue prejudice by establishment of a similar arrangement at Cincinnati." (p. 275)

Similar holdings and statements by the Commission appear in *Montgomery Cotton Exchange v. S. A. L. Ry. Co.*, 109 I. C. C. 579, 585; *White Star Refining Co. v. Illinois T. Co.*, 147 I. C. C. 671, 674; *Meridian Grain & Elevator Co. v. A. & V. Ry. Co.*, 38 I. C. C. 478.

31 *Utah Poultry Producers Co-op. v. Union Pac. R. Co.*, (C. A. 10), 147 F. 2d 975, 976, in a case involving interpretation of a tariff, states:

"Under the rules of the Interstate Commerce Commission governing the making, filing and publishing of tariffs, transit privileges are treated as a matter local to the railroad on which the transit point is situated. The local carrier determines both whether the privilege shall be granted and the condition under which it may.

(Continued on next page)

instant case for departing from this rule. As shown in the next section of this brief, such rule has long prevented any violation of Section 3 being founded upon the transit situation in this case.

B. The Criteria That as Many new Routes "as possible" may be Required to Provide as Much Flexibility and as Many Markets "as possible", Would Nullify the Short-Hauling Restrictions of Section 15(4).

Section 1(4) creates a general duty on the part of carriers to "establish reasonable through routes". The word reasonable was inserted in this paragraph by the 1940 amendments. Previously the obligation was to "establish through routes" (54 Stat. 900).

The criteria which have been set up by the Commission and the court in this case for measuring the adequacy of existing routes and the duty of railroads to establish additional routes would render all statutory restrictions on short-hauling nugatory. The idea that food articles of a perishable nature require "as wide a dis-

---

(Continued from preceding page)

be exercised. See Central R. Co. of New Jersey v. U. S., 257 U. S. 247, 42 S. Ct. 80, 66 L. Ed. 217."

Roberts, Federal Liabilities of Carriers, (2nd Ed.) Volume I, Section 207, page 486, states:

"Under the rules of the Commission governing the making, filing and publishing of tariffs, transit privileges are treated as a matter local to the railroad on which the transit point is situated. A transit charge is therefore a local charge for which the carrier establishing it is alone responsible, and the mere fact that a carrier participates in joint rates in connection with which a transit arrangement is allowed at points off its line does not make it guilty of undue prejudice by failing to accord transit to a point on its line; for mere participation in joint rates does not make connecting carriers partners, and they can be held jointly and severally responsible for unjust discrimination only if each carrier has participated in some way in that which causes the unjust discrimination."

tribution as possible", "as many routes as possible" and "as many markets and outlets as possible" and that these requirements justify the opening of new routes, constitutes a clear departure from the standards of Section 1(4), and establishes a criterion that may conveniently be used at the whim of the Commission whenever and wherever such articles are shipped. Such an abstract measuring stick amounts to an adoption by the Commission of unlimited short-hauling as advocated by the witnesses of Rio Grande.

The statutory history and requirements previously reviewed demonstrate that any such standard is at war with the design and intent of Congress. "The law exacts only what is reasonable from such carriers", *Midland Valley R. R. v. Barkley*, 276 U. S. 482, 485; *Penna. R. R. v. Puritan Coal Co.*, 237 U. S. 121, 133.

It is these new "standards and criteria" set up by the Commission that are the subject of penetrating analysis in the dissenting opinion of Circuit Judge Johnsen. This Court will want to carefully weigh this entire dissenting opinion, some of the observations of which are quoted below[32] in support of the conclusion that if the

32 "In other words, whenever it is possible physically and practicably to open up a new or an additional through route for such commodities, the Commission apparently feels entitled to exercise its power to do so, in order to make available any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use * * *." (R. 171.)

" * * * I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate des-

(Continued on next page)

standards adopted in this case are the law "then the railroads of the country may as well forget Section 15(4) entirely, as affording them any protection whatsoever against deprivation of their long hauls."

The conclusions set forth in this able dissenting opinion are apparent, as stated by its author, to anyone "who reads the Commission's Report * * * stripped of all the confusion in which the Report has been wrapped." The penetrating analysis in this opinion demonstrates that this case is "but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position" of unlimited short-hauling; and, by use of these false standards to "get the camel's nose under the tent".

(Continued from preceding page)

tinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term 'more economic transportation' under section 15(4), in the addition of another carrier's route as a mere 'bridge' line for such traffic. If that be not so, then there is not any situation in which the Commission can not make a finding of 'more economic transportation' for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination rates otherwise applying.

"Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to 'as many routes as possible' and 'as much flexibility as possible in the distribution process', so that on this basis, and without regard to any other factor, any existing through route can be called inadequate * * *." (R. 172.)

"The philosophy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the country has never yet been relegated by Congress to the full impact of marketing principles alone. There is not a distributor of any commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did." (R. 175.)

Never before, we suggest, has any judge in any court pointed up more devastatingly the "merry-go-round" devices, sustained by the majority of the district court, which have been weaved into a Commission decision; and which, "with a simple brushing aside of transportational conditions, realities and consequences", are claimed to result in "more economic transportation", within the meaning of Section 15(4)(b) of the Act.

C. The Order is Void Because the Commission Departed From and Failed to Make the Findings Required by the Standards of Section 15(4)(b) Which the Commission Expressly Invoked.

In *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, this Court, in an opinion by Mr. Justice Frankfurter, said at page 87 that:

> "The grounds upon which an administrative order must be judged are those upon which the record discloses that its action was based."

At page 89 the Court said the Securities Commission's "action must be judged by the standards which the Commission itself invoked", and, pointing out that the grounds urged by counsel to the Court "in support of the Commission's order were not those upon which its action was based", the Court refused to sustain the validity of the order, saying at page 95 that:

> "* * * an administrative order cannot be upheld unless the grounds upon which the agency acted in exercising its powers were those upon which its action can be sustained."

The Court remanded the case to the Court of Appeals, and in an opinion in the same case upon its return to this Court, 322 U. S. 194, 196-197, the principles quoted above from the Court's first decision were reiterated.

The first of those decisions (318 U. S. at page 94) repeated the settled rule that "orderly functioning of the process of review requires that the grounds upon which the administrative agency acted be clearly disclosed and adequately sustained." The Court further said that the Commission's "action must be measured by what the Commission did, not by what it might have done" and that the action "cannot be upheld merely because findings might have been made and considerations disclosed which would justify its order * * *" (p. 94).

In the instant case the Commission was specific and explicit in stating the precise standards invoked by it in ordering through routes and joint rates. Although it made findings under other sections of the Act, it found that there were no through routes via the Rio Grande on the traffic concerned, and stated (R. 33),

> "* * * that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation."[33]

Thus, while the Commission recognized all the elements required to be found under section 15(4)(b), its

---

[33] Section 15(4)(b) of the Act permits the Commission to order a new route that short-hauls existing ones if "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation".

But this authority is "applicable only where the Commission makes the *special findings listed* in the amended Section 15(4)[b]. *Thompson v. United States*, 343 U. S. 549, 555. (Italics added.)

finding and conclusion as to through routes and joint rates was as follows:

> "We conclude: 1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established." (R. 73.)

There is no finding in the foregoing as required by Section 15(4)(b) that the Rio Grande route is "needed" or will provide "more efficient" transportation.

It will be noted that in Section 15(4)(b) the word "adequate" is used conjunctively with the words "more efficient" or "more economic". In *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 255 I. C. C. 333, at page 343, the Commission said:

> "We interpret that exception to mean adequate and more efficient *and* more economic from the public's or shippers' as well as the participating carriers' standpoint." (Italics added.)

The Commission therefore construes the word "or" just before the words "more economic" as meaning "and". That interpretation was sustained by the three-judge court in *Pennsylvania R. Co. v. United States*, 54 F. Supp. 381, in an opinion which was affirmed by this Court, *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, at page 593. Interpretation of the word "or" as meaning "and" has been approved by the courts when such interpretation is necessary to give effect to the clear intention of the legislature. *United States v. Fisk*, 70 U. S. 445. The Commission's interpretation, sustained by this Court, of the word "or" as meaning "and" is necessary to conform clause "(b)" of Section 15(4) with the declared

purpose of the National Transportation Policy to promote "safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers."

As properly construed by the Commission and the Court, before it may exercise the authority granted by Section 15(4)(b) to short haul a carrier, the Commission must find upon substantial evidential facts that the proposed new route is "needed" to and will accomplish each of the three conditions there specified, first "adequate" transportation, second, "and more efficient" transportation than that provided by existing routes, third, and "more economic" transportation than existing routes provide. As the Commission did not, as apparently it could not, find that the Rio Grande route is "needed" for the "bridge" traffic it seeks, or that it will provide "more efficient" transportation for that traffic than Union Pacific routes, it has failed to meet the requirements of the standards it invoked, and the order must be set aside under the rule applied in the *Chenery* cases cited above.

In addition to the defects just discussed, the Commission speaks of the need for "more adequate and economic service." If new routes may be opened up on the theory that the more routes there are the "more adequate" the transportation service will be, then there is, of course, no limit on what the Commission may do in this field. This would be especially true where, as here, the proposed route is deemed "more adequate" simply and solely because (with its rates reduced as required by the order) it will give some shippers lower rates via the Rio Grande than they now have over that line, or because the Union Pacific is not available to shippers located only on the Rio Grande. Such departures from and

loose dealing with specific statutory standards may not be permitted. *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 488; *Western Air Lines v. C. A. B.*, 347 U. S. 67, 71; *Delta Air Lines v. Summerfield*, 347 U. S. 74, 79.

The Order may not be Upheld Upon Grounds not Invoked by the Commission.

Apparently realizing that after expressly invoking the standards of Section 15(4)(b) the Commission's departure from and failure to make findings in conformity with all of the requirements of those standards vitiates the Commission's order and requires that it be set aside, counsel for both the Government and the Rio Grande have already indicated in their respective Jurisdictional Statements that they hope to persuade this Court to sustain the order upon some other standard than those of Section 15(4)(b) which the Commission invoked. At page 10 of the Government's Jurisdictional Statement it is asserted that:

> "An independent basis of the Commission's order establishing through routes was its finding that the combination rates between the Union Pacific and the Rio Grande were, to the extent that they exceeded the joint rates via the Union Pacific routes to the same points, unjust and unreasonable and unduly prejudicial of shippers and receivers using the Rio Grande, and unduly preferential of shippers and receivers using the Union Pacific routes, in violation of Section 3(1) of the Act."

The Rio Grande's Jurisdictional Statement states at pages 12 and 27 that the short haul prohibition of Section 15(4) does not apply "[w]here discrimination and undue prejudice is found under Section 3 of the Interstate Commerce Act."

"Thus, counsel for both the Government and the Rio Grande ask the Court in this case to do the very thing it refused to do in *Securities Comm'n v. Chenery Corp., supra*, namely, to sustain the validity of the order upon grounds or standards other than those of Section 15(4)(b) which the Commission expressly and avowedly invoked. While we demonstrate elsewhere in this brief that findings of a violation of Section 3 afford no basis for compelling through routes and joint rates that short haul existing routes, the point here is that even if the Commission could order through routes upon findings under Section 3, it did not purport to do so in this case but instead expressly declared that in ordering through routes and joint rates it was acting upon the authority, standards and requirements of Section 15(4)(b). "Since the decision of the Commission was explicitly based upon the applicability of" those standards and requirements "its validity must likewise be judged on that basis", first *Chenery* case, 318 U. S. 80, page 87.

The Commission having departed from, misapplied and failed to meet the requirements of the standards it explicitly invoked, this Court will not attempt to sustain the order by searching for or spelling out "a more adequate or proper basis" for it, second *Chenery* case, 332 U. S. 194, page 196; *Florida v. United States*, 282 U. S. 194, 215; *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 488-489.

D. The Order is Void Because This is a Financial Needs Case Within the Prohibition of Section 15(4).

Section 15(4) contains a very emphatic mandate that—

"No through route and joint rates applicable thereto shall be established by the Commission for the pur-

pose of assisting any carrier that would participate therein to meet its financial needs."

This plain and unequivocal language would indicate to any reasonable person that a carrier seeking financial benefits would hardly be a suitable party to institute a proceeding thereunder. Nevertheless, the Commission denied a motion to dismiss the compiaint, saying merely that in reaching its conclusions "no consideration has been given to the financial needs" of the Rio Grande (R. 34).

It became evident quite early in these proceedings that Rio Grande had not been pushed into this litigation by shippers or anyone else. The President of Rio Grande frankly testified at the first hearing that in filing this proceeding against over two hundred defendant railroads, he was not able to get any other railroad to join with him (V. I, 47).[34] He frankly stated that his objective was to obtain more bridge traffic and do better on transcontinental business and thus improve the Rio Grande's financial position (V. I, 48). This line of testimony was also supported by Witness Hogue for the Rio Grande, who said that due to loss of local business they had to get more transcontinental freight (V. I, 69).

The essential nature of this proceeding was recognized by the Commission, when it observed (R. 37-38):

> "The Rio Grande desires to participate as a bridge line on such traffic via its Colorado gateways and Ogden at the joint through rates."

The Commission reviews, in some detail, the increase in "bridge traffic" experienced by the Rio Grande dur-

---

34 Rio Grande's President also testified he conferred with Union Pacific's President " regarding our necessity for the competitive joint rates here requested." (V. I, 45.)

ing the past fifteen years and emphasizes that development of "bridge" revenue has offset the trend as to local traffic.[35]

Nowhere in the complaint filed with the Commission is there any allegation or statement that there is any demand by shippers for the routing proposed by the Rio Grande. The complaint does not once mention Section 15(4) of the Act. Throughout the proceeding Rio Grande staked its case on the false assumption that this provision of the Act was not applicable.

U. S. v. Great Northern R. Co., 343 U. S. 562, confirms our position that the financial needs prohibition establishes a new and "independent" restriction against short-hauling.[36]

---

35 The concern of the Commission for assisting Rio Grande in obtaining further revenue is reflected in the statements (R. 47):

"Strictly local traffic was less annually throughout the 15-year period, including the war years, than during the 6-year period 1924 to 1929, inclusive.

"The reasons given for the decline or lack of proportionate growth in traffic originated are (1) depletion of nonferrous ores in Colorado and the closing of smelters, except one now operating at Leadville, Colo.; (2) decline in the amount of coal originating on the road; (3) decline in production of lumber and its products in the area served, and the discontinuance of operation by many sawmills; and (4) loss of local traffic to other forms of transportation.

"The relative decline in strictly local traffic has been offset by increases in traffic originated and shipped out over connecting lines, and traffic received from connecting lines and terminated."

36 In that case the opinion by Chief Justice Vinson said (343 U. S. 571, 572):

"Appellants would have the Court ignore the fact that the financial assistance prohibition stands as a separate sentence in Section 15(4). Certainly that sentence is gramatically capable of independent significance. * * *

"As revised in 1940, Section 15(4) deals at length with the short haul problem and, in addition, contains the separate sentence prohibiting the establishment of through routes for the purpose of

(Continued on next page)

Thompson v. United States, 343 U. S. 549, decided the same day, speaks of Section 15(4) as bestowing a "guaranteed right" on a railroad to serve points "via its own lines" (page 559). In rejecting the Commission's argument in that case "as requiring an unwarranted distortion of the statutory pattern", the opinion states:

> "In short, acceptance of the Commission's argument would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage." (p. 560)

Our view that the Rio Grande's request and the Commission's order cannot be sustained under the statute is strengthened by a consideration of the testimony as a whole. When carefully weighed, the proof demonstrates that financial gain for the Rio Grande constitutes the only basis for the proceeding before the Commission. Since the entire traffic involved in this case is transcontinental traffic, the movement of which the Rio Grande desires to share as a "bridge" line, the only purpose that can be served is the aggrandizement of the treasury of Rio Grande railroad.

The letter and spirit of the statute is that the desire for "more money" shall be completely divorced from such proceedings and shall not activate any short-hauling claims. Unless the purpose of the statute is respected in a proceeding so dominated by financial gain as this one, the statute will have little application or effect. This

---

(Continued from preceding page)

assisting a carrier to meet its financial needs. Since this prohibition stands as an independent sentence dealing with an independent problem, we cannot accept appellants' suggestion that the sentence can be ignored unless a short-hauling problem is also involved in the case."

was recognized in the *Thompson* case, *supra*, where this Court said (343 U. S. 559-560):

> "The Commission, by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of section 15(4), before the Court in United States v. Great Northern R. Co., 343 U. S. 562 (decided this day)."

The majority opinion of the court below mistakenly assumed that in permitting the Commission's order to stand only as to shipments requiring "in-transit privileges at points on the Rio Grande", it would eliminate the charge "* * * that the order was for the purpose of assisting the Rio Grande to meet its financial needs." We submit that no court could by cutting down the scope of a Commission order, change the design, purpose and effect or the validity of an order previously entered. *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, 87, 94-95. The remedy for violation of the financial needs prohibition must be the abolition of the order, not merely the whittling of it.

The truth is that the present proceeding is merely a continuation of the Chamber of Commerce effort started a hundred years ago to route transcontinental traffic through Denver and Colorado. This effort originated with the proposals in Congress to build the first transcontinental railroad.

History shows that the route to be followed by the Union Pacific became a "burning question" in Congress and "frantic" efforts were made by Denver to become a half-way station on the route. All such pressures were

rejected by President Lincoln who followed General Dodge's recommendation in routing the Union Pacific via the "great open road" out of the Platte Valley.[37]

E. The Commission's Order Disregards and is Inconsistent With the National Transportation Policy of Congress Which is a part of Every Provision of the Act.

It is specifically provided in the "National Transportation Policy"[38] that the provisions thereof shall ap-

37 Sabin, E. L., Building the Pacific Railway, Lippincott, 1919, pp. 22, 27, 30, 135, 140. Galloway, J. D., The First Transcontinental Railroad, Simmons-Boardman 1950, pp. 235-236, 253.

Brigham Young denounced General Dodge from his tabernacle pulpit for not routing the line through Salt Lake City. Dodge, G. M., How We Built the Union Pacific Railway, Senate Document 447, 61 Cong. p. 27. General Dodge later declared: "[t]he Lord had so constructed the country that any engineer who failed to take advantage of the great open road from here west to Salt Lake would not have been fit to belong to the profession * * *" (Ibid., p. 116.)

"* * * the decision of General Dodge to avoid the crossing of the Rocky Mountains directly west of Denver was proved correct when other railroads were built therein." Galloway, J. D., The First Transcontinental Railroad, supra, p. 257.

38 49 U. S. C. A. 1, 54 Stat. 899:

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote, safe, *adequate, economical and efficient service* and foster *sound economic conditions* in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or *unfair or destructive competitive practices; to co-operate* with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions; — all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, *adequate to meet the needs* of the commerce of the United States, of the Postal Service, and of the national defense. *All of the provisions* of this Act shall be administered and enforced with a view to *carrying out the above declaration of policy.*" (Italics added.)

ply to "[a]ll of the provisions of this Act", which shall be "administered and enforced with a view to carrying out" the declaration of policy.

Although the broad and far-reaching questions presented in this case involve some of the most important problems of policy that may arise under the Act, the report of the Commission completely ignores the Congressional directive as to policy. There is not a single reference to transportation policy in the entire discussion of the Commission. This alone, under a very recent three-judge opinion, justifies and requires annulment of the Commission order.[39]

The record shows that practically all of Rio Grande's supporters found their position on the virtues of opening all gateways. They therefore oppose the policy of Congress which has consistently refused to "eliminate the short-hauling restriction on its power to establish through routes."[40] The Commission necessarily based its order on that part of the testimony, for all other shipper witnesses opposed the Rio Grande.

We submit that the proof overwhelmingly establishes that the request of the Rio Grande is not consistent with important provisions of the National Transportation Policy. Instead of promoting economical and efficient service, such proposals will (1) waste long established

39 A three-judge court in *Cantlay & Tanzola v. United States*, 115 F. Supp. 72, reflected the purpose and intent of the Congressional statement of policy when it set aside the order of the Commission which sanctioned reduced petroleum rates of rail carriers, on the ground that the order contained no jurisdictional basic statement or finding with reference to national transportation policy.

40 *Thompson v. United States*, 343 U. S. 549, 556. *United States v. Mo. Pac. R. Co.*, 278 U. S. 269.

and highly improved facilities, (2) impair service throughout Union Pacific territory, (3) increase costs and rates which shippers and the public must pay, (4) adversely and seriously affect public and private interests in States such as interveners, and (5) jeopardize our national defense.

As public administrators of transportation within our respective States, these interveners believe it is of the highest importance that the mandate of Congress as to policy be considered and carried out. It is our position that under this record a fundamental question is presented as to whether the Commission has authority to institute what amounts to wide-open routing. In our opinion, unless this fundamental policy question of unlimited short-hauling receives full consideration, the implications and effects of this decision escape recognition.

All of the traffic involved is "bridge" traffic. The testimony refers to only a few of the thousands of items comprising transcontinental traffic. Since the amount of diversion according to the Commission, depends on the solicitation success of Rio Grande, the Commission's order, in effect, gives Rio Grande a license to hawk business. If that is sufficient to open a gateway, then all gateways may be opened.

We submit that it is clearly inconsistent with the above transportation policy to sacrifice the transcontinental haul of the most efficient carriers over the shortest and most efficient routes in order to provide "bridge" traffic revenue for Rio Grande.

Paraphrasing Mr. Justice Holmes in *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, relief cannot be

justified under the established transportation policy in order to put railroads on an "equal footing" or to satisfy the "personal preferences" of certain shippers "desiring" an additional through route or to provide a "variety of routes" or to "search over a wide area" for opportunities. Moreover, relief cannot be justified in order that transcontinental freight may "behold the natural beauties that may be rivaled but not repeated on the other roads." In short, as stated in that opinion, p. 545, "[t]he condition in the statute is not to be trifled away."

The declaration of policy by Congress is not merely a guide for the Commission. As stated by this Court in *United States v. Rock Island Co.*, 340 U. S. 419, this declaration controls the "basic power of the Commission." The paramount and overriding policy of Congress, since 1920, as repeatedly held by this Court, has been to promote economy and efficiency in rail transportation and avoid the "harm to the public" which unrestrained competition between carriers may engender.[41]

---

41 *McLean Trucking Co. v. U. S.*, 321 U. S. 67. In that case this Court refers to the "sharp change" in policy adopted in 1920 (p. 80) and the "altered emphasis in railroad legislation on achieving an adequate, efficient and economical system of transportation" (p. 83), reflecting "the product of a long history of trial and error by Congress." (p. 80)

In *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 277, Mr. Justice Brandeis observed that "when a railroad inflicts injury upon its rival, it may be the public which ultimately bears the loss."

Other cases stress the emphasis on economy and efficiency. *American Trucking Assns. v. U. S.*, 344 U. S. 298, 314. *N. Y. Central Securities Co. v. U. S.*, 287 U. S. 12, 25.

In *Commission v. Sanders Radio Station*, 309 U. S. 470, 474, it is pointed out that in railroad legislation, Congress has "abandoned the principle of free competition," in favor of the "suppression of wasteful practices."

The wasteful and inefficient practices inherent in the Rio Grande proposals and the Commission's order are in irreconcilable conflict with the requirements imposed by Congress. The "primary aim of that policy" is to "secure the avoidance of waste" as well as the "maintenance of service" which is a "direct concern of the public." *Texas v. United States*, 292 U. S. 522, 530. The invitation to unrestrained solicitation, proposed in the Commission's order, amounts to "cut-throat" competition which has been rejected since 1920. *United States v. Louisiana*, 290 U. S. 70, 74.

The doctrine that transportation acts of Congress constitute remedial legislation and justify liberal interpretation (*Piedmont & Northern Ry. Co. v. Interstate Commerce Com'n*, 286 U. S. 299, 311; *Pennsylvania R. Co. v. United States* (D. C. Md.), 54 F. Supp. 381, 390), would seem to be as applicable to a statement of policy as to any provision in the Act.

It has accordingly been held that under the policy of the Act, disputes are not to be settled "in accordance with the exigencies of particular circumstances" as though only the parties' "private interests or equities were involved", but that, instead, a "rigid adherence to the statutory scheme and standards is required", despite the fact that this "obviously may work hardship in some cases." *Midstate Co. v. Penna. R. Co.*, 320 U. S. 356, 361.

This Court has heretofore deemed legislative policy so important that an expressed or implied policy will be

followed "sacrificing, if necessary, the literal meaning in order that the purpose may not fail."[42]

Gateways are an essential part of the railroad industry. They represent a means of survival in an increasingly competitive economy. Unless the Congressional policy with reference to their preservation is respected, important provisions in the Act will, in effect, be nullified. *Thompson v. United States, supra*, pp. 559-560.

F. Other Inconsistencies and Departures From Prior Decisions.

The Commission report in this case is replete with contradictions and inconsistencies. It adopts, as stated in the dissenting opinion of Judge Johnsen, an "artificial classification" of commodities such as "perishable food articles" and then applies that classification to granite and marble tombstones and to livestock.[43]

The Commission in treating of "perishable food articles" stresses that the controlling factor in opening a new route is that shipment to market must proceed with "expedition and care", and "without unnecessary interruptions". Then the Commission turns around and holds

42 *Ozawa v. United States*, 260 U. S. 178, 194. *U. S. v. Amer. Trucking Ass'ns.*, 310 U. S. 534, 543. *U. S. v. Rosenblum Truck Lines*, 315 U. S. 50, 53. See also: *Holy Trinity Church v. United States*, 143 U. S. 457. *Markham v. Cabell*, 326 U. S. 404. *Helvering v. N. Y. Trust Co.*, 292 U. S. 455.

The Court will not sanction "an evasion of the whole of the policy of the law.". *Sundry Goods, &c. v. United States*, 2 Peters 358, 367.

43 "* * * it has, by means of some artificial classification, included ordinary livestock as a perishable food article (p. 656), saying merely, before doing so, that 'We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway'".

that such shipments should be interrupted for as much as 12 months for transit services while en route to market (R. 70).

The application of such "criteria" to the "little monument dealer" is aptly evaluated by Judge Johnson (R 174).[44]

The findings with reference to the onerous physical features of Rio Grande operations, previously mentioned, although not fairly reflecting the complete dissimilarity of physical and transportation conditions on the Rio Grande compared with the Union Pacific, are nevertheless wholly inconsistent with the conclusion of the Commission that somehow and in some way, when one gets east and south of the Missouri River these natural and irreducible physical dissimilarities in "transportation conditions" disappear and such "transportation conditions" become "substantially similar" (R. 72).

In this connection, Judge Johnsen points out that the "[r]eport does not undertake to show what amount of traffic goes where". The opinion of Judge Johnsen reviews the extensive findings of the Commission report as to the contrasting character of the Union Pacific and Rio

---

[44] "I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one 'of 'urgent need' (p. 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of 'as many routes as possible' and 'as much flexibility as possible in the distribution process' for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country."

Grande routes, and concludes that the report makes no "rational demonstration" that the "elements of difference" in transportation can be said to be "relatively insignificant".

The ultimate conclusions of the Commission as to the establishment of new routes are utterly inconsistent with specific findings of the Commission as to efficiency, economies, circuity, adequacy of service, elevation, and transportation needs.

The Commission recognized that under Section 15(4) no relief may be granted "unless the existing routes can be found not to provide 'adequate' transportation" (R. 69). Earlier in the report the Commission praises the fine service of Union Pacific and details some of the proof showing the physical infirmities of Rio Grande service and facilities (R. 62). Without making any specific finding whatever that the new route is "needed" as provided in Section 15(4), the Commission concludes that Union Pacific routes are "inadequate" because they are not available at points on the Rio Grande, and that it is "necessary and desirable in the public interest, in order to provide adequate and more economic transportation", that the Rio Grande route and equal joint rates be established on certain commodities (R. 70, 73). We submit that the findings of adequacy and inadequacy are conflicting and inconsistent, and do not support or justify the order. *Florida v. United States*, 282 U. S. 194, 215.

The Commission concludes that the extent of diversion of traffic will depend upon the success of Rio Grande's "solicitation" and campaign to "persuade" and "induce" shippers to use its "bridge route" (R. 46). It is difficult to understand how that route can be "necessary" or "needed" if its use will depend upon future so-

licitation and persuasion. Here again we are confronted with findings that are irreconcilable with conclusions.

The Commission details the injuries that may occur as a result of diversion of traffic (R. 65), then states that it cannot even "estimate with any degree of accuracy, how much traffic might be diverted" (R. 66) but goes right ahead and establishes the new route without indicating whether or not the interests of these intervenors and others will be injured or whether their injuries are of any consequence. Although the Commission professes to have no idea as to the volume of traffic that will move under this order, it has no hesitation in finding that the terminal bottleneck at Salt Lake City provides sufficient "present facilities" for interchanging with the Rio Grande "the additional traffic * * * which will result under the findings herein made" (R. 73).

We submit that the report and order of the Commission are permeated with "conflicting inferences" and constitute such a hodge-podge of inconsistent findings and conclusions that it does not comply with legal requirements. *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499.

The Commission's most conspicuous departure from prior decisions concerns livestock where its own prescribed rates "previously recognized and accepted" but not required over routes that "would result in short hauling" are here prescribed without such limit, and without explanation (R. 177).[45]

45 Judge Johnsen states as to these livestock rates:

"I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established gen-

(Continued on next page)

We have previously noted that the present report of the Commission constitutes a radical departure from a long line of decisions interpreting and applying the through routes provisions of Section 15(4).[46]

In the fourth section of this brief we shall review the commingling and misuse of separate and independent provisions of the Act involved in the Commission decision. This argument reflects repeated departures from the rule of prior decisions in order to achieve the result in the present case. We suggest that the authorities reviewed in Section IV be considered equally applicable to the points now under consideration.

III.

Rio Grande Claims of Violations of the Act and the Finding by the Commission of a Violation of Section 3(1) Cannot be Sustained Upon the Evidence of Record

We emphasize in Section II.C. of this brief that since the Commission based its order on compliance with

---

(Continued from preceding page)

eral livestock scheme, practice and policy which the Commission has previously recognized and accepted. In Livestock, Western District Rates, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short-hauling within the meaning of section 15(4) of the statute * * *. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory, as related to the differential permitted to be created by other carriers generally in such situations."

46 See footnote 20, *ante*, p. 39.

the requirements of Section 15(4)(b), the order cannot be supported by claims that the Commission could have sustained the order under other provisions of the Act.

Without departing from the foregoing position we propose to review at this point the "violations" claimed by Rio Grande, and to demonstrate that the record fails to establish any "violations" which may be used by Rio Grande to obtain any type of relief.

This proceeding was instituted by Rio Grande as a rate and revenue case for the purpose of obtaining a financial advantage it does not presently possess. The complaint mentioned Sections 1(4), 3, 15(1) and 15(3) of the Act (V. I, 9). The Commission stated that the Rio Grande claimed "violations of sections 1(4) and 3 of the Interstate Commerce Act" (R. 28). The Commission said that "undue prejudice and preference" as between shippers was established under Section 3(1) but that no "discrimination" under Section 3(4) against the Rio Grande was shown as to the established routes (R. 73 and 72). The conclusion of the Commission (R. 73-74) mentions no additional provisions of the Act.

The Finding of the Commission That Present Combination Rates via the Rio Grande are Unreasonable is Unsupported by Evidence.

Section 1(4) of the Act makes it a general duty of a carrier to establish "just and reasonable" rates; Section 1(5), which was not specified by Rio Grande or the Commission, provides that all charges shall be "just and reasonable"; and Section 15(1) prohibits "unjust or unreasonable" rates. Section 3(1) prohibits a carrier from giving anyone "any undue or unreasonable preference or

advantage", but provides that this section shall have no application "to the traffic of any other carrier of whatever description".

The Commission made a finding (R. 73) that the combination rates on certain perishable commodities were "unjust and unreasonable" and that present "joint rates" of the Union Pacific would be "reasonable for application" over the Rio Grande routes.

These findings were made not only without substantial evidence but without any evidence upon which the Commission could determine whether the combination rates or the joint rates were reasonable or unreasonable. The statement that rates are reasonable or unreasonable is merely "an artificial use of words", *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 545, and is not sufficient unless there is substantial evidence to back up such findings: *Florida v. United States*, 282 U. S. 194, 213.

The record is wholly devoid of such evidence. This is made clear by the Commission itself where it points out that the Rio Grande submitted a large number of rate comparisons, but that these were limited to comparison of the revenues produced on various commodities by the combination rates compared to those produced by the joint rates and the revenue that would be produced by the joint rates if made applicable via the Rio Grande (R. 67).

There being no other evidence, it results that the Commission's findings that the combination rates via the Rio Grande are unjust and unreasonable rests upon the mere fact that they are higher than the joint rates via the Union Pacific, and its finding that the joint rates are

reasonable for application via the Rio Grande rests not upon evidentiary facts concerning their reasonableness, but upon the mere fact that they are lower than the combination rates.

Some of the considerations which affect the reasonableness of rates were described by the Commission in *Memphis Cotton Oil Co. v. I. C. R. R. Co.*, 17 I. C. C. 313, 318:

> "The reasonableness of a rate must of necessity depend upon the conditions surrounding the traffic at the time it moves. The length of the haul, the competition to be met, the cost of the service, the value of the service, the density or volume of the tonnage, as well as the general transportation conditions then existing, are factors that have a more or less definite relation to the rate that a carrier may reasonably demand for transportation service."[47]

The statement of this Court in *Louis. & Nash. R. R. v. United States*, 238 U. S. 1, 12, that in absence of a "standard" rate comparisons "prove nothing"; in determining the reasonableness of rates, is peculiarly pertinent here.[48]

---

47 In *McHenry-Millhouse Mfg. Co. v. N. Y., O. & W. Ry. Co.*, 151 I. C. C. 501, 502, the Commission said:
"We have repeatedly said that the existence of a lower rate between the same points over a route other than the route of movement does not of itself establish the unreasonableness of the higher rate."

48 "The same is true of determining, by comparison, the reasonableness of freight charges. Until some standard is adopted they may prove nothing—even where the two hauls are over the same mileage. For the rate attacked may tend to show that the others are too low—while they in turn might be relied on to prove that the first is too high. Both may be unreasonably high, or too low because compelled by conditions over which the carrier had no con-

(Continued on next page)

This Court has said that a "through rate is ordinarily lower than the combination of local rates", *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 771, and the "combination rate itself is ordinarily, if not always, higher than the joint through rate." *Brown Lumber Co. v. L. & N. R. Co.*, 299 U. S. 393, 396.

It is reasonable and to be expected that there shall be differences in service charges "between through shippers over different routes * * * based on relevant differences in the 'circumstances and conditions' of the total transportation services rendered by the carriers." *Baringer & Co. v. U. S.*, 319 U. S. 1, 9.

That long haul through rates should be lower than the total of local rates, has been said by this Court to be beyond argument. *Minneapolis & St. Louis R'd Co. v. Minnesota*, 186 U. S. 257, 262.

There is nothing in the Interstate Commerce Act that requires all carriers to be considered as equal or comparable. As stated by Mr. Justice Brown in *Interstate Com. Commiss. v. B. & O. Railroad*, 145 U. S. 263, 276, the Act "was not intended to ignore the principle that one can sell at wholesale cheaper than at retail."

It is common knowledge that the tariffs of every railroad in this country, including the Rio Grande, carry routing restrictions which preclude application of its

(Continued from preceding page)

trol. Water competition, rail competition and competition of markets, enter so largely into the establishment of rates that mere distance is not necessarily a determining factor—indeed the statute itself recognizes that there may be circumstances under which it is lawful to charge less for a long haul than for a short haul over the same road." (238 U. S. 12.)

rates to traffic moving over competing lines. If the bare fact that the Union Pacific and other defendants publish some joint rates that are not applicable via the Rio Grande, constitutes a violation of Section 3, then we confidently assert that it would be difficult to find a railroad of any importance in the country that is not in violation of that section. Carried to its logical conclusion, the Rio Grande position is that if the Union Pacific consents to joint rates that short haul it with one of its connections, then it must, to avoid violating Section 3, make equal joint rates with all of its connections, regardless of short-hauling and of dissimilarity of transportation conditions. Obviously, this is incorrect unless the prohibition in Section 15(4) against short-hauling a carrier without its consent is completely nullified by Section 3.

If a combination of rates via one route becomes unreasonable and unlawful simply because it is higher than a joint rate between the same points via some other, and in this instance a much shorter route, the only remedy lies in wide-open interchange between all lines via every available junction point, regardless of carriers' rights under Section 15(4) not to be short-hauled.

We thus find ourselves back where we have been several times in this brief. Regardless of what phase of the case we consider, we always end up with an effort by the Rio Grande to by-pass and avoid the requirements of Section 15(4). It is the settled rule of this Court that this may not be done, *Thompson v. United States*, *supra*, and cases there cited.

A long line of Commission decisions also hold that Section 1 is "subordinate" to Section 15(4) and the Commission will refuse to make a determination as to the reasonableness of rates under such circumstances as would

render "nugatory and meaningless the provisions of Section 15(4)."

49 In *Port of New York Authority v. A., T. & S. F. Ry. Co.*, 144 I. C. C. 514, 517-518, the Commission refused joint rates, saying:

"While we have the power under section 1 to find combination rates unreasonable upon a proper showing, we must in such cases safeguard the carriers' rights under the short-haul provision of section 15 *.* *. In numerous cases we have permitted carriers to cancel joint rates or restrict routing, which had the effect of leaving higher combination rates to apply over certain routes, when it appeared that they did so in order to safeguard their long haul. We have done this on the principle that we have no power to prevent the cancellation of a through route if we could not have established the route as an original proposition. See The Ogden Gateway Case, 35 I. C. C. 131, 140; Routing of Coal from Western Maryland Ry. Mines, 66 I. C. C. 103, 107; Routing of Sheep, 69 I. C. C. 4, 6. Assuming that the record would support a finding under section 1 that the rates over the Hell Gate route are unreasonable to the extent that they exceed the contemporaneous rates over the float routes, the ultimate effect of any order that we might enter would be to open routes that as a practical matter are not now available and render nugatory and meaningless the provisions of section 15(4), if defendants are correct in their contention that certain of them will be short-hauled if the Hell Gate route is opened."

See also, to the same effect: *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127, 130.

That section 1(4) is "subordinate" to Section 15(4) is stated in *North American Coal Corp. v. Pennsylvania R. Co.*, 278 I. C. C. 675, 683; *Tidewater Paper Mills Co. v. B. T. R. R. Co.*, 80 I. C. C. 493, 497; *Lemon Cove-Woodlake Asso. v. A., T. & S. F. Ry. Co.*, 139 I. C. C. 239, where at page 244 the opinion shows that the problem, like here, was one of lower rates:

"Complainants would apparently be just as satisfied with a reduction in the existing rates in connection with the Visalia, as for the establishment of a new through route via Exeter."

The Rio Grande is not interested in "reasonable" rates via its longer and more onerous route. Its complaint alleged and it argued vehemently to the Commission that only "equal" rates will enable it to divert the traffic to its line. In its original brief to the Commission, at page 101, it stated that slightly higher rates on live stock "have proved to be useless" to its line and that

"unless the same level of rates [that apply on Union Pacific routes] is prescribed on the traffic involved via the Ogden gateway and the Rio Grande no practical or useful purpose will be served."

It was this kind of a problem and the potential misuse of Section 1 of the Act that prompted this Court in the recent case of *Thompson v. United States, supra*, page 550, to say that by "using the form of order employed" in that case the Commission could "divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of Section 15(4)."

While the exact provisions of the Act involved in the rate findings herein of the Commission are not made clear by its report, it would appear that, under Rio Grande's complaint, only Sections 1(4) and 15(1) and 15(3) could be considered. Significantly neither of these sections contains any authority whatever to supersede the short haul restrictions of Section 15(4).

Section 15(1) contains general language requiring a "just and reasonable individual or joint rate." But this paragraph, as shown by authorities reviewed earlier, gives no power whatever to establish new routes. The establishment of such routes must be under and in accordance with the "public interest" standard fixed in Section 15(3), but limited by the restrictions contained in Section 15(4).

Even if a Section 3(4) violation had been established, the only relief that could have been given by the Commission was an "alternative" order. The Commission could not, as will be discussed later, use a Section 3 violation in order to circumvent the short haul requirements of Section 15(4). The remedy of an alternative order for

a Section 3 violation is described in *Texas & Pacific Ry. Co. v. U. S.*, 289 U. S. 627, 650.[50]

As a rate case, this present proceeding cannot stand. For the Commission to fix rates merely to "equalize market competition" under these circumstances would, "confuse an economic problem with a transportation problem".[51] And the "facts surrounding" the establishment of rates "in other territories are not of record" in this case and available for a rate decision.[52]

In view of the uniform decisions of the Commission just reviewed, the holdings upon the facts in this case

---

50 "Where an order is made under § 3 an alternative must be afforded. The offender or offenders may abate the discrimination by raising one rate, lowering the other, or altering both * * *. The situation must be such that the carrier or carriers if given an option have an actual alternative."

The necessity and use of alternative orders to remedy Section 3 violations has been the subject of repeated Commission decisions. See *Quanah, A. & P. Ry. Co. v. Atchison, T. & S. F. Ry. Co.*, 205 I. C. C. 253; *The Ogden Gateway Case*, 35 I. C. C. 134.

51 In *Folger & Co. v. A., T. & S. F. Ry. Co.*, 146 I. C. C. 637, the Commission said:

"We have just repeatedly stated, however, that we can not readjust rates merely in order to equalize market competition."

Referring to an earlier cement rates case, the opinion in *Associated General Contractors v. A., T. & S. F. Ry. Co.*, 144 I. C. C. 305, 309, points out that "those who propose a system of rates, the avowed and sole purpose of which is to promote long-distance competition, confuse an economic problem with a transportation problem."

52 The record in the instant case is subject to the same controlling observation made in *Watson Co. v. B. & O. R. R. Co.*, 146 I. C. C. 523, 529:

"The facts surrounding the establishment of the rates shown as applicable in other territories are not of record. While they may be assumed to be reasonable for application between the points shown it does not follow that the same basis or level, distance alone considered, would be reasonable for application between the points herein considered."

that present combination rates are unreasonable and that the joint rates over Union Pacific routes are reasonable for application via the Rio Grande constitutes a departure from the rule and norm of its prior decisions without justification or explanation. In such situations this Court will refuse to approve the order. *Sec'y of Agriculture v. United States*, 347 U. S. 645.

Neither a Finding of Undue Prejudice Under Section 3(1) nor of Unjust Discrimination Under Section 3(4) can be Made in View of Admitted Dissimilarity in Transportation Conditions Proved by the Evidence.

Except for the Bamberger Railroad south of Ogden (R. 73) the Commission held that discrimination against the Rio Grande under Section 3(4), prohibiting discrimination by one carrier against another, was not sustained by the record because the "transportation conditions" over existing routes were not shown to be similar to those on the Rio Grande (R. 72).

There was a complete absence of any evidence as to transportation conditions on the other rail routes from the Pacific northwest to the east. But there was abundant proof showing dissimilarities between transportation conditions on the Union Pacific route and on the Rio Grande. All of these differences were completely disregarded by Rio Grande, and at no stage of this proceeding has Rio Grande received any encouragement that it could disregard fundamental requirements of Section 3(4) and yet obtain relief thereunder.[53]

53 It is elementary that in order to establish discrimination or a lack of "equal" treatment there must be proof that the transportation conditions involved are similar. Unless this is true there would be

(Continued on next page)

The Commission's finding that conditions were "less favorable" on the Rio Grande should, standing alone, have been enough to justify a similar result under Section 3(1), which is quoted below.[54] Nevertheless, and despite its finding that dissimilarity in transportation conditions prevented a finding of discrimination against the Rio Grande, the Commission said the combination rates of the Rio Grande unduly prejudiced shippers desiring to use that line.[55] If transportation conditions are not sim-

(Continued from preceding page)

a violation of Section 3(4) every time a carrier that interchanged traffic with one connection refused to give up traffic to another carrier with whom it had a physical connection.

The burden was on Rio Grande to establish the similarity of transportation conditions. The Commission was without power, in the absence of such proof, to make the finding the Rio Grande now says it should have made. *Int. Com. Comm. v. Louis & Nash. R. R.*, 227 U. S. 88. *Int. Com. Comm. v. Union Pacific R. R.*, 222 U. S. 541.

54 "It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

55 The majority opinion below held that there was no legal or factual basis in the evidence to support the Commission's finding that the combination rates were unduly prejudicial in violation of Section 3(1), and the dissenting opinion holds that the evidence furnishes no support for that finding. The questions presented by the appeals of the Rio Grande (No. 117) and the Government (No. 119) challenge that holding, among others, of the district court.

(Continued on next page)

ilar under Section 3(4) how can they be considered similar under Section 3(1)? That they are not similar is sufficiently demonstrated by the Commission's own findings (R. 71-72) and by the opinion of Circuit Judge Johnsen, which was reviewed earlier.[56]

The Commission rightly held that "complainant," a railroad, could not raise, in its own behalf, an issue under Section 3(1) against another railroad" (R. 33), and rightly observed, but failed to apply its holding, that Rio Grande is "not here as a shipper or receiver of traffic

---

(Continued from preceding page)

The majority held that even if the evidence had proved undue prejudice and preference in violation of Section 3(1) "the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15(3) and 15(4)" and that—

"If the Commission could order through routes and joint rates between two or more competing railroads under Sec. 3(1) merely because a shipper entity described in Sec. 3(1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15(4) would be practically emasculated." (R. 164.)

56 Judge Johnsen states in this connection:

"I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3(1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3(1). If the Commission has attempted to predicate the relief which it here granted upon the existence of a violation of section 3(1), I am certain that its action resting on this basis alone could not on these facial realities be upheld. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15(4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the prescribing of through routes and joint rates in relation to the existing conditions." (R. 178.)

but solely as a carrier seeking to participate in traffic" (R. 68).

Having no rights under Section 3(1), since it applies only to shippers or receivers of freight (*Texas & Pacific Ry. Co. v. U. S.*, 289 U. S. 627, 628), Rio Grande brought certain shippers into the proceeding. This did not improve the legal defect in the position of Rio Grande. In addition, there was not sufficient proof to sustain a violation of Section 3(1) even if Rio Grande shipper witnesses were treated as complainants before the Commission.

The incapacity of Rio Grande to obtain relief under the circumstances is not cured by the participation of a few shippers in this proceeding. Under well-settled legal principles the Rio Grande cannot maintain this action for itself nor as representative of shippers as to whose claim it has no remedial interest and is not the proprietor.[57]

Intervention is, of course, ancillary and in complete subordination to the main proceeding.[58] An "independent

---

57 The cases are collected in 67 C. J. S. 899 & 39 A. J. 858. As stated by Chief Justice Marshall in the *Corporation of Washington v. Young*, 10 Wheaton 406:

"No person who is not the proprietor of an obligation, can have a legal right to put it in suit."

58 Summarizing the cases, 39 A. J. 950 states:

"Intervention is not an independent proceeding, but an ancillary and supplemental one which, in the nature of things, unless otherwise provided for by legislation, must be in subordination to the main proceeding, and it may be laid down as a general rule that an intervener is limited to the field of litigation open to the original parties * * *."

controversy" cannot ordinarily be injected into a suit by intervention."[59]

The Rio Grande cannot, of course, rest its case on the claim that it is enforcing a public right. 39 A. J., p. 863. Neither can the Rio Grande assert that it appears in this matter in any "representative" capacity, since it has no "right or interest in common with the persons claimed to be represented." 39 A. J., pp. 921-922; 67 C. J. S., p. 920.

The Proviso to Section 3(1), Added in 1940, Prevents any Finding of Discrimination Here.

In this connection, however, and with reference to Section 15(4) we call attention to the proviso added to paragraph 3(1) in 1940, which states:

> "* * * this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description." (449 U. S. C., Section 3(1).)

If this proviso means anything it must mean that paragraph 3(1) cannot be applied to sustain discrimination involving the traffic of "any other carrier." In other words, discrimination thereunder is by a carrier between persons it is serving and cannot be applied in the case of claimed discrimination involving the traffic of other carriers. This being true, the language in Section 15(4) "except as provided in section 3" does not permit the

59 39 A. J. 860-61 states:

"* * * it is well settled that if a plaintiff at the time of commencing an action has no valid and subsisting title or right to the subject thereof, his subsequent acquisition, or perfection, of a right or title to the subject of the action during the pendency thereof will not remedy the defect so as to enable him to maintain the action * * *."

requirements of Section 15(4) to be avoided by a finding of a violation under Section 3(1).

This Court has often held that the purpose of a proviso is to take a "class of cases out of the operation of the body of the section to which it is found."[60]

It would therefore appear that the error of the Commission as to Section 3 was in finding a violation of Section 3(1) and in holding that such violation was "closely related" to Section 15 (R. 33), and a basis for establishing a through route.

Legislative History of Section 3(1) Confirms our Position.

Support for our position is to be found in the legislative history which added the proviso to Section 3(1) of the Act. It was added by S. 2009, Section 5(a)(1) in 1940 (54 Stat. 902). This bill was reported at the first session of the Seventy-Sixth Congress. Senate Misc. Reports 11, Serial 10293, Report No. 433.[61]

---

60 *McDonald v. United States*, 279 U. S. 12. *United States v. Morrow*, 266 U. S. 531. *American Airlines v. Civil Aeronautics Board*, 178 F. 2d 903, 906 applies this rule to a transportation statute. See also 82 C. J. S. 883.

The Congressional Record reveals that when the 1940 amendments to the Act were being considered by the Congress, the Chairman of the Legislative Committee of the Interstate Commerce Commission (Eastman) wrote a letter to Senator Wheeler as to meanigg of provisos in legislation stating:

"normally a proviso is used to except from the operation of law something which otherwise would be governed by that law * * *" (Congressional Record, Vol. 86, Part 10, page 11619, Sept. 6, 1940.)

61 The report on this Bill stated:

"The importance of a sound transportation system is recognized by all. It is likewise apparent to even the unobserving that this nation cannot enjoy a sound transportation system if its most important carrier faces ruin and chaos."

The original Senate Bill would have granted the Commission complete freedom of the short haul prohibition as advocated by the Commission. The House rejected the Senate Bill. House Misc. Rep. VI, Seventy-Sixth Congress, 1st Session, Report No. 1217.

The first Conference Report, April 26, 1940, appears to have reported Section 3(1) in the form in which it was finally enacted. House Misc. Reports 11, Seventy-Sixth Congress, 3rd Session, Report No. 2016, page 6, Serial 10441.[62]

Upon further disagreement as to the Bill, it appears there was a second Conference Report, dated August 7, 1940. House Misc. Reports V, Seventy-Sixth Congress, 3rd Session, Report No. 2832, Serial 10444. There appears to have been no change in the proposed Section 3(1), (p. 6) and the statement of explanation is identical to that quoted above in the first conference report (p. 65).

That the final enactment in 1940 compromised both extremes and provided strong barriers against the establishment of through routes is shown in the remarks of Senator Wheeler on September 9, 1940.[63]

---

62 The statement as to Section 5 of the Bill said:

"Section 6 of the House amendment amended section 3(1) of the Interstate Commerce Act, which makes it unlawful for any common carrier subject to Part I to give any undue preference, or cause undue prejudice, to any person, locality, port, port district, gateway, or transit point, or to any particular description of traffic. The House amendment added the words 'region, district, territory' to the list of places and localities.

"The conference substitute in section 5 retains this amendment and adds a proviso that this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description." (pp. 61-62.)

63 "The conference substitute, section 10(b) contains a compromise provision on this point, permitting the Commission to establish a

(Continued on next page)

It thus appears that the proviso to Section 3(1) was added along with the expansion of the same section by the 1940 legislation which prohibited discrimination against any "region, district, territory." The proviso was no doubt intended to prevent any attempt to utilize the enlarged Section 3 as a means of overriding other portions of the Act including Section 15(3) and (4). There can be no question but that the Congress intended to retain and strengthen the requirements of Section 15 as against further delegations of authority under Section 3 and other portions of the Act. The true character of this Congressional intention was sensed and expressed by this Court in the recent *Great Northern* and *Thompson* decisions.[64]

Since the only finding of a Section 3 violation entered by the Commission which was favorable to the Rio Grande related to paragraph (1) thereof, the above history and analysis justifies the conclusion that the Commission improperly used subparagraph (1) and should have dismissed the complaint.

In concluding this portion of the argument it is important to observe that even if the theory advanced by Rio Grande is followed of justifying this order under

---

(Continued from preceding page)

through route where it finds that the through route proposed to be established is needed in order to provide adequate and more efficient or more economic transportation, subject to the proviso that the Commission shall give reasonable preference to the carrier by railroad which originates the traffic to the condition that the Commission shall not establish a through route and joint rates applicable thereto for the purpose of assisting any carrier that would participate therein to meet its financial needs." (Congressional Record, Vol. 86, Part II, page 11768).

64 *U. S. v. Great Northern R. Co.*, 343 U. S. 562. *Thompson v. United States*, 343 U. S. 549.

Sections 1 and 3 of the Act, the conclusion is inescapable that no case for relief thereunder is established by the evidence, and the action must be dismissed. Rio Grande therefore does not have any violation of the Act that can be utilized to circumvent the requirements of Section 15(4).

No Discrimination as to Transit Privileges can be Based on Section 3.

The analysis just made as to the history and purpose of the proviso in Section 3(1) demonstrates that no claim can be asserted against the Union Pacific under Section 3 based on transit privileges. Independently of this proviso, however, it is well settled that a transit privilege is local in character, subject to control of the carrier serving the shipper, and provides no legal basis for a finding of a violation of Section 3. The decisions establishing this rule are referred to in the prior section of this brief.

The leading decision of this Court, which has been cited and followed in this respect by the Commission is *Central R. R. Co. v. United States*, 257 U. S. 247. That was a shipper's application for transit. The Commission had granted relief under Section 3. This Court annulled the order, saying the Commission sought to accomplish by "indirection" what is governed and measured by another section of the Act. In so doing this Court stated at page 259 that under the Commission view "the legality or illegality of a carrier's practice would depend, not on its own act, but on the acts of its connecting carriers."

The majority opinion of the district court in this case follows the decision just cited and quotes it to the effect that what "Congress sought to prevent" by Sec-

tion 3 was "not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them by the same carrier or carriers"; and the majority opinion specifically emphasizes that under any other application of Section 3(1) "Sec. 15(4) would be practically emasculated" (R. 164).

Decisions Relied Upon by Rio Grande are Inapposite.

Typical of the argument advanced herein on behalf of Rio Grande is the suggestion of the Government that since this Court in *New York v. United States*, 331 U. S. 284, held that "interterritorial class rates" involving "many carriers" over a large part of the country could be reached by the Commission under Section 3(1), this section "would appear to cover the preference and prejudice which results from the refusal of a single carrier to establish through routes and joint rates with another". (Jurisdictional Statement; page 12.) This is the sort of *non sequitur* that has permeated this case. The *New York* case presented no problem whatever of establishing through routes or joint rates. It involved only a claim of regional discrimination against the south and there is not a single reference in the long opinion to the problem of creating a new through route. Accordingly, whatever authority was exercised under Section 3(1) has no relationship whatever to a through route problem under Section 15(4).

The *New York* decision was heavily influenced by the 1940 amendment to Section 3(1) which "extended" and "enlarged" the language to include any "region". (pp. 297, 299). But no mention was therein made of the proviso which was simultaneously added to this section, as discussed previously, forbidding the application of this

enlarged Section 3(1), to discrimination against the "traffic of any other carrier of whatever description". This proviso was not involved in the *New York* case, but it is certainly applicable to the instant litigation.

In this connection the *New York* opinion stresses that it is not concerned with "discrimination against actual shippers" or "discrimination against a particular commodity" but with discrimination and prejudice against a "territory as a whole" (pp. 309, 334). There isn't the slightest suggestion in the opinion that the long-established rules as to what constitutes discrimination are changed. At page 305 it is emphasized that "mere discrimination does not render a rate illegal under § 3". The holding in the case that discrimination was established is based on the conclusion that differences in rate structures are "not warranted by territorial conditions". (p. 332) The decision cites and follows *Central R. R. Co. v. United States*, 257 U. S. 247, 259, in stating that "mere participation in joint rates does not make connecting carriers partners in discrimination".

The decision in *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, cited by Rio Grande, upheld Commission action in cancelling a tariff on grain to Kansas City that would have excluded other carriers from carrying such grain from Kansas City to the gulf. The opinion points out that there is "no occasion" to consider whether there was a through route on another railroad involved in the case (p. 775) since the shipment to Kansas City and from there to the gulf are "entirely distinct" and do not necessarily involve the same grain (p. 779). The Court holds that the case obviously presents only a rate question and no carrier had any right to "recapture" the traffic at Kansas City (pp. 776, 780).

Texas & Pacific Ry. Co. v. U. S., 289 U. S. 627, presented a claim by Galveston, Texas, that it was prejudiced and New Orleans was preferred in commodity rates on export, import and coastwise traffic. The Commission found that shipping distances were from 162 to 213 miles shorter to the Texas port from interior shipping points than to New Orleans (p. 656). It was held that only Section 3(1) could be considered (p. 633) and since New Orleans carriers "do not reach" the Texas ports "with their own lines" (p. 634) and do not have "effective control" over rates to the latter ports, no discrimination is established, even though there may be "participation in joint rates with the lines to Texas ports" as required by Section 1(4) of the act (p. 648). The opinion cites and follows the *Central Railroad case, supra*, (p. 650) and points out that the principle which is controlling has been followed by the Commission with the approval of the Court "for more than forty years" (p. 654). This principle, the Court holds, bars the use of Section 3 of the act to "divert traffic through the complaining gateway" (p. 639) there being no "power" in section 3 to "build up the Texas ports by diverting export and import traffic to them" (p. 646). This opinion, we submit supports in every way the position of the Union Pacific and the five States in the instant case.

Chicago, I. & L. Ry. v. U. S., 270 U. S. 287, also cited by Rio Grande, involved discrimination of 4 steam railroads in denying an electric line switching services within Michigan City, Indiana, that were granted to each other. While only one of the steam railroads had physical connection with the electric line it was held that each of such roads was an "effective instrument" (p. 293) of discrimination and an alternative order was entered under which the steam roads were "free to remove the dis-

crimination by any appropriate action" (pp. 292-293). As pointed out in *Texas & Pacific Ry. Co. v. U. S., supra*, at page 652, each defendant in the Michigan City case was "solely responsible" for the discrimination in local switching service and the case is readily distinguishable upon such basis.

A case frequently cited by Rio Grande in this case is *Virginian Ry. v. United States*, 272 U. S. 658. That decision not only fails to sustain any contention of Rio Grande but demonstrates that the claims of discrimination and prejudice against shippers herein are not established. The *Virginian* case involved a complaint, not by a railroad seeking to improve its financial position, but by 54 coal shippers located on the Virginian who complained of undue prejudice because their rates to the west were so much higher than rates of 45 competing coal shippers located in the same area on the Virginian Railway.

No question of short-hauling was involved in the *Virginian* case. The order was not "sought or made" under Section 15(3). The complaint did not seek through routes or joint rates, and they were not ordered. The Commission merely ordered the carriers to "cease and desist" from collecting from the 54 mines to western destinations rates in excess of those paid by the 45 mines. There is no suggestion or evidence in the instant case of any competition or discrimination between shippers located on the Union Pacific line and therefore no prejudice or discrimination is available as a basis for a Section 3 order.

Further proof that the *Virginian* case is consistent with our position is found in the reference in the *Vir-*

ginian case (p. 665) to *United States v. Illinois Cent. R. R.*, 263 U. S. 515, and *United States v. Pennsylvania R. R.*, 266 U. S. 191, as involving in "essence" the "same" situation as the *Virginian* case. In the *Illinois R. Co.* case discrimination was found because the "joint through rate" for lumber for a shipper at Knoxo, Mississippi, was "2 cents" higher than on all shippers "within the so-called blanket territory" although the "distance to the northern markets from many of the points on these lines is much greater than the distance from Knoxo, which lies near the centre of the so-called blanket territory" (p. 519). Since a consideration of all transportation factors demonstrated that "discrimination" existed, it was held that the conclusion reached was not "inconsistent" with decisions such as *Central R. R. Co. v. United States*, 257 U. S. 247, cited by carriers (p. 520). The opinion by Mr. Justice Brandeis emphasizes that the "order does not require a reduction of the through rate" (p. 526) since the discrimination may be removed by raising other rates. So here, if as the Commission found but the district court denied, there is any discrimination against shippers using the Rio Grande, the remedy is not the requirement of through routes and joint rates that short haul Union Pacific routes, but, instead, a "cease and desist" order affording the alternative of removing the discrimination by increasing rates of Union Pacific routes or altering both sets of rates. *Texas & Pacific Ry. Co. v. U. S.*, 289 U. S. 627, 650.

In *United States v. Pennsylvania R. Co.*, *supra*, also cited as involving the "same" situation, it was held to be discrimination for two railroads serving one city to grant reciprocal free switching services between plants located on each other's lines but to refuse such arrangement within such city to plants on a third railroad's lines. The

opinion, also written by Mr. Justice Brandeis, says it resulted in undue prejudice where the "facilities in question were granted to some and refused to others" (p. 199).

Both of the two cases just reviewed, involving the "same" situation as the *Virginian* case, demonstrate why this Court said in the recent *Thompson* case, *supra*, in footnote 18, at page 560, that the *Virginian* case "is inapposite". The same reasons make the *Virginian* case "inapposite" to the instant proceeding.

The cases just reviewed fall in the same category as *St. Louis S. W. Ry. Co. v. United States*, 245 U. S. 136, which upheld a Commission order that "substituted for the through rate of 22 cents" a "joint rate of 16 cents" to Paducah, Kentucky, on certain lumber shipments from the south (p. 142). Since the "order operates merely to introduce reduced joint rates" (p. 143), it was held that "there is no foundation in fact or law" for a claim that the prohibitions in Section 15 with reference to new through routes were "disregarded" (p. 144). The carriers could under the order establish a new through route if they wanted to, but as stated by Mr. Justice Brandeis, the order does "not require" any carrier to "substitute" any new route or "establish an additional route" (p. 143). Moreover, it was held that the case was a rate case under Section 15(1) and not "merely one to prevent discrimination", under Section 3 (p. 145).

IV.

The Commission Arbitrarily Commingled Various Sections of the Act Which Have Independent Significance, and Misused Sections 1, 3 and Parts of Section 15 in Order to Circumvent the Requirements of Section 15(4) and Provide the Remedy Desired by the Rio Grande.

We have demonstrated that Rio Grande has wholly failed to present a case that can be sustained under any individual section of the Act. This being true, it logically follows that the order of the Commission cannot be rested upon any collective consideration or commingling of the various portions of the Act.

Both the majority and minority opinions of the court below agree that no case is established under Section 3(1) of the Act. Neither of these opinions suggests that Section 1 provides any basis for the establishment of the desired through routes. The majority opinion attempts to make a case within the orbit of the order under Section 15(4) by a finding, wholly unsupportable, that present Union Pacific routes are inadequate because shippers must pay a higher rate for shipments involving in-transit privileges on the Rio Grande. Thus, the majority would permit the establishment of a through route and joint rates merely to provide a rate advantage not now possessed by certain shippers if they use the Rio Grande. This constitutes circumvention of requirements in the Act and an intermingling and commingling of sections of the Act—a process that was seized upon by the Commission at the behest of the Rio Grande.

The operation of this process in the majority opinion and the confusion it produces is reflected in its con-

sideration of Section 3(1) of the Act. The opinion states that the Commission made a finding of a violation of Section 3(1), "for the purpose of bringing the order within the authorization of Sec. 3(1)", but that as to a violation of Section 3(1) the Commission may, "correct it irrespective of whether the factual situation authorizes the order under Secs. 15(3) and 15(4) heretofore considered." While denying there was any violation of Section 3(1) the majority opinion first indicates that if such a violation of Section 3(1) did exist, the requirements of Section 15(3) and (4) could be by-passed. Such a position, we have seen, does not reflect the language and particularly the proviso to Section 3(1) and does not represent the law. But after indicating the position that Section 3(1) might be used to destroy Section 15(4), the same opinion holds that "Sec. 15(4) would be practically emasculated" if the Commission could order through routes and joint rates to equalize transportation advantages on competing railroads (R. 164). Yet, the majority opinion holds that the order is "valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3(4) of the Act" at points along the Bamberger Railroad between Ogden and Salt Lake City (R. 168).

The dissenting opinion of Circuit Judge Johnsen respects the independent significance of individual portions of the act.[65] He states (R. 178) that relief could not

[65] Judge Johnsen states:

"I have grave legal doubt whether the Commission's power to establish joint rates under section 15(3) has any relationship to the term 'more economic transportation' in section 15(4), dealing with the Commission's right to open up through routes."

This same opinion describes the "confusion in which the Report has been wrapped" and the "attempt by the Commission to gain a new foothold under another disguise." (R. 174.)

be predicated under Section 3(4), and the result the Commission reached was effected only by an "escape" from "realities through a dissolution of them under the considerations open to the Commission in section 15(4), such as the Commission here attempted". The finding of the Commission as to the Bamberger Railroad, under Section 3(4), represented, according to Judge Johnsen, the "Commission's apparent attempt to strike at as much in the present situation as possible" (R. 179).

In an effort to buttress its order the Commission invoked Sections 15(3) and (4) and said that issues with reference to the "reasonableness of the assailed rates" and "discrimination between connecting lines" were properly presented, and that all of such "issues are closely related and will be considered together" (R. 33). The Commission also said its conclusion and order was "also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services" (R. 70).

The confusion in the Commission's handling of the case and its commingling independent provisions of the Act is shown by the order entered pursuant to its report. It orders three different sets of rates and represents the height of uncertainty and indefiniteness. The requirements in this rate order and the relationship of the various provisions, defy analysis. This result is the natural culmination of the process followed throughout the case by the Commission.

Although purporting to base its order on Section 15(4)(b), there is a complete failure by the Commission to spell out with simplicity and clearness and with reason-

able certitude the ground and basis for its order as required by the decisions of this Court.[66]

That the Commission cannot evade the requirements of Section 15(4) by the "form of its order" was settled in 1952 by this Court in *Thompson v. United States, supra.*[67] This holding was consistent with earlier declarations with reference to the "form" of Commission actions.[68]

The process that was followed by the Commission in this case of scrambling the various sections of the Act and utilizing them promiscuously in order to provide the desired results has been condemned by this Court. Perhaps the leading decision, in view of the precise situation now presented, is *Central R. R. Co. v. United States*, 257 U. S. 247. In that case the complainant, American Creosoting Co., had a plant at Newark that was "connected by switch tracks with the Central and the Pennsyl-

66 *U. S. v. Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, 510-511.

67 At pages 559-560, the Court said:

"Acceptance of this argument would mean that Congress' insistence on protecting carriers from being required to short-haul themselves could be evaded whenever the Commission chose to alter the form of its order. The Commission, by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of Section 15(4), before the Court in United States v. Great Northern R. Co., 343 U. S. 562 (decided this day). In short, acceptance of the Commission's argument would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage."

68 In *So. Pacific Co. v. Interstate Comm. Comm.*, 219 U. S. 433, 442, this Court said:

"* * * the mere form given by the Commission to its action does not relieve the courts from the duty of reviewing and correcting an abuse of power."

vania" railroads. These carriers refused to "establish there the privilege known as creosoting-in-transit" and claim was made that this refusal was "unjust and unreasonable" in violation of Section 1 of the Act and "also unjustly discriminatory, in violation" of Section 3 (p. 254), because those roads had joint rates with others that offered that transit privilege on their lines.

Complainant joined 21 other "railroads located in the Trunk Line territory and New England" in the action. Relief was denied under Section 1 but granted under Section 3 by the Commission.

The opinion by Mr. Justice Brandeis points out (p. 255) that neither the Central nor Pennsylvania, on which complainant was located "accords the creosoting-in-transit privilege at any points on its lines", nor is the privilege granted by any other carrier in Trunk Line territory so far as is material here. The claimed discrimination arises by reason of "competitors" of complainant with plants in "Mississippi, Indiana, Illinois, Ohio and Pennsylvania"; and the "several railroads on which these plants are located have, each acting independently, established the privilege at the places where those plants are situated".

The respondent railroads in the proceeding did have through routes and "joint rates" passing through the "points at which this privilege prevails and also through Newark" (p. 256). But the opinion holds that the granting of transit is a "matter local to the railroad on which the transit point is situated", the revenue therefrom being retained entirely by the local carrier, and such transit may be granted by a carrier "without consulting connecting carriers" (p. 255).

Granting, the opinion states, that Section 1 may empower the Commission to "determine whether in a particular case a transit privilege should be granted or should be withdrawn", the Commission may not "accomplish by indirection" under Section 3 what it may lawfully do under Section 1 (p. 257). The opinion holds that the two railroads on which complainant was located are "powerless to cause these connecting carriers to withdraw the privilege" (p. 258). The opinion emphasizes at page 259 that to find discrimination under such circumstances would make "the legality or illegality of a carrier's practice" depend "not on its own act, but on the acts of its connecting carriers".

Now, if the foregoing result is true in the case of transit privileges "independently" established by connecting carriers with whom defendant carrier has established through routes and joint rates, then, *a fortiori*, such result would have to be the same, as in the instant case, where through routes and joint rates via the Rio Grande have not been established. By the same reasoning, if it is improper to invoke Section 3 to enforce Section 1, then it is equally improper to attempt the reverse or to use any other section to enforce or circumvent Section 15(4). Moreover, this same line of reasoning prevents Section 15(4) from being used as a vehicle to equalize rates or privileges under Sections 1, 3 or any other provision of the Act.

The Commission has direct and definite power to remedy violations of Sections 1 and 3 of the Act. It cannot seize its through route and joint rate powers to provide reasonable rates under Section 1 or to prevent undue prejudice or discrimination under Section 3. As noted earlier, the Commission in this case has improperly used

its through route power to remedy at least three separate and distinct rate and discrimination findings.

The special power to establish through routes was not conferred until 1906. This power is wholly independent of the authority to pass upon the reasonableness of rates given the Commission in 1887. The power to require joint rates may not be exercised except upon a finding of public interest. *A., T. & S. F. Ry. v. United States, supra.*

There is no authority in Sections 1(4) or 3(4) to order joint rates. If these sections may be used as a basis for a joint rate order then the enactment of Section 15(3) was a useless gesture.

In previous cases the Commission has held that Section 1(4) is "subordinate" to the specific provisions of Section 15 and the authority in Section 15(3) "is subject to the limitations, among others, in section 15(4)."[69]

---

69 See *North American Coal Corp. v. Pennsylvania R. Co.*, 278 I. C. C. 675, 679, 683 and cases cited in this brief, *supra*, Section III, footnote 49.

In *Port of New York Authority v. A., T. & S. F. Ry. Co.*, 144 I. C. C. 514, 517, the Commission refused joint rates, saying:

"While we have the power under section 1 to find combination rates unreasonable upon a proper showing, we must in such cases safeguard the carriers' rights under the short-haul provision of section 15 * * *. In numerous cases we have permitted carriers to cancel joint rates or restrict routing, which had the effect of leaving higher combination rates to apply over certain routes, when it appeared that they did so in order to safeguard their long haul. We have done this on the principle that we have no power to prevent the cancellation of a through route if we could not have established the route as an original proposition. See The Ogden Gateway Case, 35 I. C. C. 131, 140; Routing of Coal from Western Maryland Ry. Mines, 66 I. C. C. 103, 107; Routing of Sheep, 69 I. C. C. 4, 6."

In *Nicholson Universal S. S. Co. v. Pennsylvania R. Co.*, 203 I. C. C. 637, it was held at page 647 that what is now Section 3(4) "does not include within its terms any reference to routes."

Legislative History of the Through Route Provision of Section 15 Confirms Our Position.

The legislative history of the through route provision of Section 15 shows that any idea that this provision might be used to enforce other provisions of the Act was dispelled by an amendment made in 1910. Previous to that amendment the provision contained language that the through route power might be utilized "when that may be necessary to give effect to any provision of this Act". In 1910 the quoted language was eliminated.[70]

---

70 As originally enacted in 1906 (34 Stat. 590) the through routes provision of Section 15 read as follows:

"The Commission may also, after hearing on a complaint, establish through routes and joint rates as the maximum to be charged and prescribe the division of such rates as hereinbefore provided, and the terms and conditions under which such through routes shall be operated, *when that may be necessary to give effect to any provision of this Act*, and the carriers complained of have refused or neglected to voluntarily establish such through routes and joint rates, provided no reasonable or satisfactory through route exists, and this provision shall apply when one of the connecting carriers is a water line."

If the italicized language justified the view that the power to order new through routes might be used to enforce other provisions of the Act, the omission of this language after 1910 must be construed as indicating a contrary intention.

CONCLUSION

For the foregoing reasons, this Court should affirm the part of the judgment of the district court involved in the appeals in Nos. 117 and 119 and reverse the portion of the judgment of the district court from which this appeal is taken (No. 118) and remand the case to the district court with direction to issue the injunction and relief prayed by the plaintiffs in that court.

Respectfully submitted,

DON EASTVOLD, Attorney General of Washington,
ROBERT L. SIMPSON, Asst. Attorney General of Washington,
Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington.

C. W. FERGUSON,
Attorney for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon.

JAMES B. PATTEN,
Attorney for Board of Railroad Commissioners of the State of Montana, Helena, Montana.

GEORGE F. GUY, Attorney General of Wyoming,
Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming.

CLARENCE S. BECK, Attorney General of Nebraska,
BERT L. OVERCASH,
State Capitol Building, Lincoln, Nebraska,
Attorneys for State of Nebraska and Nebraska State Railway Commission and *Counsel of Record for Appellants.*

PROOF OF SERVICE

I, BERT L. OVERCASH, counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 15th day of March, 1956, I served, on behalf of all Appellants herein, copies of the foregoing brief on the several adverse parties in Nos. 117, 118, 119, 332, 333 and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

and with first-class postage prepaid to:

Donald R. Ross, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Neil Brooks, Esq.
Assistant Attorney General
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who work for The Denver and Rio Grande Western R. R. Co.; National Live Stock Producers Association; Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company,

Inc.; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc.; and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

Lee J. Quasey, Esq.
139 N. Clark Street
Chicago 2, Illinois

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

and with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

6. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

BERT L. OVERCASH,
Counsel of Record for Appellants Herein,
State Capitol Building,
Lincoln, Nebraska.

APPENDIX A

The Pertinent Provisions of the Interstate Commerce Act (United States Code; Title 49), Involved in this Case are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1(3)(a)—

"* * * The term 'transportation' as used in this part shall include locomotives, cars, and other vehicles, vessels, and all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, and transfer in transit,

ventilation, refrigeration or icing, storage and handling of property transported. * * *"

Section 1(4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 1(5)—

"All charges made for any service rendered or to be rendered in the transportation of passengers or property, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

Section 3(1)—

"It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district,

gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Section 3(4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15(1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or

property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classification, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the

terms and conditions under which such through routes shall be operated. * * *"

Section 15(4)—

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however*, That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financal needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

INDEX

	Page
Introductory	4
The Nebraska Decision	8
The Nebraska Court did not err in holding that the evidence did not support the order as to shipments not requiring stoppage for transit operations at points on the Rio Grande	8
The interpretation of clause "(b)" of Section 15(4) of the Act urged by the Rio Grande and the Government is untenable and would completely nullify and emasculate the short-haul prohibition of that section	10
The claimed misinterpretation by the Nebraska Court of Sections 3(1), 15(3) and 15(4) of the Act	15
Testimony of public and shipper witnesses from the northwest area overwhelmingly opposed the Rio Grande, and its statements with respect to that testimony are incorrect and misleading	22
The Nebraska Court was correct in holding that there was no evidence to support a finding by the Commission that Union Pacific routes are inadequate, or a need for the Rio Grande route for shipments which do not require stoppage-in-transit for storage, processing or other commercial operations at points on the Rio Grande	27
The Colorado Decision	33
The Rio Grande was not prejudiced by the Commission's holding that through routes and joint rates for the involved traffic did not exist via the Rio Grande, and that question became and now is moot because the Commission ordered equal joint rates on all commodities it thought were required in the public interest by the evidence of record	34
The Rio Grande's "typical shipments" Contention	38

REPLY BRIEF FOR UNION PACIFIC RAILROAD COMPANY, ET AL., WASHINGTON PUBLIC SERVICE COMMISSION, ET AL.

Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Wabash Railroad Company (appellees in Nos. 117, 119; appellants in Nos. 118, 333), and Washington Public Service Commission, Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission (appellees in Nos. 117, 119; appellants in Nos. 118, 332), file this joint reply to the brief of the United States of America, the Interstate Commerce Commission and the Secretary of Agriculture (herein called "Government"), and the brief of The Denver & Rio Grande Western Railroad Company (hereinafter called "Rio Grande").

The "Statement" in the Government's brief omits some factual material which we think important, and also contains conclusory statements of fact and law (see pp. 19, 28 and 33).

The Rio Grande's "Statement" is argumentative and conclusory in certain respects and omits factual aspects which are necessary for proper understanding and consideration of the cases.

In the circumstances and to avoid repetition, the Court's attention is respectfully invited to the Statements of the cases in the briefs of these appellants-appellees (see Railroads' briefs, No. 118, pp. 15-30; No. 333, pp. 9-29; five States' briefs, No. 118, pp. 11-20; No. 332, pp. 5-13).

Introductory

The subject of this litigation is an order—one order—issued by the Interstate Commerce Commission January 12, 1953, upon complaint of the Rio Grande. The order requires the Union Pacific and over 200 other railroads to establish through routes and joint rates in connection with the Rio Grande on the commodities specified in the order which constitute approximately one-third of the total volume of traffic the Rio Grande seeks to divert to its line from the Union Pacific and other railroads. The Union Pacific and other railroads named above were first to attack the order by their complaint filed June 25, 1953, in the Nebraska court (Nebr. R. 3). The Washington Public Service Commission and other State commissions intervened as plaintiffs in that suit (Nebr. R. 97), which sought to enjoin and annul the Commission's order on the ground that it was entirely null and void. A majority of the Nebraska court filed its opinion October 22, 1954, sustaining the Commission's order in part and enjoining and annulling it in part, Circuit Judge Johnsen dissenting on the ground that the order was void and should be enjoined and annulled in its entirety (Nebr. R. 151-179).

The Rio Grande filed suit in the Colorado court October 22, 1953, seeking to enjoin and annul the Commission's *failure* to issue a different and more comprehensive order which would include all commodities instead of those specified in the order actually issued (Colo. R. 1). The Colorado court filed an opinion January 13, 1955 (Colo. R. 279), sustaining the Rio Grande contentions, but upon consideration of motion for new trial and reconsideration, that opinion was modined and did not become final until the court issued its modifying order April 22, 1955 (Colo. R. 363).

The Colorado court held that the Commission had erred in holding that through routes were not already in existence via the Rio Grande for the traffic it sought moving from and to the northwest area in the States of Oregon, Washington, Montana and Idaho, and that this holding by the Commission "prejudiced the entire proceeding." That court remanded the case for further proceedings by the Commission in conformity with the court's opinion and judgment (Colo. R. 361-362). Notwithstanding its holding that the Commission's view that through routes were not in existence via the Rio Grande had "prejudiced the entire proceeding," the Colorado court did not annul or disturb the order actually issued by the Commission granting through routes and joint rates via the Rio Grande for about a third of the traffic, but instead merely enjoined and annulled the Commission's action "insofar as it denied and withheld relief" to the Rio Grande. In other words, the Colorado court purported to enjoin and annul the Commission's *failure* to issue an order, or to make the order actually issued, more favorable to the Rio Grande by including more commodities and traffic than the Commission included in the order it issued.

Although the suit of the railroads and the five States in the Nebraska court sought, as their appeals seek in this Court, to annul and enjoin the order issued by the Commission in its entirety on the ground that it is wholly null and void, and a decision accordingly by this Court on the issues in the appeals from the Nebraska court would necessarily dispose of the whole litigation, the briefs of both the Government and the Rio Grande present as the first question for consideration by this Court whether the Colorado court erred in holding that the Commission was wrong in its finding that through routes and joint rates

were not in existence via the Rio Grande for the involved traffic. This, the Government's brief states at page 57, "was a premise of the Commission's order" and is considered first in the Government's brief. The Rio Grande's brief at page 53 argues that the question whether through routes already existed via the Rio Grande "was from the beginning and is now the first and basic issue in this litigation." That question was not raised or decided in the Nebraska court, since the attack there was upon the Commission's order as issued and not, as in the Colorado court, upon the Commission's *failure* to issue some other and different order upon a different legal or factual premise or basis than that which it adopted as the basis for the order issued.

The Rio Grande's purpose in contending that the "first and basic issue" is whether the Commission erred in holding that through routes were not already in existence via the Rio Grande is, of course, an endeavor on its part to have this Court adopt the theory of the Colorado court and remand the proceedings to the Commission on the assumption that the Commission will feel compelled to issue an order more favorable to the Rio Grande than the order it actually issued.

The Rio Grande's brief asserts at page 36 that the suit in the Nebraska court dealt only with "that part of the Commission's order which granted affirmative relief to the Rio Grande," while the suit in the Colorado court dealt only with "that part" of the order which "denied and withheld" relief to the Rio Grande. This is an erroneous and untenable view of the Commission's order. The Commission issued only *one* order which is reproduced verbatim as Appendix A to this brief. As will be seen from its language, the order is entirely affirmative. It directs the carriers to do what the Commission intends

them to do, and it does nothing else. It is *not* in *two* parts. It contains no "part" which denies or withholds anything from the Rio Grande. There is no order embracing the matter of which the Rio Grande complained in the Colorado court and hence, no basis for judicial review of the subject matter of the Rio Grande's complaint to that court, namely, the Commission's *failure* to make an order which it did not make.

Since the only order issued by the Commission is the order requiring through routes and joint rates (App. A, hereto) which we contended in the Nebraska case, and contend here, to be entirely null and void, we respectfully submit that the appeals from the decision of the Nebraska court should be first presented to and considered by this Court, particularly since a decision agreeing with any of the contentions made in the attack upon the order issued would dispose of the entire litigation, making it unnecessary for this Court to give any consideration to the decision of the Colorado court.

However, if the Colorado case is considered first by this Court, then the first question, as shown in the brief of the five States (No. 332) and of the railroads (No. 333) in the Colorado case, is whether the court erred in failing to dismiss the complaint on the ground that there was no order embracing the matter of which the Rio Grande complained, and the second question for consideration is whether the Colorado court erred in denying the motion to dismiss on the ground that the Rio Grande had no legal right or standing to maintain its suit. Until and unless these questions have been considered and decided in the negative, this Court would have no occasion to reach the question whether the Colorado court was correct in holding that through routes were already in existence

via the Rio Grande for the involved traffic. That question, we submit, however, became moot and is of no legal significance, since the Commission, though finding that through routes did not exist via the Rio Grande, proceeded unhampered by the short-haul prohibition of Section 15(4) to order through routes and joint rates for all commodities which the Commission thought the "public interest" required under the evidence before it.

In this reply brief we shall discuss the Nebraska decision before taking up the Colorado decision.

The Nebraska Decision

The Nebraska Court did not err in holding that the evidence did not support the order as to shipments not requiring stoppage for transit operations at points on the Rio Grande.

The Government's brief, page 75, contends that the Nebraska court "erroneously narrowed the scope of relief granted by the Commission's order." The Rio Grande asserts that the Nebraska court erroneously usurped administrative power and substituted its judgment for that of the Commission, and for that reason the court's judgment should be reversed (brief, pp. 87, 115).

We agree that, insofar as it sustained the Commission's order, the Nebraska court not only usurped administrative powers but also substituted its own standard or basis for the order for that invoked by the Commission. For these reasons and others, we contend that to the extent it sustained the Commission's order, the Nebraska court's decision is erroneous and should be reversed (see railroad brief, No. 118, p. 42, *et seq.*).

We do not agree, however, that the Nebraska court usurped administrative power in annulling and enjoining the Commission's order insofar as it embraces shipments that would not require stoppage-in-transit for processing, storage or other commercial operations at points on the Rio Grande and later shipment beyond its termini: That court's action in this respect was based not upon a "weighing" of the evidence by the court to determine what conclusions should be drawn from it, but upon the court's finding of fact "I" and its conclusion of law that "the evidence does not justify" the Commission's finding that services via Union Pacific routes are inadequate and, hence, does not support a finding that the Rio Grande route is necessary for shipments that do not require transit operations at points on the Rio Grande (Nebr., R. 165, 168). Whether an order is supported by substantial evidence is and always has been a question of law, and the Nebraska court was clearly within its judicial power in holding that the evidence was insufficient to support the Commission's ultimate finding as to shipments not requiring transit operations at points on the Rio Grande. *Int. Com. Comm. v. Union Pacific R. R.*, 222 U. S. 541, 547; *Int. Com. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88, 91; *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, 140. Moreover, the Commission had already found Union Pacific routes to be adequate, efficient, shorter, faster and with ample capacity to haul "the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" (Nebr. R. 62). Indeed, the Commission's conclusion that Union Pacific routes are "inadequate" was not based on evidence at all but upon the physical and geographical fact that they "are not available, and higher rates apply" at points on the Rio Grande, i. e., at points *not* located on Union Pacific routes (Nebr. R. 70).

The interpretation of clause "(b)" of Section 15(4) of the Act urged by the Rio Grande and the Government is untenable and would completely nullify and emasculate the short-haul prohibition of that section.

The Rio Grande's brief argues (pp. 99-101) that the Nebraska court too narrowly interpreted clause "(b)" of Section 15(4) of the Act, which permits the Commission to order an additional route which short hauls existing routes if "the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation." In this connection, the Rio Grande argues that in determining whether a proposed additional route is justified under clause "(b)" no consideration should be given to the adequacy, efficiency or economic transportation service of existing routes, but that the basic question is "whether the transportation would be better for the economy of the area involved and the country as a whole" and whether, in this case, present railroad transportation service from and to the northwest area is "as adequate as it would be if through routes and competitive joint rates were in operation over the Rio Grande" and whether "a choice of routes" rather than "one route" would be better for the economy of the northwest area. The Government's brief, page 82, argues to the same ultimate effect.

In the first place, the suggestion that shippers from and to the northwest area have no "choice" of routes but have only "one route" is a fantastic distortion or misrepresentation of fact, for as shown at pages 53-55 of the railroad brief in No. 333, there are now in existence literally millions of through routes with joint rates between the 39,000 stations in the east and south and 2,900 stations in the northwest between which the involved traffic now moves and has moved for more than half a

century. In the second place, the argument that transportation is not "as adequate as it would be" if the Rio Grande route is added, or that the admitted adequacy and efficiency of existing through routes "is no bar to an order" requiring an additional route which short hauls existing routes, are but arguments that transportation service would never be adequate within the meaning of clause "(b)" until every possible through route at equal joint rates has been established via every railroad which connects with other railroads and could be included as a part of a through route between the origin and destination of a shipment. This, of course, would completely nullify and emasculate the short-haul prohibition of Section 15(4) and, indeed, the Government's and Rio Grande's entire argument on the meaning of clause "(b)" is in effect a contention that it should be so interpreted as to deprive trunk line railroads of any protection of their long hauls under the short-haul prohibition.

This Court recently held (1952) in *Thompson v. United States*, 343 U. S. 549, at page 559, that protection of a carrier's long haul is a "right guaranteed by Section 15(4)" of the Act, and warned that no such "unwarranted distortion of the statutory pattern" as the Government and the Rio Grande now urge would be tolerated by the Court. That decision shows at page 555 that this Court has found it necessary to strike down the "Commission's effort to limit by construction the impact of the short-hauling restriction on its power to establish through routes" and discloses the Commission's repeated and continuous efforts, through construction or repeal of the short-haul prohibition, to eliminate it entirely.

The interpretation of clause "(b)" for which the Government and Rio Grande now contend is diametrically

opposed to the purpose of legislation which led to the enactment of that clause. In its report No. 404, April 22, 1937, on Senate Bill 1261, 75th Cong., 1st Session, the Senate Committee on Interstate Commerce said at page 2:

> "Your committee feels that the shippers of the country should be given the right to use the *shortest, quickest, and cheapest routes available.* * * * The bill does not give the Commission power to order the railroads to route shipments in any particular way, but merely provides that *if a shorter route exists*, and if it is in the public interest for the shippers to have this route available, the railroads shall, upon the Commission's order, publish the route and rate in their tariffs. It is not the intention of the committee to interfere with the right of the trunk lines to their long haul, except where this right conflicts with the shippers' right to the *shortest route and lowest rate.* If there is this conflict, the *shipper is merely given the opportunity, if he wishes, of using the shorter or cheaper route.*" (Italics added.)

Surely, legislation enacted for the declared purpose of making the "shortest, quickest, and cheapest routes available" to shippers in lieu of longer, slower and costlier routes, may not be so distorted by interpretation as authorizing the Commission in this case to short haul the shorter, faster, cheaper Union Pacific routes 925 miles by ordering the addition (to the millions of presently existing routes) of the longer, slower, more onerous Rio Grande line which would result in routes from 33 to as much as 50% longer than the present Union Pacific routes (Nebr. R. 62, 70, 71). It is utterly illogical, unreasonable and fantastic to contend that where, as here, the Commission finds existing routes to be shorter, faster, more efficient, less onerous, and adequate to haul any foreseeable volume of traffic between the northwest and the eastern and southern parts of the country, the addi-

tion of the Rio Grande's more onerous, slower, mountainous route is "needed" to provide the "adequate, and more efficient or more economic, transportation" contemplated by clause "(b)" of Section 15(4), or the "adequate, economical, and efficient service" and "sound economic conditions in transportation" sought by the National Transportation Policy, or the "adequate and efficient railway transportation service" which the Commission must consider under Section 15a(2) in prescribing reasonable rates.

This Court has rejected the view that the Commission may short haul existing routes by requiring another route because existing routes do not serve the same territory served by the proposed route, or because shippers or passengers may prefer a larger "choice" of routes, holding that these are not reasons for condemning and short-hauling existing routes, *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538, 544-545. And see *United States v. Mo. Pac. R. Co.*, 278 U. S. 269.

The sweeping interpretation of clause "(b)", for which both the Rio Grande and the Government contend and which would emasculate the short-haul prohibition and give the Commission complete and unrestricted power to order new through routes that short haul existing routes, is, of course, induced by the Commission's own erroneous interpretation of that clause, in a continuation of its time-worn efforts to overcome and evade the impact of the short-haul prohibition. *Thompson v. United States, supra*, 555. Being unable upon the evidence in this case to condemn the Union Pacific routes as inadequate or to find any ground for condemning them under past precedents or present standards governing its action, the Commission invented a new theory or standard of transportation requirements for perishable food prod-

ucts. Its report states that these products require "as wide a distribution as possible," that growers and producers in the northwest area "need as many markets and outlets as possible," that the marketing system for food articles requires as orderly a distribution of them "as possible" and that such articles "must be moved to market * * * over as many routes as possible," without unnecessary interruptions so that there may be "as much flexibility as possible" in the distribution process (Nebr. R. 56, 70).

We have shown in our openng briefs that the Commission thus completely forsook and departed from the statutory standards requiring "reasonable through routes," Section 1(4), and "adequate, economical, and efficient service" required by the National Transportation Policy, and "adequate, and more efficient or more economic, transportation" contemplated by clause "(b)" of Section 15(4), which it avowedly invoked (railroad brief No. 118, pp. 52-113; States' brief No. 118, pp. 40-69).

The fallacious and untenable interpretation by the Commission of its authority, which the Rio Grande and Government counsel now hopelessly undertake to defend, is aptly and correctly condemned in the dissenting opinion of Circuit Judge Johnsen as follows (Nebr. R. 172-173):

> "Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to 'as many routes as possible' and 'as much flexibility as possible in the distribution process,' so that on this basis, and without regard to any other factor, any existing through route can be called inadequate, because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad serving as a bridge line and further such new route can be de-

> clared to provide 'more economic transportation,' because by placing joint rates in effect the cost of using such new through route for its transit facilities will be less than under the general combination rates previously existing, then *the railroads of the country may as well forget section 15(4) entirely as affording them any protection whatever against deprivation of their long hauls.*" (Italics added.)

The language quoted above (page 12) from the report of the Senate Committee on Interstate Commerce is enough, alone, to condemn and cause this Court to reject the Commission's misinterpretation of its authority to require through routes, and the feeble arguments of counsel for the Rio Grande and the Government to support that misinterpretation. This Court has made legislative history decisive of the construction of statutory provisions in innumerable cases (see Appendix A to dissenting opinion of Mr. Justice Frankfurter in *Comm'r v. Estate of Church*, 335 U. S. 632, 687-689, citing more than 125 "DECISIONS DURING THE PAST DECADE IN WHICH LEGISLATIVE HISTORY WAS DECISIVE OF CONSTRUCTION OF A PARTICULAR STATUTORY PROVISION").

The claimed misinterpretation by the Nebraska court of Sections 3(1), 15(3) and 15(4) of the Act.

The Government in a footnote at page 82 of its brief states that the Nebraska court erred in holding that Section 3(1) of the Act is not applicable to situations where, as in this case, persons alleged to be preferred and those alleged to be prejudiced are located on different railroads, but that the result in this case is the same whether it is analyzed in terms of Section 15(3) and (4) or "whether one looks also to Section 3(1)."

The Rio Grande, at page 102 of its brief, contends that the Nebraska court erred in interpreting and applying all of these provisions and particularly in holding that Section 3(1) is inapplicable to the facts in the instant case. The Rio Grande brief does not make clear the respects in which it claims the majority of the Nebraska court misinterpreted or misapplied any of these provisions except possibly the following holding of that court (Nebr. R. 164):

> "If the Commission could order through routes and joint rates between two or more competing railroads under Sec. 3(1) merely because a shipper entity described in Sec. 3(1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15(4) would be practically emasculated. The evidence of preference, advantage, prejudice or disadvantage, under these circumstances, furnishes no basis for the order under Sec. 3(1)."

It is noted that the majority of the Nebraska court held that the evidence "furnishes no basis for the order under Sec. 3(1)." We have thoroughly demonstrated, we believe, that the Commission's finding of undue preference and prejudice in violation of Section 3(1) has no basis in law and is not only without support of evidence but is contrary to the overwhelming preponderance of the evidence of record. (Railroad brief No. 118, pp. 194-222; States brief, No. 118, pp. 69-92.)

If the Rio Grande's contention is that the Commission should have ignored the short-haul prohibition in Section 15(4), but should, nevertheless, have granted through routes and joint rates in the exercise of its power under Section 3(1), then its contention is wholly

untenable because there is nothing in Section 3(1) which suggests that the Commission may order through routes and joint rates to remedy undue preference and prejudice. No case can be found in which the Commission attempted to base a through route and joint rate order upon Section 3 of the Act. We think the majority of the Nebraska court erred in failing to hold that the Commission's finding under Section 3(1) is invalid because it is unsupported by evidence and for other reasons set forth in the portions of our briefs just cited.

On this point, the following views of Circuit Judge Johnsen should be adopted by this Court (Nebr. R. 178):

> "But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3(1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 per cent greater variation in grade, involving a 24-hour additional hauling time and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3(1). If the Commission had attempted to predicate the relief which it here granted upon the existence of a violation of section 3(1), I am certain that its action resting on this basis alone could not on these facial realities be upheld. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15(4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the prescribing of through

routes and joint rates in relation to the existing conditions."

All else aside, and the Commission having found that the evidence as to transportation conditions would not support a finding of discrimination against the Rio Grande under Section 3(4) (Nebr. R. 72), Circuit Judge Johnsen is correct in holding that the evidence disclosing the dissimilarities in physical and transportation conditions does not justify the Commission's finding of a violation of Section 3(1) and we have so demonstrated in our briefs at pages just cited.

In connection with its discussion of Section 3(1) and (4), the Rio Grande's brief at pages 102-103 points to the fact that the Union Pacific does maintain through routes and joint rates with the Rio Grande on traffic to and from points in California. The inapplicability of this attempted comparison is made clear by the following undisputed testimony of witness Stilling (Vol. I, 818):

> "All of the routing arrangements via junction points in southern California have been in effect for many years, and those applying in connection with the Union Pacific were established by the Los Angeles and Salt Lake Railroad when it was an independent corporation.
>
> "As stated earlier in my testimony, the Union Pacific obtained control of the LA&SL in April, 1921, and all of the joint rates and through routes established by the LA&SL have been continued in effect. Absence of control of the LA&SL by the Union Pacific until 1921, and the additional fact that *through routes with the Rio Grande via Utah junctions are in many instances materially shorter than Union Pacific long haul routes, creates a situation directly opposite to that involving traffic to and from Idaho,*

Montana, Oregon and Washington where no joint rates have been in effect via the Rio Grande's longer route for almost half a century.

"There is another important difference between the Rio Grande's participation with the Union Pacific in trans-continental traffic to and from Los Angeles and its non-participation in through routes and joint rates to and from Portland, Seattle or Spokane, and that is that the total transportation performed to a point like Chicago is substantially greater from the Northwest than from Los Angeles.

"From Los Angeles to Chicago via Union Pacific, Provo, Utah, Rio Grande, Denver and CB&Q it is 2,293 miles. From Portland via Union Pacific, Ogden, thence Rio Grande and CB&Q it is 2,473 miles or 180 miles farther than from Los Angeles via the Provo route." (Italics added.)

As stated above, there is no language in Section 3(1) or 3(4) which suggests that the Commission has power to order through routes and equal joint rates via the Rio Grande, and it is a plain distortion of the statutory pattern to contend that any such power derives from the provisions of that Section. If this were not so, then the Commission has had the through routes power since the original Section 3 was enacted in 1887, and the enactment of the limited through routes power in Section 15(3) and (4), in 1906 and later amended, was but a useless and idle gesture on the part of Congress. Moreover, since the order in this case was issued upon complaint of the Rio Grande seeking to equalize rates on traffic which it handles or hopes to handle, the proviso to Section 3(1) seems clearly to preclude any application of Section 3(1) or (4) to this case, and, further, the proviso would seem to prevent any use of Section 3 to circumvent Section 15(4) or to confuse or intermingle the provisions of those sections. The proviso reads:

> "That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Even where a shipper is placed at a competitive disadvantage with other shippers because of inadequate service, and higher rates over longer routes, and adequate and more efficient and less costly routes are needed to effect a fair "competitive relation" with other shippers, "the Commission's authority to grant relief is bottomed on §15(3) and (4)" and not upon Section 3 of the Act, *Pennsylvania R. Co. v. U. S.*, 323 U. S. 588, 590. But under those circumstances the Commission is not justified in ordering longer more onerous routes, as in this case, to short haul existing Union Pacific routes which it expressly finds to be shorter, faster and adequate to haul any foreseeable volume of the involved traffic. The three-judge district court decision, affirmed by this Court, in the case last cited, held, 54 F. Supp. 381, 392:

> "Of course, the Commission would clearly not be justified in attempting to neutralize the disadvantage of geographical location such as Stickell has, by requiring of a carrier wasteful or additional service, without adequate compensation, even though Stickell might, for competitive or other business reasons, be in dire need thereof."

The through routes required in that case eliminated four extra days' time in transit, a 149-mile out-of-line or back-haul costing the shipper 90¢ per ton, and two switching interchanges, in contrast with a completely reverse set of facts in the instant case, where the longer Rio Grande route required by the Commission's order would result in at least 219 miles additional and wasteful transportation, and routes as much as 50% longer, over the most "onerous" operating conditions of any western

railroad, requiring two more interchanges, one or two days more time in transit, and would short haul existing shorter routes by at least 925 miles and deprive some of the railroads of their entire hauls.

The reference in the Rio Grande's brief (pp. 107-109) to certain routes that could be made in connection with its line that would give the Union Pacific a longer haul than it now obtains in connection with other railroads serving the northwest area affords no justification for the Rio Grande's demands, in the absence of evidence showing similarity of transportation conditions over existing routes and the proposed Rio Grande route. The Commission considered these suggestions of the Rio Grande, as its report clearly shows, but since supporting evidence was lacking, it rejected them in the following language (Nebr. R. 72):

> "As before indicated, on a number of commodities, from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections here defendant, its long haul, while refusing to apply the same joint rates over routes in connection with the Rio Grande via the Ogden gateway. Such routes by which the Union Pacific and certain of its connections short haul themselves are generally about as long as, and in many instances substantially longer than, the Rio Grande routes here sought, and the hauls of the Union Pacific, as well as of certain of the other defendants, are shorter over such established routes than over routes in connection with the Rio Grande via Ogden.

"*There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to.* A finding of discrimination under section 3(4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than the over routes said to be preferred. *No such a showing has here been made.*" (Italics added.)

Testimony of public and shipper witnesses from the northwest area overwhelmingly opposed the Rio Grande and its statements with respect to that testimony are incorrect and misleading.

At page 97 of its brief, the Rio Grande states:

"Most of the shippers who testified before the Commission are located at points in northern Utah, in Idaho, in Oregon and Washington served by the Union Pacific. A summary of the testimony of various shippers and producers of the commodities involved in the order of the Commission is set forth in Appendix F attached hereto. The testimony of these shippers establishes beyond question the need for the competitive joint rates and through routes prescribed by the Commission."

Again, at page 98, its brief states:

"Under the existing rate restrictions imposed by the Union Pacific and its preferred connections, shippers in northern Utah, Idaho, Montana, Washington and Oregon do not have an opportunity of making a selection of routes enabling them more profitably to market their products, and in some cases to 'feel out' the markets at such points as Grand Junction, Pueblo, Colorado Springs and other points in Colorado and Utah served by the Rio Grande via Ogden or Salt Lake City."

The Government's brief, at page 77, states that:

"* * * growers and shippers in the excluded territory [northwest area] are deprived of access to the markets represented by processors and dealers who are served only by the Rio Grande. * * *"

It defies belief that the Rio Grande would, in the face of the record before the Court, attempt to plead and rely upon the situation of shippers in the northwest area and particularly to create the false impression that the testimony of the majority of shippers from that area expressed any need or desire for through routes in connection with the Rio Grande. The record shows exactly the reverse to be true.

Attached as Appendix B to this brief is a list, with appropriate references to the record, of all witnesses who testified before the Commission from Washington, Oregon, Montana, Idaho and Utah north of Ogden. The record shows that 14 witnesses from the State of Washington, including the Public Service Commission of that State, testified in vigorous opposition to the Rio Grande and that *not a single witness from Washington supported its complaint;* that 2 witnesses from the Board of Railroad Commissioners of Montana and 3 important shipper witnesses from that State vigorously opposed the Rio Grande's complaint and *not one witness from Montana supported it;* that the Public Utilities Commissioner of Oregon and 13 shippers of large quantities of traffic from and to that State vigorously opposed the Rio Grande and that *only 2 witnesses from Oregon supported it.*

Despite its vigorous propaganda campaign soliciting witnesses from the northwest area, the Rio Grande was able to procure only 2 witnesses from the large number who testified from the States of Washington, Oregon

and Montana, while 33 witnesses from those States vigorously opposed the Rio Grande. It succeeded in procuring witness Titus (V. 1, 213), who testified that no shipper in his organization had expressed any need for the Rio Grande route and that no one could foretell whether the route would be used until after it was established; and it succeeded in procuring witness Miller (V. I, 531), who said the strongest "argument" he could make for the Rio Grande route was to have it available at equal rates in case other lines were blocked by snow storms—a situation expressly provided for by the emergency provisions of Section 15(4) of the Act.

Even in Idaho, where the Rio Grande particularly concentrated its solicitation of supporting witnesses, it succeeded in procuring only 18 witnesses, while 37 witnesses from Idaho testified vigorously in opposition to the Rio Grande. From Utah north of Ogden only 2 witnesses supported the Rio Grande, while 3 witnesses from that locality opposed it.

To summarize, the Rio Grande was able to procure a total of only 22 witnesses out of the vast area of Utah north of Ogden, Idaho, Oregon, Washington and Montana; 2 of whom were from Oregon, 2 from Utah north of Ogden and 18 from the southeast corner of Idaho; whereas a total of 73 witnesses from that northwest area vigorously opposed the Rio Grande's complaint.

Careful examination of the record shows that some 12 Idaho producers and shippers who supported the Rio Grande ship approximately 10,000 carloads annually of fruits and vegetables and that their shipments go to all markets in the 48 States and to Canada, South Pacific, South America, Cuba, South Africa, and other points (V. 1, 246, 247), while the 37 Idaho producers and ship-

pers who testified in opposition to the Rio Grande ship and receive annually over 60,000 carloads of these products, and all of them stated that the lack of equal joint rates via the Rio Grande had never handicapped or interfered with free and widespread distribution or effective participation in the markets for their fruits and vegetables. (For more complete discussion and analysis of the testimony, both in support of and in opposition to the Rio Grande, see railroad brief, No. 118, pp. 131-181, which includes a discussion of the Rio Grande's admitted solicitation and procurement of the witnesses that supported its complaint.)

The Rio Grande's suggestion at page 97 of its brief that the testimony of witnesses summarized in Appendix F to its brief represents the "typical" attitude and alleged need of routes via the Rio Grande as expressed by shippers in the northwest area is therefore entirely false and wholly misleading. The witnesses whose testimony is summarized in Appendix F to its brief, as clearly appears from examination of the appendix, are not from the northwest area as such but from the southeast corner of Idaho and from Utah, Colorado and Kansas.

The Commission's report clearly shows that the purpose of its order is to afford "relief" to shippers in the northwest area who, the report erroneously asserts, "are debarred from effective participation" in the marketing system for perishable articles. Hence, the witnesses whose testimony is summarized in Appendix F to the Rio Grande's brief is overwhelmingly contradicted, as is the Commission's own assertion, by the testimony of *all* witnesses from the States of Washington and Montana, all but 2 witnesses from the State of Oregon, and 37 as against 18 witnesses from the State of Idaho, and 3 against 2 witnesses from Utah north of Ogden.

The Commission having designed its order for the purported benefit of shippers in the northwest area, despite the denial of the State commissions and shippers in that area that there is any need for routes via the Rio Grande or that they want any "relief" through the medium of the longer, more onerous Rio Grande routes, from the shorter, faster Union Pacific routes which serve them, the testimony of witnesses along the Rio Grande in Utah and Colorado, and other witnesses from Kansas who testified about commodities not included in the order, affords no support for the order or the position of the Rio Grande or the Government, and their counsel are not justified in an attempt to shift the basis of the order from purported "relief" to shippers in the northwest to receivers and processors of commodities generally along the Rio Grande Railroad.

The suggestion in the Rio Grande's brief that shippers in the northwest area have no "choice in the selection of routes" not only contradicts the testimony of practically all shippers from that area but also contradicts the fact discussed at page 54 of the railroads' brief in the Colorado case (No. 333), that there are literally millions of through routes with joint rates in existence and available for shippers' "choice" from and to the northwest, and none of those shippers or any other shippers have ever demanded through routes over the longer, more onerous, Rio Grande line for the involved traffic.

The Rio Grande's assertion that shippers located exclusively on the Union Pacific and other lines serving the northwest area have no "choice" of routes is also fallacious and misleading in view of the inescapable fact that no shipper served exclusively by one railroad has or could have any choice of routes until his traffic reaches

the junction of such railroad with another. In other words, every railroad, including the Rio Grande, "monopolizes" the railroad traffic of shippers located exclusively on its line, at least to the extent that the shipments can move only over the rails of the railroad serving the shipper until shipments reach the end of its line or its junction with another line. For example, the Rio Grande has a complete "monopoly" of all railroad traffic originated and terminated on its line between Provo, Utah, and Denver, Pueblo and Trinidad, Colorado, for the reason that no other railroad connects with the Rio Grande or serves the territory traversed by it between those points (see map, Appendix C, Rio Grande's brief).

The Nebraska court was correct in holding that there was no evidence to support a finding by the Commission that Union Pacific routes are inadequate, or a need for the Rio Grande route for shipments which do not require stoppage-in-transit for storage, processing or other commercial operations at points on the Rio Grande.

Both the Government and the Rio Grande argue that the Nebraska court erred in holding that there is no evidence to support a finding by the Commission that Union Pacific routes are inadequate or that there is a need for the Rio Grande route for shipments which do not require stoppage-in-transit for processing, storage, grazing cattle, or other commercial operations at points on the Rio Grande (Govt. brief, pp. 79-80; Rio Grande brief, pp. 90-93).

The Government's brief states at pages 79-80 that the Nebraska court "ignores the factor of reconsignment privileges," and that this "was a basic feature of the Commission's rationale." The Rio Grande's brief at page 98 asserts that the Nebraska court in sustaining

the order only as to shipments actually stopped for processing, storage or other transit operations at points on the Rio Grande, and enjoining it as to shipments *not* requiring such commercial operations but which might merely be "reconsigned" while moving over the Rio Grande, deprives shippers from the northwest area of an opportunity to "feel out" markets at points along the Rio Grande and, failing to sell at such markets, then to "reconsign" their shipments to points east of the Rio Grande's termini. That argument is made in the apparent view that if the through routes and joint rates are limited to shipments actually stopped for processing and other transit operations at points on the Rio Grande, the quantity of traffic it would be able to divert from Union Pacific routes would be unattractively small or at least not nearly so large as the quantity would be if there were no limitations upon the application of the joint rates via the Rio Grande.

In the first place, as already noted above, the Rio Grande's gratuitous plea for the alleged benefit of shippers from the northwest contradicts their own overwhelming testimony that they neither need nor want the longer routes via the Rio Grande, and also contradicts their testimony that in view of the sparse population of the mountainous area along the Rio Grande, there are no markets there to "feel out," and moreover that fresh fruits and vegetables, which are the principal commodities involved, are freely and plentifully grown in the area served by the Rio Grande and seek markets also in the east and south (see railroad brief, No. 18, pp. 170-171, pointing to the very small population of the points located upon and served exclusively by the Rio Grande).

The Nebraska court held (Nebr. R. 165) that:

> "The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points."

The last sentence in the court's third conclusion of law (Nebr. R. 168) holds:

> "Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations specified in this paragraph, that factual premise, essential to the validity of the order, is lacking."

While we contend that the Nebraska court erred in failing to hold that the order was entirely void for lack of supporting evidence and numerous other reasons, we submit that the court was within its judicial power and was correct in holding that the evidence did not support the order to the extent indicated in its opinion.

The contention now made by the Government and the Rio Grande that "reconsignment privileges" at points along the Rio Grande "was a basic feature of the Commission's rationale" has no basis in the Commission's own report, except perhaps on the "all possible routes" theory which is plainly untenable and contrary to the stat-

utory pattern and express purpose and provisions of Sections 1(4) and 15(4) of the Act.

The "basic feature of the Commission's rationale" was not reconsignment privileges but shipments that "may be stopped in transit for various commercial operations [at points on the Rio Grande] and reshipped at the balance of the joint rate" (Nebr. R. 48). Indeed, examination of the Commission's report leaves no other conclusion than that transit operations such as processing, storing, grazing, etc., at points on the Rio Grande is the key to or basis upon which the Commission pivoted its order. The report labors painfully in an effort to prove that no matter how adequate, efficient and capable the Union Pacific routes may be, there is nevertheless a reason, namely, transit operations, for perishable traffic from the northwest to move at equal rates through points located on the longer and more onerous Rio Grande route. The following discussion in the report completely refutes the contention that "reconsignment" at points on the Rio Grande was a basic purpose of the order (Nebr. R. 48-49):

> "*Transit.*—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be *stopped in transit* for various *commercial operations* and reshipped at the balance of the joint rate from the point of origin are of great value to shipper, receivers, and distributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.
>
> "The Rio Grande, like other railroads, offers a large number of such transit arrangements, *including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling,*

fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding. Such arrangements are of importance to shippers and receivers in the territory served by the Rio Grande. Traffic from the excluded territory consists of perishable commodities, other agricultural products, milled products, livestock, and lumber and its products. West-bound traffic to that territory is made up for the most part of manufactures and partially manufactured articles, some of which are *stopped for storage, partial unloading at a number of points, and fabrication in transit.*

"'On traffic from Colorado common points and points east thereof through Pueblo, Colorado Springs, or Grand Junction, and Price, Utah, to final destinations north or west of Ogden on the Union Pacific or points on its connecting lines, failure to have joint through rates in connection with the Rio Grande hinders the use of the *stoppage-in-transit arrangements offered by that railroad at such Rio Grande points.*

* * * * *

"A discussion of the evidence offered by shippers and receivers of particular commodities who testified in support of the complainant follows." (Italics added.)

The discussion in the report of particular commodities which follows the discussion of "transit" clearly shows that the basic idea underlying the report was to permit stoppage-in-transit at points on the Rio Grande for commercial processes and operations of the sort we have emphasized in the above quotation. Indeed, it was not until the Commission reached its "general discussion and ultimate fact findings" that we find any reference to reconsignment privileges. This is found at page 70 of the record in the *Nebraska* case in the following language:

> "For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. On such traffic the defendants' routes are inadequate and less economical than are the Rio Grande routes."

From the above quotations and the discussion of commodities throughout the Commission's report, it clearly appears, we submit, that the reference to "traffic reconsigned" in the last quotation was merely an afterthought and that the Nebraska court correctly construed the Commission's report as based upon a purported need for perishable articles to be moved over the Rio Grande so that shipments could be stopped for processing, fabrication and other transit operations at points on that line. Since traffic *not* requiring stoppage for processing at points on the Rio Grande can be and is reconsigned as readily and flexibly while moving over the shorter, faster, Union Pacific routes, and as "reconsignment," unlike transit operations, does not require the shipment to be stopped at any particular point or to be taken from the custody of the carrier, there could be no evidence or any reason justifying a finding that there is necessity for such traffic to move through points on the Rio Grande instead of the Union Pacific routes. The error, we submit, of the Nebraska court was not in holding that the evidence would not support a finding that the Rio Grande route was necessary for traffic which might merely be reconsigned, but its refusal to hold that the order is entirely void for lack of supporting evidence and other reasons urged by the plaintiff railroads and five States in the Nebraska court and in this Court.

The Colorado Decision

The Government's opening brief, pages 57-74, thoroughly demonstrates the errors of the Colorado court in its holding that the Commission erroneously found that through routes in connection with the Rio Grande were not in existence for the involved traffic. The Government's brief, however, does not discuss the two questions presented in the Colorado case which must be considered before the through routes question is reached, namely, (1) whether the Commission's *failure* to compel through routes and joint rates for commodities *not* named in the order issued, is an "order" affording a jurisdictional basis for court review, and (2) whether the Colorado court erred in denying motion to dismiss the complaint on the ground that as the Rio Grande admittedly has no legal right to enhance its financial position by diverting traffic from Union Pacific routes, it is without legal right or standing to maintain its suit. Those questions are thoroughly discussed in our separate briefs in the Colorado case, Nos. 332 and 333, and they require no further discussion here, particularly since they are ignored in the Rio Grande's opening brief.

Our briefs in the Colorado case discuss still other questions which are not discussed in the Government's brief, nor mentioned in the Rio Grande's brief.

Also, bearing upon the question whether through routes for the involved traffic already exist via the Rio Grande our briefs in the Colorado case cite important evidential facts and circumstances not mentioned in the briefs of the Government and the Rio Grande. Since our briefs in that case so thoroughly comprehend and disprove all major contentions made by the Rio Grande

in its efforts to support the erroneous decision of the Colorado court, we deem it more appropriate to avoid repetition of the discussions there set forth, by earnestly requesting the Court's thorough consideration of the discussion of the several questions presented in our briefs in the Colorado case. This leaves for discussion in this reply brief only the following points in that case:

The Rio Grande was not prejudiced by the Commission's holding that through routes and joint rates for the involved traffic did not exist via the Rio Grande, and that question became and now is moot because the Commission ordered equal joint rates on all commodities it thought were required in the public interest by the evidence of record.

Implicit in the decision of the Colorado court and in the insistence of the Rio Grande that the question whether through routes already existed via its line for the involved traffic "is now the first and basic issue in this litigation" is the assumption that the Commission necessarily would have ordered joint rates via its line on all of the traffic, or at least would have issued an order far more favorable to the Rio Grande if it had not felt itself "restrained" by the short-haul prohibition of Section 15(4).

We submit that this is a false assumption which cannot be supported by anything that appears in the Commission's discussion in its report of the through routes question or elsewhere in the report. On the contrary, its report clearly shows that the Commission's finding that through routes did not exist via the Rio Grande for the involved traffic and that to establish them would require findings under clause "(b)" of Section 15(4), did not cause the Commission to limit its prescription of

joint rates to the commodities specified in the order, for the Commission undeniably ordered joint rates on all commodities which it felt were justified by the evidence in the public interest. Thus, it was a failure of evidence of "public interest" which limited the prescription of joint rates to the commodities named in the order, rather than any feeling of "restraint" by the Commission from the short-haul prohibition. The Commission, without apparent hesitation, readily made findings in purported compliance with clause "(b)" of Section 15(4) which, so far as the Commission was concerned, eliminated the obstacle of the short-haul prohibition and left it entirely free to order joint rates on all commodities which in its judgment were shown by the evidence to be required in the "public interest." Having removed the obstacle of the short-haul prohibition by findings it considered sufficient to meet the requirements of clause "(b)", the Commission had only to consider the evidence concerning the extent to which public interest required joint rates.

The fact that the Commission did not order joint rates on eastbound lumber or wheat, for example, justifies the assumption or deduction only that it considered the evidence insufficient to require joint rates on those commodities. Otherwise, it needed only to name them in the order. There is not a word in the Commission's report which justifies the assumption indulged by the Colorado court and the Rio Grande that the Commission felt itself "restrained" in the prescription of joint rates because it had found that through routes for the involved traffic were not in existence via the Rio Grande.

A finding of "public interest" is essential to the validity of an order requiring joint rates, even though through routes are already in existence, *U. S. v. Great*

Northern R. Co., 343 U. S. 562, 569, and since that finding depends upon adequacy of evidence, it necessarily follows that it was lack of evidence of public interest and not its finding that through routes were not already in existence via the Rio Grande which prevented the Commission from ordering joint rates on more commodities than those named in its order.

Since the Commission has already, upon its weighing of the evidence, prescribed joint rates on all commodities it considered to be required in the public interest, there is no basis or justification for the assumption that it would have taken a different view of or given the evidence any different weight with respect to public interest if it had found that through routes were already in existence via the Rio Grande for the involved traffic. Consequently, there is no basis or reason for the Colorado court "remanding" the case to the Commission except for the purpose of attempting to control the Commission's administrative judgment and induce it to change its previous appraisal of the evidence concerning public interest. This, of course, is beyond the court's power. (See cases cited in the railroads' brief, No. 333, pages 99-102.)

The fallacy of the contention that its finding that through routes did not already exist via the Rio Grande for the involved traffic "prejudiced the entire proceeding" and restricted the Commission's decision and order is readily demonstrable:

First, by the fact that, despite the alleged prejudice, neither the Rio Grande nor the Colorado court claims that the Commission proceeding was "prejudiced" in so far as it ordered through routes and joint rates and, indeed, the Colorado court very carefully worded its conclusions and final decree so as to prevent reconsideration

of, and thus to "save," that part of the Commission's action which is favorable to the Rio Grande as reflected in the order. This the court undertakes to accomplish regardless of its view that the "entire proceeding" and not merely the part of it that was not favorable to the Rio Grande, was prejudiced because of the claimed basic and fundamental error of the Commission in holding that through routes via the Rio Grande were not already in existence.

Second, the Chief Examiner's proposed report (which is in the record before this Court as an original, but not printed, document) also held that through routes for the involved traffic were not in existence via the Rio Grande and that "[i]n such a situation the limitations upon the Commission's power in Sections 15(3) and 15(4) apply" (Sheet 5). The Rio Grande did not exercise its right to file exceptions to that holding of the Chief Examiner nor did it claim that it was prejudiced by that holding.

The fact that neither the proceeding before the Commission nor the Rio Grande was prejudiced by such holding either by the Chief Examiner or by the Commission, and that neither felt restrained because of such holding, is demonstrated by the fact that the Chief Examiner proceeded to recommend that the Commission order through routes and joint rates in connection with the Rio Grande on *all* commodities, whereas the Commission felt that the evidence failed to prove that public interest required through routes and joint rates for commodities other than those named in the order, and so limited its requirement. In other words, it was not the holding that through routes were not in existence via the Rio Grande but the Commission's limitation of joint rates to commodities for which it thought the evidence showed public

interest required joint rates that caused the Rio Grande to claim it was prejudiced, and the Colorado court to hold, inconsistently, that the entire proceeding was prejudiced, though saving so much of the result of the prejudiced proceeding as was favorable to the Rio Grande.

That the Commission's finding that through routes were not already in existence via the Rio Grande was not the deterrent to an order more favorable to the Rio Grande is further demonstrated by Commissioner Patterson's view that the order should have included lumber and articles taking lumber rates, and by Commissioner Arpaia's separate expression holding that, although in his opinion through routes already existed via the Rio Grande for the involved traffic and that a finding under clause "(b)" of Section 15(4) was not required, he was nevertheless of opinion that under the evidence joint rates via the Rio Grande "are warranted in the public interest only on the commodities for which relief is included in the majority report" and that the Commission should interfere with railroad management by compelling joint rates "only when the reasons for doing so are clear and compelling" and then "only to the extent the public interest actually requires" (Colo. R. 110, 111).

It is clear, we submit, that there is no basis or justification for the Rio Grande's efforts to force these proceedings back upon the Commission in the hope of getting a fresh start and a more favorable order on the basis of the erroneous Colorado decision concerning the existence of through routes via the Rio Grande.

The Rio Grande's "typical shipments" Contention

The Rio Grande argues at pages 65-68 of its brief that "typical shipments are sufficient to support the ex-

istence of through routes generally." That argument is made, of course, in an effort to meet the statement in *Thompson v. United States*, 343 U. S. 549, at page 557, that "[t]hrough carriage implies the existence of a through route whatever the form of the rates charged for the through service." The discussion in the two paragraphs of the opinion (pages 557-559) immediately following the sentence just quoted, plainly shows that in using the term "through carriage" the court meant just what the words mean, *viz.*, through shipments regularly moved between the termini of the route or routes claimed to be "in existence."

The careful and accurate analysis of the evidence made in the Commission's report (Colo. R. 63-65), in the Government's brief (pages 12-18 and 68-72), in the railroads' brief in No. 333 (pages 53-82) and the States' brief in No. 332 (pages 38-66) demonstrate irrefutably the fallacy of the Rio Grande's contention that the few sporadic, accidental and "emergency" shipments it cites as moving over some 15 or 20 routes out of the millions of through routes of which it claims to be a part between the 39,000 stations in the east and 2,900 stations in the northwest area, furnish support for its "through carriage" theory, or its "typical" shipment contention. Obviously, one shipment from one eastern origin over one route via the Rio Grande to one northwest destination is neither proof that such a shipment moved over all or any others of the millions of existing routes nor "typical" of anything concerning the myriad of other routes. The few shipments in 1948 moved via the Rio Grande contrary to the "holding out" and "course of business" of the carriers that moved the 171,989 carloads over Union Pacific routes during that year. The "typical evidence" rule and cases cited at

pages 66-67 of the Rio Grande's brief are beside the point and without application to the situation involved here.

Clearly, the "through carriage" discussion in the *Thompson* case affords no basis for a contention that proof of a movement, for example, from Chicago, Ill., to Pocatello, Idaho, may be accepted as proving the existence of a through route via the Rio Grande from New York, N. Y., to Portland, Ore. (see shipments cited in Rio Grande original—not printed—Exhibit No. 1), for, in that case, the Court expressly held at page 559, that:

> "Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha unless we are to hold that compliance with Section 1(4) causes the Missouri Pacific to lose its right to serve Omaha via its own lines, a right guaranteed by Section 15(4). We reject the Commission's argument that the existence of through routes from Lenora to points on the Burlington line short of Omaha proves the existence of a through route to Omaha via the Burlington as requiring an unwarranted distortion of the statutory pattern."

The Rio Grande's brief asserts that the evidence shows "substantial and typical shipments" moved, but as observed in the Government' brief, pages 69-77, the evidence shows only 55 commercial shipments via the Rio Grande in 1948, while, as shown in the Commission's report (Colo. R. 76) 171,909 carloads moved over Union Pacific routes in 1948. Thus, the 55 cited shipments are not "substantial"; and, since their movement was necessarily limited to no more than 55 routes, they could not by any "stretch" of the typical evidence rule or of any imagination, be "typical" of the total movement during 1948, or of "through carriage" *not* performed via

the Rio Grande over the millions of existing routes over which no movement whatever is shown via the Rio Grande.

The Rio Grande's "burden of proof" Contention

Quarreling with the Commission's finding that the record contains no evidence upon which a finding of discrimination against the Rio Grande could be made because the evidence of record failed to show that transportation conditions over the Rio Grande "are no less favorable" than those over Union Pacific routes, the Rio Grande's brief, pages 73-81, argues at length that upon its mere assertion of discrimination against it, the "burden of proof" or "burden of going forward" fell upon the Union Pacific and other railroads comprising the existing routes to show that transportation conditions over their routes "are sufficiently dissimilar to transportation conditions via the Rio Grande routes through Ogden to excuse the treatment as not unjustly discriminatory."

There are many answers, the first of which annihilates this naive contention: The Commission can not make findings of fact without substantial evidence, for, "A finding without evidence is arbitrary and baseless." *Int. Com. Comm. v. Louis. & Nash. R. R.*, 227 U. S. 88, 91. It can not make findings of fact upon the mere failure of one or the other party to discharge its "burden of proof" or the "burden of going forward."

Absent substantial evidence of record, the Commission can only find, as it did here, that there is no evidence upon which to base a finding in support of an allegation in the complaint. In other words, it is not a question whether one party or the other failed to submit evidence, but whether, in the end, the evidence of rec-

ord is sufficient to support allegations of the complaint and findings essential to the validity of the order requested. The Commission cannot make findings or enter a "judgment by default" since its function in a case like this is that of a fact-finding tribunal. Therefore, the cases cited on the "burden of proof" contention in the Rio Grande's brief, pages 73-75, have no bearing upon the Commission's inescapable conclusion that there was no evidence to justify a finding of discrimination against the Rio Grande.

Inconsistently, the Rio Grande next proceeds to argue that there is evidence in the record showing that transportation conditions over its line "are not less favorable" than conditions over Union Pacific routes. It then cites at pages 77-79, the testimony of its President, Wilson McCarthy, which, though showing that the Rio Grande has spent considerable money to improve transportation conditions over its line in the last several years, fails completely to make any comparison whatever of the present transportation conditions over that line with conditions over the Union Pacific routes.

Moreover, the Commission correctly made findings from evidence of record which clearly justified its final conclusion that "operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein." (Colo. R. 102). It had previously recited facts of record which showed the superiority and more favorable conditions over Union Pacific routes and the "less favorable conditions" over the longer and slower Rio Grande route (Colo. R. 94). In these circumstances the Commission plainly was compelled to conclude that there was no evidence showing that conditions on the Rio

Grande were "no less favorable" than conditions over Union Pacific routes.

Finding itself unable to produce any evidence which would justify short hauling the shorter, faster, more efficient, direct and adequate Union Pacific routes by diverting the traffic to the longer, slower, more onerous mountainous route of the Rio Grande merely to enhance its financial position, the Rio Grande has pursued a strategy or policy of condemning, maligning and vilifying the Union Pacific for its refusal to relinquish its "right guaranteed by Section 15(4)", *Thompson* case, *supra*, to its long haul on traffic originated and terminated on its 5,600 miles of railroad, of which 2,900 miles are expensive branch lines in the northwest area. (See map, App. A, to railroad brief in No. 118.) Although the Rio Grande argues that neither it nor any other railroad has any legal right to hold traffic to its line, its brief characterizes the Union Pacific's refusal to relinquish its long haul on traffic it originates and terminates on its lines in the northwest area as "its own principality," a "whim" (p. 47), a "monopoly" (p. 48), an "over-lordship" (p. 49), "the public is coerced" (p. 49), "[t]he restrictive and arbitrary rate policy of the Union Pacific" (p. 72), "such discriminatory and unreasonably prejudicial practices as the Union Pacific" imposes on the "vast growing and developing" (pp. 81-82) northwest area (which, incidentally, is served by 5 transcontinental railroads and several short lines, the heaviest traffic producing portion of that area being about 1,000 miles from Ogden, the Rio Grande's nearest terminal), "caprice practiced by the Union Pacific in the exercise of its monopoly" (p. 102), "the arbitrary and monopolistic attitude" of the Union Pacific, "assumes the right to discriminate" (p. 103). But such opprobrious epithets may

not be substituted for evidence nor may the Commission rely upon them to make findings and an order more favorable to the Rio Grande.

Decisions cited and relied upon by the Rio Grande are inapposite.

The principal burden of the Rio Grande's argument seems to be that wherever a basis for a finding of undue prejudice and preference in violation of Section 3(1) or discrimination in violation of Section 3(4) exists, the Commission has power to order through routes and joint rates in disregard of the limitations in Section 15(4) of the Act upon its through route powers. (Rio Grande brief, p. 71.)

The error of this contention is thoroughly demonstrated in our opening briefs in the *Nebraska* case, No. 118, railroads' brief, pp. 234-236; states' brief, pp. 93-100; and the railroads' brief in the *Colorado case*, No. 333, pp. 97-98. But, even if the contention were correct, it has no relevance or application here because the Commission disavowed any reliance upon Section 3 as authority for the order issued. It expressly stated (Nebr. R. 33):

> "* * * that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation."

Since the rule laid down by this Court is that "[t]he grounds upon which the administrative order must be judged are those upon which the record discloses that its

action was based." *Securities Comm'n v. Chenery Corp.*, 318 U. S. 80, 87; 332 U. S. 194, 196, the validity of the Commission's order in this case may not be sustained on any ground other than that expressly invoked by the Commission.

The cases cited by the Rio Grande afford no support for its contention that the Commission may order either joint rates or through routes in the exercise of its powers under Section 3(1) or (4) of the Act. *Great Northern Ry. Co. v. United States*, 81 F. Supp. 921, affirmed *per curiam*, 336 U. S. 933, is cited six times in the Rio Grande's brief, but it has no bearing whatever on the instant cases. There, the Commission had previously prescribed joint rates with transit privileges on wheat and established through routes from Montana via Butte to California. See *General Mills, Inc., v. Great Northern Ry. Co.*, 269 I. C. C. 457, at page 460. The carriers granted transit privileges at points south of Butte, but the Great Northern denied them at Great Falls, Montana. The Commission found this denial to be unreasonable and unduly prejudicial to the Great Falls shipper and ordered establishment of transit privileges at that point. Since the through route and joint rates had already been established, the case is wholly inapposite.

U. S. v. Great Northern R. Co., 343 U. S. 562, is also cited several times in the Rio Grande's brief, for example at page 41. The decision in that case merely sustained an order of the Commission which prescribed joint rates and divisions thereof over through routes already in existence over the Montana Western Railroad and the Great Northern Railway. In sustaining the Commission's order, this Court expressly held at page 570 that "[t]he Com-

mission's order in this case did not establish any through route * * *." That case did not involve any diversion of traffic from one carrier to another, "the economic ramifications" of which the Court said at page 574 are quite different from a mere redistribution of revenues "between connecting carriers by determining divisions of revenues received on existing through routes." The Court further held at page 575 that Congress had amended Section 15(4) "to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs." As there was no diversion of traffic from one route or carrier to another in that case, and since such diversion of traffic from Union Pacific routes to its line for the admitted purpose of improving its financial condition is the sole objective of the Rio Grande in this case, the decision in the *Great Northern* case is clearly inapposite.

New York v. United States, 331 U. S. 284, is cited at page 83 and elsewhere in the Rio Grande's brief, but that case is clearly without any bearing whatever on the instant case, for it did not involve any question concerning the establishment of through routes or joint rates, or of diverting traffic from one carrier or route to another. It involved the Commission's power under Section 3(f) and 15(1) of the Act to find and remove undue preference and prejudice as between shippers, localities and regions located in different parts of the country.

The Rio Grande cites *St. Louis S. W. Ry. Co. v. United States*, 245 U. S. 136, at several places in its brief, but the following language of the decision at page 143 shows that it is without any bearing upon the instant case:

> "The order entered does not require any complaining carriers to substitute the route via Memphis for that via Cairo; nor does it require any to establish an additional route via Memphis. Carriers are left free to furnish the through transportation either via Cairo or via Memphis. The order merely compels a through route and a joint rate of 16 cents to Paducah. *If they elect to continue* the existing through route via Cairo, the order operates merely to introduce reduced joint rates. *If they elect to discontinue* the through routes via Cairo, the order operates to establish through routes and joint rates via Memphis, which the findings of the Commission fully justify." (Italics added.)

The last sentence of the opinion at page 145 further demonstrates the inappositeness of that decision here. It reads:

> "It is not primarily an order to remove discrimination in violation of § 3."

The decision in *Pennsylvania Co. v. United States*, 236 U. S. 351, at page 362, states that:

> "The sole question is whether the Commission exceeded its authority in requiring the Pennsylvania Company to cease and desist from what the Commission found to be a discriminatory practice."

The case did not involve establishment of joint rates, through routes, or the diversion of traffic from one route to another. It clearly has no application here.

Chicago, I. & L. Ry. v. U. S., 270 U. S. 287, cited several times in the Rio Grande's brief, involved the validity of a Commission order which, as stated at page 290:

> "* * * directed the steam railroads to remove the unjust discrimination which the Commission found

was being practiced against an electric railroad, which also entered that city, by refusal to switch its interstate carload traffic and to make arrangements with it for reciprocal switching."

The order did not involve establishment of through routes, joint rates or diversion of traffic and is, therefore, irrelevant here.

The Rio Grande's brief repeatedly cites *Virginian Ry. v. United States*, 272 U. S. 658. Our opening briefs in the *Colorado* case thoroughly demonstrate the irrelevance of that decision (states' brief, No. 332, pp. 58, 59; railroads' brief, No. 333, pp. 80-82). That decision did not involve establishment of joint rates, through routes or diversion of traffic from one route to another. The decision states at page 667 that the Commission "found that the combination rate was both unreasonable and discriminatory," but "[i]t did not order joint rates" but prescribed reasonable and non-discriminatory rates and ordered the carriers "to cease and desist" from collecting rates in excess of those prescribed.

Thompson v. United States, 20 F. Supp. 827 (no appeal), is cited at page 95 of the Rio Grande's brief in support of its contention that the Commission has power under Section 3 to order through routes and joint rates without regard to the short-haul prohibition of Section 15(4). But the language of that decision clearly shows it was not such a case. There, the Commission had found that certain carriers discriminated against another carrier and prescribed "alternative methods of removing the discrimination found to exist." The court rejected the contention of plaintiff carrier that the alternative order had the effect of short hauling it, saying that such

assumption "is prophetic and conjectural, and furnishes no adequate basis for injunctive relief," and that—

> "If the plaintiffs shall cancel the joint rates now in effect over circuitous long-haul routes and over noncircuitous routes which do not reserve to them their long hauls, it would seem to be within the power of the Commission, under section 1 (49 U. S. C. A. §1), to require the plaintiffs to show that the combination rates left in effect are reasonable and not otherwise unlawful, as well as to pass upon the reasonableness and lawfulness of such rates, *provided only that the Commission shall not use its power to deal with rates for the purpose of depriving the plaintiffs of their rights, under section 15(4), to their long hauls over noncircuitous routes.*" (Italics added.)

The Rio Grande's brief also cites *Baltimore & O. R. Co. v. United States*, 100 F. Supp. 1002, in support of its contention that the short-haul prohibition of Section 15(4) should be so construed as to nullify or emasculate it, but the decision stands for no such proposition. While the court expressed the view at page 1010 that the Commission would have been justified in basing its short-haul order upon Section 3(1), the court's opinion clearly shows that the order was based upon findings conforming to the clause "(b)" exceptions to the short-haul prohibition of Section 15(4). The Commission's report, 280 I. C. C. 121, expressly found at page 142 that the "proposed through routes are needed in order to provide adequate and more efficient and more economic transportation." The court held at page 1011 that these findings are "sufficient to justify short-hauling" and that the findings were adequately supported by evidence.

This Court's decision in *Thompson v. United States*, 343 U. S. 549, is cited 7 times in the Rio Grande's brief

and at pages 59-63 of its brief the Rio Grande tries desperately to distinguish the *Thompson* case from the cases at bar. We submit, however, that examination of this Court's decision in the *Thompson* case will show that it answers and rejects every principal contention urged by the Rio Grande in its efforts to justify diverting traffic from Union Pacific routes for a "bridge" haul over its line for the admitted purpose of improving its financial condition. (See railroad's brief in *Colorado* case, No. 332, pp. 53-86.)

CONCLUSION

The judgment of the Nebraska district court in Nos. 117 and 119, enjoining and annulling the Commission's order in part, should be affirmed and its judgment in No. 118, sustaining the validity of the order in part, should be reversed and the case remanded with direction to issue the injunction and relief prayed by the plaintiffs in that court.

The judgment of the Colorado district court, Nos. 332, 333 and 334, should be reversed and the case re-

manded to that court with direction to dismiss the complaint.

Respectfully submitted,

DON EASTVOLD, Attorney General of Washington,
ROBERT L. SIMPSON, Asst. Attorney General of Washington,
Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington.

PROOF OF SERVICE

I, ELMER B. COLLINS, attorney for Union Pacific Railroad Company, one of the Appellants-Appellees herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 18th day of April, 1956, I served, on behalf of all Appellants-Appellees herein, copies of the foregoing Reply Brief on the several adverse parties in Nos. 117, 118, 119, 332, 333 and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

and with first-class postage prepaid to:

Harry W. Shackelford, Esq.
Acting United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Neil Brooks, Esq.
Assistant General Counsel
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who work for The Denver and Rio Grande Western R. R. Co.; National Live Stock Producers Association; Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Keppers Company,

Inc.; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

Lee J. Quasey, Esq.
139 N. Clark Street
Chicago 2, Illinois

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

and with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

6. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

ELMER B. COLLINS,
Of Counsel for Appellants-Appellees Herein.

APPENDIX A

Order

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 12th day of January, A. D. 1953.

No. 30297

Denver & Rio Grande Western Railroad Company

v.

Union Pacific Railroad Company, et al.

This proceeding being at issue upon complaint and answers on file and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination;

It is ordered, That the defendants named in the complaint, according as they participated in the transportation, be and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of

the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

GEORGE W. LAIRD,
Acting Secretary.

(Seal)

v.

THE UNION PACIFIC RAILROAD COMPANY, ET AL.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF NEBRASKA

JURISDICTIONAL STATEMENT

OPINION BELOW

The opinion of the United States District Court for the District of Nebraska, Omaha Division, is not yet reported. The report of the Interstate Commerce Commission is reported in 287 I. C. C. 611. The court's opinion, findings of fact, and conclusions of law are set forth in Appendix A, *infra*, pp. 15–51.

JURISDICTION

This suit was brought under 28 U. S. C. 1336 to set aside an order of the Interstate Commerce

Commission. The judgment of the district court was entered on December 20, 1954, and separate notices of appeal were filed in that court by appellants on February 17 and 18, 1955. The jurisdiction of this Court is conferred by 28 U. S. C. 1253 and 2101 (b). The following decisions sustain the jurisdiction of this Court to review the judgment on direct appeal in this case: *United States* v. *Pennsylvania R. Co.*, 323 U. S. 612; *United States* v. *Capital Transit Co.*, 325 U. S. 357; *United States* v. *Great Northern R. Co.*, 343 U. S. 562.

STATUTE INVOLVED

Sections 3 (1), 15 (3), and 15 (4) of the Interstate Commerce Act, 24 Stat. 379, as amended, 49 U. S. C. 3 (1), 15 (3), and 15 (4), are set forth in Appendix B, *infra*, pp. 52–54.

QUESTIONS PRESENTED

1. Whether, in narrowing the Commission's order, the district court failed to give proper effect to the provisions of Section 15 (4) and to the Commission's finding thereunder that the establishment of the prescribed through routes was "necessary and desirable" from the standpoint of providing "adequate and more economic transportation" for shippers who could not otherwise participate effectively in the efficient marketing of perishable agricultural commodities.

2. Whether Section 3 (1), prohibiting any carrier from giving any undue preference to any

person, locality, etc., or subjecting any person, locality, etc., to any undue prejudice, may apply to the situation where the persons or localities receiving preference are served by one carrier and those prejudiced are served by another.

STATEMENT

The Denver and Rio Grande Western Railroad Company ("Rio Grande") operates primarily in the States of Utah and Colorado. The Union Pacific Railroad Company ("Union Pacific") operates in the Pacific Northwest and also serves points as far east as Kansas City, Missouri, and Omaha, Nebraska. Its lines interconnect with those of the Rio Grande at Ogden, Utah. Although the Union Pacific has joint rates with other connecting carriers on transcontinental traffic moving to and from the Pacific Northwest through Ogden, it has refused for many years to establish joint rates with the Rio Grande at Ogden. As a result, such traffic can move over the Rio Grande only at combination rates which are substantially higher than the joint rates prevailing on the Union Pacific routes (*i. e.*, the routes established by the Union Pacific and other connecting carriers).

On August 1, 1949, the Rio Grande filed a complaint with the Interstate Commerce Commission asking the agency to prescribe, with respect to the foregoing traffic, joint rates over its allegedly existing through routes with the

Union Pacific. After extensive administrative proceedings, the Commission issued its report on January 12, 1953. 287 I. C. C. 611. The Commission held (pp. 615–619) that through routes over the Union Pacific-Rio Grande lines were not in existence, but found (p. 659) that it was "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" that they be established (together with joint rates) for the carriage of certain commodities, principally livestock and perishable agricultural products.[1] The Commission further found (pp. 659–660) that the existing combination rates on these commodities, to the extent that they exceeded the joint rates to and from the same Pacific Northwest points via the Union Pacific routes, unduly prejudiced shippers and receivers using the Rio Grande and unduly preferred shippers and receivers using the Union Pacific routes, all in violation of Section 3 (1) of the Act.[2] The Commission accordingly ordered the establishment of through routes and joint rates for the commodities specified in the report.

[1] The agricultural commodities named in the order are fresh fruits and vegetables, dried beans, frozen poultry, frozen foods and butter and eggs, in carloads.

[2] The Commission also held (pp. 658–660) that the Union Pacific's maintenance of joint through rates on traffic to and from points on the Bamberger Railroad, a 36-mile line in Utah, while refusing to participate in like arrangements on traffic to the same points on the Rio Grande, subjected the latter to discrimination in violation of Section 3 (4) of the Act.

The Commission pointed out (pp. 655–656) that, under this country's "complex but efficient" marketing system, perishable food articles "must be moved to market with expedition and care, and over as many routes as possible"; that such movement requires that "many routes" be open to avoid "unnecessary interruptions of the free flow of such commodities" and to permit a flexible distribution process; and that a "number of services" such as storage and processing of food and grazing of cattle, not usually required in the movement of ordinary traffic, must be provided en route for perishable and semi-perishable commodities. The Commission held further (p. 656) that, although through service via the Union Pacific routes was generally as satisfactory to the shipping public as service via the Rio Grande, this was not true for perishable foods and cattle, since shippers of these commodities "are debarred from effective participation in the widespread system developed for the marketing of such commodities." The Commission stated (*ibid.*) that this conclusion was "supported and emphasized" by the fact that this traffic generally was accorded transit and reconsignment privileges which are "necessary for its efficient marketing," [3] and that

[3] Such privileges, the Commission stated (p. 634), include partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding.

the Union Pacific's routes are, as to traffic which receives such privileges at points on the Rio Grande, "inadequate and less economical" than those of the Rio Grande. The Commission also noted (p. 642) that it is the "general practice" in marketing certain agricultural commodities to divert carloads in transit as markets are found and sales are made; that shippers generally use routes over which joint rates apply so that shipments can be diverted or reconsigned without having to pay a combination of rates; and that, if a sale is lost when a shipment reaches a point through which combination rates apply, it is "frequently necessary to dispose of the shipment at that point at a forced or distress price."

On the issue of undue preference and prejudice, the Commission pointed out (p. 658) that shippers or receivers of the designated commodities who sought transit or reconsignment privileges on the Rio Grande were under a "substantial disadvantage or handicap" as against their competitors who received similar privileges while shipping over the Union Pacific at the lower rates.

In a suit brought by the Union Pacific, the district court modified the order.[1] The court held

[1] The Rio Grande brought a separate suit to review the same order. On January 15, 1955, a three-judge district court for the District of Colorado set the order aside. That court held that the "uncontradicted evidence" established that through routes already were in existence, and it remanded the case to the Commission for further proceedings. *Denver and Rio Grande Western Railroad* v. *United States*

that, although lack of in-transit privileges constituted an "inadequacy of transportation service" justifying the prescription of through routes and joint rates pursuant to Section 15 (3), (4), the evidence supported a finding of inadequacy only insofar as it related to those east-bound commodities which were actually stopped, on shippers' or carriers' instructions, for in-transit services on the Rio Grande. The court stated that such a modification of the order would eliminate short-hauling the Union Pacific except as to "shipments requiring service which is now inadequate and which service the Union Pacific cannot now give." The court further held that the Commission's finding of undue preference and prejudice was legally insufficient because Section 3 (1) outlaws only preferences and prejudices to shippers or localities served by the same carrier, and is not applicable if the persons or localities who receive the preferences are served by a different carrier than those subjected to the prejudices.

---

and Interstate Commerce Commission, Civil Action No. 4492, motion for reargument and rehearing denied April 22, 1955. The United States and the Interstate Commerce Commission intend to appeal from the judgment in that case. We are advised that the Union Pacific is also appealing from the decision of the Colorado court.

[5] Circuit Judge Johnsen, dissenting, would have set the Commission's order aside in its entirety. He was of the view that prescription of through routes to provide shippers with an additional route on which transit is available at lower rates does not satisfy the requirement in Section 15 (4) that

THE QUESTIONS ARE SUBSTANTIAL

1. Section 15 (3) of the Interstate Commerce Act authorizes the Commission to establish through routes and joint rates when it deems such action "necessary or desirable in the public interest." Section 15 (4) further provides, however, that the Commission cannot establish through routes which require a carrier to short-haul itself, unless (a) the existing route is unnecessarily long, or (b) the Commission finds that the proposed route is needed to provide adequate, and more efficient or more economic, transportation.[6]

In the instant case, the Commission found that through routes were needed to provide "adequate and more economic transportation." The district court recognized that lack of transit facilities may constitute an "inadequacy of transportation service" under Section 15 (4), but it held that the evidence supported a finding of inadequacy only in the case of shipments actually stopped on the Rio Grande for in-transit services. This holding, we

---

the Commission can short-haul a carrier only if necessary to provide "more economic transportation." He also disagreed with the majority view that the preference and prejudice prohibition in Section 3 (1) does not apply if two carriers are involved, but concluded that the facts of this case did not establish unreasonable preference and prejudice.

[6] A carrier is short-hauled when it is required "without its consent, to embrace in such [through] route substantially less than the entire length of its railroad * * *, which lies between the termini of such proposed through route * * *." Section 15 (4).

submit, misconceives the rationale of the Commission's decision; and rests upon an unduly narrow interpretation of the phrase "adequate, and * * * more economic, transportation."

The Commission's ultimate finding that through routes were needed to provide adequate transportation was not based solely (as the district court apparently assumed) upon the shippers' need for in-transit privileges on the Rio Grande. The finding was rested on the broader ground that lack of through routes "debarred" shippers from "effective participation" in this country's distribution system for the marketing of perishable agricultural commodities. The Commission noted that effective functioning of that system requires that "many routes" be open, and it pointed out that a "number of services" which are not required for commodities generally are required en route for the "efficient marketing" of perishable commodities.[1] In short, the need for transit privileges on the Rio Grande was only one of the subsidiary grounds which led the Commission to conclude that through routes were needed to provide adequate transportation.

This Court has stated that, in determining whether through routes are needed to provide "adequate, and more efficient or more economic, transportation," Congress intended that the interests of both carriers and shippers "should

[1] These services require both transit and reconsignment privileges en route.

be considered and a fair balance found." *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, 593. We submit that the Commission properly considered these interests and struck a fair balance when it found that through routes were needed to enable shippers to participate effectively in the "efficient marketing" of perishable agricultural commodities. The question whether Section 15 (4) authorizes the Commission, on the basis of such findings, to establish through routes is a substantial one that is of obvious public importance in the administration of the Act.

2. An independent basis of the Commission's order establishing through routes was its finding that the combination rates between the Union Pacific and the Rio Grande were, to the extent that they exceeded the joint rates via the Union Pacific routes to the same points, unjust and unreasonable and unduly prejudicial of shippers and receivers using the Rio Grande, and unduly preferential of shippers and receivers using the Union Pacific routes, in violation of Section 3 (1) of the Act. The district court held that this ultimate finding was legally insufficient, on the ground that Section 3 (1) prohibits only preference and prejudice to persons or localities located on the lines of the same carrier, and is not applicable if the persons or localities receiving the preference are served by a different carrier than those subjected to prejudice.

We believe that the Commission correctly interpreted Section 3 (1) as applicable to preference and prejudice of the kind here found to exist. Nothing in that Section indicates that it was intended to be limited to cases where the persons receiving the preference and those suffering the prejudice are served by a single carrier or by a group of carriers acting in concert. The Section broadly prohibits "any" carrier from giving any undue preference to any person, or subjecting him to any undue prejudice, "in any respect whatsoever." The Commission found that the Union Pacific, by refusing to establish through routes and joint rates with the Rio Grande, has subjected shippers who use the latter's route to undue prejudice, and, by the same token, has given undue preference to their competitors who use the Union Pacific routes. Such action would appear to violate the statutory prohibition against a carrier subjecting any person to preference or prejudice "in any respect whatsoever."

The district court's holding was based on the dictum in *Central R. Co. of New Jersey* v. *United States*, 257 U. S. 247, 259–260, that the purpose of Section 3 (1) is to prevent unjust discrimination between localities "by the same carrier or carriers." But, as the Court pointed out in *New York* v. *United States*, 331 U. S. 284, 342, that principle means only that "the Commission may not require carriers to do what they are power-

less to perform." In the *New York* case, the Commission found that the relation between the *inter*territorial class rates to Official Territory and the *intra*territorial class rates within Official Territory resulted in an unreasonable preference to Official Territory as a whole and to shippers and receivers of freight located there, in violation of Section 3 (1). The Commission corrected the territorial discriminations by prescribing new class rates, and this Court upheld the order.

If Section 3 (1) can reach differentials between territorial rate levels involving many carriers which serve various points in such territories, *a fortiori* it would appear to cover the preference and prejudice which results from the refusal of a single carrier to establish through routes and joint rates with another. Here the Commission has not directed the Union Pacific to do anything that it is "powerless to perform," but has merely directed it to establish certain operating arrangements with a connecting carrier on traffic to points which they both serve. Cf. *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627, 648.

3. This Court should hear this appeal not only because it presents substantial questions, but also to resolve the conflicting holdings by two different district courts as to the proper scope of the Commission's order. As we have noted (*supra*, note 4), the Union Pacific and the Rio Grande sought separate review of the order in different

courts. Although in the instant case the district court upheld the Commission's findings that through routes do not exist, the Colorado district court set aside the same order on the ground that through routes do exist, and remanded to the Commission for further proceedings. If through routes already exist, the Commission may be required to prescribe joint rates on a much broader scale than are provided under the order as originally issued or as modified in this case. Thus, although the court below has held that the order goes too far and must be enjoined *pro tanto*, another court of equal jurisdiction has held that the same order does not go far enough and that further administrative proceedings are accordingly required.[8] Only this Court can dissipate the confusion which has resulted from the conflicting decisions in the Nebraska and Colorado district courts.

CONCLUSION

The questions presented by this appeal are substantial and they are of public importance. There is also a serious conflict of decision. It is respect-

[8] As noted (*supra*, note 4), the United States, the Interstate Commerce Commission and the Union Pacific intend to appeal in the *Colorado* case. That case will involve, *inter alia*, the question of the appropriate criteria to be applied in determining when a through route has been established by action of the carriers concerned.

fully submitted that probable jurisdiction should be noted.

APPENDIX A

In the District Court of the United States for the District of Nebraska, Omaha Division

Civil Action No. 76-53

UNION PACIFIC RAILROAD COMPANY, ET AL., PLAINTIFFS

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, DEFENDANTS

Before JOHNSEN and COLLET, *Circuit Judges*, and DEIHEHANT, *District Judge*.

COLLET, *Circuit Judge*.

The Denver and Rio Grande Western Railroad Company, hereafter referred to as the Rio Grande, filed a complaint with the Interstate Commerce Commission requesting the Commission to order the Union Pacific Railroad Company (and other lines comprising the Union Pacific System, together with connecting carriers comprising, in all, 221 railroads, which will be referred to as the Union Pacific) to file joint rates over through routes with the Rio Grande for the transportation of freight from and to certain areas. The Commission granted the request as to certain types of freight with substantial territorial limitations. The Union Pacific brings this action to enjoin and set aside the order. A reference to a map of the United States will be helpful in understanding the following summarization of the facts.

The northern terminus of the Rio Grande is Ogden, Utah. From Ogden it runs south through Salt Lake City and Provo, Utah, then southeasterly and east, entering Colorado at about the south central part of that state, thence east and somewhat north through the central part of Colorado to Dotsero, west of Denver, where it divides, one branch going on east to Denver, the other swinging south and east to Pueblo, Colorado. From Denver the Rio Grande line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serve territory in southern Utah, northwestern New Mexico, and southern Colorado. These latter lines are not of special importance in this action. At Denver, Colorado Springs, Pueblo, and Trinidad the Rio Grande maintains joint rates and through routes with lines other than the Union Pacific to destinations east and south of those points.

The Union Pacific (including connecting lines which were defendants in the I. C. C. proceedings) serves the greater part of the east, south and midwestern sections of the United States. Traffic involved in this action from those sections flowing westward over the Union Pacific and connecting lines converges at Denver and Cheyenne, Wyoming, then moves westwardly across the southern part of Wyoming to Ogden and Salt Lake City. One of its lines runs from Salt Lake City south to Provo, Utah, thence southwest to Los Angeles, California.

The Union Pacific also serves the northwestern part of the United States, including that part of Utah north of Ogden, Idaho, Montana, Oregon, and Washington. It is traffic from and to this

latter territory, referred to hereinafter as the northwest territory or area, which is the principal subject of the present controversy.

The Union Pacific maintains joint rates and through routes over its lines and with many connecting carriers from and to the northwest territory through Ogden and Salt Lake City, Cheyenne, Denver, and points east and south to the Atlantic Seaboard and the Gulf of Mexico. For a comparatively short distance, from Ogden through Salt Lake City to Provo, where the Los Angeles line swings southwest, the Union Pacific and the Rio Grande parallel and serve some common points. To and from these points, joint rates and through routes are maintained by the Union Pacific over its lines with the northwest territory and the area east of Cheyenne and Denver served by the Union Pacific. The Union Pacific does not maintain joint through rates with the Rio Grande, with certain exceptions not material in this proceeding. Freight moving from the northwest territory to points in southern Utah and Colorado on the Rio Grande, finally destined to points east of the eastern termini of the Rio Grande, moves on the combination rate, consisting of the total of the Union Pacific rate to Ogden via Union Pacific and the Rio Grande rate from Ogden via Rio Grande to points on the Rio Grande. The same is true of the rates on shipments from points east of Denver to those points on the Rio Grande finally destined to the northwest territory. This combination of rates, or combination rate, as it is called, is considerably higher than a joint through rate. Freight moving from and to the northwest territory from

and to all points east of Denver[1] served by the Union Pacific and connecting carriers has the benefit of joint through rates via Union Pacific, with accompanying in-transit privileges en route, while freight originating on the Union Pacific in the northwest territory and moving to the area east of Denver, which is routed over the Rio Grande, pays the combination rate without in-transit privileges at points on the Rio Grande. The result is that practically all of the long-haul traffic originating in the northwest area and destined to the area east of Denver goes over the Union Pacific all the way on the lower joint and through rates. Since the formal record before the Commission consists of 1,957 pages of testimony, 57 exhibits and 74 verified statements, the foregoing statement is obviously only a salient outline of the basis for the Rio Grande's complaint. For a complete understanding of the intricacies of the case by one unfamiliar with the record, it will be necessary to refer to the extensive report and order of the Commission reported in 287 I. C. C. 611.

---

[1] "All points east of Denver" will be used as the designation of all points included in the Commission's order to or from which through routes and joint rates were ordered established by the Union Pacific with the Rio Grande. The Commission's order in this respect was (287 I. C. C. 611, 659):

"We conclude:

"1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite

The Commission ordered the establishment of through routes and joint rates via Ogden or Salt Lake City by the Union Pacific with the Rio Grande for the transportation of granite and marble monuments in carloads from points of origin in Vermont and Georgia to destinations in the northwest area, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, in carloads, from points of origin in the northwest territory to destinations "east of Denver." The order is based upon three primary basic findings. First, that the through routes and joint rates are necessary and desirable in the public interest, in order to provide *adequate and more economic transportation;* second, that the existing joint rates maintained by the Union Pacific are and will be *unjust and unreasonable and unduly prejudicial* to shippers and receivers of freight using or desiring to use the Rio Grande and *unduly preferential to shippers and receivers of freight using the Union Pacific;* third, that the mainte-

---

and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, then immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

nance by the Union Pacific of joint rates with the Bamberger Railroad between the northwest area and points on the Bamberger line between Ogden and Salt Lake City, while refusing to establish joint rates with the Rio Grande to and from the same points on the Rio Grande between Ogden and Salt Lake City, subjects the Rio Grande to discrimination in violation of Sect. 3 (4) of the Interstate Commerce Commission Act. Finding No. 1 has heretofore been quoted in footnote 1. Findings 2 and 3 are set out below.[2] To understand the import of these findings it is necessary to explain the factual theory upon which they are based.

First as to the finding that the rates ordered are necessary and desirable to provide adequate and more economic transportation. Located along the route of the Rio Grande, between Ogden on the west and Denver, Pueblo, and Trinidad

[2] 2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

287 I. C. C. 611, 659–660.

on the eastern termini, are a number of livestock feeders. Some of these are ranchers who graze and feed cattle and sheep. Others are operators of beet sugar plants which produce livestock feed as a by-product and feed the by-product to livestock. These livestock feeders buy cattle and sheep in the northwest area, which are ultimately destined for the market, and ship them to points on the Rio Grande for feeding. Many of the principal livestock markets of the United States are located east of Denver. Without joint through rates with in-transit privileges which would permit these livestock feeders to ship from the northwest area to the feeding points on the Rio Grande and then reship on joint through rates to points east of Denver, Pueblo, and Trinidad, they are at a substantial rate disadvantage with similar livestock feeders following the same practice who are located on the Union Pacific lines between Ogden and Provo, and between Ogden and Salt Lake City and Denver, located on the Union Pacific, who reship to points east of Denver. They are also at a substantial rate disadvantage in purchasing livestock in the northwest area in competition with buyers located on the Union Pacific lines west of Denver and Cheyenne who have the benefit of joint through rates and in-transit privileges over the Union Pacific.

Also located on the Rio Grande are a number of industries which clean, package, process, freeze, and store fresh fruits, vegetables, poultry, food products, butter, eggs, and beans, and ship them on east to points beyond Denver, Pueblo, and Trinidad. These industries are at

a comparable rate disadvantage, without in-transit privileges, as livestock feeders, and for the same reasons.

Monument dealers obtaining or shipping granite and marble from Vermont and Georgia are unable to ship full carloads to the northwest territory and have the rate advantage of partially unloading cars at intermediate points on the Rio Grande under in-transit privileges of through routes and joint rates which are available at points located on the Union Pacific.

This finding, which is finding No. 1 quoted in the footnote, is held by the Commission to justify ordering the establishment of through routes and joint rates under Secs. 15 (3) and 15 (4), Title 49 U. S. C. A. Secs. 15 (3) and 15 (4). Sec. 15 (3) empowers the Commission to establish through routes and joint rates when necessary or desirable in the public interest,[3] but Sec. 15 (4) prohibits the Commission from ordering the establishment of through routes by a carrier under Sec. 15 (3) without the carrier's consent if the result would be to short-haul that carrier unless, as provided by Sec. 15 (4), the Commission finds that the through route is needed in order to provide (1) *adequate*, and (2) *more efficient* or *more economic* transportation.[4]

[3] Sec. 15. (3) The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, * * * establish through routes, * * * and joint rates, * * * applicable to the transportation of * * * property by carriers subject to this part, * * *.

[4] Sec. 15. (4) In establishing any such through route the Commission shall not * * * require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any inter-

The Commission accurately states the legal effect of Sec. 15 (4) in its report (*Denver & R. G. W. R. Co.* v. *Union Pac. R. Co.*, 287 I. C. C. 611) at page 655, as follows:

> Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the "through route proposed to be established is needed in order to provide adequate, and more efficient, or more economic, transportation." Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, which af-

---

mediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, * * * (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however*, That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. * * *

> firmed the judgment of a lower court sustaining an order of division 2 in *D. A. Stickell & Sons, Inc.* v. *Alton R. Co., supra*, the supreme court said that the expression "more efficient or more economic" transportation, as used in section 15 (4), "may well embrace both shippers' and carriers' interests, * * * that both interests should be considered and a fair balance found." These latter considerations are not determinative, however, unless the existing routes can be found not to provide "adequate" transportation.
>
> In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests.

Was there evidence to support the finding of inadequacy? Only in the event there was inadequacy of transportation can the question of efficiency or economy be reached. It is clear from the report and the evidence that the finding of inadequacy is based upon the lack of in-transit privileges by shippers and receivers located on the Rio Grande as to the commodities embraced in the order. There is no evidence to support a finding that the physical transportation facilities furnished by the Union Pacific between the northwest area, on the one hand, and points east of Denver are inadequate. There is abundant support, however, for the finding that the service is inadequate to patrons of the Rio Grande, located on the Rio Grande between Ogden on the west and Denver, Pueblo, and Trinidad on the

east (not served by the Union Pacific between Ogden and Provo), who do not have in-transit privileges with respect to freight moving from the northwest area which is to be reshipped to points east of Denver, if under the law the lack of in-transit privileges may constitute "inadequacy." That is also true as to the service to shippers of marble and granite from Vermont and Georgia to initial points on the Rio Grande who need the in-transit privileges of partial unloading or processing en route, incident to reshipment to final destination points between Ogden in the northwest area. The foregoing inadequacies are based upon the premise that the lack of in-transit privileges constitutes inadequacy of service within the meaning of clause (b) of Sec. 15 (4). The Union Pacific vigorously contends that it does not. This question presents the crux of this case. If, as the Union Pacific contends in-transit rights and privileges are matters over which the Commission under the law has no control, the existence or granting of which is subject only to managerial discretion of the carrier, and relate only to economy or efficiency of transportation to the exclusion of considerations of adequacy of transportation, then the lack of in-transit privileges will not suffice as a proper basis for ordering "adequate" transportation. The argument is made in effect that since the transportation facilities are now available over the Union Pacific and the Rio Grande on the higher combination rates, the present nonexistence of in-transit privileges relates only to the cost or economy of transportation. Reference is made to excerpts from

opinions which it is said support the conclusion that the Commission may not under its general regulatory power force a carrier to provide or establish in-transit privileges. The question has many ramifications. We are confronted only with determining whether a finding of inadequacy of transportation may be legally based upon the absence or lack of services which are incidents of and to in-transit privileges. If that be true, the Commission may order the establishment of through routes and joint rates, with their ordinary incidents—in-transit privileges—when such action is necessary in order to provide adequate transportation. We are convinced that the Commission does have that power. *Pennsylvania R. Co.; et al.* v. *United States, et al.*, 323 U. S. 588, 54 F. Supp. 381.

But the inadequacy established by the evidence does not extend to shipments from the northwest area to initial destinations east of Denver. The same is true of shipments of monuments from Vermont and Georgia to points of initial destination in the northwest territory. Transportation service is now adequate between those points. There is ample evidence to support the finding that the establishment of the through routes and joint rates between the northwest area and points on the Rio Grande (not also served by the Union Pacific between Ogden and Provo), as to shipments which require in-transit privileges at points on the Rio Grande for reshipment to points east of Denver, will result in more economical transportation. Differences in mileage and other comparative factors are for the Commission to weigh, evaluate and determine. Its ultimate factual

conclusion may not be overturned when supported by the evidence. But, again, there is no evidence that the service is inadequate or that more economical transportation service will result with respect to shipments from the northwest area to points between Ogden and Provo served by both the Union Pacific and the Rio Grande and to be reshipped to final points of destination east of Denver. The transportation facilities are shown by the evidence now to be adequate, with in-transit privileges between those points over the Union Pacific. And that service is as economical via the Union Pacific as it would be over the Union Pacific and the Rio Grande if the through route and joint rates were established. The evidence therefore sustains the finding of inadequacy and the need for more economical transportation only as to (1) carload shipments of commodities embraced in the Commission's order from points in the northwest territory destined to points of final destination east of Denver which require in-transit privileges at points on the Rio Grande; (2) shipments of granite and marble monuments from Vermont and Georgia to final destinations in the northwest territory which require in-transit privileges at points on the Rio Grande not also served by the Union Pacific. If the order had been so limited to the evidence it would eliminate short-hauling the Union Pacific except as to shipments requiring service which is now inadequate and which service the Union Pacific cannot now give. It would eliminate the charge made by the Union Pacific that the order was for the purpose of assisting the Rio Grande to meet its financial

needs, and, more important, it would have rested squarely within the authority of clause (b) of Sec. 15 (4).

The second finding, that the combination rates maintained by the Union Pacific and the Rio Grande are unduly prejudicial to shippers using or desiring to use the Rio Grande and unduly preferential to shippers and receivers using the Union Pacific to the extent they exceed the joint and through rates available to shippers located on the Union Pacific, is made for the purpose of bringing the order within the authorization of Sec. 3 (1). Title 49 U. S. C. A. Sec. 3 (1). That section is as follows:

> SEC. 3. (1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description.

The situation which this finding seeks to correct, simply stated, is that the shippers and receivers of the designated commodities located on the Rio

Grande who do not have in-transit privileges and joint and through rates are at an economic disadvantage compared to shippers and receivers located on the route of the Union Pacific who do have joint and through rates and in-transit privileges.

If the prejudice and preference shown by the evidence falls within the prohibition of Sec. 3 (d) the Commission may correct it irrespective of whether the factual situation authorizes the order under Secs. 15 (3) and 15 (4) heretofore considered. But the prejudice and preference prohibited by Sec. 3 (1) relate to prejudice and preference shown by one carrier or a combination of carriers between the entities named in 3 (1) which are served by the one carrier or the combination acting as one. The prohibition of Sec. 3 (1) is intended to prevent a carrier from giving preferences or advantages, over which the carrier has control, to one of the entities named and not to another. It does not apply to a situation such as this where the comparison of preferences and advantages or prejudices and disadvantages is between the entities named when they are located on the lines of different carriers not acting in concert or collusion. Although the factual situation in *Central R. Co. of New Jersey v. United States*, 257 U. S. 247, was different, the purpose of Sec. 3 (1) was there stated as follows (loc. cit. 259–260):

> What Congress sought to prevent by that section, as originally enacted, was not differences between localities in transportation rates, facilities and privileges, but unjust discrimination between them by the

same carrier or carriers. Neither the Transportation Act 1920, February 28, 1920, c. 91, 41 Stat. 456, nor any earlier amendatory legislation has changed, in this respect, the purpose of scope of section 3.

If the Commission could order through routes and joint rates between two or more competing railroads under Sec. 3 (1) merely because a shipper entity described in Sec. 3 (1) located on one railroad had a transportation advantage over such an entity located on the other railroad, the prohibition of Sec. 15 (4) would be practically emasculated. The evidence of preference, advantage, prejudice or disadvantage, under these circumstances, furnishes no basis for the order under Sec. 3 (1).

The third finding, heretofore quoted, to the effect that the maintenance by the Union Pacific of joint rates with the Bamberger Railroad to and from points in the northwest area and points on the Bamberger line from Ogden to Salt Lake City, inclusive, while refusing to maintain joint rates with the Rio Grande on shipments from the northwest area to the points served by both the Rio Grande and the Bamberger Railroad from Ogden to Salt Lake City, inclusive, discriminates against the Rio Grande, is based on Sec. 3 (4), which is as follows:

> SEC. 3. (4) All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate

> in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting lines in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term "connecting line" means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III.

The Bamberger Railroad is an electric line operating only from Ogden to Salt Lake City, serving those cities and intermediate points. The Rio Grande serves all points served by the Bamberger. The criterion for determining unlawful discrimination under Sec. 3 (4) is stated by the Commission at page 658 of its order as follows:

> A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than over the routes said to be preferred.

The Commission found there was no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande. Upon this record that factual conclusion may not be disturbed. Section 3 (4) clearly prohibits such discrimination. The Commission's order in this respect is valid under Sec. 3 (4).

Considerable attention has been given by the Union Pacific in its brief to the action of the Commission in rejecting a portion of evidence offered by it in an attempt to show improper conduct in the preparation and presentation of the

Rio Grande's case before the Commission. We do not find justification for serious consideration of that question.

FINDINGS OF FACT

I

The finding of the Commission that present transportation facilities between the northwest area and points of initial destination east of Denver are inadequate is not supported by the evidence, because present transportation facilities over the Union Pacific between such points are adequate. And the evidence shows that the establishment of joint rates and through service via the Union Pacific and the Rio Grande between the northwest area and points of initial destination east of Denver, Pueblo, and Trinidad would not make such service more economical, because the rates for such service would only equal the present rates via the Union Pacific between those points.

II

The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver.

III

The record supports the Commission's finding that present transportation service for granite and marble monuments, in carloads, originating in Vermont and Georgia, consigned to initial destination points on the Rio Grande, requiring unloading and in-transit privileges for continued movement to points in the northwest territory, is inadequate and uneconomical and that the establishment of joint rates and through service is necessary in order to provide adequate and more economic transportation for such shipments.

IV

The evidence supports the finding that as to designated items of traffic moving from the northwest area, shippers and receivers of freight located on the Rio Grande are at an economic disadvantage compared with shippers and receivers of freight from the northwest area who are located on the Union Pacific. But there is no community of interest between the Union Pacific and the Rio Grande and hence there is no discrimination by the Union Pacific within the prohibition of Sec. 3 (1).

V

The evidence supports the finding of the Commission, referred to and quoted herein as Finding 3, that unlawful discrimination prohibited by Sec. 3 (4) is being practiced by the Union Pacific in refusing to establish through routes and joint rates with the Rio Grande comparable to those

existing between the Union Pacific and the Bamberger Line on traffic moving from the northwest area to points served by both the Bamberger Line and the Rio Grande between Ogden and Salt Lake City.

Conclusions of Law

I

The absence of in-transit and other privileges involved herein, incident to through joint rates will, under the law, support a finding that transportation service without such services and privileges is inadequate within the meaning of Sec. 15 (4). The evidence therefore supports the finding of the Commission that the establishment of through routes and joint rates between the Union Pacific and the Rio Grande is necessary in order to provide adequate and more economic transportation of the designated commodities in carloads originating in the northwest area, consigned to initial destination points on the Rio Grande west of Denver, Pueblo, and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo, and Trinidad. As to such commodities the order of the Commission is valid under Secs. 1, 15 (3) and 15 (4) of the Act and does not violate the direction of Sec. 15 (4) that reasonable preference be given the carrier which originates the traffic.

II

The evidence supports the finding of the Commission that it is necessary, in order to provide

adequate and more economic transportation of shipments of marble and granite monuments in carloads from points in Vermont and Georgia to points of final destination in the northwest territory, which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest area, that through routes and joint rates be established between the Union Pacific and the Rio Grande as to such shipments.

III

To the extent that the order of the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande on carload traffic moving from the northwest area to points on the Rio Grande, which traffic is to be reshipped to points east of Denver, but which is of such nature or character that it does not require stoppage-in-transit privileges, which are incident to in-transit privileges, and as to all traffic moving from the northwest area to points of original destination east of Denver, Pueblo, or Trinidad said order is not valid, because Sec. 15 (4) constitutes a limitation on the power of the Commission to order establishment of through routes which will result in short-hauling the Union Pacific, unless that be necessary in order to provide, inter alia, adequate transportation. Since the evidence does not justify a finding of fact that the establishment of such routes and rates is necessary to provide adequate transportation for commodities of the character stated or to the destinations spec-

ified in this paragraph, that factual premise, essential to the validity of the order, is lacking.

IV

To the extent the Commission requires the establishment of through routes and joint rates between the Union Pacific and the Rio Grande at Ogden on carload traffic moving from the northwest area to points between Ogden and Salt Lake City, inclusive, served by both the Rio Grande and the Bamberger line, the order is valid for the purpose of removing an unlawful discrimination against the Rio Grande under Sec. 3 (4) of the Act.

To the extent stated in the foregoing opinion, findings of fact, and conclusions of law, the order of the Commission will be enjoined. The cause is remanded to the Interstate Commerce Commission for such further proceedings as it may deem appropriate, consistent herewith.

Copy filed District of Nebraska, Oct. 22, 1954. Mary A. Mullen, Clerk.

Civil Action No. 76–53

Union Pacific R. Co. v. *United States*

JOHNSEN, *Circuit Judge,* dissenting.

The Commission has here used standards and criteria for the exercise of its power to compel through routes and joint rates, which I think are beyond the warrant of the statute. The majority opinion upholds in part the result which the Commission has so reached.

What the Commission purports to make the primary basis for its establishing of through routes and joint rates over the Rio Grande is "perishable food articles." Here, as taken from its Report, are the manner and perspective of its approach to the question.

"Growers [of perishable food articles in Idaho, located on the Union Pacific]. * * * market such products throughout the United States. In order to get as wide a distribution as possible, those growers and other growers in the northwestern area [that part of Utah lying north of Ogden, and the States of Idaho, Montana, Oregon, and Washington] need as many markets and outlets as possible."[5] 287 I. C. C. at page 642. To comprehend or evalnate that need, says the Commission, "it is necessary to consider the nature, extent and functioning of our intricate and far-flung commodity marketing system." P. 655. The importance, in our condition of growing population and national development, of having "a constantly expanding flow of diverse commodities" and "particularly articles of food" is emphasized. The comment is made that "A complex but efficient marketing system has been evolved to provide as orderly a distribution of

[5] It should be noted that the situation covered by the Commission's order does not involve the matter of joint rates to intermediate points on the Rio Grande as final destinations. Joint rates already apply to such traffic. The question is one of through routes and joint rates for traffic having a billing origin and destination outside of Rio Grande territory, and for which the Rio Grande therefore would merely be serving as a "bridge" line only, while the Union Pacific, on whose branch lines most of the traffic originates, would be caused to lose a line-haul thereon of 975 miles.

food commodities as possible," and the truism is expressed that "Adequate transportation facilities and services are required for the proper functioning of the system." P. 656.

Then follows what seems to me to represent the crux of the Commission's concept and standard in what it did.

1. "Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and *over as many routes as possible.* This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that *as much flexibility as possible in the distribution process* be permitted." [Emphasis mine.] P. 656.

2. "A number of services, not only at origin and destination, but enroute, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semi-perishable commodities." In-transit privileges, "such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit," are available at various points on the Union Pacific to through-shipper on the basis of the joint rates applicable over that route, and similar privileges exercisable on the Rio Grande could be made available to such shippers, at a lower cost than under the present combination rates, by establishing competitive through routes and joint rates over that road, so that those desiring to have the benefit of these additional facilities would be able to enjoy them

on the same basis as those on the Union Pacific. Because the use of such transit facilities on the Rio Grande are not available in the same manner as those on the Union Pacific, "The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities." P. 656.

3. The Commission does not attempt to explain how the failure of such through-shippers as a general class to have access to the transit privileges on the Rio Grande on the same rate basis as on the Union Pacific, can thus broadly and absolutely be declared to debar them "from effective participation in the widespread system developed for the marketing of such commodities." In the absence of such an explanation, and on the implication of what the Commission has precedingly said in its Report, as set out above, the only deduction that I am able to make is that the Commission regards all shippers of perishable commodities as having a right generally or abstractly, upon an expressed desire by any of them in a particular situation, to be given "as many routes as possible" and "as much flexibility as possible in the distribution process," because otherwise they will be "debarred from effective participation in * * * the marketing of such commodities."

In other words, whenever it is possible physically and practicably to open up a new or an additional through route for such commodities, the Commission apparently feels entitled to exercise its power to do so, in order to make avail-

able any increase in the amount of transit privileges en route which can be provided for such through-traffic, on the basis of simply declaring, as it in effect did here, that the previous through routes are inadequate, since they lack the additional transit privileges of the new carrier's route, which some shipper may desire or can solicitedly be persuaded to use, and on the basis of further holding that the other prerequisite of section 15 (4) of the Act, 49 U. S. C. A. § 15 (4), where the element of short-hauling another carrier is involved, as it is here, that such an added through-route must also provide "more efficient or more economic transportation" than that existing on the present through routes, can sufficiently be satisfied by merely resorting to the Commission's power under section 15 (3) to prescribe joint rates and pointing out that joint rates necessarily in the situation will provide "more economic transportation," since they obviously are lower than the previous combination rates.

I have grave legal doubt whether the Commission's power to establish joint rates under section 15 (3) has any relationship to the term "more economic transportation" in section 15 (4), dealing with the Commission's right to open up through routes. Rather, it seems to me that the term "more economic transportation" in section 15 (4) is intended to have reference to the elements of distance, time, equipment, cost of operation, territorial reach, and all those other quantitative and qualitative factors which are inherent in a transportational comparison from the standpoint of the interests of both the public and the carriers—and that the Commission's

power to establish joint rates under section 15 (3) is one which has application only after through routes exist or are established, without the right to use it as a factor under section 15 (4) for satisfying the requirements of opening up a long-haul-depriving, additional through route.

But however this may be, I am at least convinced that, where the question is one, as here, of opening up, not an initial through route, but an additional one for the same through-traffic to the same ultimate destinations, the Commission's power to establish joint rates cannot be made to constitute the sole ingredient or content of the term "more economic transportation" under section 15 (4), in the addition of another carrier's route as a mere "bridge" line for such traffic. If that be not so, then there is not any situation in which the Commission cannot make a finding of "more economic transportation" for whatever additional through route it may undertake to open up, since in all cases joint rates necessarily, from their very nature, are lower than combination rates otherwise applying.

Let me add in summary that, if it can properly be held, as the Commission has done here, that perishable commodities are entitled to "as many routes as possible" and "as much flexibility as possible in the distribution process," so that on this basis, and without regard to any other factor, any existing through route can be called inadequate, because it is possible to create additional transit privileges or facilities for such traffic by opening up another through route over another railroad, serving as a bridge line, and further

such new route can be declared to provide "more economic transportation," because by placing joint rates in effect the cost of using such new through route for its transit facilities will be less than under the general combination rates previously existing, then the railroads of the country may as well forget section 15 (4) entirely, as affording them any protection whatsoever against deprivation of their long hauls.

Here the opening up of a through route over the Rio Grande as a bridge carrier for the transcontinental freight involved will deprive the Union Pacific of a long haul of 975 miles upon such traffic as the Rio Grande is able to solicit away from it. But this is not the sole purport or effect of the Commission's order. If the order is upheld either in whole or in part, on the basis on which the Commission's result has been reached, the Commission can hereafter exercise its power to require through routes and joint rates from every connecting point in the country against every existing carrier, since every new through route necessarily will afford additional transit privileges and every joint rate necessarily will reduce the cost of using the new through route as against the combination rate previously applicable.

Nor should one allow oneself to be blinded to what the real scope and significance of the Commission's reach here is. What it has purported to paint the picture of, in relation to its standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" is, as previously indicated, "perishable food articles." But it has, by means of some artificial

classification, included ordinary livestock as a perishable food article (P. 656), saying merely, before doing so, that "We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive routes over the Rio Grande via the Ogden gateway." And it has further held that a little monument dealer, located on the Union Pacific in Utah, is entitled to have established for him a through route and joint rates on the Rio Grande, in order to have the transit privilege available to him of unloading locally, here and there in Colorado, on a through rate basis, some individual monuments out of an estimated four-carload lot of monuments per year.[6]

All of this to me is but another attempt by the Commission to gain a new foothold, under another disguise, for the philosophy and position that it should have the right to put into effect as many new through routes as it deems advis-

[6] I shall not take the time to go into the details of this trivial monument situation, which the Commission characterized as one of "urgent need" (Page 638), except to comment that it is typical of the Commission's approach, result and intended reach. Why a little dealer, who wants to make local peddlings of 4 carloads of tombstones is entitled to have the Union Pacific join in giving him the opportunity to do so on a through rate basis is a bit beyond me. But more than this, if tombstones constitute a commodity that is entitled to this extreme transit privilege, on the same basis as perishable foods, then the Commission's purported basis of "as many routes as possible" and "as much flexibility as possible in the distribution process" for perishable foods is meaningless, and it seems rather apparent what this initial action of the Commission here portends for the transportation system generally of the country.

able, without being required to give consideration to the question of short hauling another carrier. It has repeatedly asserted that viewpoint and sought to gain that end. But Congress has never been willing to accede to that philosophy and position, and the courts have on a number of occasions had to strike down the Commission's efforts in that direction. All this is familiar history in the railroad world, and I shall not bother to go into it further here.

It is on the basis of the unqualified use of that standard here in relation to perishable commodities, and the attempt to get the camel's nose under the tent as to one or two other commodities also, in a smothered, beginning approach to an apparently wider future reach, that I would strike down the Commission's order. I think that anyone who reads the Commission's Report, in the light of what I have said, and stripped of all the confusion in which the Report has been wrapped, will have no convictional difficulty as to the implications which I have pointed out.

I do not mean to make any implication, nor do I here assume to pass judgment, on whether the Ogden gateway is in other manner or to other extent subject to being opened up. All I say is that the philosophy and standard of "as many routes as possible" and "as much flexibility as possible in the distribution process" can not be made the basis for overriding the short-hauling provisions of section 15 (4), through the merry-go-round device of calling all transportation inadequate without the availability of every bit of transit privilege that exists on any connecting carriers aggregately, and of construing the

term "more economic transportation" to mean nothing more than the difference between joint rates placed in effect and the combination rates previously existing.

The philosophy and standard which the Commission has used are unquestionably sound as a marketing principle, but the railroad transportation system of the country has never yet been relegated by Congress to the full impact of marketing principles alone. There is not a distributor of any commodity—including perishable foods—who, up to the time at least of the Commission's present order, has had, or has been regarded as being entitled to have, as a matter of sound transportational concept, every avenue and facility that it is possible to open up for him, with a simple brushing aside of transportational conditions, realities and consequences, such as I think the Commission here did.

I have previously referred to the fact that most of the traffic that is here involved originates on the branch lines of the Union Pacific, and that on such of this traffic as the Rio Grande is able to solicit to use its route, the Union Pacific will lose a line haul of 975 miles. The Report of the Commission admits that "the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves" is about 200 miles. Page 654. It also recognizes that the Rio Grande is a mountainous route, of higher grades, more circuity, and greater operational costs than the Union Pacific. "The total rise and fall in feet on the Rio Grande is 66.3 per cent greater than

that of the Union Pacific. Other data as to physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services." Page 648.

All of these matters, however, the Commission lightly brushes aside, as not having relationship to the question of "more economic transportation" in the situation, and so leaving it free to hold, as above indicated, that the new through route provides "more economic transportation," because its joint rates necessarily are lower than the previously applicable combination rates. All that the Commission says, in brushing aside the transportational differences which I have set out, as not requiring consideration on the question of "more economic transportation" in the situation, is that, when they are spread over hauls of such great lengths as are here involved, "they become relatively insignificant." Page 658.

The Report does not undertake to show what amount of traffic goes where. It merely says that "About 90 percent of the traffic upon which joint rates are sought via Ogden and the Rio Grande moves to (Missouri River crossings and points east and southeast) and about 10 percent to the Southwest." Page 626. How much terminates at the Missouri River crossing-points or at other midwestern destinations, the Report does not state. As to livestock, however, it certainly is a matter of common knowledge

that the primary markets are Chicago, Omaha, Kansas City and some other Missouri River points. To each of these points, as well as to the Minneapolis and St. Louis markets, the record shows that a haul of 200 miles more, and a transportation time of at least 24 hours longer, as well as at least one or two more terminal-yard services, are involved over the Rio Grande route. I do not believe that without rational demonstration the Commission can say, except arbitrarily, that in relation to hauling distances of 1036 miles (Omaha) or 1153 miles (Kansas City) or 1521 miles (Chicago), the elements of difference which I have set out are so "relatively insignificant" as to be entitled to be ignored on the question of whether "more economic transportation" is being provided. And in the absence also of some demonstration or analysis of quantities and destinations as to the various other commodities involved, I do not believe that the Commission can be said to have any less arbitrarily brushed off the facts of the transportational and service differences existing, as related to the question of "more economic transportation" under the statute, than in the case of livestock, when it merely attempts to push all of the facts abstractly to a far-distant horizon, without establishment of the reality of that horizon for lumping purposes.

Incidentally, I also may add that what the Commission has here done as to livestock is a departure or exception from the long-established general livestock scheme, practice and policy which the Commission has previously recognized and accepted. In *Livestock, Western District*

Rates, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535, the Commission prescribed rates on livestock in western territory, predicated generally on the shortest routes over which carload traffic could be moved without transfer of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the statute. In establishing the prescribed rates, the carriers limited their application, as the Commission itself has recognized, over routes which did not result in short hauling, and over other and longer routes provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. This the Union Pacific was willing to do in relation to the Rio Grande's route. It would seem to me that the upsetting of this general, established scheme, practice and policy as to livestock rates, in the present situation, apart from the other aspects of the question here involved as to the livestock, is entitled to some explanation on the part of the Commission, if it is to escape the implication of an arbitrary departure as against the Union Pacific in its long-hauling of livestock from the northwest territory; as related to the differential permitted to be created by other carriers generally in such situations.

This dissent is being written hastily, in order not to delay the filing of the majority opinion, and I shall accordingly not take the time to go into detail on other matters. I agree with the majority that the Commission had no right here

to find a violation of section 3 (1) of the Act against the Union Pacific and its connecting through-route carriers, but the basis for my view is not that adopted by the majority, that a discrimination under this section cannot at all exist, unless the complaining person or entity is located upon the lines of the carrier or combination of carriers claimed to have committed the discrimination. I do not believe that this viewpoint is tenable on the language of section 3 (1), nor on the expressions contained in *St. Louis Southwestern Ry. Co.* v. *United States*, 245 U. S. 136, 141, as well as on the plain, contrary assumptions made in *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627. But on the factual elements that are involved in the present situation I do however not think that there exists any basis on which to declare the Union Pacific and its connecting through-route carriers guilty of unreasonable preference or unreasonable prejudice under section 3 (1), in having refused to join with the Rio Grande to make the latter available as a bridge line for hauling through traffic at the same rate, over a 200-mile longer route, with a 66.3 percent greater variation in grade, involving a 24-hour additional hauling time, and necessitating the furnishing of several more terminal-yard services. I do not believe that these facial railroad realities would permit of a finding of such a discrimination as was intended to be reached by section 3 (1). If the Commission had attempted to predicate the relief which it here granted upon the existence of a violation of section 3 (1), I am certain that its action resting on this basis alone could not on these

facial realities be upheld. Only an escape from these facial realities, through a dissolution of them under the considerations open to the Commission in section 15 (4), such as the Commission here attempted, could at all, in my opinion, on the facts of the situation, have furnished a basis for the prescribing of through routes and joint rates in relation to the existing conditions.

In the pattern of the Commission's apparent attempt to strike at as much in the present situation as possible, the Commission further, as noted in the majority opinion, required the Union Pacific to establish joint rates with the Rio Grande to and from the same points where it maintained joint rates with the Bamberger Railroad. The Report says: "The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande." P. 659. The brief of the Union Pacific argues pointedly that "No evidence was submitted concerning or comparing transportation conditions on the Bamberger's electric line between Ogden and Salt Lake City with conditions on the Rio Grande." The brief of the Commission makes no denial of the fact that no such evidence is contained in the record. The most that the Commission could properly have said, I think, was that it had not been made to appear by the evidence that there was any important dissimilarity in the conditions on the two roads. But the lack of any such evidence of dissimilarity could hardly afford a basis for a finding of similarity

on the part of the Commission. This segment of the Commission's order is perhaps of relatively small importance in the present controversy. I refer to it simply as being characteristic or in the pattern of the loose and improper basis and manner in which it seems to me that the Commission has dealt with the entire situation.

I would strike down the Commission's order generally, on the basis and manner in which its result has been reached. In taking that position, however, I would again emphasize that I intend no implication that there may not exist some proper basis and some proper manner of reach as to some parts of the Ogden gateway situation. I have not allowed my mind to look at that avenue, in either one direction or the other. The pervading infirmities on which the Commission's present order seems to me to rest make it sufficient and compel me to halt my judicial consideration right here.

APPENDIX B.

The Interstate Commerce Act, 24 Stat. 379, as amended, 49 U. S. C. 1 *et seq.*, provides as follows:

§ 3. *Preferences; interchange of traffic; terminal facilities.*—(1) *Undue preferences or prejudices prohibited.*

It shall be unlawful for any common carrier subject to the provisions of this chapter to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description.

* * * * *

§ 15. * * * (3) *Establishment of through routes, joint classifications, joint rates, fares, etc.*

The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own

initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this chapter, or by carriers by railroad subject to this chapter and common carriers by water subject to chapter 12 of this title, or the maxima or minima, or maxima and minima, to be charged, and divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. The Commission shall not, however, establish any through route, classification, or practice, or any rate, fare, or charge, between street electric passenger railways not engaged in the general business of transporting freight in addition to their passenger and express business, and railroads of a different character. If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancellation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section.

(4) *Through routes to embrace entire length of railroad; temporary through routes.*

In establishing any such through route the Commission shall not (except as provided in section 3 of this title, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad

operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation; *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b) of this paragraph, give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest.

[1] The Secretary is a party only to Nos. 332, 333, 334. The issue decided in those cases is briefed under Point II *infra*, pp. 75–88.

OPINIONS BELOW

The report of the Interstate Commerce Commission (Neb. R. 25; Col. R. 59; R. II, 1518)[2] appears at 287 I. C. C. 611. The majority and dissenting opinions of the Nebraska district court in Nos. 117, 118, 119 (Neb. R. 153, 169) are reported at 132 F. Supp. 72. The *per curiam* opinion of the Colorado district court in Nos. 332, 333, 334 (Col. R. 280) is reported at 131 F. Supp. 372.

JURISDICTION

The final judgment of the Nebraska three-judge district court was entered on December 20, 1954 (Neb. R. 210). Separate notices of appeal were filed in that court by appellants on February 17 and 18, 1955 (Neb. R. 226, 229, 230).

The final judgment of the Colorado three-judge district court was entered on February 1, 1955 (Col. R. 361), and a timely motion for new trial or reargument and reconsideration was denied on April 22, 1955 (Col. R. 362). Separate notices of appeal were filed in that court by

[2] The record in this case consists of four volumes. One volume contains the record of proceedings before the Nebraska district court, and references to that record will appear as Neb. R. ——. There is a similar volume covering the proceedings before the Colorado district court, and references to it will appear as Col. R. ——. Two additional volumes contain the record of procedings before the Commission—a record which was put into evidence in both the Nebraska and the Colorado cases. References to these volumes will appear as R. I, ——, and R. II, ——.

appellants on June 20, 1955 (Col. R. 364, 365, 369).

The jurisdiction of this Court rests on 28 U. S. C. 1253 and 2101 (b). Probable jurisdiction of the cases was noted on October 24, 1955, and they were consolidated for oral argument (Neb. R. 245; Col. R. 374).

QUESTIONS PRESENTED

1. Whether the Colorado district court, in setting aside the Commission's order establishing new through routes (and joint rates) for specified commodities on the ground that the "uncontradicted evidence" showed that through routes were already in existence, applied an erroneous standard for determining the existence of through routes and improperly set aside the Commission's finding that such routes did not exist.

2. Whether, in narrowing the Commission's order, the Nebraska district court failed to give proper effect to the provisions of Section 15 (4) and to the Commission's finding thereunder that the establishment of the prescribed through routes was "necessary and desirable" from the standpoint of providing "adequate and more economic transportation" for shippers who could not otherwise participate effectively in the effi-

cient marketing of perishable agricultural commodities.

STATUTE INVOLVED

The pertinent provisions of the Interstate Commerce Act, 24 Stat. 379, as amended, 49 U. S. C. 1 *et seq.*, are set forth in the Appendix, *infra*, pages 90–94.

STATEMENT

The general nature of the administrative proceedings

On August 1, 1949, the Denver & Rio Grande Western Railroad Company (referred to as the Rio Grande) filed with the Commission a complaint requesting that the Union Pacific Railroad Company (which, with its leased lines, is referred to as the Union Pacific) be required to establish just, reasonable and non-discriminatory and competitive joint rates with the Rio Grande on freight traffic

(a) between points on or via the Union Pacific in Utah north of Ogden, Idaho,

---

[3] The Government's jurisdictional statement in the Nebraska case also raised the following additional question:

"Whether Section 3 (1), prohibiting any carrier from giving any undue preference to any person, locality, etc., or subjecting any person, locality, etc., to any undue prejudice, may apply to the situation where the persons or localities receiving preference are served by one carrier and those prejudiced are served by another."

Further analysis of the case convinces us (see p. 82, n. 20, *infra*) that this Court's determination as to the correctness of the Nebraska court's decision on the issue stated in question 2 above will be dispositive of Nos. 117, 118, and 119.

Montana, Oregon, Washington and British Columbia, and Colorado common points and points east thereof,

(b) between Utah common points on the one hand, and places on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia on the other hand.

The Rio Grande's complaint named as additional defendants numerous other railroads with which (or with some of which) the Union Pacific maintains through routes and joint rates.

In its complaint, the Rio Grande contended that through routes already exist for the freight traffic involved. Therefore, it urged that the failure of the Union Pacific to establish competitive joint rates for the traffic in question, when moved on through routes in which the Rio Grande participates, violates Sections 1 (4), 3, and 15 (1) and (3) of the Interstate Commerce Act.

Numerous parties intervened in the Commission proceedings in behalf of the complainant, including the Secretary of Agriculture of the United States, the Public Utilities Commissions of Colorado and Utah, the American National Live Stock Association, other live stock and stock feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce, groups of employees of the Rio Grande, and the American Short Line Railroad Association. Interveners in

opposition to the complaint of the Rio Grande and supporting the Union Pacific and other defendants include the State of Nebraska, the City of Cheyenne, Wyo., the Public Service Commissions of Montana, Washington, Oregon, Wyoming, Nebraska and Kansas, Chambers of Commerce and other associations, certain industrial employee groups in Wyoming, and employee groups of the Union Pacific, the Chicago & Northwestern Railway, and the Wabash Railroad.

In late 1949 and early 1950, extensive hearings were held before a hearing examiner in Salt Lake City, Boise, and Cheyenne. Following an examiner's report, the filing of exceptions and oral argument before the full Commission, the full Commission issued the report and order challenged in these cases. In brief, the Commission held that through routes did not exist over the Rio Grande for the freight traffic in question, but that through routes should be established for specified commodities pursuant to Section 15 (4) of the Act; and that for such commodities, moving in carloads on such through routes, rates not in excess of the joint rates maintained on such commodities on the competitive Union Pacific routes should be established. The Commission also found that the maintenance by the Union Pacific of joint rates to certain points on the Bamberger Railroad, while refusing to participate in joint rates to the same points

on the Rio Grande, subjected the Rio Grande to discrimination in violation of Section 3 (4) of the Act. It ordered elimination of this discrimination. (Neb. R. 26–74.)

The geographical and historical background

The historical, geographic, and traffic background of these cases is set forth in detail in the Commission's report (Neb. R. 34–48). Accordingly, it will be summarized very briefly here.[*]

The Rio Grande operates between Ogden, Utah (its northwestern terminus) and Denver, Colorado, over two routes. By way of the Moffat tunnel the distance is 607 miles, while the route via Pueblo is 782 miles. These are the Rio Grande's main lines. Its eastern connections are the Union Pacific and other railroads with which it connects at Denver, Colorado Springs, Pueblo, Walsenberg and Trinidad. Denver, Colorado Springs and Pueblo are sometimes referred to in this case as the Colorado common points because they are served both by Rio Grande and by Union Pacific or other railroads with which the Union Pacific maintains joint rates.

Western connections of the Rio Grande are in Utah at Ogden, Salt Lake City, and Provo. At Ogden, the connecting lines are the Union Pacific and the Southern Pacific. At Salt Lake City,

[*] A convenient map is appended to the opening brief filed by the Rio Grande (p. 133).

37 miles south of Ogden, the connections are the Western Pacific and the Los Angeles line of the Union Pacific. At Provo, 44 miles south of Salt Lake City, it again connects with the Union Pacific's Los Angeles line. Salt Lake City and Provo are sometimes referred to as the Utah common points since they are served by both the Rio Grande and the Union Pacific.

The Union Pacific runs west from Omaha to Julesburg in northeastern Colorado. At Julesburg, a line runs southwest to Denver, while the main line goes west through Cheyenne (from which another Union Pacific line runs south to Denver) to Ogden. At Ogden, the Union Pacific's main line connects with the Southern Pacific and the Rio Grande. A Union Pacific line running north from Ogden serves points in Utah north of Ogden and (with its connecting lines) Idaho, Montana, Oregon, Washington, and British Columbia. This last described area is referred to as the excluded area.

The Rio Grande generally participates in through routes and joint rates on transcontinental traffic. However, joint rates do not apply to movements over the Rio Grande between the excluded territory and the Colorado common points and points east. Similarly, with some exceptions, joint rates do not apply to freight traffic moving between the excluded territory and Utah common points south of Ogden. However, such traffic

moves on joint rates over the lines of the Union Pacific and other railroads with which it maintains joint rates. In the absence of joint rates on Rio Grande routes for such excluded-territory traffic, such traffic can be routed over the Rio Grande only at combination rates which are considerably higher than the joint rates which are available on the competitive Union Pacific route via Cheyenne.

The findings and the evidence

1. As to the existence or non-existence of through routes

The Commission found (Neb. R. 33) that

> there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.

In 1897, Union Pacific and its controlled lines, the Oregon Short Line Railroad and the Oregon-Washington Railroad and Navigation Company, were in separate receiverships. In that year, the last-named companies established with the Rio Grande, to and from points in the excluded terri-

tory via the Ogden gateway, joint rates equal to the rates then in effect on the line of the Union Pacific through Cheyenne (R. I, 86–88). These joint rates with the Rio Grande via Ogden remained in effect until they were cancelled progressively by the Union Pacific in 1906 and 1912.

Union Pacific has never purported, by formal action, to cancel through routes with the Rio Grande via Ogden. The Assistant Freight Traffic Manager of Union Pacific testified (R. I, 799–800) that:

> The Interstate Commerce Act gives all shippers the right to specify the lines over which their shipments shall move so the Ogden gateway and route via the Rio Grande is actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington. However, most of that traffic originates or terminates at points on the Union Pacific, and it ordinarily moves via the Union Pacific through Wyoming because the joint through rates to and from that territory are restricted so that they will not apply when traffic is interchanged with the Rio Grande at junction points in Utah.[5]

The establishment of the through routes sought by Rio Grande would require Union Pacific to short haul itself within the meaning of Section

[5] See a similar statement by Union Pacific's counsel during the oral argument before the Commission (R. II, 1621).

15 (4) of the Interstate Commerce Act (R. I, 587,°800). No evidence was presented to show that in recent years Union Pacific or any of the other defendant railroads have solicited traffic from and to the areas here concerned for routing over a Rio Grande route on which higher combination rates apply. Rather, it is undisputed that for many years it has been the policy of Union Pacific "to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic" (Neb. R. 32.)..

There was evidence that scattered shipments on through bills of lading are made to and from the excluded territory over the Rio Grande through the Ogden gateway. Exhibit 1, p. 4 (discussed in detail at R. I, 70–76) shows that in 1948, a representative year, 37 carload shipments were made on through bills of lading from origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo, and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned goods, canned salmon, machinery, contractors' equipment, paper bags, lum-

ber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that 2 carloads of canned salmon moved from Seattle, Wash., to Provo, 2 carloads of acid from Dupont, Wash., to Louviers, 2 carloads of canned goods from Logan, Utah, to Denver, 2 carloads of sheep from Bellevue, Idaho, to Pueblo, 3 carloads of lumber from McCall, Idaho, to Salt Lake City, 3 carloads of canned goods from Logan to Pueblo, and 6 carloads of lumber from Emmett, Idaho, to Midvale. It should be noted that all of these shipments were destined to points common to the Rio Grande and the Union Pacific in Utah or Colorado. There was no evidence that any of these shipments moved from the excluded area over the Union Pacific and the Rio Grande via the Ogden gateway to any destination east of the Colorado common points (*i. e.*, points on the north-south line of the Rio Grande between Denver and Trinidad, Colorado).

There was also evidence (R. I, 75) that in 1948 there were 18 carload shipments moved on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden, and

thence by the Union Pacific to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed, hull bran, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destination so as to avoid paying the applicable combination rates.

However, the evidence strongly suggests that the above shipments via the Rio Grande and at the higher combination rates may have resulted, at least in substantial part, from shippers' ignorance or inadvertence. Thus, the Rio Grande's vice president in charge of traffic (R. I, 66) noted that "competitive through rates on traffic originating at Missouri River or east thereof and destined to the Union Pacific's closed door territory north of Ogden [via the Rio Grande] do not apply via Pueblo, Colorado, with a population of seventy-five thousand, over any route or combination of routes. This fact is overlooked from time to time by certain shippers who bill cars to unload at Pueblo, which results in higher charges at combination rates." (R. I, 72–

73.) Similarly, the manager of a cold storage plant in Pueblo testified that the plant received farm products from the excluded territory north of Ogden via the Rio Grande "only when a misrouting occurs" (R. I, 304).

Also in 1948, 22 carload shipments moving on through bills of lading from various origins east of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint through rates were not applicable over that road via the Ogden gateway (R. I, 75–76). Referring to all of the above figures as to eastbound and westbound shipments via Rio Grande in 1948, Rio Grande's vice president in charge of traffic stated that they "reveal that many shippers, large and small, and many railroads, assume a through route exists at competitive freight rates via Rio Grande-Ogden-Union Pacific on westbound traffic, and via Union Pacific-Ogden-Rio Grande on eastbound traffic" (R. I, 76).

In addition to this evidence of isolated commercial shipments, it was also shown that, pursuant to service orders issued by the Commission and in effect during World War II, a substantial number of freight shipments were diverted by the Rio Grande from through routes in which it regularly participates to the routes via Ogden to the

excluded territory. For example, under Interstate Commerce Commission Service Order No. 98, effective November 2, 1942, and cancelled August 17, 1945, the Rio Grande diverted to the Union Pacific at Ogden and Salt Lake City, 8,491 carloads destined to points in Oregon and Washington via the Southern Pacific (R. I, 70).

Also, during World War II, special combination trains of troops in passenger cars and military supplies in freight cars from eastern and southern origins to destinations in the northwest (excluded) area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific (R. I, 71). The rates and charges for these freight movements were not filed with the Commission, but were adjusted under Section 22 of the Act on the basis of the joint rates applicable over the Union Pacific route through Wyoming (R. I, 71).

In February 1949, when the main line of the Union Pacific in Wyoming was blocked by snowstorms, a substantial amount of traffic was diverted from the Union Pacific to the route of the Rio Grande between Denver and its junctions with the Union Pacific in Utah (*e. g.*, Ogden, Salt Lake City) (R. I, 72).

The Commission concluded that neither the scattered commercial shipments in the typical year 1948, nor the shipments routed or diverted over the Rio Grande under wartime or emer-

gency conditions, established that through routes over the Rio Grande on traffic originating in or destined to the excluded territory already existed. As to the wartime and emergency routings and diversions, the Commission stated that "[t]hey show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute 'through routes' within the meaning of that term as used in the act." (Neb. R. 32).

Turning to the scattered commercial shipments in the typical year 1948, the Commission concluded as follows (*ibid.*):

> * * * so far as this record shows, "the carriers' course of business" has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads east-bound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the

same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

Referring to all of the shipments via the Rio Grande which have been described above, the Commission stated that "all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the [single] shipment held insufficient to show the existence of a through route in *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.* [155 I. C. C. 313], cited with approval by the Supreme Court in *Thompson* v. *United States* [343 U. S. 549]" (Neb. R. 32–33).

2. As to the need for establishing through routes for particular commodities.

Having found that through routes did not exist over the Rio Grande for the traffic in question, the Commission next considered whether through routes and joint rates should be established over the Rio Grande pursuant to Section 15 (3) and (4).

It is undisputed that requiring the Union Pacific to establish through routes with the Rio Grande on traffic between the excluded territory, on the one hand, and the Utah common points, the Colorado common points, and points east of the Colorado common points, on the other hand, would compel the Union Pacific to short haul itself. Under Section 15 (4), the Commission cannot require a carrier to short haul itself

"unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation."

Such a determination was made, the Commission concluding (Neb. R. 73):

> That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations

in the Lower Peninsula of Michigan and in Oklahoma and Texas.

The subsidiary findings of the Commission as to the needs of shippers for through routes over the Rio Grande, and the evidence supporting those findings, are summarized below.

Livestock. The Commission's principal findings as to the needs of shippers or consignees of livestock originating in the excluded territory may be stated as follows (Neb. R. 52–54):

In the areas in Utah and Colorado served by the Rio Grande, there are good pasture lands for grazing livestock. In addition to stock produced locally in those areas, substantial quantities are shipped in the summer season from other sections in Colorado, Utah, and surrounding states both for feeding in feed lots and pastures and for grazing on the livestock ranges. There is a large movement of livestock into and out of Colorado. Raisers of livestock and operators engaged in fattening livestock, who are served only by the Rio Grande, generally buy from areas from which joint rates apply in connection with that road in order to obtain the benefit of grazing or feeding in transit and of reshipping the fattened animals to Denver or markets east of Denver on the balance of the joint rate. Such operators must absorb the difference in the transportation costs, and are not able to purchase livestock economically in the northwest area in competition

with buyers from Iowa, Wyoming, Nebraska, Colorado and Kansas who have the benefit of competitive joint rates from the excluded territory over the Union Pacific routes (Neb. R. 52).

As a result of the curtailment of the use of grazing lands in national forests in Colorado, livestock raisers in that state have switched from raising livestock to fattening such stock by grazing in private pastures. They obtain some of this stock from the northwest areas, particularly Idaho, Montana and Oregon (Neb. R. 52–53).

On sheep and goats to destinations west of the Missouri River, including Colorado common points, and on cattle to the Colorado common points and east thereof, via Ogden and the Rio Grande, the rates are on a combination basis, and feeders of livestock located on the Union Pacific in northern Colorado and Nebraska are now able to overbid the Arkansas Valley (S. E. Colorado) feeders on northwest stock when destined to the Missouri River and east thereof (Neb. R. 53–54).

Illustrative evidence in support of the Commission's findings as to livestock is as follows:

The superintendent of livestock operations of the Holly Sugar Corp., Denver, Colo., testified that this company has sugar factories on the Rio Grande in Colorado, including one at Delta, about 35 miles southeast of Grand Junction, and that in a normal year of beet sugar production it has available for feeding at this point from 25 to

60 thousand tons of beet pulp, as well as several thousand tons of molasses. The livestock pens where the animals are fed are adjacent to the sugar factory. This concern also has other factories at Swink, Colo., and points in Montana and Wyoming. It buys livestock in most of the western states and feeds annually from 10 to 12 thousand head of cattle and from 50 to 60 thousand lambs (R. I, 269–272). It purchases livestock on the Union Pacific in Idaho and Montana but cannot move them to Delta for feeding-in-transit at through competitive rates (R. I, 273). The livestock produced in the Northwest, particularly in Idaho and western Montana on the Union Pacific, is of excellent grade for use in feeder operations on the Rio Grande and elsewhere. No livestock has been shipped to Delta because of the application of the higher combination of rates from western Montana. The Union Pacific does not publish, in connection with the Rio Grande, joint through rates from the Northwest to eastern livestock markets on as low a basis as those available to livestock feeders on the Union Pacific, *e. g.*, in Wyoming and Nebraska. This has hindered the feeder operations of the Holly Sugar Corp., as well as other feeders and dealers on the Rio Grande, and favors the operations of livestock dealers and feeders on the Union Pacific (R. I, 274, 277–282).

The chief rate clerk of the traffic department of the Holly Sugar Corp. testified that the rates

on cattle from points in Montana and Idaho to Denver are 31 to 35 cents higher per 100 pounds when routed over the Union Pacific-Rio Grande than they are when routed over the Union Pacific (R. I, 288); that on sheep from these points to Omaha, Kansas City, and Chicago, the rates via the Union Pacific-Rio Grande-Union Pacific are 19 cents per 100 pounds higher than via Union Pacific direct from and to the same points (R. I, 288); that on cattle to Omaha via the Union Pacific-Rio Grande the rates are from 35 cents (from Divide, Montana) to 33 cents (from Idaho Falls) higher than the Union Pacific rates direct; that on cattle to Kansas City the rates via Union Pacific-Rio Grande are 45 cents to 33 cents higher than over the Union Pacific direct from the same two origins, while to Chicago the difference ranges from 57 cents (from Divide) to 33 cents (from Rogerson, Idaho) (R. I, 397).

The general manager of the Producers' Livestock Marketing Association, a marketing association of livestock producers which operates in 14 western states, testified that the association handled about 30,000 carloads of livestock in 1948. Livestock, he stated, is grazed and fed along the Rio Grande between Ogden and Denver (R. I, 310–311). Although a large part of this livestock is produced locally, a substantial amount is shipped in from other nearby areas both for feeding in feed lots and pastures and for summer

range grazing. Most of the sheep brought into the feeding and grazing area come from the Northwest—Idaho, Oregon, Montana, and Washington (R. I, 312). Livestock moving from the feeding and grazing areas via the Rio Grande goes both east and west to slaughter pens and feed yards and pastures, and sells in competition with stock from points on the Union Pacific north of the Rio Grande lines (R. I, 313). Pasturing of livestock on wheat in the wheat-raising states is a growing practice, and wheat pastures of Kansas, for example, offer an important outlet for sheep and lambs from points on the Rio Grande. Billing at joint rates with feed-in-transit is less than the cost of shipments at combination rates. The witness further testified that there is a 19-cent arbitrary on the movement of livestock over the Rio Grande from Ogden on shipments originating on the Union Pacific, and that this reduces the net returns of growers and feeders. The opening of the Ogden gateway to the Rio Grande would have the effect of lowering the rates and increasing the service (R. I, 314–315). See discussion of this arbitrary in the Commission's report (Neb. R. 55).

A livestock operator at Heber, Utah, which is served only by the Rio Grande, testified that he is engaged principally in raising sheep in an extensive livestock area (R. I, 324). This area produces "an extraordinarily good fat lamb."

Some of these lambs are sold for feeding in such midwestern states as Kansas, Iowa and Nebraska. Growers in his area bring in most of their replacements of breeding stock from such states as Idaho and Montana (R. I, 325). The ewes and lambs are brought in from Idaho and Montana under a billing which permits feeding in transit and which is used again in sending the lambs to the market. The arbitrary of 19 cents, applicable on such feeding-in-transit movements via Union Pacific-Rio Grande through Heber to market, means that the returns to the Utah producer would be that much less than the returns to the producer located on the Union Pacific. If such feeder lambs were shipped from the Heber area to Kansas wheat pastures, higher combination rates would apply (R. I, 326–327).

The president and general manager of the Benton Land & Livestock Co., Burns, Colorado, owning 16,000 acres of land and leasing about 30,000 additional acres in Western Colorado, testified that his company does not breed cattle but buys them wherever possible for fattening on its land adjacent to the lines of the Rio Grande. The fattened stock are then shipped to markets, with about 90 percent going to New York (R. I, 331–332). The "opening of the Ogden gateway" would be advantageous to this company in that it would permit it to purchase young livestock in Idaho, Oregon, Washington

and Montana and ship it on joint rates with feeding in transit in Colorado (R. I, 432–433). The company endeavors to buy cattle that can be reshipped at joint rates after feeding in transit. The company has found that because of the lack of through rates on livestock from the Northwest area via the Rio Grande to eastern markets, it cannot compete in buying cattle in that area against buyers from other areas (such as points on the Union Pacific) who enjoy such joint rates, unless it is prepared to absorb the difference between joint and combination rates (R. I, 334, 342–344). Because of the gradual reduction in grazing areas of the national forests, grazers in his territory are changing from breeding operations to feeding operations and are forced to buy livestock for feeding (R. I, 342–344). The opening of the Ogden gateway would give such operators in Colorado and Utah an opportunity to purchase young stock from the Northwest area at a competitive cost (R. I, 341).

The secretary of the Colorado Cattlemen's Assn., Denver, Colo., testified that this association has 5,000 members composed of livestock dealers, feeders and operators who raise cattle and who purchase and market animals requiring feeding in transit. A majority of the big operators in the association go out of Colorado to buy at least a portion of the cattle which they feed. After feeding, the cattle are sold principally through Denver

and Chicago and other eastern markets. Members of the association find it difficult to purchase cattle in the Northwest on a competitive basis for feeding in transit in Colorado because they lack joint rates on which they can reship to eastern markets (R. I, 345–347). The members of the association are interested in having the Ogden gateway opened as they want to buy young stock on a competitive basis for feeding-in-transit (R. I, 349).

The owner of a large ranching and livestock business in Utah and Colorado testified that he purchases breeding stock in the northwest area which he brings into his ranges in Utah and Colorado. In the fall of the year, after feeding on Utah and Colorado ranges, he reships them either to markets in Kansas City, St. Joseph, or to his pasture areas in western Kansas. In the absence of joint rates, such as are available to growers located on the Union Pacific, he must pay "about a 19-cent or 20-cent penalty" on such movements (R. I, 374–375).

An official of the Lincoln Packing Division of the American Stores, Inc., which has cold-storage plants and stores throughout the country, testified that this concern has a storage plant at Pueblo, Colo., on the Rio Grande, with a storage capacity of between 200 and 250 carloads (R. I, 412). This concern engages in storage operations and in the slaughter of livestock. It receives at its

Pueblo plant shipments of lambs which originate in Idaho and Oregon on the Union Pacific. When these shipments move over the Union Pacific via Ogden and the Rio Grande, combination rates are applied, resulting in charges of $70 to $80 more per car than if moved at joint rates applicable via the Union Pacific through Denver. Despite the higher rates via the Rio Grande, the company uses the Rio Grande route because shipments move more expeditiously and suffer less shrinkage. The greater shrinkage on the Union Pacific results from the necessity of stopping cars for feeding in transit at Denver, a necessity which does not exist on the Rio Grande route (R. I, 413–415).

Agricultural commodities. The Commission's findings as to the necessity for through routes and joint rates over the Rio Grande for agricultural commodities (excluding livestock) moving out of the excluded northwest territory, fall into two categories. That is, the Commission found that producers and shippers of such commodities in the excluded territory, and processors and dealers of such commodities who are served only by the Rio Grande, both need such through routes, though partly for different reasons.

(a) *Growers and shippers in the excluded territory need through routes and joint rates via the Rio Grande in order to exercise reconsignment*

privileges effectively. The Commission found (Neb. R. 56–57):

> Growers of wheat, potatoes, onions, peas, other vegetables, and fresh fruits at Idaho Falls, Burley, Twin Falls, Blackfoot, Aberdeen, Caldwell, and Parma on the Union Pacific, and also those engaged at such points in buying, selling, packing, and distributing vegetables and fresh fruits, market such products throughout the United States. In order to get as wide a distribution as possible those growers and other growers in the northwest area need as many markets and outlets as possible.
>
> In marketing the large production of such products, particularly Idaho potatoes, it is the general practice to divert carloads in transit as markets are found and sales are made. Routes over which joint through rates apply are generally used so that a shipment can be diverted or reconsigned without the application of a combination of rates. If a shipment reaches a point through which a combination of rates applies and the sale is lost, it is frequently necessary to dispose of the shipment at that point at a forced or distress price. Such points are called closed or pocket markets.
>
> The principal outlets for Idaho fruits and vegetables vary from year to year, but large markets are in the Central, Southwestern, and Southeastern States. Carloads moved over the Union Pacific to the

> Central States can be diverted to the Southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect. Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City. * * *

The importance of reconsignment privileges to shippers of agricultural commodities, and the fact that such reconsignment privileges can be exercised only along routes on which joint rates apply, were illustrated by the following testimony:[6]

The owner of a thousand-acre farm in Idaho is engaged in raising and shipping fresh fruits and vegetables, green peas, lettuce, potatoes, onions, prunes and peaches (R. I., 420). In his business, it is necessary to ship many carloads of produce before they are sold and to sell them "while rolling or in transit." His most important markets are Chicago, Kansas City, St.

---

[6] For a further illustration of the significance of diversion or reconsignment privileges, see *Southeastern Vegetable Case*, 200 I. C. C. 273, 278-279.

Louis, the Midwest, and the Southwest, although some cars go to New York. In shipping, he has had many experiences with "distressed cars," which are carload shipments which arrive at points where they can be reconsigned only at higher combination rates. Such points are known as pocket markets (R. I, 421–424). If he could use joint through routes and rates over the Rio Grande, the so-called "pocket markets" could be avoided (R. I, 425–427). He does not think that the opening of the Ogden gateway would reduce the tonnage of the Union Pacific, but, rather, that it would open the "pocket markets" to Idaho products, increasing their consumption by as much as would be diverted away from the Union Pacific (R. I, 427-428).

The vice president and general manager of another large concern, J. C. Watson Co. of Parma, Idaho, testified that his company is engaged in producing, packing, and distributing fresh fruits and vegetables, and ships from 1,500 to 2,000 carloads annually to markets throughout the United States; that it is constantly seeking new markets and supports the Rio Grande's application because joint rates through the Ogden gateway via the Rio Grande would provide a free flow of fruits and vegetables from Idaho to all markets, especially into southwestern territory (R. I, 432–433). He further testified that shipments of fruits and vegetables from Idaho fre-

quently encounter market areas which are called "pocket markets." Thus, shipments reaching points in Kansas not served by the Union Pacific, *e. g.*, Wichita or Hutchinson, cannot be reconsigned, under prevailing rate restrictions, to Kansas City or points east if, for any reason, they are rejected or if the price proves unsatisfactory (R. I, 433). The witness gave examples of the difficulties encountered and the additional expenses incurred when shipments arrive at "pocket markets" (R. I, 434–435).

A member of the executive committee of the Idaho State Grange, a statewide organization consisting of 12,000 members who are farmers, shippers, growers, and dealers in potatoes and grain, testified that it would be to the best interest of Idaho as an agricultural state to have the Ogden gateway opened (R. I, 262–263). Competitive through rates via Ogden and the Rio Grande to markets not now open to producers of that state would be beneficial (R. I, 267).

Moreover, the needs of shippers of agricultural products in the excluded territory for joint rates at which they can reconsign shipments is not limited to reconsignment while shipments are on the Rio Grande routes. Thus, an Idaho shipper testified that he can ship potatoes on joint rates via the Union Pacific and Denver to such points in the southwestern states as Tulsa, Oklahoma City and Fort Worth. However, if he desires to

reconsign the shipment from such a point to a point in the southeastern states, he must pay a higher combination rate. He cannot ship into the southeastern states at joint rates unless he uses the Union Pacific as far as Kansas City. Because of this limitation on reconsignment at joint rates from southwestern to southeastern points, he avoids the risks of "pocket markets" by largely refraining from shipping to points in the southwest (R. I, 292–302).

Other witnesses engaged in producing and shipping potatoes and other vegetables testified as to the need for competitive joint through rates via Ogden and the Rio Grande to enable them to exercise reconsignment privileges effectively (R. I, 252, 292–294; 303–304; 438–440; 467–468; 472).

(b) *Processing and marketing facilities on the Rio Grande are cut off from producers and shippers of agricultural products in the excluded territory.* The Commission found (Neb. R. 69–70) that

> * * * A complex but efficient marketing system has been evolved to provide as orderly a distribution of food commodities as possible. Adequate transportation facilities and services are required for the proper functioning of the system. Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be

moved to market with expedition and care, and over as many routes as possible, * * * A number of services, not only at origin and destination, but en route, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities. * * *

* * * The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities. This conclusion is also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services which are generally accorded such traffic and are necessary for its efficient marketing. For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. * * *

For example, Skyland Food Corporation operates a frozen food plant at Delta, Colorado, engaging principally in the processing of fruit. The capacity of the plant is 15,000,000 pounds annually and it is operated at about 50 percent of its capacity. While Idaho fruit is desirable, it cannot be used for processing at Delta be-

cause of the lack of joint rates from Idaho via the Rio Grande. If through rates via Ogden and the Rio Grande were available, it could obtain fruits in the Brigham, Utah, area, north of Ogden for processing in transit, and could use apples of "C" grade from Idaho, amounting to several thousand tons annually. (R. 140–149).

The Mountain Ice & Coal Co. operates a cold storage plant at Pueblo, Colo., with a capacity of 74 cars. The principal perishables stored at this plant are apples, frozen foods, butter, eggs, frozen poultry, onions and potatoes. It would be able to store frozen foods from Oregon and Washington, which originate on the Union Pacific lines, if the Ogden gateway were opened by joint rates. Storage customers desire access to as many markets as possible, but the combination rates now in effect limit the flow of Northwest territory products through Pueblo (R. I, 303). While the company can receive shipments via the Union Pacific and Denver, the necessity for a backhaul to Denver means that it can sell in Denver, after in-transit processing, only if it can receive shipments on joint rates via Ogden and the Rio Grande (R. I, 307–308).

A shipper of dried beans at Colorado Springs handles beans originating in California, Wyoming, Idaho, Colorado, and New Mexico. His principal market is in the southeastern section of the United States. He buys beans in Idaho which

he can process in transit at his warehouses, provided the eventual destination is not east of the Missouri River. He is interested in processing Idaho beans in Colorado Springs, but does not do so because most of his markets are east of the Missouri River. (R. I, 406). He stated that he had lost business in many instances because he could not furnish Idaho Red beans and Idaho Great Northern beans in his assorted cars from Colorado Springs (R. I, 407). However, if he purchased Idaho Red beans or the Great Northern beans in Idaho and brought them through Colorado Springs via the Ogden gateway and Rio Grande, he would pay a 39-cent higher rate than via the Union Pacific and Denver (R. I, 408).

A witness testifying for the United States Department of Agriculture, supporting the application of the Rio Grande, stated that it is the position of that Department that the opening of the Ogden gateway route will promote distribution; that the continued inability of shippers to use the Ogden gateway at joint through rates is not in the interest of the general agricultural public (R. I, 1069–1073); that the Department is opposed to the existing routing restrictions on agricultural commodities and is of the view that the small amount of tonnage the Union Pacific would lose if the Ogden gateway were opened commercially would do no substantial harm to that carrier (R. I, 1080–1081).

Granite and Marble Monuments—Westbound: The only westbound commodity, with respect to which the Commission found that through routes and joint rates via the Union Pacific-Rio Grande routes were justified under Section 15 (4), was granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory.

The Commission made the following finding (Neb. R. 52) as to this commodity:

> There is * * * an urgent need for the establishment of joint through rates on [monuments] to destinations in the excluded territory with stop-off privileges at intermediate points on the Rio Grande. A substantial portion of this traffic has been lost to the trucks, chiefly because of rate differences and the lack of stop-off privileges on the Rio Grande at competitive through rates.

The testimony supporting this finding is as follows:

A fabricator and wholesale dealer in granite and marble monuments at Brigham City, Utah, testified that he purchases marble from Georgia and granite from Wisconsin, Vermont, and Minnesota; that he sells in Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington, and would be benefited by joint through rates with transit stopover arrangements on the Rio Grande; that he has dealers in Colorado on the Rio Grande

and with no joint through rates over that road he is "penalized" in getting a car into Northern Utah, Idaho, Montana and portions of Oregon over the Union Pacific (R. I, 388–389). To dealers in the Northwest, he can ship through Rock Springs over the Union Pacific into Ogden, but if he routed cars over the Rio Grande he would lose on the car when it reached the Northwest. He has a dealer at Grand Junction, Colo., and customers at Logan, Utah; Pocatello, Idaho Falls and Boise, Idaho; Butte, Great Falls and Helena, Montana; Spokane, Washington; and Eugene and Portland, Oregon (R. I, 389). It would be a great advantage to this shipper if he could use the Ogden gateway over the Rio Grande (R. I, 390).

The witness stated further that he had transit privileges when he shipped over the Union Pacific out of Omaha, thence into the Northwest; that if he could ship Georgia marble through Grand Junction, Colo. (over the Rio Grande) with stopoff privileges he could handle about four cars a year that way; that, on his shipments from Georgia, practically every car contains marble stones which are reshipped to the Northwest and if he had transit privileges and through rates it would enable him to meet competition (R. I, 390–391). He further stated that his yard is the only one between Denver and Los Angeles and San Francisco, and that there are no manufacturers in the Northwest; that the

granite or marble from Georgia comes through in pool cars, to be finished by the various dealers in the West, and that the cars are stopped at a number of places for partial unloading; and that the nature of the business is such that the dealer has to handle about ten different materials and must ship in the pool cars for that reason (R. I, 392–393). There are dealers whom he cannot always supply, since the cars almost invariably contain some material for either Brigham or for customers at other points in Utah, or in Idaho or Montana. If possible, cars are shipped with some tonnage in them for Grand Junction, but the difficulty is that such cars must terminate on the Rio Grande, and this seldom can be done. Therefore, the only alternative is to ship to Grand Junction in less-than-carload lots, which is prohibitive (R. 392–396).

A retail dealer in monuments at Grand Junction, Colo., supported the testimony of the foregoing witness. He stated that he retails monuments in eastern Utah, western Colorado, and northwestern New Mexico and that it would be very beneficial to him to be able to get pool cars, which he is not now able to do; that he has to buy full carloads on certain items, which results in overstocking; that, if he could have pool car stock delivered, his inventory would be smaller and it would enable him to expand his market considerably (R. I, 398–399); that it fre-

quently happens that he must forego business because the wholesaler cannot readily sell him a part car (to stop in transit at Grand Junction to partially unload) since the cars contain tonnage for others north of Ogden. Such part-car shipments as he gets are included in cars which terminate on the Rio Grande, while if pool cars were operated it would enable him to sell in the Northwest area (R. I, 400). On cross-examination, he stated that he could not do business at a profit unless he could get the materials at a carload rate and that if he has to ship everything at a less-than-carload rate he would have to cease his business (R. I, 403–406).

3. As to the circuity of the Rio Grande's routes

In finding (Neb. R. 73) "that it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation" that the Union Pacific and its connecting lines establish through routes with the Rio Grande on specified commodities originating in the excluded northwest territory, the Commission directed that such routes run only to

> destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, thence immediately

> north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas.

As a result, the through routes which the Commission ordered established will not apply on shipments from the excluded territory to points in Colorado east of and including the Colorado common points, Kansas (except Kansas City), Nebraska (except Omaha), North and South Dakota, Minnesota, Wisconsin, and those portions of Iowa and Illinois which lie north of the route of Union Pacific and the Chicago and North Western between Omaha and Chicago.

This ultimate finding was based primarily on differences in operating conditions over the Union Pacific routes and over the Rio Grande routes via Ogden. Thus, the Commission made the following findings in its report (Neb. R. 71–72):

> The differences in the distances between the Union Pacific routes through Wyoming, on the one hand, and the Rio Grande routes sought, on the other, using Boise, Idaho, as a representative point in the excluded territory, vary approximately from 95 miles or 11 percent to Denver, short-route distance 880 miles; 200 miles or 14 percent to Kansas City, 1,410 miles; 211 miles or 8 percent to New York, N. Y., 2,691 miles; 200 miles or 9 percent to Atlanta, Ga., 2,289 miles, to 33 or 35 miles,

or 2 percent, to New Orleans, and to Fort Worth and other points in the Southwest, with short-route distances varying from 1,612 miles at Oklahoma City to 2,282 miles at New Orleans. From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the Northern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and range up to more than 50 percent, than the short routes. From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska, except Omaha, the short-route distances are less than 1,000 miles. We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls between the excluded territory, on the one hand, and points in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago

& North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United States east and south of the points and territory above described, the differences in the transportation conditions are, in general, spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar.

There was evidence that there is much greater curvature in the Rio Grande line than in that of the Union Pacific, and that the total rise and fall in feet on the Rio Grande is 66.3 per cent greater than that of the Union Pacific.

Extensive evidence as to the circuity of Rio Grande's routes was summarized by the Commission in the form of the following table showing representative destinations and distances from McCammon, Idaho, over routes using the Rio Grande from Ogden to Denver, as compared with distances over routes using the Union Pacific through Wyoming (Neb. R. 40):

From McCammon, Idaho to—	Via Union Pacific	Distance	Via Rio Grande	Distance	Difference	Circuity via Rio Grande
		Miles		*Miles*	*Miles*	*Percent*
Omaha, Nebr	(1)	1,036	(2)	1,255	219	21.1
Kansas City, Mo	(3)	1,153	(3)	1,352	199	17.2

[5] Union Pacific to Ogden, Rio Grande to Pueblo.
[6] Union Pacific to Denver, Colorado & Southern to Sixala, N. Mex.

4. As to the rate situation at the Utah common points

The Commission found (Neb. R. 74):

> That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the Act.

The Bamberger Railroad is an electric railroad operating 36 miles between Ogden and Salt Lake City, points which are also served by the Union Pacific and the Rio Grande. Through routes and joint rates exist on traffic moving to and from points on the Bamberger and from and to

points in the excluded territory via the Bamberger, Ogden and the Union Pacific. However, through routes and joint rates do not exist on traffic moving between the same points over the Rio Grande (R. I, 117). The Commission stated that "it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande" (Neb. R. 73).

The decisions of the district courts

The Colorado Decision. The Rio Grande brought suit in the Colorado district court, seeking to set aside the Commission's order principally on the grounds that (1) the Commission erred in finding that through routes are not in existence via Ogden and the Rio Grande between points in the excluded territory, on the one hand, and the Colorado common points and points east, on the other, and (2) that the refusal of the Union Pacific and its connecting lines to establish competitive joint rates on traffic moving via Ogden and the Rio Grande constituted a violation of Section 3 (4) of the Act. The Colorado district court held that the through routes in question were already established (Col. R. 290, 292). Concluding that the Commission's holding to the contrary had prejudiced the Rio Grande's case (Col. R. 288), the Colorado court remanded to the Commission so that it might determine

whether broader relief should be granted (Col. R. 292).

The Nebraska Decision. The Union Pacific and its connecting lines brought suit in the Nebraska district court, seeking, on various grounds, to set aside the Commission's order insofar as it directed them to establish through routes and joint rates with the Rio Grande. The Nebraska court sustained the Commission's order establishing through routes and joint rates over the Rio Grande for particular commodities, in carloads, originating in the excluded territory "consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, which require in-transit privileges incident to reshipment to points east of Denver, Pueblo and Trinidad" (Neb. R. 167). The court also sustained the Commission's order as to shipments of marble and granite monuments from points in Vermont and Georgia to points in the excluded territory "which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest [excluded] area" (*ibid.*). Thus, the Nebraska court modified the Commission's order insofar as the order required the establishment of through routes and joint rates on shipments of the specified commodities which do not require unloading or in-transit privileges on the Rio Grande.

The Nebraska court also sustained (Neb. R. 164) that portion of the Commission's order (Neb. R. 74) which found that—

> the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

SUMMARY OF ARGUMENT

I

The Commission found that through routes are not in existence over the Union Pacific and the Rio Grande railroads via the Odgen gateway, between points in the excluded northwest territory and eastern points. Therefore, it approached this case (in which the Rio Grande sought joint rates with the Union Pacific on all through traffic susceptible of movement via the gateway) as one requiring, initially, application of Section 15 (4)—a section which provides that where the establishment of an alternate through route will short haul one of the carriers directed to participate therein (the Union Pacific's situation here) the Commission must determine that certain conditions exist before it may prescribe the new

route. The Commission made ultimate findings meeting the requirements of Section 15 (4). Specifically, it determined that establishment of the prescribed through route for carriage of certain designated commodities was necessary to provide adequate and more economic transportation. The Commission then determined that the establishment of competitive joint rates for these designated commodities, moved over the prescribed alternate route, was necessary and desirable in the public interest—a determination meeting the requirements of Section 15 (3).

The Rio Grande challenged the Commission's order in the Colorado district court because of the Commission's failure to grant broader relief. That court concluded that the Commission had erred in failing to consider the Rio Grande's application free of the limitations imposed by Section 15 (4). In the court's view, a through route via the Ogden gateway already existed and Section 15 (4) was accordingly inapplicable.

A through route, in the statutory sense, does not exist merely because there is a physically practicable route. Carriers are obliged to provide interchange facilities with other lines and to forward and deliver traffic to such other lines. But compliance with this duty does not entail abandonment of a trunk line's right to maintain its long haul as against other carriers which would operate a bridge line and deprive the trunk

line of a portion of that haul. Congress has zealously sought, over the course of many years, to preserve and protect trunk lines against unnecessary short hauling. This is the function of Section 15(4). See *Thompson* v. *United States*, 343 U. S. 549, 555–560.

In short, a route which is physically open may be, for all practical purposes, closed by virtue of the existence of commercial barriers. The fact is that the trunk lines protect, and have already protected, their historic through routes by failing or refusing to join in the adoption of through or joint rates with the numerous lines which are, at one point or another, in a position to serve as bridge lines. Such refusal makes use of the alternate routes more costly and hence non-competitive.

The question decided by the Colorado court was not whether the Ogden gateway should be opened by action of the Commission (and, if so, to what extent). That court decided, in substance, that the Union Pacific, by voluntary action, had already waived the protection afforded by Congress in Section 15(4). We submit that such a waiver is not to be lightly implied. And it should not be implied unless there is a holding out by the trunk line, manifested by conduct which is unequivocal or by a course of business which is fairly representative, to participate in through service over the alternate route. This view finds support in the *Thompson* case, *supra*, though, concededly,

that case is distinguishable on its facts. See, also, *United States* v. *Great Northern R. Co.*, 343 U. S. 562, 574–575.

Special wartime routings and emergency diversions aside, more than 99 percent of the traffic which the Rio Grande seeks the opportunity to carry under joint rates competitive with the Union Pacific's rates has been heretofore moved via the Union Pacific's routes. This is so because even those shippers who would have good reason, all other things being equal, to prefer the Union Pacific-Rio Grande route for particular shipments (*e. g.*, because of the availability of a desired in-transit service at facilities located on the Rio Grande) are deterred by the fact that the combination of local rates which must be paid when the traffic is so routed is prohibitively high. A very small fraction of one percent has moved over the two-carrier route. The Union Pacific has never solicited such traffic (though it has accepted it on through bills pursuant to requests by shippers or other carriers). It appears, moreover, that some or all of this insignificant amount of traffic was routed over the Union Pacific-Rio Grande route because certain individual shippers erroneously assumed that the rates covering transportation via that route were the same as the rates via the Union Pacific routes.

The Commission found that these sporadic and isolated shipments were not sufficient to show a

holding out by the Union Pacific to join in a through route with the Rio Grande and that they were in no sense representative of the Union Pacific's course of business. A detailed examination of the subsidiary findings and evidence upon which this ultimate finding was rested shows that it has a substantial basis. The Colorado court accordingly erred in setting this finding aside and in substituting its independent judgment.

II

In a suit, brought by the Union Pacific (grounded on the contention that the Rio Grande is not entitled to any relief), the Nebraska district court modified the Commission's order. We take issue with that modification insofar as it narrows the measure of relief granted by the Commission in relation to the carriage of designated agricultural commodities (fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs). In other respects, we do not challenge the decision.

The Commission's order directed, *inter alia*, the establishment of through routes and competitive joint rates for the eastbound carriage, via the Ogden gateway, of the above-named agricultural products. This was rested upon an ultimate finding that establishment of such routes and rates was "necessary and desirable in the public interest, in order to provide adequate and more economic transportation * * *."

The Commission's reason for granting the relief in question fall into two categories, the one having to do with in-transit privileges, the other with reconsignment privileges.

Shippers of the designated agricultural commodities are faced with the need of procuring various types of in-transit services (washing, sorting, processing, etc.) while their produce is en route to market. The privilege of stopping carloads in transit for the purpose of securing such services is afforded by the Rio Grande. Many classes of shippers having need for these services are prevented, however, from making use of the facilities and privileges which are available on the lines of the Rio Grande, because, in the absence of joint rates between that railroad and the Union Pacific, the commodities can subsequently be reshipped to eastern markets only at prohibitively high combination rates. Similarly, processors and dealers served only by the Rio Grande are prevented from participating in the marketing of such commodities.

There is further and distinct need on the part of the shipping public in connection with the marketing of the designated commodities. They are perishable or semi-perishable commodities. Moreover, the markets to which they are shipped are fluid, prices being subject to rapid fluctuation. Shippers and dealers customarily meet the special economic problems

incident to trading in these markets by taking advantage of the reconsignment privileges which the railroads widely extend. The ability of shippers and dealers to participate fully and effectively "in the widespread system developed for the marketing of such commodities", necessarily depends upon the availability of numerous and flexible routing arrangements. Thus, if there is a sudden need, because of a shift of market conditions, to reconsign a shipment which has reached a point at which combination rates, rather than joint rates, apply, it may be necessary to dispose of the produce at forced or distress prices. Reconsignment in this situation may be unavailing because the shipper will probably be unable to meet the competition, at other points, of those who have obtained the advantage of joint through rates. The Commission found that numerous shippers of agricultural commodities originating in the excluded northwest territory are being deprived of effective participation in the marketing system because of the absence of joint rates via the Union Pacific and the Rio Grande to markets beyond the Rio Grande—a lack which precludes their use of reconsignment privileges which the Rio Grande extends. In this respect, also, the Commission found that the Ogden gateway should be opened in the interest of providing adequate and economic transportation.

The Nebraska court held that the Commission might appropriately consider the shipping public's need for in-transit services in determining whether existing transportation is adequate and economic. However, the court ignored the important factor of reconsignment privileges. The modification which it effected by its order reflects its consideration of the one factor and its failure to consider the other. Thus, the court's order upheld through routes and joint rates on the agricultural commodities in question when routed from points in the northwest area to initial points of destination on the Rio Grande for the purpose of obtaining in-transit services at those points. But, under the decision, joint rates on these same commodities will not be available in other circumstances.

The Nebraska court thus held, correctly we believe, that the concepts of adequacy of transportation and economy of transportation embrace the needs of the shipping public, and that, given such needs, the Commission may open up an alternate route, even though the carrier which will be thereby short hauled performs an efficient service on its own line. *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, 592–593. The court erred, however, in taking account of the needs of particular shippers for in-transit services while ignoring the no less pressing need of many shippers for reconsignment privileges from which

they are presently excluded by the lack of competitive rates. An examination of the Commission's subsidiary findings and of the evidence shows that this difference in treatment, on the part of the court, whether it was intentional or inadvertent, was unwarranted. The record demonstrates that both types of need exist and that the Commission's order, so far as it relates to the designated agricultural commodities, should not have been narrowed.

ARGUMENT

Introduction

A single order of the Interstate Commerce Commission is involved in these appeals. In its principal aspects, that order requires the Union Pacific and the Rio Grande railroads to establish through routes and joint rates for the carriage, between specified territories, of certain designated commodities (chiefly livestock and perishable agricultural products). The practical effect of the order is to establish rates for those commodities, when carried over the opened route, which will be competitive with the prevailing rates on such traffic when carried over the Union Pacific routes (*i. e.*, when carried without participation by the Rio Grande).

The order involved is narrower in scope than the relief sought by the Rio Grande, which had petitioned the Commission to establish joint com-

petitive rates on *all* commodities moving to and from the so-called excluded territory. It is broader than the Union Pacific desired, since it has been that carrier's position that the Commission lacked basis for prescribing through routes and joint rates with the Rio Grande in respect of *any* commodity.

Both carriers sought relief from the Commission's order, though in different forums. In the suit brought by the Rio Grande in Colorado, the district court held that the Commission had erred in concluding that through routes did not already exist. Holding further that this prejudiced the Rio Grande's case before the Commission, that court remanded to the Commission so that it might determine, "free of any of the limitations imposed by § 15 (4) with respect to establishing through routes" (Col. R. 294), whether the Rio Grande was entitled to the full relief which it had sought.

In the suit brought by the Union Pacific before the Nebraska district court, there was, of course, no challenge by the complainant to the Commission's determination that through routes did not already exist. The claim, rather, was that the evidence and findings did not meet the statutory criteria which must be satisfied before such routes and rates may be established by the Commission. The court found that the evidence and findings supported the Commission's order only in part, and it modified the order accordingly.

Since it was a premise of the Commission's order that through routes for the carriage of the commodities in question were not already in existence, we consider that issue first.

I. The Commission correctly held that through routes are not in existence over the Union Pacific-Rio Grande via the Ogden Gateway

A. The statutory criteria

The Commission held (Neb. R. 33) "that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation."[7]

[7] It also stated, in similar vein (Neb. R. 29-30):

"The first question for our determination, therefore, is whether or not the present routes by way of the Ogden gateway constitute 'through routes' as that term is used in section 15 (3) and (4) of the act. As above stated and as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess."

"Through routes," as used in the Interstate Commerce Act, is a term of art. While a through route presupposes physical interconnection between two carriers, the mere connection of two carriers does not show that a through route exists in the statutory sense. Indeed, it is plain that connecting carriers are not subject to the duty of forming through routes in any and all circumstances. *Thompson* v. *United States*, 343 U. S. 549, 553–558. Thus, Section 1 (4) of the Act significantly states that "It shall be the duty of every common carrier * * * to establish *reasonable* through routes with other such carriers * * *" (emphasis added). Carriers are also required to afford reasonable facilities "for the interchange of traffic" with connecting lines and "for the receiving, forwarding, and delivering" of traffic to those lines. Section 3 (4). The duty to interchange and forward, however, falls short of a duty to join in a through route.

The existence of a through route requires, in addition to physical interconnection, that "the participating carriers hold themselves out as offering through transportation service," *Thompson* v. *United States*, *supra*, at 557. Such a "holding out" is most readily and unequivocally manifested when two connecting carriers, by voluntary action, publish rates, whether they be joint rates or so-

called proportional rates,[9] which are less than the aggregate of their respective local rates.[9] It may also be clearly manifested by other conduct, such as open solicitation of through traffic to be carried over a particular route.

The many existing through routes in this country have been established largely by voluntary action of the carriers. See *Thompson*, *supra*, at 554. In the simplest situation, *e. g.*, where railroad A has trackage between points 1 and 2, and railroad B has trackage between points 2 and 3, the railroads invariably offer in unequivocal terms a through service between points 1 and 3. Quite frequently they publish a rate for such transportation which is lower than the aggregate of the local rates between points 1 and 2 and points 2 and 3.[10]

---

[9] In *United States v. Great Northern R. Co.*, 343 U. S. 562, 566, n., the Court stated: "When a through rate consists of a combination of rates for intermediate distances, the rate for one segment of the shipment is referred to as a proportional rate where * * * that rate is lower than the local rate over that segment."

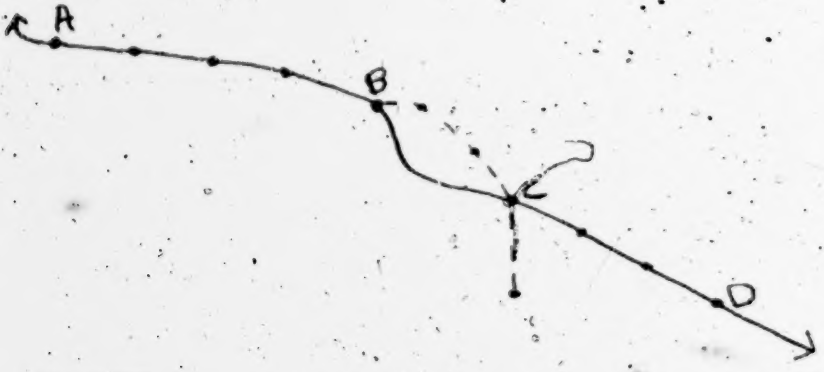
[9] Here, as we note *infra*, a shipper routing traffic over the Union Pacific-Rio Grande route would have been obliged to pay a combination rate consisting of the aggregate of the local rates, and such rate would have been far higher than the joint rate available over the Union Pacific routes.

[10] Of course, charging a combination of local rates would not disprove the existence of a through route. Existence of such a route might also be inferred from movement of a substantial amount of traffic on through bills of lading. Thus, this Court observed in *St. Louis Southwestern Ry. Co. v. United States*, 245 U. S. 136, 139:

"A 'through route' is an arrangement, express or implied,

The vexing problem—one which has occupied the attention of the Congress, the Commission, and the courts for a good many years—is presented by the situation where there are alternate physical avenues available over which traffic may be routed.

This situation may be illustrated by a simple diagram.



between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a 'through rate.' This 'through rate' is not necessarily a 'joint rate.' It may be merely an aggregation of separate rates fixed independently by the several carriers forming the 'through route'; as where the 'through route' is 'the sum of the locals' on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation. * * *"

The Commission decision in *Through Routes and Through Rates*, 12 I. C. C. 163, 166–167, to which this Court referred in the *St. Louis Southwestern* decision, stated that the existence of a through route is a "question of fact" and that "such incidents as the billing, the transfer from one carrier to another, the collection and division of transportation charges * * * and other like incidents of the transaction may properly be depended upon for guidance as to the existence of a through route."

The carrier represented by the solid line, we shall suppose, is a trunk line operating between A and D and points beyond. It has a junction at B and C with a short line, represented by the broken line. Let us assume that the short line, quite naturally, would like to share in hauling, between points B and C, eastbound traffic moving on the trunk line from A toward D and westbound traffic moving on that line from D toward A. Let us assume further, however, that the trunk line, also quite naturally, wishes to avoid giving up a part of its long haul and that it quotes through rates for this traffic moved via its lines while refusing to establish competitive through or joint rates on such traffic moved via the short line. May the Commission, in such circumstances, compel establishment of a through route and competitive joint rates on such traffic moved via the short line's tracks?

On this point, Congress has spoken in Section 15 (3) and (4) (*infra*, pp. 91–94). Under Section 15 (3), Congress has granted the Commission the broad power to establish, "whenever deemed by it to be necessary or desirable in the public interest," through routes and joint rates. This power, however, is qualified by Section 15 (4).

The latter provision states in substance that a carrier shall not be compelled to participate in a through route where the effect will be to short

haul if," unless (a) the existing route is unreasonably long (not the situation in the instant case) or (b) "the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation."[11]

In the instant case, the Commission found that, so far as transportation of the particular designated commodities was concerned, it was necessary and desirable in the public interest, in order to provide adequate and more economic transportation, to prescribe the establishment of through routes and competitive joint rates. The Colorado court held, however, that the Commission erred in considering Rio Grande's application in terms of ability to meet the criteria stated in Section 15 (4). It was that court's view that the Union Pacific, by voluntary action, had engaged in a course of conduct which evidenced consent to the creation of a through route with the Rio Grande and that accordingly the question

[11] Short-hauling, in the words of Section 15 (4), is to "require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route."

[12] Additional provisos in Section 15 (4) are not immediately pertinent. A brief history of the evolution of the so-called short-hauling provisions is found in *Thompson v. United States*, *supra*, at 554–557.

before the Commission should have been decided exclusively by reference to the criteria stated in Section 15 (3), free from the limitations imposed by Section 15 (4).

On this aspect of the case, the question may be restated as follows: What course of conduct sufficiently establishes that a carrier has consented to establishment of a through route? Or, otherwise phrased, when does a carrier waive the protection against short hauling which Congress has carefully written into Section 15 (4)?

Thompson v. United States, supra, was a case in which the trunk carrier quoted through rates on traffic originating on or destined for an intersecting short line when such points were not also served by the trunk line. The essential situation there presented may be stated in terms of the diagram appearing above. Let us suppose that the trunk line pictured in the diagram offered through service from A to B and thence, via the short line, to points on the short line falling short of and not including C. Such a holding-out, *Thompson* teaches, does not constitute an offer to provide through service via the short line as between points B and C.

In the instant case, unlike *Thompson*, *some* traffic (a small fraction of one per cent) actually moved via the Rio Grande between the equivalents of points B and C (that is, moved between excluded territory and common points or be-

yond). This led the Colorado district court to conclude that a through route was already open. But this Court, in *Thompson*, did not hold that if some traffic had moved between B and C it would necessarily follow, irrespective of the amount of the traffic and of the circumstances under which the transportation was performed, that a through route was open—a question which it had no occasion to reach. The Court did indicate, quite clearly we believe, that whether a carrier had acted in such a manner as to hold out through service would depend upon whether the carrier's "course of business" (343 U. S. at 557) negatived or affirmed a readiness to join in through service with the other carrier concerned. The Court's opinion also reflects approval of the Commission's expressed view that a determination whether the routing of shipments over lines of two connecting carriers manifests a holding out to perform through service depends upon an evaluation of all the incidents of the transportation (*ibid.*).[23]

The difficulty in stating categorically whether a through route exists in a particular case inheres, then, in this circumstance: a route physically

[23] In *Thompson*, p. 557, n., the Court also referred to *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, as a case in which "the Commission held that proof of one shipment on a through bill of lading over a certain route was not sufficient to show the existence of a through route because that one shipment was not representative of the carriers' course of business."

open and available for the performance of a through service may be, practically speaking, closed (or virtually closed) by reason of commercial barriers. There are, for example, literally countless routes by which an ingenious shipper might specify the carriage of a carload of goods from New York to Chicago; provided, of course, he were willing to pay an aggregate of rates far higher than the through rate he might enjoy by accepting carriage over an ordinary, established through route. To establish that some shipments have moved between New York and Chicago over many of these variant, physically open routes would not establish that those routes are, in any meaningful sense, open through routes. The simple truth of the matter is that the trunk lines protect, and have always protected, their historic through routes by failing or refusing to join in the adoption of through or joint rates with the numerous lines which are, at one point or another, in a position to serve as bridge lines and to deprive the trunk carriers of their long hauls.[7]

[7] The views expressed in this paragraph are not in conflict, as the district court apparently believed (4 Col. R. 291), with *Virginian R. Co. v. United States*, 272 U. S. 658. There it was held that a through route existed despite the fact that it was commercially closed to some of the lines located in the origin territory, but only because the route was open to numerous other lines similarly situated. See the reference to the *Virginian* case in *Thompson v. United States*, *supra*, at 560, n.

The Commission's view, as expressed in its report (Neb. R. 32), is that sporadic and isolated shipments which take place over a route despite the existence of commercial barriers—shipments which occur for special reasons and in exceptional circumstances, such as ignorance or inadvertence, or unusual and transitory needs, on the part of a few individual shippers who specify abnormal routing—do not show, in and of themselves, that a through route is open. The Commission must consider the totality of circumstances in order to determine what is truly representative of the carriers' course of business. It is also the Commission's view that if a trunk line opens a route for carriage of a particular commodity by quoting a through rate on that commodity in recognition of the fact that special needs of a particular class of shippers justify abnormal routing of that particular commodity, it does not follow that there is an existing through route open for carriage of other commodities as to which the carrier does not purport to make through service available.[15]

These views find full support in the statutory scheme, for to hold otherwise would necessarily

[15] As noted, *infra*, the Union Pacific voluntarily quotes through rates with the Rio Grande on sheep and goats. Note, also, that the Commission has, on various occasions, prescribed through routes on a single commodity without opening those routes to all commodities. See, *e. g., D. A. Stickell & Sons, Inc.* v. *Alton R. Co.*, 255 I. C. C. 333; *Adriance Irvain Co.* v. *Ann Arbor R. Co.*, 276 I. C. C. 334.

tend to undermine the protection which Congress has so zealously sought to preserve for a carrier's long hauls. See *Thompson, supra*, pp. 554–557. Moreover, as this Court emphasized in *United States* v. *Great Northern R. Co.*, 343 U. S. 562, the Commission's power to alter the patterns of traffic and to divert the flow of traffic from one route to an alternate physical route (by means of prescribing through routes and joint rates) is more circumscribed than its power to divert revenues (by means of prescribing joint rates and divisions thereof) as between two carriers which already participate in a through route.[16]

---

[16] The *Great Northern* case turned on a proviso which appears in Section 15 (4) (*infra*, p. 93) and reads as follows:

"No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

This language, the Court held, did not bar the Commission, in a case involving two carriers (one a feeder and the other a trunk line) which had an existing through route, from prescribing joint rates and divisions thereof for the purpose of providing financial assistance to the feeder line. Had no through route existed, however, the Commission could not have prescribed such a route with a view to accomplishing that purpose. The Court observed that "[i]t is one form of regulation to redistribute revenues between connecting carriers by determining divisions of revenues received on existing through routes. The economic ramifications are quite different if the Commission establishes through routes which divert traffic to the lines of a financially weak carrier." 343 U. S. at 574.

It follows that when the Commission proposes, by rate-making, to divert substantial traffic from the route over which it normally moves to a route over which it does not ordinarily flow, it must find, preliminarily, one of two things: it must find, on the basis of clear and persuasive evidence, that a through route already exists; or it must find, if it concludes that there is no existing through route, that the conditions specified in Section 15 (4) are satisfied and that such a route may be properly prescribed. It may not lightly set aside the protection provided trunk carriers by Section 15 (4). *Great Northern, supra,* at 574–575.

With these criteria in mind, we turn to the question whether the Commission, on the particular facts and findings in this case, properly concluded that a through route was not already open and that Section 15 (4) accordingly applied. We add only that the Commission's judgment on that question, largely factual in nature, is plainly entitled to great weight and should not be disturbed unless found to be arbitrary. Cf. *Board of Trade* v. *United States,* 314 U. S. 534, 546–548.

B. The application of the statutory criteria to the facts of this case

In the instant case, the Commission held that the existence of through routes was not established by proof of the following: (1) 37 eastbound carloads of commercial shipments, in 1948, from the excluded territory, via Ogden and the

Rio Grande, to points in Utah and Colorado served by both the Union Pacific and the Rio Grande, and 18 westbound carloads of commercial shipments, in 1948, from points east of Colorado, via the Rio Grande and Ogden, to the excluded territory; (2) the Rio Grande's diversion of freight traffic from regular through routes in which it participated, to the Union Pacific; via Ogden or Salt Lake City, pursuant to service orders of the Commission issued during World War II; (3) World War II movements of troops and military supplies from the east and south to destinations in the northwest (excluded) area via Rio Grande-Ogden-Union Pacific; or (4) temporary, emergency diversions, because of snow conditions, from the Union Pacific to the Rio Grande, via the latter's Denver and Utah gateways, of traffic to and from the excluded territory.

During the representative year 1948, only a total of 55 carloads of commercial shipments moved eastbound and westbound at combination rates, over the Rio Grande, to or from points in the excluded territory, on the one hand, and the Utah or Colorado common points (or beyond), on the other. There is no evidence that any one of these shipments via the Rio Grande was solicited for movement over the Rio Grande by the Union Pacific or any of the connecting carriers with which it maintains through routes and joint rates. To the contrary, there is substantial evi-

dence that all or some of these shipments via the Rio Grande, at combination rates higher than the joint rates applicable via the Union Pacific, were so routed over the Rio Grande through the ignorance or inadvertence of shippers or originating carriers (Statement, *supra*, pp. 14–15). Obviously, shipments routed via the Rio Grande through ignorance or mistake by shippers or originating carriers do not constitute a "holding out" by the Union Pacific of a through transportation service with the Rio Grande. The routing of these 55 carload shipments via the Rio Grande is not to be regarded as a "course of business" on the part of Union Pacific, since, as the Commission noted (Neb. R. 32), these isolated shipments must be "compared with many thousands in both directions in the same year [1948] from and to the same points at the joint rates over the Union Pacific routes."

Such isolated commercial shipments are in the same category as the isolated shipment which, in *Beaman Elevator Co.* v. *Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, was held to be insufficient proof of the existence of a through route. This principle of *de minimis*, in the determination of the existence of a through route apparently was approved by this Court in the *Thompson* case. Its application by the Commission to the facts of this case is reasonable.

During World War II, substantial shipments from points in the south and east were initially

routed to points in the northwest (excluded) territory via Rio Grande-Ogden and carriers other than the Union Pacific (such as the Southern Pacific). Pursuant to wartime service orders of the Interstate Commerce Commission and the Office of Defense Transportation, Rio Grande diverted many of such shipments to the Union Pacific at Salt Lake City or Ogden. These shipments were diverted by Rio Grande and were accepted by Union Pacific under compulsion of law. They do not represent an agreement between carriers for the establishment of through routes, as contemplated by Section 1 (14) of the Interstate Commerce Act. Similarly, the mandatory diversion or interchange of such shipments did not manifest any "holding out" or "course of business" by the Union Pacific to maintain through routes with the Rio Grande via Ogden. As the Commission concluded, such interchanges under governmental compulsion "show only that the Rio Grande routes were physically practicable" (Neb. R. 32), and have no bearing, under the *Thompson* case, on whether "through routes" are in existence.

No greater significance attaches to the initial routing and movement via Rio Grande-Ogden-Union Pacific of mixed trains of troops and military supplies from the south and east to points in the excluded area. These were wartime emergency movements, the routing of which was actually beyond the control of either carrier.

In February 1949, snow conditions on Union Pacific's main line through Wyoming forced it to divert to the Rio Grande, through Ogden on the west and Denver on the east, freight and passenger traffic from and to the excluded territory. However, it is clear that such diversion by the Union Pacific, and the acceptance and delivery of such diverted traffic by the Rio Grande, represented no more than the cooperation in emergencies which is happily commonplace in American transportation. Moreover, it was done under the actual or potential compulsion of the Commission's emergency powers under Section 1 (15) and (16).

We submit that the Colorado district court erred in finding, on the basis of the isolated or emergency shipments discussed above, a "continuous use of the Rio Grande route in the movement of traffic to and from the closed door area at through combination rates, without objection of the Union Pacific or participating railroads, * * * although the volume of traffic involved is comparatively small" (Col. R. 288). In arriving at this conclusion, the district court relied upon statements of Union Pacific representatives that shippers had the right to specify routing via the Rio Grande at combination rates to and from the excluded area. From this, the district court concluded that through routes must be in existence, on the theory that under Section 15 (8) of the Act a shipper

can specify routing only over an existing through route (Col. R. 288).

We believe that the district court's analysis overlooks economic realities. As the Commission found (Neb. R. 32), the Union Pacific's "whole course of conduct * * *, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic." Under these circumstances, Union Pacific's acceptance of isolated shipments on bills calling for routing over the Rio Grande hardly proves a "holding out" that it maintains through routes with Rio Grande. Moreover, there was evidence that such shipments via the Rio Grande were routed by shippers or originating carriers who did not know that joint rates did not apply on the Rio Grande (Statement, *supra*, pp. 14–15). There was no evidence that any of these shipments were made by a shipper who was aware that routing via Rio Grande would be at the higher combination rates.

Similarly, we think that the Colorado district court erroneously concluded from the fact that Union Pacific maintains through routes and rates with the Rio Grande on shipments of sheep and goats that through routes existed for commodities generally. The establishment, either voluntarily or pursuant to an order of the Commission, of a through route for a particular commodity, in recognition of a special need of shippers, does not

create a through route for commodities generally (see *supra*, p. 66). It is not a "holding out" to maintain through routes on all commodities or to all points. *Thompson* v. *United States, supra.*

The Colorado court also found proof of the existence of through routes in the wartime routings and diversions of traffic and in the emergency routings in February 1949. It reasoned that the fact that "the Commission did not invoke its authority under § 15 (4) of the Act to establish temporary through routes * * * indicates that the Commission assumed that through routes were already in existence" (Col. R. 289).

We submit that it should be completely immaterial whether the Commission established temporary through routes before it directed such wartime and emergency routings and reroutings of traffic. Union Pacific was doubtless aware that if it had raised the objection that neither regular nor temporary through routes were in existence, the Commission would have exercised quickly its powers under Section 15 (4) to establish temporary through routes. Clearly, Union Pacific incurred no legal disability because it cooperated in such wartime and emergency traffic movements.

In sum, the Commission was fully justified, on this record, in finding what every informed commercial shipper has long recognized: that the Ogden gateway is closed to traffic to and from so-called excluded territory.

II. The Nebraska district court erroneously narrowed the scope of relief granted by the Commission's order

A. The factors upon which the Commission relied were appropriate under the Act

The Commission's order (Neb. R. 21) opened up the Ogden gateway so as to permit the carriage at competitive joint rates, via the Union Pacific and the Rio Grande, of various designated commodities (ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs) moved, in carloads, from the excluded northwest territory to other specified territory.[17] This was based upon an ultimate

[17] The Commission's order did two other things as well: (1) it established a through route and joint rates, via the Union Pacific and the Rio Grande, for the carriage of granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area (Neb. R. 22); (2) it directed the Union Pacific to eliminate the discrimination, found violative of Section 3 (4) (*infra*, p. 91), which resulted from maintaining joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad, south of Ogden, on the other hand, while refusing to participate in like rates to and from *the same points* on the Rio Grande (Neb. R. 22).

The Nebraska district court sustained the portion of the order relating to granite and marble monuments as to shipments "which require unloading and in-transit privileges at points on the Rio Grande incident to the continuation of the shipment to the northwest area" (Neb. R. 167). This limitation is consistent with the Commission's rationale (Neb. R. 51–52), and we do not question its propriety.

In addition, the Nebraska court sustained, without any modification, the direction to the Union Pacific to cease dis-

finding, meeting the requirements of Section 15 (3) and (4), that establishment of such through routes and joint rates was "necessary and desirable in the public interest, in order to provide adequate and more economic transportation * * * " (Neb. R. 73). While various members of the Commission would have ordered relief on a broader scale, *i. e.*, would have included additional commodites, there was no disagreement on the proposition that need for relief in respect of the designated commodities was fully established by the record.

The Commission's reasons for granting the relief described in the preceding paragraph fall into two categories, the one having to do with transit privileges, the other with reconsignment privileges.

Shippers and dealers in the designated commodities have an important need for various types of in-transit services, *e. g.*, the grazing and fattening of livestock, and the preparation and processing of foodstuffs, en route to market. The privilege of stopping carloads in transit for the purpose of securing such services is afforded

---

crimination as between the Rio Grande and the Bamberger in relation to points which they commonly serve. The Commission had found that there was no "important dissimilarity" which would justify the Union Pacific's distinction in treatment (Neb. R. 73), and the district court found that "[u]pon this record that factual conclusion may not be disturbed" (Neb. R. 165).

by the Rio Grande. Many classes of shippers having need for these services are prevented, however, from making use of the facilities and privileges which are available on the lines of the Rio Grande, because the absence of joint rates between that railroad and the Union Pacific makes the cost of routing the traffic over the Rio Grande prohibitive. As to such traffic, the Commission concluded, growers and shippers in the excluded territory are deprived of access to the markets represented by processors and dealers who are served only by the Rio Grande and who reship such commodities to points beyond the Rio Grande. Similarly, processors and dealers served only by the Rio Grande are deprived of an opportunity to handle agricultural products from the excluded territory. (Neb. R. 57–60, 70.)

The Commission also found that there is a further important need on the part of the shipping public in connection with the marketing of the designated agricultural commodities. The perishable or semi-perishable nature of these commodities, taken in conjunction with the fluidity of the markets to which they are transported, creates special economic problems which can only be satisfactorily resolved if there is great flexibility in the transportation system. Shippers and dealers customarily meet these economic problems by taking advantage of the reconsignment privileges which the railroads

generally extend. For example, a shipment of produce originating in the northwest may be marked at the outset for a destination in the east but reconsigned, one or more times, while en route, so as to reach a destination, perhaps ultimately in another section of the country, such as the southeast, where it may be disposed of with profit. The ability of shippers and dealers to participate effectively "in the widespread system developed for the marketing of such commodities" (Neb. R. 70)—a system "complex but efficient" (Neb. R. 69)—necessarily depends upon the availability of numerous routing arrangements. Thus, if there is a sudden economic need, because of a shift in supply and demand, to reconsign a shipment which has reached a point at which combination rates, rather than joint rates, apply, it may be necessary to dispose of the produce at forced or distress prices. Reconsignment in this situation may be of no avail because the shipper will probably be unable to meet the competition, at other points, of those who have obtained the advantage of joint through rates. The Commission concluded, in the instant case, that numerous shippers of perishable and semi-perishable commodities originating in the excluded northwest territory are being deprived of effective participation in the marketing system by virtue of the lack of joint rates as between the Union Pacific and the Rio Grande—a

lack which substantially precludes the use by these shippers of reconsignment privileges which the Rio Grande extends. In this respect, also, the Commission concluded that the Union Pacific routes, alone, are inadequate and that the interests of the economy would be served by opening up the Ogden gateway so as to permit participation by the Rio Grande.

The Nebraska district court found that the Commission might appropriately consider the shipping public's need for in-transit services in determining whether existing transportation was adequate and economic. The court's opinion, however, ignores the factor of reconsignment privileges. And the court stated in its findings of fact (Finding of Fact II, Neb. R. 166):

> The record supports the Commission's finding that present transportation service between the northwest area and points of initial destination on the Rio Grande (not also served by the Union Pacific between Ogden and Provo) is inadequate and also inefficient and uneconomical as to shipments of the commodities specified by the Commission from the northwest area to initial points of destination on the Rio Grande west of Denver, which require in-transit privileges enabling their reshipment on joint through rates to points of final destination east of Denver.[18]

[18] See, to similar effect, Conclusion of Law II, Neb. R. 167.

The Nebraska court has held, in short, that if one of the designated agricultural commodities is routed initially to a point on the Rio Grande, so that it may receive certain in-transit service (*e. g.*, processing) at that point, joint rates will apply. They will not apply, however, under the decision, to these same commodities routed over the Rio Grande in other circumstances. Thus, the Commission's order is considerably narrowed and the factor of reconsignment privileges, which was a basic feature of the Commission's rationale, finds no expression in the order as modified. We challenge the court's modification insofar as it bears on the establishment of through routes and joint rates for the designated agricultural commodities.

Before turning to a consideration of the Commission's subsidiary findings and the supporting evidence (which show, we believe, that the court was unwarranted in thus narrowing the order), we would emphasize that, from the standpoint of legal significance under the statute, no distinction can properly be drawn between the needs of shippers for in-transit services and their need for reconsignment privileges. Both, in our view, are factors which may be appropriately considered by the Commission in determining

whether existing transportation is adequate and economic.[19]

Congress has not limited the authority of the Commission to establish an alternate through route to the situation in which the existing route is unreasonably long, or to the situation in which the carrier which operates the existing route is providing inadequate or inefficient service on its own line. The Commission may also direct the establishment of the additional through route (and accompanying joint rates) because such additional route is needed, however efficiently the existing route may be run, to provide "adequate, and * * * more economic, transportation" (Section 15 (4)). Adequate transportation and economic transportation, in other words, are concepts which take into account the broad needs of the shipping public. Indeed, the concept of adequacy of transportation, this Court unanimously held in *Pennsylvania R. Co.* v. *United States*, 323 U. S. 588, 592–593, "would seem to apply only to the interest of the shipping public," while the term

[19] We are not suggesting, of course, that the Commission may open up additional routes merely by indulging in the abstract hypothesis that, from the standpoint of flexibility, two are better than one, three are better than two, etc. We rely, as shown *infra*, upon specific findings that specific classes of shippers have substantial present needs for the alternate route which would be provided under the Commission's order.

economic transportation may embrace both shippers' and carriers' interests. Plainly, then, the Commission's recognition, in the instant case, that the Union Pacific provides good service on its own lines is no bar to an order which holds that the needs of certain classes of shippers justify, as to certain commodities, the establishment of an additional through route and of the accompanying joint rates which will make that route accessible.[20]

[20] In the preceding discussion, we have put aside, as we shall in the portion of the brief which follows, the Commission's finding that the failure of the Union Pacific to join in the establishment of joint rates with the Rio Grande has been unduly prejudicial of shippers and receivers of the designated commodities using the Rio Grande and unduly preferential of shippers and receivers using the Union Pacific routes, in violation of Section 3 (1) of the Act (*infra*, pp. 90–91). The district court held this ultimate finding legally insufficient because it was of the view that Section 3 (1) prohibits only preference and prejudice to persons or localities on the lines of the same carriers, and is not applicable if the persons or localities receiving the preference are served by a different carrier than those subject to prejudice. For the reasons summarized in our Jurisdictional Statement in No. 119, pp. 11–12, we believe that the court erred in this respect. However, we find that, in the context of the present case, the central findings which show that members of the shipping public have been prejudiced by inability to use the Rio Grande similarly show that the existing transportation is not adequate or economic. Thus, the result here appears to us to be the same whether the case is analyzed strictly in terms of Section 15 (3) and (4), or whether one looks also to Section 3 (1). For the sake of simplicity of presentation, we turn to an analysis of the facts in terms of Section 15 (3) and (4), stating, at the same time, our conviction that this Court should not approve the view expressed below by the Nebraska court as to the scope of Section 3 (1).

B. The Commission's findings and the evidence justify the through routes and joint rates which it prescribed for agricultural commodities

In directing the establishment of through routes and joint rates on particular commodities moving via the Rio Grande to and from the excluded territory, the Commission recognized specific transportation needs of producers, shippers, dealers, and processors of such commodities.

Livestock. The Commission's findings as to livestock originating in the excluded territory may be summarized as follows: livestock (sheep and cattle) produced in the excluded northwest area are considered desirable for feeding and breeding purposes; good pasture lands for grazing livestock are found in areas in Utah and Colorado served by the Rio Grande; persons in these areas engage in fattening livestock, move livestock to the feeding lots, exercise feeding in-transit privileges, and reship stock, on the balance of available joint rates, to other parts of the country; if feeders of livestock at points served only by the Rio Grande desire to buy for feeding purposes livestock produced in the excluded area, they can only move it to their feeding lots and thence to markets beyond the Rio Grande at combination rates higher than the joint rates available to feeders and buyers served by the Union Pacific; thus, the lack of through routes, with competitive joint rates applicable to such routes, for livestock moving from the excluded

territory via the Rio Grande to eastern markets deprives growers in the excluded northwest area of a market for livestock, and deprives feeders in Utah and Colorado of competitive access to feeding stock from the excluded area. The typical evidence set forth in the statement (*supra*, pp. 20–28) clearly supports these findings as summarized above.

Agricultural products (other than livestock). The Commission found, and the record shows, that fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs are produced in the excluded territory and marketed in other parts of the United States. The growers and shippers of these commodities need access to as many markets as possible. Processors and dealers in such commodities who are located on the Rio Grande find it impractical to receive such commodities for storage, packing and other in-transit services because such commodities can move from points in the excluded territory via Ogden to points served only by the Rrio Grande, and thence to markets east of the Rio Grande, only on combination rates. Such processors and dealers are thus at a competitive disadvantage *vis-a-vis* processors and dealers on the Union Pacific who can receive such commodities from the excluded territory and reship them, after in-transit processing, on joint rates. At the same time, growers in the excluded territory are denied

access to the marketing services and facilities served only by the Rio Grande, while the persons providing such facilities and services cannot participate in the handling of such commodities. (Statement, *supra*, pp. 28–36). Thus, it was shown that to make in-transit services on the Rio Grande practically available on such commodities, it is necessary to establish for them through routes via Ogden and the Rio Grande and joint rates applicable to such routes.

The Nebraska court sustained the Commission's findings as to the necessity for through routes and joint rates via Ogden or Salt Lake City and the Rio Grande so as to make in-transit privileges on the Rio Grande available to shippers and receivers of livestock and the other specified agricultural commodities. Accordingly, it held that the Commission could require the establishment of such through routes and joint rates for carload shipments of such commodities "originating in the northwest area, consigned to initial destination points on the Rio Grande west of Denver, Pueblo and Trinidad, *which require in-transit privileges incident to reshipment* to points east of Denver, Pueblo and Trinidad" (Neb. R. 167; emphasis added).

Since the evidence with respect to livestock showed only a need for through routes and joint rates in connection with the exercise of in-transit privileges on the Rio Grande, we do not contest

the Nebraska court's restriction of such routes and rates, in the case of livestock, to shipments requiring in-transit privileges on the Rio Grande. However, we contend that, as to the remaining agricultural commodities, the Nebraska court erred in confining the Commission's relief to shipments of such commodities which require in-transit privileges on the Rio Grande. The court rejected or overlooked the importance to shippers of the right to reconsign or divert such shipments while en route—a right which can be exercised usefully only to the extent that joint rates are available.

The Commission found that in the marketing of agricultural commodities (other than livestock) originating in the excluded territory, it is a common practice to reconsign or divert carload shipments while they are in transit as markets are found and sales are made. While such reconsignment privileges exist over most railroads, it is necessary for shippers to use routes over which joint rates apply so that such shipments may be diverted to the new destinations at joint rates rather than at higher combination rates. If the shipment has moved to a point from which its diversion to a new destination can be made only at a combination rate, it must often be sold at that point at a distress price. Such points are known as pocket markets. For example, all points on the Rio Grande are pocket markets

with respect to potatoes shipped on joint rates to such points via Ogden from points in the excluded territory; if a sale is lost upon arrival of a shipment at such a Rio Grande station, it can be reconsigned to a destination beyond Denver or Pueblo only at higher combination rates.

Again, there are substantial markets for Idaho fruits and vegetables in the Central, Southwestern and Southeastern states. The Commission found (Neb. R. 56–57) that

> Carloads moved over the Union Pacific to the Central States can be diverted to the Southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect. Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City. One Idaho shipper has made few sales of potatoes in the Southwest in the last several years because of pocket markets there.

This condition arises from the fact that the Union Pacific maintains joint rates on such commodities moving from the excluded territory to the south-

eastern states only on shipments which utilize its long haul to Omaha or Kansas City. Shipments which move into the southwest points over the Union Pacific and its connections via Denver cannot be reconsigned or diverted to southeastern points except at higher combination rates. In that respect, as the Commission found, the "southwestern markets are pocket markets." (Statement, *supra*, pp. 32–33.)

If agricultural products could be consigned at joint rates from the excluded northwest area via Ogden and the Rio Grande to points in Oklahoma and Texas, subject to reconsignment at joint rates to southeastern points, broader and more flexible markets would be available to northwest growers and shippers.

It follows that for shippers of agricultural commodities originating in the excluded territory to be able to exercise reconsignment or diversion rights, there must be established for such commodities through routes and joint rates via the Rio Grande which are not restricted, as required by the decision below, to particular shipments which require in-transit services at points on the Rio Grande.

CONCLUSION

The judgment of the Colorado district court (Nos. 117, 118, 119) should be reversed.

The judgment of the Nebraska district court (Nos. 332, 333, 334) should be reversed insofar

as that judgment narrowed the scope of relief granted by the Commission's order in relation to the carriage, over the prescribed through routes and at the specified joint rates, of the following agricultural commodities: fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs. In other respects, the judgment should be affirmed.

Respectfully submitted.

APPENDIX

Pertinent Provisions of the Interstate Commerce Act

Sec. 1 (4). It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers.

Sec. 3 (1). It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, lo-

cality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description.

SEC. 3 (4). All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper As used in this paragraph the term "connecting line" means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III.

SEC. 15 (3). The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or

property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. The Commission shall not, however, establish any through route, classification, or practice, or any rate, fare, or charge, between street electric passenger railways not engaged in the general business of transporting freight in addition to their passenger and express business, and railroads of a different character. If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancelation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section.

SEC. 15 (4). In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would

make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest.

SEC. 15 (8). In all cases where at the time of delivery of property to any railroad corporation being a common carrier, for transportation subject to the provisions of this part to any point of destination, between which and the point of such delivery for shipment two or more through routes and through rates shall have been established, as

in this part provided to which through routes and through rates such carrier is a party, the person, firm, or corporation making such shipment, subject to such reasonable exceptions and regulations as the Interstate Commerce Commission shall from time to time prescribe, shall have the right to designate in writing by which of such through routes such property shall be transported to destination, and it shall thereupon be the duty of the intitial carrier to route said property and issue a through bill of lading therefor as so directed, and to transport said property over its own line or lines and deliver the same to a connecting line or lines according to such through route, and it shall be the duty of each of said connecting carriers to receive said property and transport it over the said line or lines and deliver the same to the next succeeding carrier or consignee according to the routing instructions in said bill of lading: *Provided, however,* That the shipper shall in all instances have the right to determine, where competing lines of railroad constitute portions of a through line or route, over which of said competing lines so constituting a portion of said through line or route his freight shall be transported.

v.

The Denver and Rio Grande Western Railroad Company.

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

JURISDICTIONAL STATEMENT

Opinion Below

The report of the Interstate Commerce Commission is found in 287 I. C. C. 611. The opinion of the United States District Court for the District of Colorado was filed January 13, 1955, and has not been reported, but is attached hereto as Appendix D. The opinion, by the court's order entered April 22, 1955, was "modified by

substituting for pages 14, 29, 31, 32 and 36 thereof" rewritten pages bearing the same numbers. Copy of that order and the rewritten pages are attached hereto as Appendix E. The court made no separate findings of fact or conclusions of law.

Jurisdiction

This action was brought in the United States District Court for the District of Colorado by The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") against the United States of America and the Interstate Commerce Commission, pursuant to 28 U. S. C. 1336, 1398, 2284 and 2321-2325, to enjoin, annul, suspend and set aside "in part" an alleged "order" issued January 12, 1953 (Appendix A hereto), by the Commission in a proceeding entitled "Docket No. 30297, Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co. et al." These appellants intervened as defendants in the district court.

The final judgment and decree of the district court, dated February 1, 1955, was entered February 14, 1955. On April 22, 1955, the district court entered an order overruling and denying a motion of these appellants and others for new trial or reargument and reconsideration. Copies of the final judgment and decree and the order entered April 22, 1955, denying that motion are attached hereto as Appendices B and C.

Notice of appeal was filed by these appellants in the United States District Court for the District of Colorado on June 20, 1955.

The jurisdiction of this Court to review the judgment by direct appeal is conferred by 28 U. S. C. 1253 and 2101(b).

The following decisions sustain the jurisdiction of this Court to review the judgment in this case on direct appeal: *Edward Hines Trustees v. U. S.*, 263 U. S. 143; *Sprunt & Son v. United States*, 281 U. S. 249; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479; *Moffat Tunnel League v. U. S.*, 289 U. S. 113; *United States v. Mo. Pac. R. Co.*, 278 U. S. 269; *U. S. v. Great Northern R. Co.*, 343 U. S. 562; *Thompson v. United States*, 343 U. S. 549; (see also *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538).

Statutes Involved

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out in Appendix F hereto:

National Transportation Policy (Preceding Section 1), and Sections 1(4), 3(4), 15(1), 15(3), 15(4), 15(8) and 20(11).

Questions Presented

The following questions are presented by this appeal:

I. Does the Rio Grande, which obtained joint through rates on certain commodities under the Commission's order, have legal standing to seek by a suit to enjoin the order, similar rates on all commodities via all possible routes when the granting of such additional relief is subject to administrative determination of public interest requirements under the Interstate Commerce Act.

II. Did the district court err in holding that Rio Grande sustained "pecuniary injury" and had standing

to maintain this action on the ground that the Commission deprived Rio Grande of additional "pecuniary gain" which would be realized if all the joint rates demanded by Rio Grande had been granted.

III. Did the district court err in holding that Rio Grande need not sustain "pecuniary injury" in order to have a "right to judicial review".

IV. Did the district court err in holding that the Commission's finding that "there are at present no through routes, as that term is used in the act", over the Rio Grande via Ogden or Salt Lake City "on the traffic here concerned" is not supported by substantial evidence and is erroneous as a matter of law.

V. Did the district Court, in connection with its holding that through routes were in existence on the "bridge" traffic sought by Rio Grande, err in failing to consider and give effect to the fact that the primary objective of Rio Grande was to participate in the transportation of products from the northwest states to the eastern and southern markets and that not a single movement of such "bridge" traffic is shown to have occurred over the Rio Grande route.

VI. Did the district court, in connection with its holding that through routes were in existence, err in failing to find that the cancellation of joint rates in 1906 and 1912 effectively closed these through routes in accordance with the understanding and "course of business" of the parties concerned and that the conclusion of the Commission in this regard is supported by legislative amendments in 1940 to section 15(3) of the act.

VII. Did the district court, in connection with its holding that through routes were in existence, err in failing to find as the Commission found, that shippers have a right to route traffic via the Rio Grande and Union Pacific at combination of local rates and that the Union Pacific had no right or duty to refuse shipments.

VIII. Did the district court err in holding that the decision of the Commission as to the existence of through routes "obviously prejudiced the entire proceeding" in view of the fact that the Commission's order established through routes and joint rates upon all commodities that it considered upon the evidence to be necessary in the public interest.

IX. Did the district court err in annulling and setting aside only that portion of the Commission's order which "denied relief to the Rio Grande" upon its holding that the Commission's finding as to through routes "obviously prejudiced the entire proceeding".

X. Did the district court err and exceed its powers in making findings of fact favorable to Rio Grande and in ordering the Commission to proceed "in conformity with the opinion and judgment of the court", and the "instructions" therein.

Statement

The Rio Grande's complaint to the Commission demanded that joint rates, in lieu of the present combination of local rates, be established via its line "the same" as joint rates maintained over shorter through routes by the Union Pacific and other defendant railroads named in the complaint for about 172,000 carloads of traffic.

moved annually by those railroads for more than 75 years between points in the northwest area and points in the eastern and southern parts of the country described in the order. The combination rates via the Rio Grande are substantially higher than the joint rates maintained over Union Pacific routes. The Rio Grande's President testified that its purpose in filing the complaint was to improve its financial condition by diverting this traffic from Union Pacific routes for a "bridge" haul over its line.

The order issued by the Commission requires that the Union Pacific and over 200 other railroads establish through routes and joint rates in connection with the Rio Grande "the same" as the joint rates maintained by them on the several commodities named in the order, which comprise about 57,000 carloads, or one-third of the traffic annually that the Rio Grande seeks to divert over its line, short-hauling the Union Pacific routes at least 925 miles and subjecting the Union Pacific and other lines to large revenue losses.[1]

But the Commission did not order through routes and joint rates on about two-thirds of the traffic, and it is for the purpose of having the Commission order through routes and joint rates via its line on the remaining two-thirds of the traffic, that the Rio Grande brought this suit to enjoin and annul the Commission's *failure* to include the remaining two-thirds of the traffic in the order it issued. Such failure is not embraced in the order issued or in any "order" of the Commission.

---

[1] The validity of the order issued is now before this Court in Nos. 117, 118, and 119, appeals docketed May 31, 1955, from the final decree of the United States District Court for the District of Nebraska.

The case presents the novel and unique situation of an admitted attempt by the Rio Grande through judicial proceedings to further enhance its financial gains by diverting to its longer line for a "bridge" haul, traffic that originates or terminates on the railroads that have the shortest, fastest and most efficient routes and lowest rates between the points at which the traffic originates and points of its destination.

The Rio Grande contended before the Commission that through routes at the combination or sum of local rates already existed via its line for the traffic it seeks, and that the short-hauling prohibition in Section 15(4) was not applicable. It demanded that the lower joint rates maintained over the existing Union Pacific routes be made applicable via its line, and contended that refusal of the defendants named in its complaint to make the joint rates applicable via its line discriminated against it. The Commission held that through routes via the Rio Grande did not exist for the involved traffic but found they were necessary in the public interest to provide adequate and more economic transportation for certain commodities named in the order, and required that joint rates "the same" as maintained over existing Union Pacific routes be made applicable via the Rio Grande to those commodities. The Commission found that the evidence failed to prove the alleged discrimination against the Rio Grande and concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained." The order issued does not, in terms, deny or withhold anything, nor does it make any reference to the remaining two-thirds of the traffic the Rio Grande seeks by this suit to divert to its line.

The district court overruled a motion to dismiss the case on the ground that, as the Rio Grande admittedly has no legal or other right to the traffic it seeks to divert to its line for its financial gain, it has no standing to maintain the suit. The court reversed the Commission and held that through routes via the Rio Grande do exist for the involved traffic, that the Commission had erred as a matter of law and upon the evidence in finding that through routes via the Rio Grande did not exist, and that this finding "prejudiced the entire proceeding" before the Commission. The court, again reversing the Commission, held that the evidence proved discrimination against the Rio Grande, and enjoined and annulled "the order" insofar as it denied and withheld relief from the Rio Grande, and "remanded" the case to the Commission for further proceedings in conformity with the court's opinion, but *only* insofar as the Commission "denied and withheld relief" to the Rio Grande.

These five states, representing territory served by long established Union Pacific routes from the Missouri River to the Pacific northwest, oppose Rio Grande proposals to short haul the shortest, swiftest and most economical route to eastern and southern markets, by requiring Union Pacific and over two hundred other railroads to enter into joint through rates with the Rio Grande whose admitted objective is to divert this traffic, primarily from the Union Pacific, in order to obtain a "bridge" haul and thereby improve its financial position. According to Rio Grande the "potential" volume of such traffic moving from the northwest to the east

and south, which would be "available for solicitation", amounts to 101,476 carloads annually.[2]

Being distant from the principal markets, the economic life of the northwest depends upon fast, efficient, low cost transportation. Present transportation facilities and routes to and from this area are more than sufficient and Union Pacific alone is shown to possess an unused transportation capacity of 85%. Piling on additional surplus facilities and unneeded routes, will, in the opinion of these states, adversely affect the economic future of this territory and violate the manifest policy and intention of Congress.[3]

The present through route provisions of the Act were adopted in 1940 in order to make the "shortest,

---

2 As indicated by the Commission, (287 I.C.C. 631) the bulk of the traffic sought constitutes agricultural and mineral products of the northwest, which (p. 623) now travel via Union Pacific "because the Union Pacific routes are shorter." The reverse movement west comprises only 56,286 carloads annually and was given little emphasis by Rio Grande. The only westbound articles included in the order were "granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations" in the northwest (p. 659).

The traffic east and the traffic west are entirely independent of each other and should have been so considered. The Commission's order which the Court annulled in *United States v. Mo. Pac. R. Co.*, 278 U.S. 269, 273, involved only the establishment of "through routes for west bound freight traffic."

3 Congressional policy since 1920 has stressed as paramount economy and efficiency in transportation facilities. *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U.S. 266, 277. The 1940 declaration of Congress (49 U.S.C. preceding § 1) emphasizes "adequate, economical and efficient service" and this declaration controls the "basic power of the Commission." *American Trucking Assns. v. U. S.*, 344 U.S. 298.

quickest, and cheapest routes available." Union Pacific routes meet these tests.

Ordinarily requests for new routes are justified as "needed" and involving "more efficient or more economic" transportation by showing that they are shorter than existing routes. The Rio Grande routes sought herein are unique in that they would short haul the short route by substituting an uneconomic, wasteful, slower route from 33 to 219 miles longer which must go up and down many of the highest mountains in the country.[4]

Long experience has demonstrated to these states that the fantastic wastefulness involved in Rio Grande proposals would ultimately be saddled upon the public

4 Report No. 404, Senate Bill 1261, 75th Cong., 1st Session, page 2. Congressional Record, pp. 6055-6056. 287 I.C.C. 655.

5 At page 648, the Commission reviews some of the proof showing the Rio Grande to be "less favorably situated," and at page 656 it finds that "operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein." The full impact of wastefulness established beyond dispute by the record is not reflected. This shows that the Rio Grande "has no value as a service route" (R. 1163, 1319); that curvature is so great a train completes a circle every 5.45 miles and requires 51% more effort (Ex. 12, p. 9), at a cost of $124.33 per car (Ex. 15, p. 7; Ex. 53, p. 3), and that freight car days are wasted.

In *Texas v. United States*, 292 U.S. 522, 530, the Court said it is a "primary aim" of present transportation policy of Congress "to secure the avoidance of waste." One of the long expressed purposes of Congress has been to eliminate this kind of "cut-throat" competion. *United States v. Louisiana*, 290 U.S. 70, 74.

In this connection it is significant that practically all shipper witnesses of Rio Grande, including the U.S. Department of Agriculture, supported their position on the ground that notwithstanding the mandate of Congress against short hauling existing routes, all gateways should be opened and unlimited cross-hauling should be the rule.

and shippers of these states." This local marginal mountainous railroad should not be permitted to force its admittance into the transcontinental railroad systems which this region must support.

The overwhelming public detriment that these states and their communities may suffer under Rio Grande proposals includes: (1) reduction in existing service, (2) abandonment of branch lines, (3) waste of present and adequate facilities, (4) increases in unit costs, and (5) destruction of long established channels of trade and commerce.[7]

The differences in rates which Rio Grande now experiences merely reflect differences in transportation conditions which have always characterized sound transportation regulation and practices.[8]

It is clear that what Rio Grande seeks in this proceeding, a rate advantage by circumventing the requirements of the Act, is not appropriate under the Act and is

---

6 As noted by the Court in *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U.S. 266, 270, "when a railroad inflicts injury upon its rival, it may be the public which ultimately bears the loss."

7 This Court has said that it "could not be readily supposed that Congress intended, when regulating such commerce, to interfere with and interrupt, much less destroy, sources of trade and commerce already existing." *Texas & Pac. Railway v. Interstate Com. Com.*, 162 U.S. 197, 211.

8 *Barringer & Co. v. U.S.*, 319 U.S. 1, 9. *Brown Lumber Co. v. L. & N. R. Co.*, 299 U.S. 393, 396.

The Act was "not intended to ignore the principle that one can sell at wholesale cheaper than at retail." *Interstate Com. Commiss. v. B. & O. Railroad*, 145 U.S. 263, 276.

inconsistent with previous decisions of the Commission in this field.[9]

The Questions Are Substantial

1. The Commission's order establishes through routes and joint rates for Rio Grande on a specified list of commodities and gives Rio Grande for the first time a right to solicit and transport a substantial volume of traffic that it could not previously carry. Limitations on the scope of the order to the articles therein named reflects the proof as to the various public interest requirements under the Act including the showing as to dissimilarity of transportation conditions. (287 I. C. C. 619, 656.) The Rio Grande has no legal or other right to the traffic it seeks to divert to its line, *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 780. Under such circumstances Rio Grande has no legal standing to seek the assistance of the courts in order to broaden the order and obtain additional "pecuniary gain" that is dependent upon administrative findings of public interest.

The district court conceded that the Commission's order "took nothing away from the Rio Grande which it already had" and on that basis "caused no pecuniary loss to the Rio Grande". It held, however, that failure to give Rio Grande all of the "increase of traffic" and all of the increase of "net earnings" requested may constitute "pecuniary injury" to the Rio Grande.

---

9 *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I.C.C. 334, 333, summarizes recent Commission decisions and points out that through routes have been established when they "eliminated expensive out-of-line hauls," or were "shorter" or "were at least as economical;" and were rightly denied in the case being heard since the "routes sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic transportation" and "would not 'give reasonable preference' to the originating carrier."

We are not aware that any court has previously suggested that a "pecuniary loss" may be shown by a failure to obtain the full amount of "pecuniary gain" requested. No authority whatever is cited by the court in support of this novel doctrine. The cases noted by the court, in this connection, all involve an actual or threatened "loss" of something previously possessed. The question in each case is whether the particular loss constitutes "legal injury".[10]

The district court, we submit, can find no support for its views because in such cases as *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, involving establishment of a union station at Cleveland, this Court held at page 487 that "legal injury" was not shown even though the "financial stability" of a carrier was threatened. The point in such cases, which escaped the district court, is that no "legal injury" was shown notwithstanding such losses. In numerous cases this Court has declared that previously enjoyed rights must be "injuriously affected" in order to have standing to review Commission orders.[11]

---

10 In the *Chicago Junction Case*, 264 U.S. 258, the order substituted a "monopoly" for previous "neutral control" of terminal railroads in Chicago and subjected "plaintiffs to irreparable injury" in an amount which the opinion said at page 266 "exceeds $10,000,000," annually.

In *Edward Hines Trustees v. U.S.*, 263 U.S. 143, 147, it was contended by a shipper that railroad property was being taken by the Commission order "without due process of law, in violation of the Fifth Amendment" to the detriment of the shipper, but the Court held that this was not legal injury to the shipper.

In *Sprunt & Son v. United States*, 281 U.S. 249, the order deprived a shipper of a "competitive advantage" of $7.00 per ton previously enjoyed, but the Court held that this was not legal injury and dismissed the suit.

11 Many of the cases are summarized in *Moffat Tunnel League v. U.S.*, 289 U.S. 113, 119. See also *Claiborne-Annapolis Ferry v. U.S.*, 285 U.S. 382, *Alton R. Co. v. United States*, 315 U.S. 15, and compare *Atchison, T. & S. F. Ry. v. United States*, 130 F. Supp. 76.

In support of its decision as to legal standing the district court also suggested that "pecuniary injury" is not "essential to the right of judicial review". As sole support for this new rule of general application in the field of administrative law, the opinion cited two negro segregation cases. The gist of these cases as shown by the *Mitchell* decision is that judicial review may be had where the Commission order deprives a colored person of his constitutional right to "equality of treatment" by being forced to give up a pullman seat "under threat of arrest".[12]

There is no claim herein, even by Rio Grande, that any action of anyone has deprived it of any constitutional rights, and none could be made because, as noted, the Rio Grande has no legal, equitable or other right of any nature to the traffic it wants to divert to its line, *I., T. & S. F. Ry. v. United States*, 279 U. S. 768, 780. Hence, the cases relied on by the district court have no application. It is one thing to suggest that a deprivation of constitutional rights may not necessarily involve "pecuniary" loss; it is quite another thing to say that in cases involving no loss of constitutional or other legal rights, there may be a review without "pecuniary injury."

If either of the theories posed by the district court justifies legal standing, then a vast expansion of judicial review in this field is inevitable. Practically every disappointed applicant before an administrative tribunal

12 In *Mitchell v. United States*, 313 U.S. 80, the Commission had dismissed the complaint of a negro. The other case cited, *Henderson v. United States*, 339 U.S. 816, involved a "denial of dining service" by reason of color when there were "existing and unoccupied facilities."

would have a right to go to court if failure to obtain every "pecuniary gain" requested constitutes a "pecuniary loss" or if "pecuniary injury" is no longer a prerequisite to legal standing to maintain suit.

2. In holding that through routes were in existence the district court stated that its decision was upon a "narrow ground" and for such disposition of the case, "[t]his very brief and sketchy statement of the case will suffice". The Commission, on the other hand, based its contrary conclusion upon a full application of all of the tests declared by this Court to be decisive in *Thompson v. United States*, 343 U. S. 549. These tests include not merely a physical, objective inquiry but subjective matters such as a holding out, consent, custom and "course of business" by all carriers involved.[13] This requires a review of the entire record and history of operations and is not satisfied by a "brief and sketchy" review of the case. *Universal Camera Corp. v. Labor Bd.*, 340 U. S. 474, 488.

In weighing the evidence the Commission recognized, as noted above, that the objective of Rio Grande was to participate "as a bridge line" in the transportation of the products of the northwest region to eastern markets; and as to this traffic no "through shipments" had ever moved "to any destination east of Colorado

---

13 Applying the *Thompson* rule the Commission said at page 616:

"* * *It thus becomes necessary to determine whether the carriers in this proceeding 'hold themselves out as offering through transportation service' from and to the points here concerned via the Ogden gateway as indicated by their 'course of business' in respect of traffic over the routes in question."

The *Thompson* opinion at page 557 quotes a Commission Report to Congress that all of the tests therein enumerated "are not to be regarded as exclusive of others which may tend to establish a carrier's course of business with respect to through shipments."

common points", i. e., the eastern termini of the Rio Grande (287 I. C. C. 623, 617). The few shipments in the record in the reverse direction during 1948 were properly regarded by the Commission "as of an isolated nature" in view of the entire record (287 I. C. C. 618).[14]

The district court's statement that there has been a "continuous use of the Rio Grande route" is not supported by the record. Rio Grande's evidence of specific shipments related only to the year 1948. The President of Rio Grande testified that his railroad had no idea of participating in transcontinental traffic until after their modernization program was completed and this program was started only after the Dotsero cut-off was established in 1934. The "Moffat Tunnel Line" under which Rio Grande obtained a shorter line from Denver to Ogden was not acquired until 1947. (287 I. C. C. 622.) The Rio Grande's interest was in California traffic to the extent that it financed the construction of the Western Pacific in 1911 as an outlet to California. (287 I. C. C. 622.) The first indication that anyone in the northwest territory had concerning the desire of Rio Grande to open up through routes to this region was the unprecedented "pamphlet" campaign which the Rio Grande prosecuted among shippers to help it succeed in this litigation (R. 50). As shown by the Commission report at pages 636 and 638-639 reasons advanced for through routes included recent developments.[15]

---

14 The *Thompson* case, page 557, follows the rule declared by the Commission in *Beaman Elevator Co. v. Chicago & N. W. Ry. Co.*, 155 I.C.C. 513, that "isolated shipments" are insufficient to establish through routes.

15 The farm machinery business referred to by the Commission at page 636 "was established in 1947." Changes in the "use of grazing lands in national forests" mentioned at pages 638 and 639 were of recent origin.

Rio Grande supporters did not base their testimony on any claim of "continuous use". On the contrary they asserted that the routes were closed and the Ogden along with all other gateways should be opened without regard to the Congressional mandate against short-hauling existing routes.

Upon the basis of the entire record, and the "whole course of conduct of the Union Pacific" covering a period of "many years", the Commission correctly concluded at pages 618-619 that through routes were not in existence; and that any "other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15(4) made in 1940".

While the district court made the general conclusion that through routes were in existence, it did not define what routes of the many hundreds of thousands that might be created were included in that category. This Court made it clear in the *Thompson* decision, *supra*, at page 559, that the existence of through routes to points "short of Omaha cannot be used as evidence of the existence of a through route to Omaha". Through routes have definitely fixed and known termini, and, under the *Thompson* decision, proof of a shipment from Peoria, Ill., via the Rio Grande to Boise, Idaho, cannot be used as evidence of the existence of a through route via the Rio Grande from New York, Boston or Chicago, for example, to Portland, Oregon. Nor may one shipment from each of 18 eastern origin points via the Rio Grande to 10 destinations in the northwest suffice to prove that any through route exists via the Rio Grande for the traffic

concerned, to say nothing of the hundreds of thousands of through routes of which the Rio Grande claims its line to be a part between the 39,000 railroad stations in the east and south and the 2,900 stations in the northwest area.

The cancellation in 1906 and 1912 by Union Pacific of joint rates established by the receivership courts in 1897, in view of the history previously reviewed, fully accomplished a closing of the through routes in question. This was the admitted position of Rio Grande until after this Court handed down its decision in the *Thompson* case (June 2, 1952). In its publicity campaign prior to and after the filing of its complaint with the Commission, August 1, 1949, the Rio Grande publicly asserted that its purpose was to "restore" to the northwest the "rates and routes" established by the receivership courts in 1897. As a part of its publicity campaign, the Rio Grande printed and widely distributed a pamphlet entitled "20 Questions—An Informative Quiz", in which it posted 20 questions and answered them with the arguments it thought would convince shippers to aid it in its efforts. These questions clearly and indisputably show that the Rio Grande itself considered that the prior through routes via its line had been "closed" by the cancellation of the joint rates by the Union Pacific.[16]

---

16 Among the 20 questions were the following:

" 2 What Is Meant by the 'Closed' Gateway at Ogden?"

" 3 What Is the Effect of the Closed Gateway?"

" 4 How Does the Rio Grande Seek to Open the Ogden Gateway?"

" 5 How Will the Rio Grande Benefit from Opening of the Ogden Gateway?"

" 6 Why Does the Union Pacific Oppose Opening of the Ogden Gateway?"

(Continued on next page)

The suggestion of the district court that these routes were not closed disregards the realities of the situation and is in conflict with the understanding of the parties as shown by their conduct. There is no suggestion by the district court of what further action, if any, was required to close the route via the Rio Grande; and under the circumstances the Commission correctly refused to sustain Rio Grande's present position on the basis of a claim with reference to the sufficiency of a tariff change over forty years ago.

In filing this proceeding Rio Grande conceded in its complaint that the cancellation of tariffs by Union Pacific operated "to prevent the movement of freight traffic via the routes" sought and the action of Union Pacific and other defendants "deprives the public and the complainant of the use" of these routes. Ample authority and machinery existed to challenge the right of Union Pacific to close these routes under the tariff amendments made in 1906 and 1912. Neither Rio Grande nor any shipper took any action or made any such contention as is now advanced.[17]

(Continued from preceding page)

"7 Will the Open Ogden Gateway Reduce Freight Rates?"
"8 Will the Open Gateway Provide Improved Service?"
"9 With Opening of the Gateway, Will There be More Freight Cars Available for Northwest Shippers?"
"11 Will an Open Gateway at Ogden Benefit Colorado and Utah?"
"12. Will an Open Gateway at Ogden Benefit Shippers Outside of Union Pacific or Rio Grande Territory?"
"13 Will Opening of the Ogden Gateway Reduce Railroad Employment in the Closed Door Territory?"
"14 Will the Opening of the Ogden Gateway Reduce Taxes Paid in the Closed-Door Territory?"

17 In *Atlantic Coast Line R. Co. v. U.S.*, 284 U.S. 288, tariff amendments were cancelled which would have closed a through route. The Commission acted in that case under Section 15 (7) of the Act which permits the suspension of tariff changes and which authorizes such suspension upon complaint.

There is nothing new or novel in the closing of a through route by a tariff filing such as occurred here. The Commission in the present case adhered to the rule it has uniformly followed in this regard—a rule that recently was applied in *Steinmetz v. Atchison, T. & S. F. Ry. Co.*, 293 I. C. C. 202 (August, 1954), where it was held that complainant was "apprised" of the fact that a route was "closed" by the "publication of the joint through rate from and to these points for application over routes other than that used."[18]

The *Thompson* decision rejects the idea that publication of "local" rates as a part of a "combination" through rate constitutes the maintenance of a through route. Such a publication, the opinion holds at page 558, "proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines".

Legislative amendments to Section 15(3) of the Act in 1940 specifically recognize the "canceling" of "any through route or joint rate" by "any tariff or schedule" change. (49 U. S. C. A. 15(3).) The legislative history of this amendment shows that Congress and the Commission recognized for many years that the type of tariff filing made herein by Union Pacific operated to close a through route and that a standard for suspension of such closings should be a part of our statutory system.[19]

---

18 In *A., T. & S.F.Ry. v. United States*, 279 U.S. 768, 775, in upholding the "cancellation of the proposed tariff" which would have closed a through route, this Court said, "[i]ts proposed tariff was in effect a withdrawal."

19 The 1940 amendment consists of a new sentence added to Section 15(3). This sentence originated as a "clarifying" amendment to a Bill in 1937 with reference to the "elimination of any existing through route or joint rate." See Senate Report No. 404, 75th Cong. 1st Sess. (S. 1261); Senate Report No. 1970, 74th Cong. 2nd Sess. (S. 1636).

The decision in *Virginian Ry. v. United States*, 272 U. S. 658, provides no support for the district court's opinion. That case involved no question of establishing through routes since they already existed. The language in the opinion as to through routes is dictum. The case presented a clear case of discrimination by one railroad against 54 mine shippers on its own line who were refused the same rates enjoyed by 45 other mine shippers on the same line. It was not even necessary to establish joint rates in that case. Moreover, there was no problem of short-hauling.

This Court has said that the "Commission's determination of the point in time and space at which a carrier's transportation service begins or ends is an administrative finding which, if supported by evidence, is conclusive on the courts". *I. C. C. v. Hoboken R. Co.*, 320 U. S. 368, 378. Under this rule the Commission's determination herein that the Union Pacific effectively closed the routes in question is not subject to reversal.

The standard created by the district court herein for determining the existence of through routes assumes that the Union Pacific had the right and duty to refuse and stop shipments over the Rio Grande route in order to protect itself against short-hauling. Any such rule would place an impossible burden on a carrier and deny shippers a fundamental right which the Commission has always recognized of routing their own traffic.[20] Ad-

[20] At page 652 of the report the Commission recognizes and gives effect to the "right" of shippers to "route their own traffic." At page 618 the report points out that the few westbound movements through the gateway were "specified by the shippers" and the only use made of this route arose "by force of shippers or connecting carriers' routing." This occurred, the Commission found, despite the consistent "policy" of the Union Pacific "to guard jealously its long haul." Any other view, the report says at page 619, would completely circumvent the Act.

hering to this position in the recent case of *Steinmetz v. Atchison, T. & S. F. Ry. Co.*, 293 I. C. C. 202, it was held that although the route chosen by a shipper was "closed" by reason of a tariff publication, this "does not mean that a shipper may not specify routing for a shipment over such a 'closed' route and expect compliance with the routing thus specified." The rate for such shipment, the opinion states, would be the "combination rate".

There is nothing in the statutes or in prior decisions of this Court that would require a carrier to erect barriers at gateways in order to avoid the peril of being short hauled.[21]

It is a distortion of Section 15(8) to suggest that under this provision shippers have a right to route traffic only where a through route already exists within the meaning of Section 15(3) and (4). This statute gives a shipper a right always to choose between "two or more through routes". The statute has application only where "two" through routes exist. The rights of shippers where "two" through routes have not been established are not declared or covered by this section. The provision was added in 1910 (36 Stat. 553) as a part of the expansion of Section 15 with reference to the creation of new through routes and it was no doubt intended to protect shippers in the case of duplication of routes resulting from such legislation.

There is no occasion at this late date to conclude that Section 15(8) has been improperly interpreted by the Commission for nearly a half-century.[22]

---

21 The "duty of a railway company to receive freight when tendered for transportation" is noted in *Southern Ry. Co. v. Reid*, 222 U.S. 424, 435.

22 Our contention as to the interpretation of this section finds some support in *Lamb v. Moor*, 17 Ga. App. 542, 87 S.E. 837.

The suggestion of the District Court that issuance of "through bills of lading" on the few westbound movements described constituted a recognition of "through route status" contains the fundamental fallacy that the Union Pacific had the right and duty to refuse such lading. All that an employee of Union Pacific did or could do in this connection was to comply with the mandate in Section 20(11) that, when "receiving property for transportation" the railroad "shall" issue a bill of lading therefor.[23]

3. Since, as shown earlier, the limitations on the through routes and joint rates granted the Rio Grande arose from administrative findings concerning public interest and these limitations did not depend upon the Commission's position as to existence of through routes via the Rio Grande, the district court was not justified in declaring that the position of the Commission as to such routes "obviously prejudiced the entire proceeding". Moreover, and in any event the court was not justified, upon the basis of such a finding, in setting aside *only* that portion of the order which "denied relief to the Rio Grande". Anything which is held to prejudice an "entire proceeding" would necessarily vitiate the "entire proceeding", not merely a part thereof.

There is, moreover, in this case no showing that the Rio Grande is "suffering prejudice"[24] because of the

---

23 The "duty" to issue a bill of lading is imposed by Congress. *Atchison & Topeka Ry. v. Harold*, 241 U.S. 371, 378.

It was always true that even if a railroad had "no through route" it "was bound to accept goods destined beyond its line for delivery to the next carrier and was required by the statute to give a through bill of lading." *Norfolk & W. Ry. Co. v. Dixie Tobacco Co.*, 228 U.S. 593, 595.

24 *Chicago Board of Trade v. Olsen*, 262 U.S. 1, 43. *See Electric Bond Co. v. Comm'n*, 303 U.S. 419, 443.

Commission's finding that through routes were not already in existence. As noted above, it ordered through routes and joint rates for all commodities found necessary in the public interest, and limitations thereon were imposed by reason of public interest requirements of the Act.

Having made the findings required under Section 15(3) and (4), the Commission was free to feel the scope of its order. *United States v. Merchants &c. Ass'n*, 242 U. S. 178, 186-187. The concurring opinion of Commissioner Arpaia shows clearly that although he thought the desired routes were already "open and available to shippers", in deciding "to what extent" joint rates should be compelled, he concluded that they "are warranted in the public interest only on the commodities for which relief is included in the majority report". (287 I. C. C. 665.) Commissioner Patterson thought lumber and articles taking lumber rates should have been included in the order (287 I. C. C. 664).

4. The district court usurped administrative jurisdiction in declaring that the "facts alleged and the proof before the Commission" established "discrimination adversely affecting the Rio Grande and shippers over its lines", upon the basis of "existing rates and charges". Such a finding was made although the court frankly stated earlier that it was making only a "brief and sketchy" review of the case "since we rest our decision upon a narrow ground". That "narrow ground" related to the existence of through routes. It did not comprehend a review of the evidence or of the complete report of the numerous and complicated legal questions pertaining to rates and discrimination under the various sections of the Act.

In remanding the case the district court annuls and remands only that portion of the case which "denied relief" to the Rio Grande and orders the Commission to take "further proceedings in conformity with this opinion". Included in the opinion the court sets forth what it terms "instructions". Hence, if it heeds the remand, the Commission is prevented from reversing or reconsidering that part of the "prejudiced" proceeding which is favorable to the Rio Grande.

The opinion points to no evidence justifying its conclusion that "discrimination" is established. The Commission, after careful review of the evidence, holds that discrimination under Section 3 (4) is not shown (287 I. C. C. 658) and concludes that the Rio Grande as a "railroad, could not raise, in its own behalf, an issue under section 3(1)" (287 I. C. C. 619).

It is fundamental that the "court must act within the bounds of the statute" permitting judicial review.[25] Heretofore the rule has been that the "function of the reviewing court ends when an error of law is laid bare" and findings such as the above "usurped an administrative function."[26]

---

25 *Ford Motor Co. v. Labor Board*, 305 U.S. 364, 373. The applicable statute (28 U.S. Code, Sec. 1336) contains no authority to direct the Commission how to dispose of the case. And see *F.C.C. v. Allentown Broadcasting Corp.*, 75 S.Ct. 855.

26 *F.P.C. v. Idaho Power Co.*, 344 U.S. 17, 20.

Such findings constitute a "substitution of judicial for administrative discretion." *Communications Comm'n v. Woko*, 329 U.S. 223, 299. See also *Interstate Comm. Comm. v. Ill. Cent. R.R.*, 215 U.S. 452, 470; *Federal Comm'n v. Broadcasting Co.*, 309 U.S. 134, 144.

Rate orders are "clearly legislative." The *Chicago Junction Case*, 264 U.S. 258, 263.

It is not within the province of the court "to revise the Commission's decision and to enter such judgment as the court may think just." *Radio Comm'n v. Nelson Bros. Co.*, 289 U.S. 266, 276.

Unless the district court's opinion is reversed, Rio Grande will be free to go back to the Commission and insist that it enter an order carrying out all the "instructions", observations and declarations in such opinion without reference to or consideration of any independent powers of the Commission. In short, to order joint rates in connection with the Rio Grande on *all* of the traffic. In this regard, as well as upon other phases of this case, as previously noted, the district court has plainly usurped the Commission's discretion and greatly enlarged the nature and scope of judicial review by the present opinion.

Conclusion

These five states can suggest no language which describes the consequences of the district court decision herein better than the words of our late Chief Justice Vinson, when, speaking for this Court, he said that "diversion" of "traffic to the lines of a financially weak carrier" will "cause important changes in the movement of traffic, diverting traffic to a new geographic area *at the expense of* other carriers and *other areas*"; and that Section 15(4) of the Act was amended by Congress to prohibit this sort of "tinkering" with through routes.[27]

After extensive deliberation and careful consideration of the entire record, the Interstate Commerce Commission, which as often noted by this Court,[28] is not unfriendly to "completely" eliminating the "short hauling restriction on its power to establish through routes", frankly declared that the conclusion now reached by the district court as to the existence of through routes, would "set aside the provisions of section 15(3) and (4) of the

27 *U.S. v. Great Northern R. Co.*, 343 U.S. 562, 574-575.

28 *Thompson v. United States*, 343 U.S. 549, 555-556.

act"; and the Commission added that this would be a "result plainly not intended by the Congress" and "a result clearly not in accord with the decision in *Thompson v. United States, supra.*"[29]

As representatives of the shippers and public of the states directly affected we are interested in the preservation of the "right guaranteed by Section 15(4)"[30] because that is our only guarantee that the good service of the shortest, most efficient and most economical transcontinental transportation facilities will continue to be available to us at the lowest possible cost.

We therefore submit that the questions presented by this appeal are substantial and of general public importance and vitally affect the economic condition of a large area of this country.

Respectfully submitted,

BERT L. OVERCASH,
Counsel of Record for Appellants,
State Capitol Building,
Lincoln, Nebraska.

PROOF OF SERVICE

I, BERT L. OVERCASH, counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 19th day of August, 1955, I served, on behalf of all appellants herein, copies of the foregoing Jurisdictional Statement on the several parties thereto, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed en-

velope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

4. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

5. On Brotherhood Committees of employees of The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

6. On Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company, Inc.; Idaho Farm Bureau; Public Service Commission of Utah; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Structural Steel and Forging Company, by mailing a

copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

BERT L. OVERCASH
Counsel of Record for
Appellants Herein.

APPENDIX A

Order

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 12th day of January, A. D. 1953.

No. 30297

Denver & Rio Grande Western Railroad Company

v.

Union Pacific Railroad Company, et al.

This proceeding being at issue upon complaint and answers on file and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination;

It is ordered, That the defendants named in the complaint, according as they participate in the transportation, be and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediateely north of points on the lines of

the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

GEORGE W. LAIRD,
Acting Secretary.

(Seal)

APPENDIX B

IN THE DISTRICT COURT OF THE UNITED STATES
FOR THE DISTRICT OF COLORADO

Civil Action No. 4492

The Denver and Rio Grande Western Railroad Company,
Plaintiff,

v.

United States of America and Interstate Commerce Commission,
Defendants,

Union Pacific Railroad Company, et al.,
Intervening Defendants.

Filed Feb. 14, 1955

Final Judgment and Decree

The hearing in the above-entitled cause having been held on June 8 and 9, 1953, before Circuit Judge Orie L. Phillips and District Judges Royce H. Savage and William Lee Knous, constituting a District Court of three judges, convened pursuant to Title 28, U. S. C., Sections 2284 and 2325, and all parties being represented by counsel, and the Court having received the evidence offered and heard the arguments of counsel, and the Court being fully advised in the premises and having filed its opinion herein on January 13, 1955, and the Court being of the opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297 is invalid and unlawful insofar as it denied relief to the plaintiff above named;

NOW, THEREFORE, upon the basis of said opinion of this Court dated January 13, 1955, and for the reasons therein set forth, IT IS ORDERED, ADJUDGED AND DECREED that the injunction and other relief prayed for by plaintiff and intervening plaintiffs in the complaint be and the same is hereby granted, and the order of the Interstate Commerce Commission dated January 12, 1953, be and the same is hereby annulled and set aside insofar as it denied and withheld relief to the plaintiff and intervening plaintiffs,

IT IS FURTHER ORDERED, ADJUDGED AND DECREED that this cause, insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief to plaintiff and intervening plaintiffs, be and the same is hereby remanded to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of this Court.

DATED this 1st day of February, 1955.

APPENDIX C

IN THE DISTRICT COURT OF THE UNITED STATES
FOR THE DISTRICT OF COLORADO

Civil Action No. 4492

The Denver and Rio Grande Western Railroad Company,
Plaintiff,

vs.

United States of America and Interstate Commerce Commission,
Defendants.

Filed Apr 22 1955

Order Denying Motion for New Trial or Reargument and Reconsideration

---

Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company; and Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, intervening defendants herein, having seasonably filed their motion for new trial or reargument and reconsideration and this Court having entertained and duly considered said motion and brief of plaintiff in opposition thereto,

IT IS ORDERED:

1. That said motion be and it is hereby overruled and denied;

2. That the Clerk of this Court transmit forthwith copies of this Order to counsel in this case.

DATED at Denver, Colorado, this 22 day of April, 1955.

By the Court:

APPENDIX D

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLORADO

No. 4492 Civil

The Denver and Rio Grande Western Railroad Company,
Plaintiff,

v.

United States of America and Interstate Commerce Commission,
Defendants.

Messrs. Dennis McCarthy and Robert E. Quirk (Herbert M. Boyle was with them on the brief) for plaintiff.

Mr. E. Riggs McConnell (Messrs. Stanley N. Barnes, James E. Kilday, and Donald E. Kelley, were with him on the brief) for the United States of America, defendant.

Mr. Samuel R. Howell (Mr. Edward M. Reidy was with him on the brief) for the Interstate Commerce Commission, defendant.

Messrs. Elmer B. Collins, F. O. Steadry, L. E. Torinus, Jr., and Eugene S. Davis (Messrs. F. J. Melia, Warren H. Ploeger, Roland J. Lehman, Carson L. Taylor, E. G. Knowles, W. R. Rouse, Nye F. Morehouse, M. L. Countryman, Jr., Edwin C. Matthias, J. C. Gibson, and Joseph H. Miller were with them on the briefs) for intervening railroad defendants.

Messrs. W. J. Hickey, John R. Barry, and Lee J. Quasey (Messrs. Duke W. Dunbar, Frank W. Wachob, William T. Secor, E. R. Callister, Jr., Peter M. Lowe, Paul M. Hupp, Lewe P. Siddons, Dennis O'Rourke, and Alden T. Hill were with them on the briefs) for intervening plaintiffs.

Messrs. William E. Doyle, Robert L. Simpson, Howard B. Black and Bert L. Overcash (Messrs. Don Farsvold, C. W. Ferguson, James B. Patten, Clarence S. Beck, and Richard H. Shaw were with them on the briefs) for intervening defendants.

Before PHILLIPS, Chief Circuit Judge, and KNOUS, Chief District Judge, and SAVAGE, District Judge.

Per Curiam.

This action was brought by the Denver and Rio Grande Western Railroad Company against the United States of America and the Interstate Commerce Commission under the Urgent Deficiencies Act to set aside and permanently enjoin, in part, an order of the Interstate Commerce Commission.

In August, 1949, the Rio Grande filed a complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroad defendants. In such complaint the Rio Grande alleged that the defendants have failed and refused to establish and maintain competitive joint rates on freight traffic with the Rio Grande: (a) via its Colorado and Utah gateways between places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and (b) between Utah common points and places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that through routes now exist and have for many years existed for the interchange of traffic by the Rio

Grande with the Union Pacific at Provo, Ogden and Salt Lake City, Utah, and with the Union Pacific and certain other defendants at Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colorado, as to freight traffic

(a) between points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and

(b) as to freight traffic between Utah common points and points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that the rates and charges applicable to such traffic between the points described via such through routes, with minor exceptions, are based upon the combination of the intermediate local or other rates, which rates and charges, in the aggregate, are substantially higher than the joint rates maintained by the defendants on similar competitive traffic between the same origin and destination places and territories which moves via the Union Pacific or via the Union Pacific and the other defendants, and that such combination rates are unjust, unreasonable and discriminatory, as compared with the competitive joint rates maintained by the Union Pacific or via the Union Pacific and the other defendants on like freight traffic via other competitive routes;

And that the failure and refusal of the Union Pacific and other railroad defendants to establish joint competitive through rates and charges applicable to the freight traffic between the points above described re-

sults in combination through rates which are excessive, unjust, unreasonable and constitute violations of §§1, 3 and 15 of the Interstate Commerce Act[1] and was and is contrary to the national transportation policy, since it deprives the public, shippers and the Rio Grande of the use of reasonable and available through routes and rail facilities at just, reasonable and non-discriminatory through joint rates, which were and are necessary and desirable in the public interest.

The Rio Grande prayed that the Commission enter an order requiring the Union Pacific Railroad and the other defendant railroads to establish and maintain for the future, just, reasonable, and non-discriminatory competitive joint rates on the freight traffic via the route of the Rio Grande through its Colorado and Utah gateways between (a) points on the Union Pacific and its connections in Utah, north of Ogden, Utah; and in Idaho, Montana, Oregon, Washington, and British Columbia, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad, Colorado, and points east thereof; and between (c) the points designated in (a); and (d) Utah common points.

By the challenged order entered on January 12, 1953, the Commission granted some but not all of the relief sought by the Rio Grande. 287 I. C. C. 611. In this action the Rio Grande seeks to have the court enjoin, set aside, annul and remand, with appropriate directions, that part of the order which denied relief sought by the Rio Grande. Union Pacific and other railroads and other persons have intervened with permission of the Court.

1 Hereinafter called the Act.

Section 1, Par. (4) of the Interstate Commerce Act in part provides:

"It shall be the duty of every common carrier * * * to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; * * *. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3, Par. (4) of such Act in part provides:

"All carriers * * * shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper * * *."

Section 13(1) of such Act in part provides:

"That * * * any common carrier, complaining of *anything done or omitted to be done* by any common carrier subject to the provisions of this part, in contravention of the provisions thereof, may apply to said Commission by petition, which shall briefly state the facts; whereupon a statement of the complaint thus made shall be forwarded by the Commission to such common carrier, who shall be called upon to

satisfy the complaint, or to answer the same in writing, within a reasonable time, to be specified by the Commission. If such common carrier within the time specified shall make reparation for the injury alleged to have been done, the common carrier shall be relieved of liability to the complainant only for the particular violation of law thus complained of. If such carrier or carriers shall not satisfy the complaint within the time specified, or there shall appear to be any reasonable ground for investigating said complaint, it shall be the duty of the Commission to investigate the matters complained of in such manner and by such means as it shall deem proper." (Italics ours.)

Section 15(1) of such Act provides:

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, * * * the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall

cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

At the threshhold we are confronted with a motion of the defendants to dismiss on the ground that the Rio Grande is without standing to maintain this suit. We hold that the Rio Grande has such standing. Since we so hold, by reason of our conclusion with respect to the existence of the through routes, the erroneous finding of the Commission on that issue, the erroneous application to the facts by the Commission of certain provisions of the Act, and the rights of the Rio Grande under the provisions of the Act, we shall state in detail our reasons for denying such motion, after a full consideration of the merits.

I.

The Merits

The Rio Grande operates approximately 2400 miles of railroad in Colorado, New Mexico and Utah. From its northern terminus at Ogden, Utah, it runs south to Salt Lake City and Provo, Utah, thence generally east to Dotsero, Colorado, where it divides, one branch going east to Denver, the other southeast to Pueblo. From Denver the line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serving territories in southern Utah, northwest New Mexico and southern Colorado are not of importance in this action.

The Rio Grande has interchange track connections and interchanges traffic with the Union Pacific at Denver,

Colorado, and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and the Western Pacific at Salt Lake City. It has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, Santa Fe and the Colorado & Southern; at Colorado Springs with the Santa Fe and the Rock Island; at Pueblo with the Santa Fe, the Colorado & Southern and the Missouri Pacific; at Walsenburg with the Colorado & Southern and at Trinidad with the Santa Fe and the Colorado & Southern.

The Union Pacific, with its leased lines, operates as a single system. From Ogden, Utah, one line of the Union Pacific extends in a southwesterly direction through Salt Lake City and Provo and thence to Los Angeles. Another line extends northwest through Utah, Idaho, Oregon, Washington and Montana, serving what is referred to as the northwest territory, or the closed door territory. From Ogden, the Union Pacific runs generally easterly through Cheyenne and Denver, with eastern termini on the Missouri River at Omaha and Kansas City. At various points on its line it connects and interchanges traffic with the other intervening railroads.

The Union Pacific and other intervening railroads and the Rio Grande participate in through routes and joint rates with each other and with other carriers on transcontinental and other traffic, with certain exceptions. Joint rates generally do not apply in connection with the Rio Grande on traffic originating at or destined to points in Utah, north of Ogden, and in Idaho, Montana, Oregon and part of Washington. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande to and from Ogden,

the higher combination rate, consisting of the aggregate of local rates, applies.

The transcontinental traffic to and from this northwest territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather *[than over the Rio Grande route. This is due in part, to the refusal of Union Pacific to join with Rio Grande in establishing joint rates with respect to such traffic. The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic.

The power of the Commission to establish through routes and joint rates is limited by §15(4) of the Act, which declares that, except as provided in §3 of the Act, a railroad may not be required without its consent to embrace in such route substantially less than the entire length of its railroad which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long, as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed is needed in order to provide "adequate, and more efficient or [more economic], transportation." It is further provided that in prescribing through routes the Commission shall, so far as is consistent with the public interest and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier which originates the traffic. The section further provides that no through routes and joint rates applicable thereto shall be established for the purpose of assisting any carrier to meet its financial needs. This section was designed

*APPELLANTS' NOTE: The language included in brackets is modified by substituted page 2 of Appendix E.

to restrict the power of the Commission to establish through routes which would short haul a carrier without its consent.

Rio Grande contended at the hearing before the Commission, and contends here, that the routes over which joint rates are sought were in existence and open to traffic at combination rates, and that the Commission was not called upon to establish through routes and, therefore, limitations on its power to do so, imposed by §15(4), are not applicable and need not be considered. It urged that the principal task of the Commission was to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such existing through routes are unjust, unreasonable or discriminatory, in violation of §§1 and 3 of the Act, and contrary to the national transportation policy.

The Commission recognized that the first question for its determination "is whether or not the present routes by way of the Ogden gateway constitute 'through routes' as that term is used in section 15(3) and (4) of the Act." Only five of the ten participating members of the Commission joined in the report and order of the Commission, wherein it was first determined that through routes were not in existence over the Rio Grande in connection with the Union Pacific through the Ogden gateway. Having reached this conclusion, the Commission proceeded upon the assumption that any order requiring the establishment of such through routes and joint rates over them must be grounded on findings, as specified in §15(3) and (4). Thus limited in its further consideration of the case, the Commission entered its order:

> "That it is necessary and desirable in the public interest, in order to provide adequate and more eco-

nomic transportation, that through routes and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

In all other material respects the relief requested by the Rio Grande was denied.

This very brief and sketchy statement of the case will suffice, since we rest our decision upon a narrow ground. We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding.

The undisputed evidence bearing upon the crucial question of existing through routes must be summarized. In 1897, the Union Pacific established joint through competitive rates with the Rio Grande to and from points in the northwest area through Ogden. These rates were in effect until canceled by Union Pacific in 1906 from and to some points and in 1912 from and to remaining points. But the through routes were not closed.

Counsel for Union Pacific expressed the opinion at the hearing before the Commission, in response to interrogation by Chairman Alldredge, that the cancellation of the joint rates did not close the through routes and that shippers were free to route via the Rio Grande if they wanted to pay more.

The principal traffic witness of the Union Pacific testified at the hearing that a shipper who was willing to pay the higher combination rate had the right to specify under §15(8) of the Act a route via the Rio Grande. It should be observed that this right exists only when through routes and through rates have been established. This witness further testified that some joint through rates are now published in a Union Pacific tariff for application to shipments of sheep and goats from the northwest area via Ogden and the Rio Grande to points on the Missouri River and east thereof.

A continuous use of the Rio Grande route in the movement of traffic to and from the closed door area at through combination rates, without objection of the Union Pacific or participating railroads, is shown by the evidence, although the volume of traffic involved is comparatively small. In 1948, which was selected as a

representative year, 37 carload shipments were made on through bills of lading from the northwest area to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific or its connections, but none moved to any destination east of Colorado common points. In the same year, 18 carload shipments were made west bound on through bills of lading from points east and southwest over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific to destinations in the northwest area. In addition, 21 carload shipments moved on through bills of lading from various eastern points to destinations in the northwest area, which were routed over the Rio Grande and Union Pacific, were held by Rio Grande at Denver or Pueblo for change of the routing because the joint through rates were not applicable. The traffic movement to and from the northwest area over the Rio Grande through the Ogden gateway on through bills of lading and at through rates was substantially the same in years prior to 1948 and continued into 1949, until the date of the Commission hearings.

From November, 1942, to August, 1945, a number of shipments were diverted under service orders issued by the Commission from the regularly used routes to the Rio Grande route. During World War II mixed trains of troops in passenger cars and of military supplies in freight cars moved from eastern and southern points on through billing over the Rio Grande via Ogden and Union Pacific to the closed door area. These trains were not routed under service orders issued by the Commission. In 1949, when the main line of the Union Pacific in Wyoming was blocked by snow, the traffic was diverted

over the Rio Grande between Denver and junctions with the Union Pacific in Utah. These latter movements were made under emergency conditions and admittedly do not tend to establish an ordinary course of business between the carriers involved, but the Commission did not invoke its authority under § 15(4) of the Act to establish temporary through routes which indicates that the Commission assumed that through routes were already in existence.

It is well settled that a joint rate is not essential to the existence of a through route. The rate which applies over a through route may be the aggregate of separate rates fixed independently by the several carriers participating in the through route. *St. Louis-Southwestern R. Co. v. United States,* 245 U. S. 136, 139; *Thompson v. United States,* 343 U. S. 549, 556. In *Thompson v. United States, supra,* the court defines a through route as follows:

> "* * * The statutory term 'through route,' used throughout the Interstate Commerce Act, has been defined by this Court as follows:
>
> "'A "through route" is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a "through rate." This "through rate" is not necessarily a "joint rate." It may be merely an aggregation of separate rates fixed independently by the several carriers forming the "through route": as where the "through rate" is "the sum of the locals" on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation. Through Routes and Through Rates, 12 I. C. C. 163; 166.'

"In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service."

While the foregoing definition of "through route" compels us to conclude that the through routes contended for by Rio Grande were in existence, the Commission relied on the *Thompson* case in reaching its decision that through routes were not in existence. But the facts in the *Thompson* case are in striking contract with the facts in this case. There, the question was whether a route from Lenora, Kansas, via Missouri-Pacific to Concordia, Kansas, and thence via Burlington to Omaha was a through route. No evidence was presented that any shipment had ever been made from Lenora to Omaha via the Burlington or that the carriers had ever offered through service over that route.

In our case, through routes and joint rates were established in 1897 and the joint rates remained in effect for some fifteen years. While the joint rates were canceled by Union Pacific, nothing was ever done to close the routes and diminished traffic continued to move over the same through routes at the higher through combination rates. Moreover, joint rates were continued in effect as well as through routes in respect to the shipment of sheep and goats from the closed door area through Ogden over the Rio Grande to the Missouri River and beyond. The Union Pacific and other participating railroads have issued through bills of lading, thereby recognizing the through route status. Shipments were diverted from the Union Pacific over the Rio Grande under emergency con-

ditions without having the Commission authorize temporary through routes, which suggest that both the Union Pacific and the Commission assumed the existence of through routes.

The Commission stated in its report and order that "The Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable." Then follows a statement that the establishment of joint competitive rates would result in such routes becoming "effective through routes, a character which they do not now possess." Thus, it appears that the Commission reasoned that the closing of the routes in a commercial sense by applying the higher combination rates terminated the through routes. But, it was held to the contrary in *Virginian Railway Co. v. United States*, 272 U. S. 658. There, of 99 coal mines located on the line of the Virginian, 45 enjoyed through routes and joint rates to the West because of certain trackage arrangements entered into between the Virginian and the Chesapeake & Ohio. As to other complaining mines, the court said, at page 661:

> "* * * But that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive. * * *"

In discussing the attack made on the order of the Commission fixing joint non-discriminatory rates, the court stated, at page 666:

> "* * * The Virginian contends that the order is void because the Commission directed the establish-

ment of through routes and joint rates without finding that they are necessary in the public interest. Such a finding is essential to the validity of an order under § 15(3). But the order here in question was not sought or made under § 15(3) and does not direct the establishment of through routes and joint rates. Through routes to the West were already in existence. And there were through rates by combination. (Citing cases.) The fact that the combination rates were excessive constituted the only obstacle to the movement."

The intervening railroads argue that Rio Grande had the burden of proving, in order to show the existence of the through routes contended for, an actual movement of traffic between every point in the northwest area and every point in the United States on every railroad east of a north and south line drawn roughly along the eastern boundary of Colorado. They point out that there are some 2,900 railroad stations in the northwest area and some 30,000 stations in the area east of Colorado and that there are undoubtedly hundreds of thousands of through routes available in the published tariffs between the thousands of stations in the involved area of which Rio Grande claims to be a part. This question was not considered by the Commission, and we do not reach it here. In our view, the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond. Since the case must be remanded to the Commission for a new hearing, we believe that the Commission should initially pass on the question of whether the burden is on the Rio Grande to show some actual movement of traffic on through billing over each of the possible routes

between the thousands of stations in the involved areas. It might be mentioned in passing that the court in the *Virginian Railway Company* case concluded that "through routes to the west are already in existence," without apparent direct proof of transportation of freight from all points on the Virginian to all points in the west via the Chesapeake & Ohio.

The contention of the intervening railroads that we are not authorized to enter an order remanding the case to the Commission with appropriate instructions is refuted by the recent order entered by the Supreme Court in *Secretary of Agriculture v. United States,* 347 U. S. 645.

II.

The Motion to Dismiss

*[We have concluded that under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law, and that the Commission erred, as a matter of law, in not finding the existence of such through routes.

We have further concluded that the Commission, in determining whether the Union Pacific Railroad and the other defendant railroads should be required to establish and maintain for the future just, reasonable, and nondiscriminatory competitive joint rates, as prayed for by the Rio Grande, erred as a matter of law in failing to apply the provisions of § 1(4) and § 3(4), rather than the provisions of § 15(3).

The duties and powers of the Commission, with respect to the relief sought by the Rio Grande, are clearly provided in § 1(4) and § 3(4) of the Act. The right of

*APPELLANTS' NOTE: The language included in brackets is modified by substituted page 3 of Appendix E.

the Rio Grande to file its complaint with the Commission and seek the relief therein prayed for is clearly given by § 13 of the Act. Under the Act, a carrier is as fully entitled to non-discriminatory treatment as a shipper. See *Chicago Junction* case, 264 U. S. 258, 267, which cites with approval *Pennsylvania Co. v. United States*, 236 U. S. 351, where the complainant sought relief under § 3 of the Act.

The fact that the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief. See *Rochester Telephone Corp. v. United States*, 307 U. S. 125, 135-143; *Mitchell v. United States*, 313 U. S. 80, 92, 93.

The negative portion of the order required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had, and, if considered solely from those points of view, the order caused no pecuniary loss to the Rio Grande.

If the Rio Grande, in the proceeding before the Commission, established its right to the relief prayed for, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and [equitable divisions thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates, and the denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established.

The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defend-

---

[APPELLANTS' NOTE: The language included in brackets is modified by substituted pages 4 and 5 of Appendix E.

ants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of § 1(4) and § 3(4) of the Act.

If the Rio Grande, on its showing before the Commission and an application of the provisions of § 1(4) and § 3(4), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the Rio Grande of a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its operating income, and, no doubt, in its net earnings.[2] More succinctly stated, if the Rio Grande, under the facts established by the evidence before the Commission, and the application of the provisions of § 1(4) and § 3(4) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande.

Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order.[3]]

While it is our view that the denial of the relief here challenged will result in pecuniary injury to the

2 The Union Pacific asserts that the granting of the relief prayed for would result in a large loss of traffic and a large reduction of earnings by the Union Pacific.

3 The Chicago Junction Case, 264 U. S. 258, 266, 267.

Rio Grande, we do not think such injury is essential to the right of judicial review. In *Mitchell v. United States*, 313 U. S. 80, Mitchell brought a proceeding before the Commission in which he alleged that the Chicago, Rock Island and Pacific Railway Company, in its purported compliance with an Arkansas statute requiring segregation of the races during transportation did not provide as desirable accommodations for colored as for white passengers traveling in Arkansas over its line, which resulted in unreasonable charges and unjust discrimination against and undue prejudice to colored passengers in violation of §§ 1, 2, 3, and 13 of the Act and the Fourteenth Amendment. The only relief sought was the removal and avoidance in the future of the alleged discrimination and prejudice in the furnishing of accommodations. The Commission, while holding that the matters complained of were prohibited by § 3(1) of the Act, denied the relief prayed for. Mitchell then brought an action in the District Court of the United States for the Northern District of Illinois to set aside the Commission's order. In passing on whether Mitchell had standing to maintain the action, the Supreme Court said, at pages 92 and 93:

> "*First.* The Commission challenges the standing of appellant to bring this suit. We find the objection untenable. This question does not touch the merits of the suit, but merely the authority of the District Court to entertain it. The fact that the Commission's order was one of dismissal of appellant's complaint did not foreclose the right of review. Appellant was an aggrieved party and the negative form of the order is not controlling. Rochester Telephone Corp. v. United States, 307 U. S. 125, 143.
>
> "Nor is it determinative that it does not appear that appellant intends to make a similar rail-

road journey. He is an American citizen free to travel, and he is entitled to go by this particular route whenever he chooses to take it and in that event to have facilities for his journey without any discrimination against him which the Interstate Commerce Act forbids. He presents the question whether the Act does forbid the conduct of which he complains.

"The question of appellant's right to seek review of the Commission's order thus involves the primary question of administrative authority, that is, whether appellant took an appropriate course in seeking a ruling of the Commission. The established function of the Commission gives the answer. The determination whether a discrimination by an interstate carrier is unjust and unlawful necessitates an inquiry into particular facts and the practice of the carrier in a particular relation, and this underlying inquiry is precisely that which the Commission is authorized to make. As to the duty to seek a determination by the Commission in such a case, we do not see that a passenger would be in any better situation than a shipper. Texas & Pacific Ry. Co. v. Abilene Cotton Oil Co., 204 U. S. 426; Robinson v. Baltimore & Ohio R. Co., 222 U. S. 506; Mitchell Coal Co. v. Pennsylvania R. Co., 230 U. S. 247; Morrisdale Coal Co. v. Pennsylvania R. Co., 230 U. S. 304; General American Tank Car Corp. v. El Dorado Terminal Co, 308 U. S. 422.

"The District Court had jurisdiction to review the action of the Commission and the question on that review was whether that action was in accordance with the applicable law."

*[There, Mitchell suffered no pecuniary injury, but the court had no difficulty in concluding that he had a right to maintain the proceeding before the Commission,

*APPELLANTS' NOTE: The language included in brackets is modified by substituted page 6 of Appendix E.

that he was an aggrieved party, and that he was entitled to judicial review. See, also, *Henderson v. United States*, 339 U. S. 816, 823.

Here, the Rio Grande sought an order compelling the defendant railroads to perform the duty of establishing just and reasonable joint rates, fares, and charges over through routes, and it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate.

We think the cases relied on by the defendants are distinguishable.

Edward Hines Trustees v. United States, 263 U. S. 143, did hold that in order for the plaintiffs to maintain that action it was necessary for them to show that the order subjected them "to legal injury, actual or threatened," but the complainants there sought the] continuation of a so-called penalty charge of $10 per car per day on lumber held at reconsignment points. The court said that the plaintiffs had no absolute right to require carriers to impose penalty charges and that plaintiffs' right was "limited to protection against unjust discrimination." Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines. In the *Chicago Junction* case, *supra*, the court distinguished between an incident of more effective competition and injury inflicted by denying equality of treatment. Just, reasonable, and non-discriminatory joint rates is the equality of treatment which the Rio Grande here seeks.

In *Alexander Sprunt & Son, Inc. v. United States*, 281 U. S. 249, the Interstate Commerce Commission entered an order directed to the railroads operating in Oklahoma, Arkansas, Texas, and Louisiana, which required them to remove in a prescribed manner, undue prejudice and preference caused by their rates on cotton shipped from interior points to Houston and other ports on the Gulf of Mexico. Two actions were brought, one by Sprunt & Son and one by the Texas & New Orleans Railroad Company and other carriers, to enjoin the enforcement of the order. Upon final hearing, the District Court sustained the validity of the order and entered a decree dismissing the bills. None of the carriers appealed from the decree. Sprunt & Son appealed. The court held that the issue of undue prejudice and unjust preference which had been passed upon by the Commission had become moot, because most of the carriers never sought to annul the order and that the carriers who joined in the suit to set it aside had voluntarily severed themselves from the shipper, who objected to it. With respect to the right of Sprunt & Son to maintain the action, the court at pages 254, 255, said:

> "* * * We are of the opinion that appellants have no standing, in their own right, to make this attack. In so far as the order directs elimination of the rate differential previously existing, it worsened the economic position of the appellants. It deprived them of an advantage over other competitors of almost 3.5 cents per hundred pounds. The enjoyment of this advantage gave them a distinct interest in the proceeding before the Commission under § 3 of the Interstate Commerce Act. For, their competitive advantage was threatened. Having this interest, they were entitled to intervene in that administrative proceeding. * * * But that interest alone did not give

them the right to maintain an independent suit, to vacate and set aside the order. Such a suit can be brought by a shipper only where *a right of his own is alleged to have been violated by the order.* * * * In the case at bar, the appellants have no independent right which is violated by the order to cease and desist. *They are entitled as shippers only to reasonable service at reasonable rates and without unjust discrimination. If such service and rates are accorded them, they cannot complain of the rate or practice enjoyed by their competitors or of the retraction of a competitive advantage to which they are not otherwise entitled.* The advantage which the appellants enjoyed under the former tariff was merely an incident of, and hence was dependent upon, the right, if any, of the carriers to maintain that tariff in force and their continuing desire to do so." (Italics ours.)

Here, again, the court recognized that mere deprivation of a competitive advantage was not enough and that they were only entitled to reasonable service at reasonable rates and without unjust discrimination. Here, the very thing the Rio Grande seeks is not a mere competitive advantage, but the establishment of just and reasonable through rates and the removal of unjust discrimination, which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings.

In *Pittsburgh & West Virginia Railway Co. v. United States*, 281 U. S. 479, the Commission entered an order authorizing the New York Central Railroad and other rail carriers to join in establishing a union passenger station at Cleveland, through a subsidiary, Cleveland Union Terminals Company. The Wheeling & Lake Erie Rail-

way Company had for some years owned and maintained an independent passenger station at Ontario Street, Cleveland, in the line of the easterly approach to the proposed union terminal. It was apparent that either ownership of or an easement in the Wheeling's site would be indispensable in order to provide the necessary easterly approach to the terminal. Wheeling consented to sell its site and become a tenant in the new terminal. Contracts were made embodying this plan, subject to approval of the Interstate Commerce Commission. Thereupon, Wheeling filed before the Commission two applications for certificates of public convenience and necessity, one permitting it to abandon its Ontario Street station, and the other authorizing it to use the facilities of the union terminal, and pending its completion to use the facilities of the station of the Erie Railroad and the tracks of the Big Four.[4] Pittsburgh & West Virginia Railway, a minority stockholder and connecting carrier of the Wheeling, intervened in opposition to the applications. It opposed them on the ground that the Ontario Street station was ample for both the present and future needs of the Wheeling and that the contracts were disadvantageous to the Wheeling in certain particulars. The Commission found the public convenience and necessity would be served by the granting of both applications and accordingly issued its certificates as prayed for. Pittsburgh & West Virginia Railway then brought an action in the District Court of the United States for the Northern District of Ohio to set aside and annul the order of the Commission. The Supreme Court held that the order did not affect Pittsburgh & West Virginia as a carrier and that the claim that the order threatened Wheeling's

4 Cleveland, Cincinnati, Chicago & St. Louis Ry. Co.

financial stability and Pittsburgh & West Virginia's financial interest as a minority stockholder was not sufficient to show a threat of the legal injury necessary to entitle it to bring a suit to set aside the order. The court, at page 487, said: "* * * The injury feared is the indirect harm which may result to every stockholder from harm to the corporation," and that the interest of Pittsburgh & West Virginia was insufficient to give it standing to bring the action.

In *Moffat Tunnel League v. United States*, 289 U. S. 113, the Commission had entered an order authorizing the Denver and Rio Grande Western Railroad Company by stock purchase to acquire control of the Denver and Salt Lake Railway Company, called the Moffat Road. In the proceeding before the Commission the Moffat Tunnel Improvement District and the Public Utilities Commission of Colorado had intervened and they brought an action in the District Court of the United States for the District of Delaware to set aside the Commission's order. In holding that the plaintiffs did not have standing to maintain the suit, the Supreme Court said, at page 119:

> "* * * the complaint must show that plaintiff has, or represents others having, a legal right or interest that will be injuriously affected by the order. Edward Hines Trustees v. United States, 263 U. S. 143, 148. Sprunt & Son v. United States, 281 U. S. 249, 254. Pittsburgh & W. Va. Ry. v. United States, 281 U. S. 479, 486. Plaintiffs have failed to show that they are so qualified. Their interest is not a legal one. It is no more than a sentiment, such as may be entertained by members of the public in the territory west of Craig, that the improvement of transportation facilities authorized by the Commission will lessen the possibility of construction by a rival of the Rio Grande of an extension of the Moffat to Utah common points."

The *Pittsburgh & West Virginia Railway* case and the *Moffat Tunnel League* case are obviously distinguishable from the instant case.

With respect to cases relied on by the defendants, the statement by the court in *Youngstown Sheet & Tube Co. v. United States*, 295 U. S. 476, is apposite. "* * * The authorities cited by the appellees are to be distinguished on the ground that the plaintiffs either had no legal interest or capacity to sue or failed to allege that the rates under attack were *unreasonable or discriminated against them.*" (Italics ours.) Here, the existing rates are attacked by the Rio Grande on the ground that they are unjust, unreasonable, and discriminatory as against the Rio Grande and shippers on its line, deny them equality of treatment, and cause injury to them.

It is urged that to maintain the action, equitable grounds for relief must be alleged. But, it should be remembered that in the *Rochester Telephone* case, the court, at page 142, said:

> "* * * An action before the Interstate Commerce Commission is akin to an inclusive equity suit in which all relevant claims are adjusted. An order of the Commission dismissing a complaint on the merits and maintaining the *status quo* is an exercise of administrative function, no more and no less, than an order directing some change in status. The nature of the issues foreclosed by the Commission's action and the nature of the issues left open, so far as the reviewing power of courts is concerned, are the same. Refusal to change an existing situation may, of course, itself be a factor in the Commission's allowable exercise of discretion. In the application of relevant canons of judicial review an order of the Commission directing the adoption of a practice might raise

considerations absent from a situation where the Commission merely allowed such a practice to continue. But this bears on the disposition of a case and should not control jurisdiction. * * *"

Moreover, in overruling *Proctor & Gamble v. United States*, 225 U. S. 282, the court, at page 136, in the *Rochester Telephone* case, *supra*, observed that the shipper in that case "was within the express language of Congress authorizing suits 'to enjoin, set aside, annul, * * * any order of the Interstate Commerce Commission.'"

In the instant case, the Rio Grande, in its complaint, alleges that it was without adequate remedy at law. Clearly, the Rio Grande can maintain no other action which will give it adequate relief or prevent injury to it.

Accordingly, we conclude that the Rio Grande had standing to maintain the action.

The order in so far as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with this opinion.

APPENDIX E

IN THE UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLORADO

Civil Action No. 4492

The Denver and Rio Grande Western Railroad Company,
Plaintiff,

v.

United States of America and Interstate Commerce Commission,
Defendants.

Filed Apr 22 1955

Order

It is ordered by the court that the opinion heretofore filed herein be modified by substituting for pages 14, 29, 31, 32 and 36 thereof the following pages numbered 14, 29, 31, 32 and 36 and by the changes reflected in such last-mentioned pages:

[Substituted Page]

than over the Rio Grande route. This is due, in part to the refusal of Union Pacific to join with Rio Grande in establishing joint rates with respect to such traffic. The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic.

The power of the Commission to establish through routes and joint rates under §15(3) is limited by §15(4) of the Act, which declares that, except as provided in §3 of the Act, a railroad may not be required without its consent to embrace in such route substantially less than the entire length of its railroad which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through rate unreasonably long, as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed is needed in order to provide adequate, and more efficient or more economic

[Substituted Page]

II.

The Motion to Dismiss

We have concluded that under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law, and that the Commission erred, as a matter of law, in not finding the existence of such through routes.

We further conclude that the Commission erred as a matter of law in applying the limitations of §15(4) with respect to the establishment of through routes, in determining whether the Union Pacific and the other defendant railroads should be required to establish and maintain for the future just, reasonable and non-discriminatory competitive joint rates under the provisions of §14(4), §3(4), §15(1) and §15(3).

The duties and powers of the Commission, with respect to the relief sought by the Rio Grande, are clearly provided in §1(4), §3(4), §15(1) and §15(3) of the Act. The right of the Rio Grande to file its complaint with the Commission and seek the relief therein prayed for is clearly given by

[Substituted Page]

equitable divisions thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates, and the denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established.

The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defendants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of §1(4), §3(4), §15(1), and §15(3) of the Act, free of any of the limitations imposed by §15(4) with respect to establishing through routes.

If the Rio Grande, on its showing before the Commission and an application of the provisions of §1(4), §3(4), §15(1) and §15(3), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the

[Substituted Page]

Rio Grande of a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its operating income, and, no doubt, in its net earnings.[2] More succinctly stated, if the Rio Grande, under the Facts established by the evidence before the Commission, and the application of the provisions of §1(4), §3(4), §15(1) and §15(3) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande.

Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order.[3]

2 The Union Pacific asserts that the granting of the relief prayed for would result in a large loss of traffic and a large reduction of earnings by the Union Pacific.

3 The Chicago Junction Case, 264 U. S. 258, 266, 267.

[Substituted Page]

There, Mitchell suffered no pecuniary injury, but the court had no difficulty in concluding that he had a right to maintain the proceeding before the Commission, that he was an aggrieved party, and that he was entitled to judicial review. See, also, *Henderson v. United States*, 339 U. S. 816, 823.

Here, the Rio Grande sought an order compelling the defendant railroads to perform their statutory duty to establish just and reasonable joint rates, fares, and charges over through routes, and if it was entitled to such an order, then it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate.

We think the cases relied on by the defendants are distinguishable.

Edward Hines Trustees v. United States, 263 U. S. 143, did hold that in order for the plaintiffs to maintain that action it was necessary for them to show that the order subjected them "to legal injury, actual or threatened," but the complainants there sought the

APPENDIX F

The Pertinent Provisions of the Interstate Commerce Act (United States Code, Title 49), Involved in this Case are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1 (4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to

part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3 (4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15 (1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers sub-

ject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classification, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and mini-

ma, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. * * *"

Section 15 (4)—

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

Section 15(8)—

"In all cases where at the time of delivery of property to any railroad corporation being a common carrier, for transportation subject to the provisions of this part to any point of destination, between which and the point of such delivery for shipment two or more through routes and through rates shall have been established as in this part provided to which through routes and through rates such carrier is a party, the person, firm, or corporation making such shipment, subject to such reasonable exceptions and regulations as the Interstate Commerce Commission shall from time to time prescribe, shall have the right to designate in writing by which of such through routes such property shall be transported to destination, and it shall thereupon be the duty of the initial carrier to route said property and issue a through bill of lading therefor as so directed, and to transport said property over its own line or lines and deliver the same to a connecting line or lines according to such through route, and it shall be the duty of each of said connecting carriers to receive said property and transport it over the said line or lines and deliver the same to the next succeeding carrier or consignee according to the routing instructions in said bill of lading: *Provided, however,* That the shipper shall in all instances have the right to determine, where competing lines of railroad constitute portions of a through line or route, over which of said competing lines so constituting a portion of said through line or route his freight shall be transported."

Section 20(11)—(in part)

"That any common carrier, railroad, or transportation company subject to the provisions of this part receiving property for transportation from a point in one State or Territory or the District of Columbia to a point in another State, Territory, Dis-

trict of Columbia, or from any point in the United States to a point in an adjacent foreign country shall issue a receipt or bill of lading therefor, and shall be liable to the lawful holder thereof for any loss, damage, or injury to such property caused by it or by any common carrier, railroad, or transportation company to which such property may be delivered or over whose line or lines such property may pass within the United States or within an adjacent foreign country when transported on a through bill of lading, and no contract, receipt, rule, regulation, or other limitation of any character whatsoever shall exempt such common carrier, railroad, or transportation company from the liability hereby imposed; * * *."

In the Supreme Court of the United States

OCTOBER TERM, 1955

WASHINGTON PUBLIC SERVICE COMMISSION;
PUBLIC UTILITIES COMMISSIONER OF OREGON;
BOARD OF RAILROAD COMMISSIONERS OF THE STATE OF MONTANA;
STATE BOARD OF EQUALIZATION AND PUBLIC SERVICE COMMISSION OF WYOMING;
STATE OF NEBRASKA and NEBRASKA STATE RAILWAY COMMISSION,

Appellants,

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

BRIEF FOR ABOVE NAMED APPELLANTS

OPINIONS BELOW

The opinion of the United States District Court for the District of Colorado (R. 279) is reported in 131 F. Supp. 372. The report of the Interstate Commerce Commission (R. 57) is found in 287 I. C. C. 611.

JURISDICTION

This action was brought October 22, 1953, in the United States District Court for the District of Colorado (R. 1) by The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") against the United States of America and the Interstate Commerce Commission, pursuant to 28 U. S. C. 1336, 1398,

3284 and 2321-2325, to enjoin, annul, suspend and set aside "in part" an alleged "order" issued January 12, 1953, by the Commission in a proceeding entitled "Docket No. 30297, Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co. et al." These appellants intervened as defendants in the district court.

The final judgment and decree of the district court, dated February 1, 1955, was entered February 14, 1955. On April 22, 1955, the district court entered an order overruling and denying a motion of these appellants and others for new trial or reargument and reconsideration (R. 361; 362).

Notice of appeal was filed by these appellants in the United States District Court for the District of Colorado on June 20, 1955 (R. 369).

The jurisdiction of this Court to review the judgment by direct appeal is conferred by 28 U. S. C. 1253 and 2101(b). Probable jurisdiction was noted by this Court on October 24, 1955.

STATUTES INVOLVED

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out in Appendix A hereto:

> National Transportation Policy (preceding Section 1), and Sections 1(4), 3(4), 15(1), 15(3), 15(4), 15(8) and 20(11).

QUESTIONS PRESENTED

The following questions are presented by this appeal:

I. Does the Rio Grande, which obtained joint through rates on certain commodities under the Commission's

order, have legal standing to seek by a suit to enjoin the order, similar rates on all commodities via all possible routes when the granting of such additional relief is subject to administrative determination of public interest requirements under the Interstate Commerce Act.

II. Did the district court err in holding that Rio Grande sustained "pecuniary injury" and had standing to maintain this action on the ground that the Commission deprived Rio Grande of additional "pecuniary gain" which would be realized if all the joint rates demanded by Rio Grande had been granted.

III. Did the district court err in holding that Rio Grande need not sustain "pecuniary injury" in order to have a "right to judicial review".

IV. Did the district court err in holding that the Commission's finding that "there are at present no through routes, as that term is used in the act", over the Rio Grande via Ogden or Salt Lake City "on the traffic here concerned" is not supported by substantial evidence and is erroneous as a matter of law.

V. Did the district court, in connection with its holding that through routes were in existence on the "bridge" traffic sought by Rio Grande, err in failing to consider and give effect to the fact that the primary objective of Rio Grande was to participate in the transportation of products from the northwest states to the eastern and southern markets and that not a single movement of such "bridge" traffic is shown to have occurred over the Rio Grande route.

VI. Did the district court, in connection with its holding that through routes were in existence, err in

failing to find that the cancellation of joint rates in 1906 and 1912 effectively closed these through routes in accordance with the understanding and "course of business" of the parties concerned and that the conclusion of the Commission in this regard is supported by legislative amendments in 1940 to Section 15(3) of the act.

VII. Did the district court, in connection with its holding that through routes were in existence, err in failing to find as the Commission found, that shippers have a right to route traffic via the Rio Grande and Union Pacific at combination of local rates and that the Union Pacific had no right or duty to refuse shipments.

VIII. Did the district court err in holding that the decision of the Commission as to the existence of through routes "obviously prejudiced the entire proceeding" in view of the fact that the Commission's order established through routes and joint rates upon all commodities that it considered upon the evidence to be necessary in the public interest.

IX. Did the district court err in annulling and setting aside only that portion of the Commission's order which "denied relief to the Rio Grande" upon its holding that the Commission's finding as to through routes "obviously prejudiced the entire proceeding".

X. Did the district court err and exceed its powers in making findings of fact favorable to Rio Grande and in ordering the Commission to proceed "in conformity with the opinion and judgment of the court", and the "instructions" therein.

STATEMENT

The Rio Grande's complaint to the Commission demanded that joint rates, in lieu of the present combination of local rates, be established via its line "the same" as joint rates maintained over shorter through routes by the Union Pacific and other defendant railroads named in the complaint for about 172,000 carloads of traffic moved annually by those railroads. The traffic originates and terminates on the lines of the Union Pacific, Great Northern, Northern Pacific, Milwaukee, Southern Pacific and other railroads that have owned and operated for some 75 years thousands of miles of railroad trackage in the ("northwest") area embracing northern Utah, Idaho, Montana, Oregon and Washington. Most of that traffic originates and terminates on the lines of the Union Pacific[1] and moves over its lines through Idaho, Wyoming, Nebraska and Kansas between points in the northwest area and points in the eastern and southern part of the United States over through routes ("Union Pacific routes") and under joint rates maintained by the Union Pacific and other railroads, including those named above.

The joint rates have never applied via the Rio Grande except during a short period in the early part of this century, when Union Pacific and two of its subsidiary lines were in receiverships. Having their own shorter and direct routes connecting at their eastern termini with other railroads forming the through routes for this transcontinental traffic, the Union Pacific and other carriers

---

1 Union Pacific now owns and operates 5,606.7 miles of railroad in that area, of which 2,913.19 miles, or over 50 per cent, consists of numerous branch lines extending from and serving as "feeders" to its main lines. About 50 per cent of the traffic the Rio Grande wants routed via its line originates and terminates on these branch lines. The Rio Grande demands, and the effect of the order is that, all these main and branch lines serve as "feeders" of bridge traffic to its line.

serving the northwest area have insisted on retaining their long hauls and therefore have refused to establish through routes and joint rates with the Rio Grande for this transcontinental traffic. The only rates applicable via the Rio Grande for this traffic are the combination or the sum of the local rates of each carrier, and those rates are substantially higher than the joint rates over Union Pacific routes.

Since 1935, the Rio Grande management has sought some method by which it could compel carriers comprising the Union Pacific routes to make their joint rates applicable via its longer and more onerous, mountainous route for a "bridge haul"[2] on traffic from and to the northwest area. (V. I, 48)*. On August 1, 1949, the Rio Grande filed its complaint with the Commission which resulted in the order involved in these appeals. The complaint alleged that the combination of local rates via the Rio Grande for the involved traffic are so much higher than the joint rates maintained via Union Pacific routes as to prevent the movement of the involved traffic via the Rio Grande, thus depriving the Rio Grande of through freight traffic

2 The term "bridge traffic" is used to designate traffic hauled by a carrier on whose line the traffic neither originates nor terminates. A "bridge haul" is the transportation of such "bridge" traffic some part of the distance between its point of origin and its final destination. "Bridge" traffic is most attractive because it is generally least expensive to haul since the "bridge" carrier performs none of the expensive branch line, gathering or switching services required at the point of origin and point of final destination. The Rio Grande's president testified that the reason it is pressing for more "bridge" traffic is that "there is more money in it" than in traffic it originates or terminates.

The traffic the Rio Grande seeks to divert to its line is "bridge" traffic which originates and terminates outside of Rio Grande territory. Joint rates already apply to traffic originated at or destined to points on the Rio Grande.

* Because of duplication in page numbering the printed records in these cases, this abbreviation will be used to refer to pages of Volumes I & II, proceedings before the Interstate Commerce Commission.

it might obtain if "equal rates" applied via its line. It alleged that the combination rates were unjust and unreasonable, unduly prejudicial to shippers desiring to use the Rio Grande and that the refusal of the Union Pacific and other defendants named in the complaint to establish joint rates in connection with the Rio Grande the same as the joint rates maintained over Union Pacific routes violated Sections 1(4), 3, 15(1) and 15(3) of the Interstate Commerce Act.

The Rio Grande demanded that the Commission order the Union Pacific and other defendants named in the complaint to establish joint rates on *all commodities* in connection with the Rio Grande "the same" as the lower joint rates maintained over Union Pacific routes. Realizing that its demands would short haul the Union Pacific routes 925 miles, Rio Grande's complaint alleged that, as its tracks physically connect with other railroads, through routes "now exist" for the interchange of the involved traffic between its line and the Union Pacific and other railroads and contended that the Commission should prescribe the joint rates without regard to the prohibition in Section 15(4) against short-hauling existing routes. Citing this Court's decision in *Thompson v. United States*, 343 U. S. 549, the Commission rejected that contention and held that prescription of any of the joint rates demanded by Rio Grande would involve the authority conferred by Section 15(3) as limited by Section 15(4) of the Act to prescribe through routes and joint rates.

The order issued by the Commission[3] requires that

3 The validity of the order issued is now before this Court in Nos. 117, 118 and 119, appeals docketed May 31, 1955, from the final decree of the United States District Court for the District of Nebraska.

the Union Pacific and over 200 other railroads establish through routes and joint rates in connection with the Rio Grande "the same" as the joint rates maintained by them on the several commodities named in the order, which comprise about 57,000 carloads, or one-third of the traffic annually that the Rio Grande seeks to divert over its line, short-hauling the Union Pacific routes at least 925 miles and subjecting the Union Pacific and other lines to large revenue losses.

But the Commission did not order through routes and joint rates on about two-thirds of the traffic, and it is for the purpose of having the Commission order through routes and joint rates via its line on the remaining two-thirds of the traffic, that the Rio Grande brought this suit to enjoin and annul the Commission's *failure* to include the remaining two-thirds of the traffic in the order it issued. Such failure is not embraced in the order issued or in any "order" of the Commission.

The case presents the novel and unique situation of an admitted attempt by the Rio Grande through judicial proceedings to further enhance its financial gains by diverting to its longer line for a "bridge" haul, traffic that originates or terminates on the railroads that have the shortest, fastest and most efficient routes and lowest rates between the points at which the traffic originates and points of its destination.

As stated, the Rio Grande contended before the Commission that through routes at the combination or sum of local rates already existed via its line for the traffic it seeks, and that the short-hauling prohibition in Section 15(4) was not applicable. It demanded that the lower joint rates maintained over the existing Union Pacific routes be made applicable via its line, and contended

that refusal of the defendants named in its complaint to make the joint rates applicable via its line discriminated against it. The Commission held that through routes via the Rio Grande did not exist for the involved traffic but found they were necessary in the public interest to provide adequate and more economic transportation for certain commodities named in the order, and required that joint rates "the same" as maintained over existing Union Pacific routes be made applicable via the Rio Grande to those commodities. The Commission found that the evidence failed to prove the alleged discrimination against the Rio Grande and concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained." The order issued does not, in terms, deny or withhold anything, nor does it make any reference to the remaining two-thirds of the traffic the Rio Grande seeks by this suit to divert to its line.

The district court overruled a motion to dismiss the case on the ground that, as the Rio Grande admittedly has no legal or other right to the traffic it seeks to divert to its line for its financial gain, it has no standing to maintain the suit. The court reversed the Commission and held that through routes via the Rio Grande do exist for the involved traffic, that the Commission had erred as a matter of law and upon the evidence in finding that through routes via the Rio Grande did not exist, and that this finding "prejudiced the entire proceeding" before the Commission. The court, again reversing the Commission, held that the evidence proved discrimination against the Rio Grande, and enjoined and annulled "the order" insofar as it denied and withheld relief from the Rio Grande, and "remanded" the case to the Commission for further proceedings in conformity with the court's opin-

ion, but *only* insofar as the Commission "denied and withheld relief" to the Rio Grande.

These five States, representing territory served by long established Union Pacific routes from the Missouri River to the Pacific northwest, oppose Rio Grande proposals to short haul the shortest, swiftest and most economical route to eastern and southern markets, by requiring Union Pacific and over two hundred other railroads to enter into joint through rates with the Rio Grande whose admitted objective is to divert this traffic, primarily from the Union Pacific, in order to obtain a "bridge" haul and thereby improve its financial position. According to Rio Grande the "potential" volume of such traffic moving from the northwest to the east and south, which would be "available for solicitation" and diversion by the Rio Grande to its line amounts to 101,476 carloads annually.[4]

Being distant from the principal markets, the economic life of the northwest depends upon fast, efficient, low cost transportation. Present transportation facilities and routes to and from this area are more than sufficient and Union Pacific alone is shown to possess an unused

4 As indicated in the Commission's report (R. 77, 69) the bulk of the traffic sought constitutes agricultural and mineral products of the northwest, which now travel via Union Pacific "because the Union Pacific routes are shorter." The reverse movement west comprises only 56,286 carloads annually and was given little emphasis by Rio Grande. The only westbound articles included in the order were "granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations" in the northwest (R. 105).

The traffic east and the traffic west are entirely independent of each other and should have been so considered. The Commission's order which the Court annulled in *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, 273, involved only the establishment of "through routes for westbound freight traffic."

transportation capacity of 85% (V. I, 690). Piling on additional surplus facilities and unneeded routes, will, in the opinion of these States, adversely affect the economic future of this territory and violate the manifest policy and intention of Congress.[5]

The present through route provisions of the Act were adopted in 1940 in order to make the "shortest, quickest, and cheapest routes available."[6] Union Pacific routes meet these tests. Rio Grande routes do not.

Ordinarily requests for new routes are justified as "needed" and involving "more efficient or more economic" transportation by showing that they are shorter than existing routes. The Rio Grande routes sought herein are unique in that they would short haul the short route by substituting an uneconomic, wasteful, slower route from 219 miles to as much as 50 per cent longer which must go up and down many of the highest mountains in the country.[7]

---

5 Congressional policy since 1920 has stressed as paramount economy and efficiency in transportation facilities. *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 277. The 1940 declaration of Congress (49 U. S. C. preceding § 1) emphasizes "adequate, economical and efficient service" and this declaration controls the "basic power of the Commission." *American Trucking Assns. v. U. S.*, 344 U. S. 298.

6 Report No. 404, Senate Bill 1261, 75th Cong., 1st Session, page 2. Congressional Record, pp. 6055-6056. 287 I. C. C. 655.

7 The Commission reviews (R. 94) some of the proof showing the Rio Grande to be "less favorably situated," and it finds that "operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein." (R. 102.) The full impact of wastefulness established beyond dispute by the record is not reflected. This shows that the Rio Grande "has no value as a service route" (V. I, 803); that curvature is so great a train completes a circle

(Continued on next page)

Long experience has demonstrated to these States that the fantastic wastefulness involved in Rio Grande proposals would ultimately be saddled upon the public and shippers of these States.[8] This local marginal mountainous railroad should not be permitted to force its admittance into the transcontinental railroad systems which this region must support.

The overwhelming public detriment that these States and their communities may suffer under Rio Grande proposals includes: (1) reduction in existing service, (2) abandonment of branch lines, (3) waste of present and adequate facilities, (4) increases in unit costs, and (5) destruction of long established channels of trade and commerce.[9]

(Continued from preceding page)

every 5.45 miles and requires 51% more effort (Ex. 12, p. 9), at a cost of $124.33 per car (Ex. 15, p. 7; Ex. 53 p. 3) and that freight car days are wasted.

(Pursuant to stipulation of the parties filed with the Clerk of this Court November 9, 1955, exhibits received in evidence by the Commission and sent up in original form as part of the record prepared by the Clerk of the district court are not printed but may be referred to and treated as if they were printed.)

In *Texas v. United States*, 292 U. S. 522, 530, the Court said it is a "primary aim" of present transportation policy of Congress "to secure the avoidance of waste." One of the long expressed purposes of Congress has been to eliminate this kind of "cut-throat" competition. *United States v. Louisiana*, 290 U. S. 70, 74.

In this connection it is significant that practically all shipper witnesses of Rio Grande, including the U. S. Department of Agriculture, supported their position on the ground that notwithstanding the mandate of Congress against short-hauling existing routes, all gateways should be opened and unlimited circuitous hauling should be the rule.

8 As noted by the Court in *Texas & Pac. Ry. v. Gulf, etc., Ry.*, 270 U. S. 266, 270, "when a railroad inflicts injury upon its rival, it may be the public which ultimately bears the loss."

9 This Court has said that it "could not be readily supposed that Congress intended, when regulating such commerce, to interfere with and interrupt, much less destroy, sources of trade and commerce already existing." *Texas & Pac. Railway v. Interstate Com. Com.*, 162 U. S. 197, 218.

The differences in rates which Rio Grande now experiences merely reflect differences in transportation conditions which have always characterized sound transportation conditions, regulation and practices.[10]

It is clear that what Rio Grande seeks in this proceeding, a rate advantage by circumventing the requirements of the Act, is not appropriate under the Act and is inconsistent with previous decisions of the Commission in this field.[11]

SUMMARY OF ARGUMENT

1. The Commission's order established through routes and joint rates on some commodities. Because of Rio Grande's failure to satisfy various "public interest" requirements, additional commodities and routes were not included in the order. There was no "order" as to omitted routes and commodities. The failure of the Commission to grant a broader "order" affords no jurisdictional basis for judicial review. Granting judicial relief to the Rio Grande in such circumstances would necessarily involve the exercise of "administrative" functions by the Court.

10 *Barringer & Co. v. U. S.*, 319 U. S. 1, 9. *Brown Lumber Co. v. L. & N. R. Co.*, 299 U. S. 393, 396.
The Act was "not intended to ignore the principle that one can sell at wholesale cheaper than at retail." *Interstate Com. Commiss. v. B. & O. Railroad*, 145 U. S. 263, 276.

11 *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I. C. C. 331, 333, summarizes recent Commission decisions and points out that through routes have been established when they "eliminated expensive out-of-line hauls," or were "shorter" or "were at least as economical"; and were rightly denied in the case being heard since the "routes sought are substantially longer than the present routes, and their establishment would appear to encourage wasteful and uneconomic transportation" and "would not 'give reasonable preference to the originating carrier."

Since the order issued granted Rio Grande substantial benefits and as conceded by the district court "took nothing away from the Rio Grande", no "pecuniary loss" was sustained and Rio Grande has no standing to maintain this action. The lower court clearly erred in concluding that the failure of Rio Grande to realize all the "pecuniary gain" requested constitutes "pecuniary injury". No decision of this Court sustains this position. The only case which the district court cited as supporting this view involved an actual annual loss of $10,000,000, by reason of the Commission's order.

The holding of the district court that "pecuniary injury" need not be suffered, to afford judicial review, would extend the right of review to every litigant before the Commission receiving less than its maximum demands. No precedents can be found which sustain this new rule of judicial review. The cases cited by the district court involve the review of Commission orders denying relief to negroes who were deprived of their Constitutional right to equality of treatment. These cases do not support the conclusion of the court since they involve a "loss" and deprivation of rights constituting legal injury.

The claim now made by Rio Grande that review is justified under the Administrative Procedure Act disregards the language therein continuing the same requirements of legal injury for review as set forth in statutes already providing judicial review.

The position of the Commission that through routes and rates did not previously exist resulted in no prejudice to Rio Grande since the Commission held that the requirements of section 15(4) in this regard were satisfied with respect to the commodities named in the order. The limitation of relief to Rio Grande was caused by

"public interest" requirements under the act and not by the position of the Commission as to non-existence of through routes. The Commission's position in this regard became a moot question by reason of the establishment of through routes.

2. The Commission rightly concluded that through routes did not exist on the basis of the various objective and subjective tests prescribed by this Court. The self styled "brief and sketchy statement of the case", by the distfict court, considered only a portion of the record and some but not all of the controlling factors.

The paramount objective of Rio Grande in this case is to share in the "bridge" shipment of agricultural products from the northwest to the eastern markets. Not a single movement of this "bridge" traffic over any proposed route was shown to have occurred. The relatively few movements shown by Rio Grande for the year 1948 were from east to west, and these, as realistically held by the Commission, amounted to only "isolated" shipments that are wholly insufficient to establish a through route.

There was, therefore, no "holding out", no "course of business", no "course of conduct", no "continuous use", which would establish the desired through routes. Undisputed evidence, given no consideration by the district court, showed that it was only in recent years that Rio Grande completed improvements which enabled it to seek these new routes. Earlier when the routes now desired were closed, Rio Grande confined its efforts to building a new outlet to the Pacific coast. The "pamphlet" campaign launched by Rio Grande at the beginning of this proceeding clearly recognized that the desired routes

were closed. Extensive evidence, unnoted by the court below, refutes the idea there has been any "continuous use" of the proposed through routes. And shipper witnesses for the Rio Grande made no claim that routes already existed. They founded their testimony on the desirability of opening all gateways without regard to the Congressional mandate against short-hauling.

The Commission correctly warned that a decision that Rio Grande's showing herein established the existence of through routes would constitute an "open invitation to any shipper to set aside" the requirements of the act by staging a few shipments.

The district court, though holding that the evidence "establishes the existence of through routes" via the Rio Grande, refused to face squarely the consequences of declaring the existence of "hundreds of thousands of through routes" by the kind of showing attempted and ordered a "new hearing" by the Commission as to the extent of through routes. In so doing the Commission was directed to reconsider a question it has already considered and resolved against Rio Grande.

3. The undisputed evidence shows that joint rates, temporarily in effect while the railroads involved were in receivership, were effectively cancelled by Union Pacific in 1906 and 1912 by tariff amendments. All during the period since this cancellation the public and the parties to this proceeding regarded the routes as closed. Neither the Rio Grande nor anyone else took any action to suspend this closing of routes. Under such circumstances the Commission rightly concluded that Union Pacific had done everything required to close such routes.

In amending Section 15(3) in 1940 Congress recognized the long established right of carriers to close routes by cancelling joint tariff rates. This legislation required a showing of "public interest" if the Commission "suspended" the route closing. The legislative history shows this amendment was aimed at preventing "wholesale cancelling of joint and through routes" by tariff amendments.

The decision of the Commission as to the effect of tariff amendments made more than 40 years ago follows repeated decisions of the Commission and this Court and, being supported by evidence, is not subject to review in this action.

4. The Commission correctly held that shippers have a right to route their traffic and Union Pacific had no right or duty to refuse shipments. There is nothing in the law requiring or permitting a road block or embargo to be erected in order to preserve a carrier's right not to be short-hauled. For many years the Commission and this Court have held that a shipper may route his traffic over a "closed" route if he desires to pay the established rates.

Section 15(8) of the Act is not inconsistent with this position. That section applies only when "two or more through routes" have been established and was added in 1910 to protect shippers against the duplication of routes that might result from an expanded Section 15 adopted in that year. The section has no application in cases such as the present where "two or more through routes" do not exist.

The issuance of a through bill of lading on the few bridge shipments moved west over the proposed route in

1948, merely complied with the mandate of Section 20(11) of the Act and constitutes no acknowledgment of a through route. The Union Pacific, under long established decisions, had no right or duty to refuse a through bill of lading to any such shipper.

5. The district court exceeded its powers and usurped administrative authority in finding that "discrimination" against Rio Grande was established. This finding, and the various "instructions" to the Commission contained in the opinion, have the effect, in connection with the "remanding the case to the Commission", of completely tying the Commission's hands. This action was taken by the district court even though it frankly stated that its disposition of the case was based upon a "narrow ground" following a "very brief and sketchy statement of the case". The opinion of the court constitutes in effect a *de novo* review of the record which is beyond the statutory power of review.

ARGUMENT

I.

Rio Grande Does not Have Legal Standing to Maintain This Action.

The Commission's order establishes through routes via the Rio Grande route in both directions and requires joint rates "the same" as rates on Union Pacific routes to be established on the commodities specified, which comprise about a third of the involved traffic. Rio Grande has therefore obtained under the order substantial rights to solicit and haul transcontinental traffic that it could not previously carry. The potential "pecuniary gain" thus realized by the Rio Grande is considerable (esti-

mated to be $11,000,000, annually although the exact dollar volume is not fixed.

Though holding that the Rio Grande has standing to maintain this suit, the district court admitted that to the extent the Commission's order failed to grant Rio Grande the full "relief" requested it:

> "* * * required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had, and, if considered solely from those points of view, the order caused no pecuniary loss to the Rio Grande." (R. 293-294)

The court goes on, however, and theorizes that *if* Rio Grande was entitled to joint rates under Sections 1(4), 3(4), 15(1) and 15(3) independent of Section 15(4), then it failed in the order to secure "a pecuniary gain to which it was entitled", because the "granting of the relief undoubtedly would have resulted in a large increase of traffic" which in turn would increase "operating income, and, no doubt, in its net earnings." This result, the opinion suggests, may constitute "pecuniary injury to the Rio Grande" (R. 294).

At this point it should be immediately noted that if failure to realize all the "pecuniary gain" requested by any applicant in a proceeding before the Commission may constitute sufficient "pecuniary injury" to obtain a judicial review, then every case in which everything that is requested is not obtained may be the proper subject of judicial proceedings.

It is, of course, elementary that a "pecuniary benefit means an increase in one's net worth by the receipt of money or property." *Hays' Estate v. Commissioner of Internal Revenue* (5th C. C. A.), 181 F. 2d 169, 171.

Practically every complainant before the Commission seeks that kind of "benefit". Heretofore, such a "benefit" or "gain" has not been held identical with a "loss" sustained as a result of a Commission order in determining whether a judicial review was available.

The district court does not refer to a single decision upholding its view that failure to obtain all the "pecuniary gain" asked for may constitute "pecuniary" loss and "legal" injury. The cases involving the problem of legal standing, as we shall see, all relate to the sufficiency of the losses therein experienced to amount to "legal injury". These cases clearly define what kind and type of loss—what deprivation of a previously held benefit—is sufficient basis for judicial review.

The only authority mentioned by the court in support of its theory is the reference in footnote 3 to the *Chicago Junction Case*, 264 U. S. 258, to substantiate the statement that "judicial review" is available where an order will cause a carrier to "suffer pecuniary injury", but that case is no support whatever for the reasoning that the Rio Grande suffered "pecuniary injury" by being deprived of a "pecuniary gain" which "undoubtedly would have resulted" from a "large increase in traffic" if all the relief requested had been obtained.

Instead of supporting the lower court, the *Chicago Junction Case* demonstrates why this action cannot be maintained. The order involved in that case permitted the New York Central to take over certain terminal railroads in Chicago and give the Central a "monopoly", thereby replacing the "neutral control" existing prior to the order. That the plaintiff railroads were actually

deprived of business in an annual amount of $10,000,000 annually, is made clear at pages 266-267 of the opinion.[12]

As further stated by this Court in that case, this "loss" was not merely an "incident of more effective competition". It was "injury inflicted" by "denying" plaintiffs the rights and benefits which they *previously enjoyed*, and an amendment of the Act in 1920 specifically "made provision for securing joint use of terminals."

The Rio Grande can point to no revenue it has lost by the present order. It can only claim that the order *demanded* would give it a "large increase in traffic" and a "pecuniary gain." No authority whatever is cited by the lower court that such demand for additional "pecuniary gain" gives Rio Grande a legal standing in this case.

The opinion below cites several decisions of this Court wherein even a "loss" actually resulting from an order did not give the affected party standing to seek review of the order. Cases such as *Edward Hines Trus-*

---

12 The opinion states:

"The main purpose of the acquisition by the New York Central was to secure a larger share of the Chicago business. By means of the preferential position incident to the control of these terminal railroads, it planned to obtain traffic theretofore enjoyed by its competitors. Because such was the purpose of the New York Central control, and would necessarily be its effect, these plaintiffs intervened before the Commission. That their apprehensions were well founded is shown by the results. The plaintiffs are no longer permitted to compete with the New York Central on equal terms. A large volume of traffic has been diverted from their lines to those of the New York Central. The diversion of traffic has already subjected the plaintiffs to irreparable injury. The loss sustained exceeds $10,000,000. Continued control by the New York Central will subject them to an annual loss in net earnings of approximately that amount. If, as suggested in *Interstate Commerce Commission v. Chicago, Rock Island & Pacific Ry. Co.*, 218 U. S. 88, 109, a legal interest exists where carriers' revenues may be affected, there is clearly such an interest here."

fees v. U. S., 263 U. S. 143, and *Sprunt & Son v. United States*, 281 U. S. 249, were rejected by the district court as involving a "mere deprivation of a competitive advantage" and therefore "not enough" to warrant review in the courts. The deprivation and loss involved in both of those cases was very substantial[13] but the extent of such loss is not as important as the fact that that loss actually occurred. What the district court overlooked is that notwithstanding such losses this Court held that there was no basis for review because a "legal injury" had not been suffered.

The foregoing observation is also applicable to *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, in which plaintiff a connecting carrier and "minority stockholder" sought to review a Commission order establishing a union station in Cleveland. It was held at page 487 that "legal injury" did not exist although the "financial stability" of the carrier directly concerned was threatened and plaintiff's investment imperiled.

The decisions of this Court sustain the proposition that previously enjoyed rights must be "injuriously affected" in order to afford any standing whatever to seek review of a Commission order.[14]

---

13 In the *Hines case* it was claimed property was being taken by the Commission's order "without due process of law, in violation of the 5th Amendment." (263 U. S. p. 147.)

In the *Sprunt case* the order caused a shipper to lose a $7.00 per ton advantage which he had enjoyed over his competitors.

14 *Moffat Tunnel League v. U. S.*, 289 U. S. 113, at page 119, cites and summarizes the cases. See also *Claiborne-Annapolis Ferry v. U. S.*, 285 U. S. 382; *Alton R. Co. v. United States*, 315 U. S. 15.

Alabama Power Co. v. Ickes, 302 U. S. 464, 478, states that the "mere fact that petitioner will sustain financial loss" is not sufficient.

The statement in *Edward Hines Trustees v. U. S.*, 263 U. S. 143, 148, that "plaintiffs have no absolute right" to maintain previous competitive advantages is, *a fortiori*, applicable to Rio Grande and requires a conclusion that Rio Grande has no right of any kind in the additional "pecuniary gain" that would be realized under the order requested of the Commission.

The law that should control here, governing the question of standing to maintain suit to review an order of the Commission was unusually well and correctly stated by Chief Judge Moore of the three-judge court that dismissed for lack of standing the complaint in *Atchison, Topeka and Santa Fe Ry. Co. v. United States*, 130 F. Supp. 76 (affirmed per curiam by this Court Nov. 14, 1955; No. 400, 76 S. Ct. 152). In that case the order authorized one motor carrier to acquire control of another. Fearing stronger competition from the combination of motor carriers than it had previously experienced, the Santa Fe Railway sued to annul the order. The court stated, page 78, that:

> "In this case the Complaint fails to allege that the plaintiffs have suffered or been threatened with any damage or financial injury. It does not allege that any definite legal right of the plaintiffs has been violated, nor that the order of the Commission has created any additional motor carrier service, or increased competition for the plaintiffs. The plaintiffs merely allege that they are in competition with the motor carriers, and that they have a direct interest in the enforcement of the Interstate Commerce Act and the National Transportation Policy."

Distinguishing this Court's decisions in *Chicago Junction Case*, 264 U. S. 258; *Western Pacific v. South. Pac. Co.*, 284 U. S. 47, and *Alton R. Co. v. United States*, 315 U. S. 15, and noting that the Santa Fe was "not threatened with any new competition from new oper-

ating rights which they have not been subjected to in the past", and, hence, no threatened loss of the railroad traffic from any substantial or material "change in the transportation situation", the court held, at page 79:

> "Thus it appears that there is here no right of the plaintiffs which may have been violated by the order of the Commission and, furthermore, there is no damage alleged. In other situations it has been held that even where there may be damage, a plaintiff must have some special and peculiar interest which may be directly and materially affected by the action alleged to be unlawful. L. Singer & Sons v. Union Pacific R. Co., 311 U. S. 295, 61 S. Ct. 254, 85 L. Ed. 198. And where there is no violation of a right, no action may be maintained and no right exists to be immune from lawful competition or the unauthorized financing of such competition. Alabama Power Co. v. Ickes, 302 U. S. 464, at pages 479-480, 58 S. Ct. 300, 82 L. Ed. 374.
>
> "And in Tennessee Electric Power Co. v. Tennessee Valley Authority, 306 U. S. 118, 59 S. Ct. 366, 369, 83 L. Ed. 543, the Court held one threatened with direct injury by governmental action may not challenge that action 'unless the right invaded is a legal right,—one of property, one arising out of contract, one protected against tortious invasion, or one founded on a statute which confers a privilege.' There the plaintiffs were held to be without standing to sue because 'the damage consequent on competition, otherwise lawful, is in such circumstances *damnum absque injuria*, * * *.'
>
> "Though the motor carriers in the instant case may, as a combination under joint control with adequate financial backing, offer stronger competition to the railroads than they did previously, we conclude that the railroads have no 'definite legal right' to be immune from this competition and, therefore, are not 'parties in interest' who may maintain this suit."

The District Court Erred in Holding That Rio Grande Need not Sustain Pecuniary Injury to Maintain This Action.

While the precise theory or ground for the court's holding that Rio Grande has standing to maintain this action is uncertain, the emphasis placed on *Mitchell v. United States*, 313 U. S. 80, clearly shows that the court thought that "pecuniary injury" is not "essential to the right to judicial review" as a result of that decision. This Court's holding that Mitchell had a right to review the dismissal of his complaint to the Commission because he was deprived of his *constitutional right* to equal train accommodations, offers no assistance whatever in solving the present case. Here the Rio Grande, in its greatest flights of contention, has never suggested that it is being or has been deprived of any legal or constitutional right by the order of the Commision which it attacks.

This Court said in the *Mitchell* case (p. 94) that the "fundamental individual right" to equality of treatment "guaranteed against state action by the Fourteenth Amendment", prevented compliance with a state statute as to "segregation" of white and colored passengers; and that the provisions of the Interstate Commerce Act carried such guaranty into effect by requiring "equality of treatment".

The entire basis for the proceeding in the *Mitchell* case was the actual deprivation of constitutional rights inflicted upon Mitchell by requiring him to give up a pullman seat and "move into the car provided for colored passengers" and to do this "under threat of arrest"[15] (p. 89).

---

15 This Court has made it clear that as to state action, complainants are "deprived of the equal protection of the laws guaranteed by

(Continued on next page)

Henderson v. United States, 339 U. S. 816, also cited by the lower court, which involved a "denial of dining service" to a colored railroad passenger, is in all respects a holding identical with that in the *Mitchell* case. The action in that case was to review the "railroads current regulations" and "practices", to which complainant had been "subjected" and which deprived him of the "use" of "existing and unoccupied facilities" on trains by reason of his color.

To state, as did the court below, that these constitutional cases do not involve a "pecuniary injury" is but to announce that constitutional rights do not necessarily involve money. It is one thing, however, to suggest actual deprivation of constitutional rights gives a right of review although no "pecuniary" loss has occurred; it is quite another thing to suggest that in cases such as the present, which involve no question of constitutional rights, there may be a review even though there is no "pecuniary injury". If the latter is correct, then what limitation exists on the review of Commission orders? If a plaintiff is entitled to a review because he asked for something he did not receive in full, then the doctrine of "legal injury" as a basis for review is abandoned.

(Continued from preceding page)
the Fourteenth Amendment" by racial segregation (*Brown v. Board of Education*, 347 U. S. 483, 495); and such segregation is a "denial of due process of law guaranteed by the Fifth Amendment." (*Bolling v. Sharpe*, 347 U. S. 497, 500). The latter opinion at page 499 cites *Buchanan v. Warley*, 245 U. S. 60, that restrictions on conveyances based on race are an "unreasonable discrimination, a denial of due process of law."

The constitutional basis for a right of action on account of such "deprivation" of rights is unaffected by the fact that a statute may also prohibit the discrimination. *Flemming v. South Carolina Elec. & Gas Co.*, (4 Cir.), 224 F. 2d 752.

Any such result which amounts to judicial review of *all* Commission orders is neither warranted by the statutes nor consistent with judicial practice.

When the entire opinion of the district court is considered, there is reason to believe that the key to its decision is the position taken as to the necessity of "pecuniary injury". The court must have realized, in view of the long history of restrictive decisions in the field of "legal injury" that a failure to obtain all the "pecuniary gain" that was desired could not be converted into a showing of "pecuniary loss".

The conclusion of the district court, that standing exists, will, if affirmed, inevitably change the whole course of decisions in this field and greatly expand the volume of reviewable decisions of the Commission. This will be true if either of the two theories advanced by the court is adopted. We submit, however, that there is no need for enlarging judicial review of such cases to include those which have never heretofore been regarded as cognizable in court. To do so would place this Court in the position of supervising more and more of the intricate activities of the Commission.

The Administrative Procedure Act Provides no Standing for the Rio Grande to Maintain This Suit.

Realizing that long established principles governing judicial review of Commission orders provide no basis for this action, Rio Grande claims the right to maintain this suit under Sections 1009(a) and 1009(e) of the Administrative Procedure Act (5 U. S. C. § 1009).

Section 1009(e) deals only with the "Scope of Review" (60 Stat. 243), which it limits, and does not pur-

port to give any right of review to anyone.[16] That section must therefore be completely eliminated from consideration.

Section 1009(a) with reference to a right of review must be read with the introductory clause which precedes the section.[17] This clause makes directly applicable to the whole of Section 1009(a) all other statutes relating to the Commission, for the purpose of determining to what extent such statutes "preclude" review. The words "so far as" in such introductory clause "recognizes that the previous law often cut off review to some extent without cutting it off altogether" and the Act was "carefully framed" to leave such "law as it was".[18]

The requirement in the Procedure Act of a "legal wrong" as a basis of review continues in effect the same requirement of legal standing that has always existed and which is reflected in the cases reviewed previously in this brief. See also *Alabama Power Co. v. Ickes*, 302 U. S. 464.

The ground for review also specified in the Procedure Act "adversely affected or aggrieved * * * within the meaning of any relevant statute" does not itself establish any new standard for review since reference must be to a "relevant" statute as the basis of review. The "relevant" statutes in this case are the same statutes

16 *E. Brooke Matlack, Inc. v. United States*, 119 F. Supp. 617, 619.

17 Section 1009(a) states: "Except so far as (1) statutes preclude judicial review or (2) agency action is by law committed to agency discretion—(a) Right of Review—Any person suffering legal wrong because of any agency action, or adversely affected or aggrieved by such action within the meaning of any relevant statute, shall be entitled to judicial review thereof."

18 Davis, Unreviewable Administrative Action, 15 F. R. D. 411, 428.

that have been in effect for many years prior to the Procedure Act governing review of Commission orders.[19] These statutes and the decisions of the Court interpreting and applying them demonstrate, as shown before, that Rio Grande has no right to a judicial review of this case.

The provisions of Section 1009(a) of the Procedure Act therefore create no new or additional right to judicial review of Commission orders. Moreover, they do not relax the requirements of judicial review which are applicable to review of Commission decisions. That this legislation was never intended to enlarge the power of judicial review as to such orders is shown by the authoritative Attorney General's Manual and his report to the Senate Judiciary Committee in this regard.[20]

---

19. These statutes apply to "any order of the Interstate Commerce Commission." 28 U. S. C. 1336, 1398, 2284. 28 U. S. C. Section 2321 commands that the "procedure" in such appeals "shall be as provided in this chapter." 49 U. S. C. 17(9) provides that review may be had of Commission orders under the foregoing "provisions of law" but "not otherwise."

In *Atchison, Topeka and Santa Fe Ry. Co. v. United States, supra,* the district court held at page 78:

"Plaintiffs also refer to Section 10 of the Administrative Procedure Act, 5 U. S. C. A. § 1009, but it is clear that that Act merely was a declaration of existing law where judicial review is provided. See Transamerica Corp. v. McCabe, D. C., 80 F. Supp. 704.

"Thus the decisions under the Interstate Commerce Act must control the determination of whether the plaintiffs are 'parties in interest' within that Act."

20. This Manual states as to Section 1009(a):

"This statement of the persons entitled to judicial review has occasioned considerable comment because of the use of the phrase 'any person suffering legal wrong.' This phrase was used as one of limitation and not for the purpose of making judicial review available to anyone adversely affected by governmental action. The delicate problem of the draftsmen was to identify in general terms the persons who are entitled to judicial review. As so used, 'legal wrong' means such wrong as particular statutes and the courts

(Continued on next page)

In *Heikkila v. Barber*, 345 U. S. 229, 235, it was held that 'appellant's right to review of deportation orders under the 1917 Act were "not enlarged" by the Procedure Act.[21]

Recent decisions demonstrate that the requirements which have been imposed by this Court under Commission appeal statutes are similar to those imposed by the Administrative Procedure Act.[22]

It has already been noted that a failure to give "pari materia" effect to previous statutes governing review of agency actions will "create confusion" in this

(Continued from preceding page)
have recognized as constituting ground for judicial review. 'Adversely affected or aggrieved' has frequently been used in statutes to designate the persons who can obtain judicial review of administrative action. The determination of who is 'adversely affected or aggrieved * * * within the meaning of any relevant statute' has 'been marked out largely by the gradual judicial process of inclusion and exclusion, aided at times by the courts' judgment as to the probable legislative intent derived from the spirit of the statutory scheme.' Final Report, p. 83; see also pp. 84-85. The Attorney General advised the Senate Committee on the Judiciary of his understanding that section 10(a) was a restatement of existing law. More specifically he indicated his understanding that section 10(a) preserved the rules developed by the courts in such cases as *Alabama Power Co. v. Ickes*, 302 U. S. 464 (1938); *Massachusetts v. Mellon*, 262 U. S. 447 (1923); *The Chicago Junction Case*, 264 U. S. 258 (1924); *Sprunt & Son v. U. S.*, 281 U. S. 249 (1930); *Perkins v. Lukens Steel Co.*, 310 U. S. 113 (1940); and *Federal Communications Commission v. Sanders Brs. Radio Station*, 309 U. S. 470 (1940). Sen. Rep. p. 44 (Sen. Doc. p. 230). This construction of section 10(a) was not questioned or contradicted in the legislative history."

21 The recent decision in *Shaughnessy v. Pedreiro*, 75 S. Ct. 591, as to review of deportation orders was based on 1952 legislation.

22 Compare *Fahey v. O'Melveny & Myers* (9 Cir.), 200 F. 2d 420, 478, with *Benton v. United States* (D. C., Ga.), 114 F. Supp. 37, 44.

field: *Willapoint Oysters v. Ewing* (9 Cir.), 174 F. 2d 676, 686.

There is no Order Which can Serve as a Basis for Review Herein.

The order of the Commission established through routes and joint rates on some of the commodities demanded by Rio Grande. The order is silent as to routes and rates on the remaining commodities which are sought by Rio Grande in this action. At no place in the order is there any reference to the conclusion reached in the report that only a part of the allegations of the complaint are sustained.

The order thus entered by the Commission carries into effect its conclusions as to what should be done. There being no order as to other traffic, no basis whatever exists for a suit by Rio Grande that encompasses and is limited to such other traffic.

The situation in the present case is comparable to *Brady v. Interstate Commerce Commission*, 43 F. 2d 847, affirmed *per curiam, Brady v. United States, et al.*, 283 U. S. 804. Complainant in that case sought reparation damages exceeding $57,000.00 on the ground he was discriminated against by two railroads in the furnishing of cars. The Commission awarded him $12,838.31. He brought suit claiming "errors of law" were made by the Commission in considering the case. Brady conceded in the three-judge district court that he did not want to enjoin the entire order since he received benefits therein. His object, like that of Rio Grande here, was to obtain a review of that portion of the order that did not give him all that he prayed for before the Commission. Under such circumstances it was held that the suit should be

dismissed since the "recitals" in the Commission's report which fixed the amount of recovery were not subject to review. The court held that the "findings upon which a judgment is based constitute no part of the judgment itself even though incorporated in the same instrument" and that the court has "no power" to review the findings of the Commission "as upon a writ of error or appeal". The "order" which may be reviewed, the Court concludes, is the "mandate" or "command" given by the Commission (p. 850).

In a later suit by the same complainant (*Baltimore & Ohio R. Co. v. Brady*, 288 U. S. 448, 458) this Court stated:

> "Plaintiff may not adopt the award as the basis of his suit and then attack it".

That is precisely what Rio Grande is attempting to do in this case. The only order that can be challenged grants Rio Grande substantial advantages. The present suit makes no attack on this favorable order but misuses such order as a basis for obtaining relief which the Rio Grande "failed to secure from the Commission." *Standard Oil Co. v. United States*, 283 U. S. 235, 241. A long line of decisions of this Court sustain the position that a plaintiff cannot do this. A number of these cases are cited in *Chicago Junction Case*, 264 U. S. 258 at page 264. Judicial review is refused, this Court states, "not because the order * * * was negative in character", but "because to do so would have involved exercise by it of the administrative function of granting the relief", which the Commission had failed to grant. The application of this rule in *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, to the failure of the Commission to fix divisions of joint rates is particularly pertinent.

Citation and discussion by Rio Grande and the district court of *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, and the abolition of the "negative" order doctrine is beside the point. The reason judicial review cannot be had in this case has nothing to do with the negative order question. The fatal defect in this action, namely, the absence of any "order" embracing the matter complained of, is jurisdictional. There must be an order embracing the matter complained of, for, if not, there is nothing to which the Court's jurisdiction and power to review can attach. Courts may not usurp administrative functions by enlarging and expanding orders of administrative agencies.

Any claim by Rio Grande that the decision of the Commission constitutes "merely preparation for possible action in some proceeding which may be instituted in the future" does not provide a foundation for judicial review. *Shannahan v. United States*, 303 U. S. 596, 599.[23] Citing that decision, the opinion in *American Federation of L. v. National Labor R. Board*, 103 F. 2d 933, 936, declares that a decision or determination of an administrative body "may be definitive" and "may be binding as to all parties concerned" and still not constitute an "order" if it "does not also command or direct a particular thing to be done". There is no "command" in the present order with reference to the commodities and routes which are the subject of this suit by Rio Grande.

---

23 A number of decisions of this Court are cited in *Carolina Aluminum Co. v. Federal Power Commission* (4 Cir.), 97 F. 2d 435, 436, in support of the rule that a "mere finding upon which no order is based, even though it may determine a status which may form the basis of future governmental action * * * lacks the fundamental characteristics of an order."

United Gas Pipe Line Co. v. Federal Power Commission (3 Cir.), 206 F. 2d 842, 845, observes that—"Time and again, the Supreme Court has cautioned us that reviewability is limited 'to orders of a definitive character dealing with the merits of a proceeding'."

That the recital portion of the order entered herein refers to the report and opinion of the Commission is of no consequence, as noted in the *Brady* and other cases just reviewed. The classic statement in this connection, which appears in a number of the foregoing cases, is the observation of Judge Learned Hand in *Eckerson v. Tanney*, 235 F. 415, 418:

> "* * * the judgment itself does not reside in its recitals, but in the mandatory portions."

The reference in the order of the Commission to the report and its incorporation is in the first paragraph of the order which is entirely devoted to recitals. Following this paragraph appears the first portion of the order beginning *"It is ordered,"*. Thereafter is set forth three "ordering" paragraphs headed, *"It is further ordered"*. There is not the slightest suggestion in the order as thus drawn of any intention on the part of the Commission to make any "command" or to deal with through routes and joint rates on commodities not named in the order. On the contrary, the reference to the report in the recitals and its total omission in the formal "order" constitutes clear indication that the Commission followed the usual rule and practice and had no thought of making the entire report a part of the order.

The present case is therefore subject to the rule stated by this Court in *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522, 528, that "matter embodied in a report and not followed by a formal order" is not "subject to judicial review".

It is well settled in both federal and state courts that an opinion is "not a part of the record proper" and a statement in an opinion of a conclusion "even though

couched in mandatory terms, cannot serve as the order or judgment of the court".[24]

There was no order of the Commission specifically covering the traffic which is the subject of review in this action. Since such an order "was not in actual existence" at the time the order was entered, there can be no application whatever of the doctrine of incorporation in this case.[25]

The claim by and on behalf of Rio Grande that the negro discrimination cases, *Henderson v. United States*, 339 U. S. 816, and *Mitchell v. United States*, 313 U. S. 80, involved judicial review where no order had been entered by the Commission, is not true. There was an order of dismissal in both of these cases by the Commission which constituted a complete denial of all relief.[26]

---

24 *In re D'Arcy*, 3 Cir. 142 F. (2) 313, 315 citing *England v. Gebhardt*, 112 U. S. 502. See also *Wright v. Gibson* (9 Cir.), 128 F. 2d 865. *Dye Coal Co. v. Evatt*, 144 Ohio St. 233, 58 N. E. 2d 653.

25 The principle is illustrated very well in will cases where it is uniformly held that nothing can be incorporated by reference that was not in existence when the will was executed. *Lawless v. Lawless*, 187 Va. 511, 47 S. E. 2d 431. *Continental Illinois Nat. B. & T. Co. v. Art Institute*, 341 Ill. App. 624, 94 N. E. 2d 602.

26 In the *Henderson case* (339 U. S. 816) at page 826, this Court reversed the District Court "with directions to set aside the order of the Interstate Commerce Commission which dismissed the original complaint."

In the *Mitchell* case (313 U. S. 80) at page 88, this Court referred to the fact that the "Commission dismissed the complaint." At page 92 reference is made to the dissent of five Commissioners to this "dismissal." The final paragraph of the opinion (p. 97) remands the case "with directions to set aside the order of the Commission."

Rio Grande was not Prejudiced by the Position of the Commission as to Through Routes.

The Commission held, in disposing of this case, that the requirements of Section 15(4)(b) for adequate and more economic transportation for the articles named in the order were satisfied, and thereupon established through routes and joint rates. In determining the extent of the relief to be granted, the Commission apparently gave consideration to all pertinent provisions of the Act. After referring to Sections 15(3) and 15(4), the Commission said:

> "In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together." (R. 65)

In limiting the scope of the order the Commission gave effect to the evidence concerning public interest and public need in relation to Rio Grande proposals. Had the Commission found the evidence sufficient in these respects and desired to do so, it could have broadened its relief. The position of the Commission, however, as to non-existence of through routes did not operate to prevent its granting further relief to the Rio Grande.

Our contention that Rio Grande was not prejudiced by the position of the Commission as to through routes is demonstrated by the fact that the Commission ordered through routes and joint rates via the Rio Grande for all commodities it deemed necessary in the public in-

terest as shown by the evidence; and by the dissenting opinion of Commissioner Arpaia. He disagreed with the majority and thought the proposd routes were already "open and available to shippers", but he went on to say that no further relief than that granted was appropriate under the record:

> "The question then is to what extent should we compel joint rates. Joint rates over the routes through Ogden, I believe, are warranted in the public interest only on the commodities for which relief is included in the majority report.
>
> "We should interfere in the management of a railroad only when the reasons for doing so are clear and compelling, as they are here, and only to the extent the public interest actually requires." (R. 111)

The real obstacle to further relief and more "pecuniary gain" in this case was therefore "public interest" and all the requirements in connection therewith. Rio Grande is in no position to complain about the position of the Commission regarding non-existence of through routes under such circumstances.

Since Rio Grande is not "suffering prejudice" as a result of the position of the Commission, there is no right of review. *Chicago Board of Trade v. Olsen*, 262 U. S. 1, 43. This Court does not consider "hypothetical controversies which may never become real". *Electric Bond Co. v. Comm'n*, 303 U. S. 419, 443. It is fundamental that a reviewing court "will disturb the administrative determination only for prejudicial error", and will give no consideration to claimed errors "which did the complaining party no injury".[27]

---

27 The cases are collected in 73 C. J. S., Public Administrative Bodies and Procedure, Section 210, pages 569-570. See also *American Power Co. v. S. E. C.*, 325 U. S. 385.

The Administrative Procedure Act (5 U. S. C. § 1009) has been interpreted as requiring "prejudicial error" as a basis for review. *United States v. Watkins* (D. C. N. Y.), 73 F. Supp. 216, 225 (reversed on other grounds 164 F. 2d 457).

In *Philadelphia Co. v. Securities and Exchange Com'n* (C. A. D. C.), 177 F. 2d 720, 725, it was held that an erroneous "standard" would create "no prejudice" if the Commission "did not think petitioners' case proved by any standard however low."

II.

The Commission Carefully Considered the Entire History and Record Herein and Concluded, in Accordance With Decisions of This Court, That Proposed Through Routes do not Exist Because the Carriers in This Proceeding do not "hold Themselves out as Offering Through Transportation Service" in Connection With the Rio Grande From and to the Points Here Concerned as Indicated by Their "Course of Business". The Lower Court, Without Squarely Meeting This Test on the Basis of the Whole Record, Pointed to Some of the Factors Involved and Erroneously Held That Through Routes Exist.

The "first question for our determination", said the Commission (R. 61), "is whether or not the present routes by way of the Ogden gateway constitute 'through routes' as that term is used in section 15(3) and (4) of the act". Citing and quoting this Court's opinion in *Thompson v. United States*, 343 U. S. 549, the Commission faces squarely the decisive test which must be applied and states:

> "It thus becomes necessary to determine whether the carriers in this proceeding 'hold themselves out

as offering through transportation service' from and to the points here concerned via the Ogden gateway as indicated by their 'course of business' in respect of traffic over the routes in question." (R. 62)

Recognizing that whether through routes exist is not merely a physical, objective inquiry, under the test established by this Court, the Commission properly considers and reviews every feature of the problem including matters that are subjective—questions of holding out, consent, custom and "course of business" by all the carriers involved. In this connection, this Court in the *Thompson* opinion, *supra*, at page 557, quotes a Commission Report to Congress that the "incidents and circumstances" of shipments which are designated for consideration in determining whether a through route exists are "not to be regarded as exclusive of others which may tend to establish a carrier's course of business with respect to through shipments."

Such an inquiry, the Commission realized, must not only consider the entire picture presented; it must also include a realistic appraisal of the evidence giving effect to the realities of the transportation world and the importance and legal recognition of gateways through this vast country.

In limiting its review and consideration to certain factors or incidents bearing on the problem, the lower court did not, in our opinion, grasp the full significance of the standards and considerations implicit in the yardstick established by this Court. Perhaps the lower court spoke with more truth than it realized when it said:

> "This very *brief* and *sketchy* statement of the case will suffice, since we rest our decision upon a *narrow* ground." (Italics added.)

It did not seem to occur to the lower court that the problem in this kind of case cannot be considered in a legal vacuum. Something more than an interplay of abstract definitions and legal rules is required.

The Commission well knew, and it is supremely important to remember, that, as stated in the Commission's report (R. 69), the objective of the Rio Grande was to "participate as a bridge line" on traffic via "its Colorado gateways and Ogden"; and the primary objective, in this connection, as frankly testified by the Rio Grande's President, was to improve its financial position by cutting in on the Union Pacific haul from the northwest states to the eastern portion of the country. This heavy volume of traffic, moving the many products of the northwest to the east, as pointed out by the Commission (R. 77), comprises "101,476" carloads annually. The movement in the reverse direction amounts to only "56,286" cars. The prize therefore which the Rio Grande wanted "available for solicitation" was primarily the eastward movement.

The actual movements, relied on by the Rio Grande to support the existence of through routes, must be considered against the foregoing background. *Significantly, not a single movement occurred within the category of "bridge" shipments from the northwest to the east.* The Commission said:

> "No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points." (R. 63)

There is therefore in this record no eastward movement whatever of the type traffic which constitutes the

basis and backbone of Rio Grande's aspirations. Moreover, the movements going west include only "18 carload shipments". Viewed in the light of the total volume of traffic involved, the Commission was clearly justified in saying that "all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co. v. Chicago & N. W. Ry. Co., supra*, cited with approval by the Supreme Court in *Thompson v. United States, supra*" (R. 64-65).

The figures on movement placed in the record by Rio Grande related solely to the year 1948. While the Rio Grande later claimed this was a representative year, there was no proof whatever that similar shipments occurred in any prior year. We respectfully challenge the statement of the lower court that a "continuous use of the Rio Grande route" (R. 288) is shown by the evidence and the additional statement that such shipments were "substantially the same in years prior to 1948 and continued into 1949" (R. 289). Quite probably these statements were prompted by the language of this Court, based on ample facts, in *U. S. v. Great Northern R. Co.*, 343 U. S. 562, at pages 563-564, that there the "through routes in question already exist since the carriers concerned have continuously provided through service over the same through routes" and the further statement in the same opinion at page 574 that "through routes over the Montana Western and appellee's lines long have been in existence." But the facts here do not justify any such statement.

The Rio Grande's witness who placed this testimony in the record said he selected 1948 because it was the

"last full calendar year prior to this proceeding". He stated that the problem of misrouting traffic existed "to about the same extent in prior years, and have continued thus far in 1949" (V. I, 76). Such testimony does not constitute any showing whatever of any "bridge" movement for any year other than 1948, and the "bridge" movement in that year is confined to 18 isolated westbound shipments over only 18 of the millions of through routes of which the Rio Grande claims to be a part between the 39,000 railroad stations in the east and south and the 2,900 stations in the northwest area.

We submit that the conclusions of the Commission as to "course of business" and "course of conduct of the Union Pacific" are irrefutably established by the record and that this case must be judged upon the basis that such findings are absolute and conclusive.[28] Positive and unequivocal testimony of other transcontinental lines serving the northwest area, particularly the Northern Pacific, Great Northern and Milwaukee roads (V. I, 711; 909), proves beyond doubt that their policy, "course of business" and "course of conduct", like the Union Pacific's, has always been and now is, as found by the Commission

---

28 The Commission said (R. 64):

> "So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, 'the carriers' course of business' has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open

(Continued on next page)

(R. 64), "to guard jealously its [their] long haul and not open commercially the Rio Grande routes on this traffic."

We further submit that our contention that no "continuous use" of the proposed routes is shown appears from an examination of the events leading up to the filing of this case and the undisputed testimony in this regard. This phase of the record has been entirely ignored by the lower court including the testimony of Rio Grande's President, Wilson McCarthy. He testified unequivocally that the Rio Grande had no idea of ever participating in transcontinental traffic until a long program of modernization was completed which started after the Dotsero cut-off was established in 1934.[29]

It was only after the program detailed in McCarthy's testimony was completed that his company "reached the conclusion" that the Union Pacific should agree to "joint competitive rates" (V. I, 44), and the program appar-

---

(Continued from preceding page)

commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads east-bound, none to destinations east of Colorado common points, and 18 carloads westbound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report."

29 Mr. McCarthy said:

"The Dotsero Cutoff had just been completed when I began my tenure as co-trustee of the Rio Grande. While this 'cutoff' provided a potential means for the Rio Grande to participate in transcontinental traffic, the physical condition of our company at that time was such that we were in no position to effectively compete for this extremely competitive business from either a service or cost standpoint. Because of long depressed earnings, the Rio Grande's

(Continued on next page)

ently was not completed until 1947 at the conclusion of a reorganization.

The claim of Rio Grande that the proposed routes are already open is to be contrasted with the testimony of McCarthy that he had "been looking forward to the opening of the Ogden Gateway" for many years (V. I, 55); and his statement that it has been "our hope and our thought" that we "ought" not be "excluded" from the northwest business (V. I, 54).

Any suggestion that the through routes in effect temporarily until 1906 or 1912, continued and were the subject of "continuous use" thereafter is therefore simply not true. This further appears from other historical facts in the record. As mentioned by the Commission (R. 68), the "competitive stresses" which occurred in those early years resulted in the Rio Grande financing "the construction of a new railroad, the Western Pacific, to obtain an outlet to the Pacific coast.[30]

The inference is inescapable that the Rio Grande was interested in a route to the San Francisco Bay area on the California coast, and the Rio Grande, until it con-

---

(Continued from preceding page)

trackage and rolling stock were in very poor condition. At that time faster schedules were neither feasible nor possible.

"Therefore, a planned program was immediately progressed with a view towards contributing to a sounder national transportation system by making the Rio Grande a vital link in transcontinental traffic. This embraced strengthening of the personnel, a revamping of the financial structure, and complete modernization of the physical plant." (V. I, 42.)

30 As stated by the Commission (R. 68), "[t]he Western Pacific was opened in July 1911." McCarthy, in referring to the construction of the Western Pacific by Rio Grande, says this route is called "the direct *central* continental route" by his company (V. I, 53.)

ceived this case, never had the slightest idea that any through routes to the northwest area could be claimed against the Union Pacific. These historical facts and unequivocal conduct belie any claim that the Union Pacific did not actually close any routes in 1906 or that there has been "continuous use" of them at all times. Certainly no one in the northwest States which have joined in this brief ever had any notice or knowledge of the contention now made by the Rio Grande. If there is such a thing as estoppel in the law of transportation, this would be an appropriate place to invoke it against the Rio Grande.

The first notice the shippers of the northwest had as to the purpose of the Rio Grande was when it launched its "pamphlet" publicity campaign following the institution of this proceeding. This campaign, in which its President McCarthy participated, refutes any suggestion that shippers in the northwest were making "continuous use" of the proposed routes (V. I, 60). As a part of its publicity campaign, the Rio Grande printed and widely distributed a pamphlet entitled "20 Questions—An Informative Quiz" (I. C. C. Ex. 30), in which it posed 20 questions and answered them with the arguments it thought would convince shippers to aid it in its efforts to "open" through routes via its line in connection with the Union Pacific to and from the northwest area. These questions clearly and indisputably show that the Rio Grande itself considered the prior through routes via its line "closed" by the cancellation of the joint rates by the Union Pacific.[31]

---

31 Among the 20 questions were the following:
"2 What is Meant by the 'Closed' Gateway at Ogden?"
"3 What is the Effect of the Closed Gateway?"

(Continued on next page)

Many other items of proof in this record refute the idea that there was any "continuous use" of any of these proposed routes by anyone. The "distributor of farm machinery" whose testimony was dwelled on at considerable length by the Commission (R. 82) in an attempt to justify a portion of the order herein, operated a business that "was established in 1947". The Commission adverted to more *recent* changes in policy relating to the "use of grazing lands in national forests" (R. 84). Such testimony, as well as much other, shows that the claim of Rio Grande was not founded upon any premise that there had been "continuous use" of existing through routes over a long period of time.

The truth is that the testimony of Rio Grande supporters as a whole was premised on the theory that all gateways here and elsewhere should be opened and the Commission should adopt "competition" as the rule of action in such cases without regard to the Congressional mandate against short-hauling existing routes.

(Continued from preceding page)

"4 How Does the Rio Grande Seek to Open the Ogden Gateway?"
"5 How Will the Rio Grande Benefit from Opening of the Ogden Gateway?"
"6 Why Does the Union Pacific Oppose Opening of the Ogden Gateway?"
"7 Will the Open Ogden Gateway Reduce Freight Rates?"
"8 Will the Open Gateway Provide Improved Service?"
"9 With Opening of the Gateway, Will There be More Freight Cars Available for Northwest Shippers?"
"11 Will an Open Gateway at Ogden Benefit Colorado and Utah?"
"12 Will an Open Gateway at Ogden Benefit Shippers Outside of Union Pacific or Rio Grande Territory?"
"13 Will Opening of the Ogden Gateway Reduce Railroad employment in the Closed-Door Territory?"
"14 Will the Opening of the Ogden Gateway Reduce Taxes Paid in the Closed-Door Territory?"

We believe that, in view of the admitted design of the Rio Grande for some years to obtain the opening of the Ogden gateway, the caution of the Commission that permitting a showing of a limited number of isolated movements through the gateway would constitute an invitation to circumvent the Act by "staging" a few shipments, deserves careful consideration.[32]

The court's opinion below reflects some misgiving for its general conclusion that the routes claimed are open when it states that such routes are open to and from certain "points" and a "new hearing" will be necessary to determine whether actual movement of all commodities between all points is necessary in order to completely open the gateway. On the question of establishing "hundreds of thousands of through routes" by the process of saying they already exist, the court concludes that this "question was not considered by the Commission, and we do not reach it here" (R. 292).

It is an error to say the Commission did not consider this question. It did consider the question and resolved it against the Rio Grande. The report notes that at least on paper there were in existence certain through routes with joint rates on "east-bound shipments of sheep or goats" (R. 85). Under well established administrative practice and recognizing that the establishment of through routes must have a direct relationship to the channels

32 The Commission said (R. 65):
"Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15(4) made in 1940 (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra.*"

of commerce, the Commission refused to suggest that all routes were open to all commodities because such routes exist for eastbound sheep and goats.

Completely overlooked by the lower court in this connection, was the holding of this Court in the *Thompson* case that the existence of through routes to points on the Burlington "short of Omaha cannot be used as evidence of the existence of a through route to Omaha." To hold the contrary, that opinion emphasizes, would mean that a railroad would "lose" a "right guaranteed by Section 15(4)" to its long haul (343 U. S. 549, 559).

The statute, as thus declared by this Court, will not permit any railroad to establish through routes by any "foot in the door" process. To the extent that actual movements constitute a "course of business" and a "holding out" by all railroads concerned and to the extent that all other requirements in connection therewith are met, through routes may come into existence, but only to and from those points and covering those specific commodities embraced therein. Any other rule, as this Court notes, would open wide the opportunity of sacrificing a "guaranteed" right against short-hauling.

Before proceeding to a discussion of certain specific points in the lower court's opinion, we wish to comment on its observation that since the "Commission did not invoke its authority under § 15(4)" in promulgating "service orders" during the war for diversion of certain shipments over the Rio Grande "the Commission assumed that through routes were already in existence" (R. 289). This suggestion illustrates quite well how far the court went in its efforts to find support for its position. With the life of the country at stake, with the Com-

mission and the President in full possession of war powers, we are told by the court that the shipment of "troops" and "military supplies" over the Rio Grande route under direct emergency orders of the government constituted a recognition that the routes already existed, otherwise the Commission itself would have had to initiate a proceeding before engaging in such an activity. The statement of the Commission in this regard shows that, in its effort to saddle an "assumption" upon the Commission, the court completely ignored and distorted the effect of the Commission's finding that these "emergency" shipments have "no bearing upon the issue".[33]

In its desperate efforts to escape application of the short-haul prohibition of Section 15(4), the Rio Grande has insisted throughout these proceedings that through routes via its line for the traffic concerned are already "in existence" because counsel and a traffic witness for the Union Pacific stated or "admitted" on the record that it is physically possible for shippers of the involved traffic to use the Rio Grande as a bridge line if they are willing to pay the higher combination of local rates. The district court also seized upon these statements as supporting its conclusion that through routes already exist via the Rio Grande (R. 288). But the same fact was present, and the same "admission" was necessarily made in *Thompson v. United States* 343 U. S. 548, and rejected by the Court as irrelevant to the question whether through routes already existed. At page 558, the Court said:

33. "These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute 'through routes' within the meaning of that term as used in the act." (R. 64.)

"The fact that appellant's line connects with the Burlington at Concordia does not aid the Commission in proving the existence of a through route, since the power to establish through routes under Section 15(3) and (4) also presupposes such physical connection. And the showing that appellant publishes a local rate from Lenora to Concordia and that the Burlington publishes a local rate from Concordia to Omaha proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines."

III.

The Commission Properly Concluded That Cancellation of Joint Rates in 1906 and 1912 Effectively Closed the Rio Grande Routes. This Conclusion Reflected the Understanding of the Parties and the Absence of any Attempt at the Time to Suspend Closing of the Routes. Legislative Amendments of 1940 Confirm the Commission's Conclusion and the Decision of the Commission, in This Regard, is not Subject to Judicial Review.

We submit that the effect of the cancellation by the Union Pacific in 1906 and 1912 of joint rates established while the railroads involved were in control of the receivership court must be judged, now, in the light of what occurred and did not occur at the time and not by any standard of what might have happened in connection with such cancellation.

The evidence establishes beyond dispute and the complaint of Rio Grande before the Commission concedes, (V. I, 7), that at all times since such cancellation, these tariff cancellations operated "to prevent the movement of freight traffic via the routes" sought by Rio Grande, and the action of the Union Pacific and other defendants

deprives "the complainant [Rio Grande] of the use" of these longer routes for the traffic concerned (V. I, 10). In the opinion below the court stated that the "Commission reasoned that the closing of the routes in a commercial sense * * * terminated the through routes". Earlier in the opinion the court says that the "higher rates effectually close the Ogden gateway" (R. 285).

Nowhere does the court suggest what further should have been done by the Union Pacific in 1906 and 1912 to legally close these routes which, by the tariff change, were held to be "effectually" closed. At no place in the opinion is there any reference to any statute, any regulation or any requirement that was not met by the tariff changes. Moreover, from the standpoint of these five States, which all during this period have been led to believe by the action and position of the Rio Grande that the routes were closed, there is no suggestion of what further steps were required to bring about a closing of the Ogden gateway.

The bare assertion of the court (R. 288) that "the through routes were not closed" and that (R. 291) "nothing was ever done to close the routes", under the circumstances, comes as quite a shock in view of the foregoing record as to what transpired in this connection.

In concluding that the routes were actually closed, the Commission gave recognition to the realities of an uninterrupted history showing these "routes are not considered as open" (R. 62) and during all this period the carriers (including the Rio Grande) did not "hold themselves out as offering through transportation service" (R. 62). This being the ultimate and overriding test, and this test being supported by overwhelming proof, the Commission rightly concluded that no mere technical

claim with reference to the sufficiency of a tariff change over forty years ago could be used to affect its conclusion.

But the Commission's reasoning had more than is mentioned in the court's opinion to support it. The Commission knew that neither it nor anyone else had at any time during this long period made any attempt to suspend the "cancellation" of these rates and the closing of these routes; and, until the instant case, no claim had ever been made by anyone that these through routes continued to exist. Ample statutory authority was available to the Rio Grande and anyone wanting to assert the existence of through routes following these tariff changes.

That such a remedy was open is reflected in many decisions of this Court. In *Atlantic Coast Line R. Co. v. U. S.*, 284 U. S. 288, a Commission order was upheld requiring tariff amendments to be cancelled which would have closed a through route. In approving a lease in that case the Commission had imposed as a condition of approval that "existing and possible through routes" would be preserved (page 291). The tariff amendments would have "excluded from the joint rates traffic" over one of such existing through routes (page 291). The opinion concludes that the Commission properly specified that "an open route" should be continued. In reaching the same conclusion the three-judge district court in that case held (48 F. 2d 239), that without the condition inserted in the lease approval there would have occurred an "abandonment of existing routes" (page 242), and that the Commission was within its authority in acting "to prevent the closing of any gateways and routes then existing" (page 244).

The Commission's action in the case cited was upheld under its general suspension authority in Section

15(7).[34] If in the instant case any objection had existed to the cancellation of tariffs and closing of routes by the Union Pacific in 1906 and 1912 it would have been appropriate and the Commission could have acted under the same provision of the Act.[35] No such action having been taken the route became "closed" as suggested in the foregoing case.

In addition to the matters just reviewed, the Commission also realized that in proceeding as it did the Union Pacific followed statutory authority. The recent decision in *Steinmetz v. Atchison, T. & S. F. Ry. Co.*, 293 I. C. C. 202, gives appropriate effect to the publication of tariff changes as a means of closing a through route. In that case, a shipper routed a shipment of cattle from Montana to Kansas via a route which had no joint through

---

34 49 U. S. C. 15(7). Under this section the Commission may on its own initiative or following complaint suspend any new rate or practice affecting any rate, fare or charge.

35 The Rio Grande was fully aware of its right to object to the closing of the through routes, for it vigorously asserted that right, along with the state commissions of Colorado and Idaho, and numerous other protestants against Union Pacific tariffs proposing to "cancel the joint through passenger fares" then in effect with the Rio Grande. *The Ogden Gateway Case*, 35 I. C. C. 131. Approving the cancellation of the joint fares the Commission held, at page 140, that it had "no power * * * to prevent the cancellation of through routes and joint rates" voluntarily established. Pointing out that the Rio Grande routes were longer, more mountainous and had more severe grades than the Union Pacific, the Commission said, at page 141, that to compel the Union Pacific to short-haul itself against its will, through denying approval of the proposed cancellation of the joint and equal fares with the Rio Grande "would be illogical and arbitrary in the highest degree."

Its lack of power to prevent cancellation of the "through routes and joint rates", the Commission said at page 142, would not deprive passengers of "through service" via the Rio Grande at the higher combination of intermediate fares, for no railroad could "deprive passengers of the right to use its rails" at the "regularly established fares."

rates. In dismissing a complaint for reparation, the opinion cites *Thompson v. United States*, 343 U. S. 549, and states:

> "Therein the Supreme Court makes plain that a route such as that used for the instant shipment may not be regarded as a through route under section 15(4) of the Interstate Commerce Act. Thus, the route used by this shipment was a 'closed' route, and the complainant was apprised of that fact by the publication of the joint through rate from and to these points for application over routes other than that used. This does not mean that a shipper may not specify routing for a shipment over such a 'closed' route and expect compliance with the routing thus specified, but it does mean that when such routing is specified and complied with, the carriers concerned have a right to charge a combination rate, provided that each of the factors in such combination does not exceed a maximum reasonable rate for a shipment having origin and destination at the points from and to which such rate applies."

There is nothing new or novel in withdrawing from and closing a route by a tariff filing, *The Ogden Gateway Case*, 35 I. C. C. 131. In *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, in upholding the "cancellation of the proposed tariff", which would have closed a through route, this Court observed: "[i]ts proposed tariff was in effect a withdrawal" (p. 775).

This Court has held that Section 6 of the Act expressly provides for the "changing and superseding" of joint through rates by filing of "new schedules" and that any "through bills of lading" thereafter would be subject to "local rates" and not joint rates. *Kansas City So. Ry. v. Albers Comm. Co.*, 223 U. S. 573, 596-597.

Consistent with the Commission decision in the *Steinmetz* case, *supra*, the courts have not hesitated to hold that previous tariffs may be cancelled by implication in order to give full and complete effect to new tariffs.[36]

The position of the lower court as to the effect of the rate cancellation of Union Pacific and the publication of local rates is contrary to the holding of this Court in *Thompson v. United States, supra*, wherein this Court refused to permit circumvention of the Act by any finding that "the sum of the local rate from Lenora to Concordia published by the appellant and the local rate from Concordia to Omaha published by the Burlington" is an "unreasonable" rate for the "route from Lenora to Omaha via the Burlington" (343 U. S. 553). This Court rejected the idea that publication of "local" rates as a part of a "combination" rate constituted the maintenance or existence of a through route. Such a publication, this Court said, "proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines" (343 U. S. 558).

The *Thompson* decision, in reversing the majority opinion of the lower court therein (101 F. Supp. 48), followed the reasoning of Judge Moore, who filed a dissenting opinion. He fully sustained the Missouri Pacific contention that the suggested route was closed by reason of the fact that combination rates "prevented" a movement of grain even though "a shipment of grain

36 In *Chicago, I. & L. Ry. Co. v. International Milling Co.* (C. A. 8), 43 F. 2d 93, 96, it is held that a "new tariff naming different rates" is effective even though it fails to "state in specific terms that the previously established rate is cancelled." To the same effect is *Crookston Milling Co. v. Great Northern Ry. Co.*; 185 Minn. 583, 242 N. W. 287, 289.

could be made at a tariff composed of a combination of the local rates" (p. 51); and the publication of combination rates was the only effective means the Missouri Pacific had of indicating that the route was closed. Judge Moore specifically declared that the "technicality" of a "commercially closed route" should not be used as "evidence of a through route" (p. 55) in view of the requirements of Section 15(4) as to establishing through routes.

Legislative History of Amendments to Section 15(3) Confirms our Position.

In 1940, Congress adopted an amendment to Section 15(3) specifically recognizing the "canceling" of "any through route or joint rate" by "any tariff or schedule" change and providing a standard for suspension thereof by the Commission.[37]

The language of this amendment appears in Senate Report No. 404, 75th Congress (1937), 1st Session (S. 1261), serial #10076 as a clarifying amendment to legislation under consideration.[38]

37 49 U. S. C. 15(3). The amendment consists of a new sentence added thereto which states.

"If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancelation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section."

38 Senate Report 404 states:

"The Committee on Interstate Commerce amended section 1 of the bill by striking therefrom the words: 'The elimination of any existing through route or joint rate, fare, charge, or classification without the consent of all carriers parties thereto or authorization by the Commission shall be deemed prima facie unreasonable and

(Continued on next page)

The purpose of this amendment was spelled out precisely in Senate Report No. 1970, 74th Congress (1936), 2nd Session (S. 1636), serial #9988, as follows:

> "The amendment was adopted to prevent any wholesale cancelling of joint and through routes and rates when the Emergency Transportation Act of 1933 expires on June 16, 1936. In Section 4 of that act there is a proviso:
>
> 'that no routes now existing shall be eliminated except with the consent of all participating lines or upon order of the coordinator.'
>
> "The amendment in the bill under consideration makes this a part of the permanent law, throwing the burden of proof that a route is against the public interest on the trunk line."

The history just reviewed demonstrates clearly that Congress and the Commission recognized that for many years the type of tariff change made by the Union Pacific was effecting a closing of routes and by this amendment a standard was established under which such closing of routes could be suspended. The Congressional purpose and recognition implicit in this legislation is not to be defeated even though the full scope thereof may not have been visible to the Commission in some earlier cases.[39]

(Continued from preceding page)

contrary to the public interest' and inserting in lieu thereof the following: 'If any tariff or schedule cancelling any existing through route or joint rate, fare, charge, or classification without the consent of all carriers parties thereto or authorization by the Commission is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancellation to show that it is consistent with the public interest.

"This amendment by the committee was recommended by Commissioner Eastman and is but clarifying.

39 That the amendment to Section 15(3) in 1940 constituted a recognition that routes become closed by tariff amendments unless "suspended by the Commission" is reflected in *Cancelation of*

(Continued on next page)

The decision in *Virginian Ry. v. United States*, 272 U. S. 658, gives the lower court no support for its views. That case did not involve the closing of routes by tariff changes. It presented the question whether 54 mines on the Virginian railroad were discriminated against by reason of the fact that 45 mines on the same railroad had lower rates that were denied the 54 mines. The dictum in the case as to the existence of through routes with combination rates was irrelevant to the decision. Through routes already were physically open by reason of trackage agreements and reciprocal switching absorptions, and it was wholly unnecessary to consider the requirements of Section 15(4).[40] It was not even necessary to establish joint rates and, as the opinion states, joint rates

---

(Continued from preceding page)

Rates and Routes Via Short Lines, 245 I. C. C. 183. While the opinion suggests that in a "strict technical sense" the tariff amendment would not itself effect a complete "closing of the routes", the opinion points out that "for all practical purposes the routes would be closed" and the "interchange of through traffic" would end (p. 185). It was held by the Commission that the last sentence of Section 15(3), added in 1940, gave the Commission authority to suspend "route" cancellations and as "remedial" legislation permitted the Commission to be free from the "limitations contained in section 15(4)" when acting with reference to the *"cancellation* of joint routes and rates already existent" (pp. 187-188).

40 In prescribing through rates for all mines the Commission and the court in the *Virginian* case did not have to face any problem of creating a new through route. *Wyoming Coal Co. v. V. Ry. Co.*, 96 I. C. C. 359, 98 I. C. C. 488. There was no contention whatever even suggested before the Commission that through routes did not already exist. According to Virginian counsel at page 491 existing rates to the west "reach every station," comprise "local distance tariffs" and are not "merely unreasonable rates" but "impossible rates." Applicants asked the Commission for the same "track connections" provided other mines. The complaining mines were "entirely surrounded by mines" enjoying the lower rates and they were the only mines in the entire Outer Crescent District denied the benefit of "district rates to central territory." (p. 491)

The through route contention made in court in the *Virginian* case was purely an "afterthought" and there was no record to support any such argument.

were not required. There was no problem of short-hauling in the *Virginian* case. The considerations which prompted the conclusion in the instant case by the Commission that through routes have not existed for many years were wholly absent from and not involved in the *Virginian* case. We therefore submit that the lower court was not justified in citing that case in support of its conclusion.

The Commission Finding as to Effect of Tariff Filing by Union Pacific is Conclusive.

The matter of when the Union Pacific closed the routes in question and the interpretation and effect of procedural steps in that connection are all matters peculiarly within the jurisdiction and determination of the Commission. On these matters the decision of the Commission will not be reviewed or reversed there being evidence in the record which supports the Commission's findings.

This Court has stated many times that:

> "* * * The Commission's determination of the point in time and space at which a carrier's transportation service begins or ends is an administrative finding which, if supported by evidence, is conclusive on the courts. * * *" (*I. C. C. v. Hoboken R. Co.*, 320 U. S. 368.)

The opinion just cited refers, at page 378, to many cases supporting the above rule and it is observed that the courts properly accept the Commission's findings as to "prevailing conditions and practice."

The conclusion of the Commission in the instant case necessarily took into consideration the conditions and practices in 1906 and 1912 concerning the withdrawal from

through routes, and its decision with reference thereto cannot be set aside. As to whether Union Pacific "complied with the procedural requirements of the Act", the "commission's findings of fact" have always been held to be "conclusive" if based on evidence. *B. & O. R. Co. v. United States*, 298 U. S. 349, 364.

The construction by the Commission of the tariff change of the Union Pacific and its holding that the routes proposed herein by Rio Grande are closed, must be adhered to by this Court unless "plainly wrong". *Great Northern Ry. Co. v. Delmar Co.*, 43 F. 2d 780, 782. The record fully sustains the finding of the Commission that through routes claimed by the Rio Grande were not in existence.

IV.

The Commission Correctly Held That Shippers Have the Right to Route Their Own Traffic and Union Pacific had no Right or Duty to Refuse Shipments.

The opinion of the district court falsely assumes that the Union Pacific had the right and duty to refuse a few shipments tendered over the Rio Grande route in order to protect its right not to be short hauled. Pointing to a few shipments that have physically moved via the Rio Grande over portions of a few of the multitude of existing routes, the court concludes that this shows the Rio Grande route is open for the involved traffic.

If the position of the court is correct then a railroad permits at its peril any movement at local or combination rates over a route that it contends is closed. This would require constant policing or a physical separation or disconnection of railroad tracks and a course of conduct wholly foreign to anything found in the statutes or suggested in Commission regulations.

The Commission's opinion makes it clear that no such fantastic requirements exist in the law. Its report emphasized that the "routes used, or attempted to be used" for the few shipments through the gateway were "specified by the shippers"; and none of this traffic was "solicited" by any defendant railroad, the use being confined to times when despite the jealous guarding of its long haul, the Union Pacific has been "called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing" (R. 64).

Both in the foregoing discussion and later the Commission recognizes and gives effect to the "right" of shippers to "route their own traffic."

The position of the court that in failing to defy shippers and maintain a 24-hour vigil at every gateway, the Union Pacific has lost its right to its long haul, is unsupportable in theory and practical operation; and this position of the court is particularly indefensible in the face of the unequivocal declaration of the Commission that it cannot oppose shippers' routing.

Any other view, as pointed out by the Commission, would enable a carrier to completely circumvent the requirements of Section 15(4).[41]

Adhering continuously to this position, the Commission in the recent case of *Steinmetz v. Atchison, T. & S. F. Ry. Co.*, 293 I. C. C. 202, states that, although the route

41 "Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15(4) made in 1940 (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra.*" (R. 65.)

chosen there by a shipper was a "closed" route by reason of the "publication" of the carrier, this "does not mean that a shipper may not specify routing for a shipment over such a 'closed' route and expect compliance with the routing thus specified." The rate, the opinion holds, for such shipment, would be the "combination rate." And, see *The Ogden Gateway Case*, 35 I. C. C. 131, where the Commission held at page 142, that no carrier may take steps to "deprive passengers of the right to use its rails * * * at the regularly established fares."

On the matter of the duty of a carrier to accept shipments, this Court in *Southern Ry. Co. v. Reid*, 222 U. S. 424, 435, states:

> "It is undoubtedly the duty of a railroad company to receive freight when tendered for transportation."

The opinion goes on to hold, however, that there can be no transportation "until they had fixed and proclaimed the rate to be charged therefor" (p. 442) covering all shippers at all times. The rate established may either be one which is a "through route and joint rate" or if such has not been established, the "separately established rates, fares, and charges applied to the through transportation" (222 U. S. 443-444).[42]

---

42 Citing the foregoing case, *Cleveland, C., C. & St. L. Ry. Co. v. Hayes*, 102 N. E. 34, 38, 181 Ind. 87, 97, states:

"If a through rate has not been fixed, then the shipper in exercising his common-law right of routing cannot make a through shipment, but must make shipment according to the local rates of the respective lines over which the carriage may be undertaken."

A number of cases as to the duties and responsibilities of connecting carriers are cited in *N. Y. Central R. Co. v. The Talisman*, 288 U. S. 239, for the following rule:

"Petitioner and respondent were connecting carriers. As such, each, in the discharge of its duties to the public, owed to shippers of freight in its possession destined to points on or routed over the railway of the other the duty to deliver to the connecting line for further transportation; and each was correspondingly bound to receive and carry." (p. 241)

Section 15(8) has no Application.

It is a distortion of Section 15(8) to suggest, as did the lower court, that this section limits the right of shippers to route traffic to cases where a through route exists. Section 15(8) does not purport to cover the myriad of situations where no through route exists. It merely provides that where "two or more through routes and through rates shall have been established", to which the carrier is a party, the shipper may choose between them. It is only in such "cases" that the statute has any application. The rights of shippers where "two" through routes have not been established are not declared or covered by this section.

Section 15(8) was added to the Act in 1910 (36 Stat. 553) as a part of the expansion of Section 15 with reference to the establishment of new through routes. As an accompanying part of such legislation, it was no doubt intended to serve as protection to the shipper in connection with any duplication of routes that would result from such legislation.

The decision in *Lamb v. Moor*, 17 Ga. App. 549, 87 S. E. 837, sustains the above views. The court there held that an interstate shipment was controlled by the Hepburn act, but no designation of routing in writing was necessary to recover since it "nowhere appears that between the point of delivery for shipment and the point of destination two or more through routes and through rates had been established; to which through routes and through rates the defendant was a party" (p. 837).

A recent case, *E. E. West Petroleum Co. v. Atchison, T. & S. F. Ry. Co.* (8 Cir.), 212 F. 2d 812, involving inter-

mediate rates, reviews very well the "intricate system of lines" and "innumerable physical connections" to be found in our railway system (p. 819) and the "practicality" from a commercial standpoint that must govern the application and interpretation of rates. The court discusses the "complexity of our vast railway systems" and the "expert ingenuity in creating imaginary routes" that is possible under the circumstances (p. 820). The court pays heed, at page 816, to the *Thompson* decision of this Court as preventing the declaration of through routes where the carriers' "course of business" negatives their existence since "they never held themselves out as offering such through service."

Where, as Here, Physical Transfer is Possible and Local Rates Have Been Published, no Railroad may Lawfully Refuse to Issue a Through Bill of Lading.

The lower court suggests that when the Union Pacific "issued through bills of lading" it and the other railroads thereby recognize the "through route status" (R. 288) of the proposed Rio Grande route. This suggestion like those previously discussed, contains the fundamental fallacy that Union Pacific had the right and duty to refuse a through bill of lading.

The issuance of bills of lading to shippers at the combination rates could in no manner be given the effect of recognizing a through route within the meaning of Section 15(3) and (4). The Union Pacific or any other railroad was required by statute when "receiving property for transportation from a point in one State * * * to a point in another State" to comply with the mandate that it "shall" issue a bill of lading therefor. 49 U. S. C. 20(11).

Such a bill of lading, under this statute, constitutes a contract and "fixes" the "route" to be used in the transportation. *Schwalb v. Erie R. Co.*, 161 Misc. 743, 293 N. Y. S. 842. It is "required to be issued by the carrier." *Aradalou v. New York, N. H. & H. R. Co.* 225 Mass. 235, 239, 114 N. E. 297, 299. In issuing the bill of lading, the carrier is performing a "duty" imposed upon it by Congress. *Atchison & Topeka Ry. v. Harold*, 241 U. S. 371, 378.

The question whether there is any "holding out" that constitutes a voluntary establishment of through routes is comparable to the question whether, at common law, a railroad "assumed, or held itself out to the public as assuming" the responsibility for carriage over connecting lines. *Insurance Co. v. Railroad Co.*, 104 U. S. 146, 157; 9 Am. Jur. 986. Such an agreement, it was held, will not be inferred and can be shown "only from clear and satisfactory evidence"; and the receipt and acceptance of goods for shipment beyond the carrier's lines did not constitute any such contract. *Myrick v. Michigan Central R. R. Co.*, 107 U. S. 102, 107. Moreover, as held in the case just cited, there was no holding out of such a contract by a statement on the receipt for goods that the receipt might be "exchanged for a through bill of lading" (p. 109). See also *United States v. Munson S. S. Line*, 283 U. S. 43, 47-48.

It is well settled also that the "mere stating of a through fare on the receipt of the freight" did not imply any undertaking for the entire haul. *Northern Pac. Ry. Co. v. Amer. Trading Co.*, 195 U. S. 439, 459.

While the Carmack amendment changed the originating carrier's liability, it made no other change in the

normal or common law relationship of carriers. *Cincinnati & Tex. Pac. Ry. v. Rankin*, 241 U. S. 319; 9 Am. Jur. 993. The Carmack amendment applied whether or not the railroad had a "through route or rate established" and irrespective of the carrier's position that even though it "had no through route" it "was bound to accept goods destined beyond its line for delivery to the next carrier, and was required by the statute to give a through bill of lading." *Norfolk & W. Ry. Co. v. Dixie Tobacco Co.*, 228 U. S. 593, 595. This opinion by Mr. Justice Holmes refers to the "compulsory acceptance" of shipments in this connection. See also *Mexican Light Co. v. Tex. Mex. R. Co.*, 331 U. S. 731, involving two bills of lading.

V.

The District Court Exceeded its Powers in Making Findings of Fact and Remanding the Case to the Commission With Instructions to Proceed in Conformity With the Opinion.

The opinion of the district court in its specific findings and in its observations and discussion raised many important questions as to the division of authority between administrative commissions and courts.

In "remanding the case to the commission" the court sets forth what it terms "instructions" (R. 362, 293) for the disposition of the matter by the Commission. Included in these "instructions" are the following findings:

> "Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines * * *." (R. 297)

> "Here the very thing the Rio Grande seeks is not a mere competitive advantage, but the establishment of just and reasonable through rates and the removal of unjust discrimination, which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings." (R. 299)

Having given these "instructions" to the Commission and having made these findings, the court concludes:

> "The order in so far as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with this opinion." (R. 302)

We submit that if these findings and "instructions" are "appropriate" then the Commission has only a limited function in such cases, and matters of fact which have heretofore been subject to administrative determination may now be foreclosed by judicial action.

It is elementary that the "court must act within the bounds of the statute" permitting judicial review, *Ford Motor Co. v. Labor Board*, 305 U. S. 364, 373. The applicable statute (28 U. S. C. 1336), authorizing a review of the Commission's orders, gives the court power only to "enjoin, set aside, annul or suspend, in whole or in part, any order" of the Commission. There is no authority contained in the statute to "remand" or make findings of fact and there is a complete omission of any power to direct or instruct the Commission as to its further consideration or disposition of the case.

Throughout the opinion, the district court manifests a tendency to tell the Commission how to handle and determine this case. The court even outlines (R. 292) what further consideration should be given to through routes

by the Commission. At no point in the opinion is there any recognition of the limitations of authority involved in judicial review of orders of the Commission.

The opinion of the court points to no evidence justifying its conclusion that "discrimination" against the Rio Grande is established. The Commission, after review of the evidence, holds that discrimination under Section 3(4) is not shown (R. 104) and concludes that the Rio Grande, as a "railroad, could not raise, in its own behalf, an issue under section 3(1)" (R. 65).

While the reasoning of the district court in this regard is not explicit, the opinion states that "a carrier is as fully entitled to non-discriminatory treatment as a shipper" (R. 293). If this statement implies that the Rio Grande has the same rights under Section 3(1) as a shipper, then the court is clearly in error. *Arkadelphia Co. v. St. Louis S. W. Ry. Co.*, 249 U. S. 134, 149. See also *Henderson v. United States*, 339 U. S. 816, 824.

In making its own findings of fact the lower court "usurped an administrative function", *F. P. C. v. Idaho Power Co.*, 344 U. S. 17; and subjects the present case to the following holding in that case at page 20:

> "* * * the guiding principle, violated here, is that the function of the reviewing court ends when an error of law is laid bare."

The decision below would effect a "substitution of judicial for administrative discretion", *Communications Comm'n v. WOKO*, 329 U. S. 223, 229, and destroy the "wide discretion" and "wide latitude" which Congress has delegated to the Commission, *Siegel Co. v. Trade Comm'n*, 327 U. S. 608, 611-613.

Quite early in the history of the Commission this Court reflected that the courts should not "usurp merely

administrative functions" under the "guise of exerting judicial power". *Interstate Comm. Comm. v. Ill. Cent. R. R.*, 215 U. S. 452, 470. More recently in *Federal Comm'n v. Broadcasting Co.*, 309 U. S. 134, 144, this Court has declared:

> "Unless these vital differentiations between the functions of judicial and administrative tribunals are observed, courts will stray outside their province and read the laws of Congress through the distorting lenses of inapplicable legal doctrine."

At page 143 of that decision, this Court emphasizes that it is the responsibility of the Commission "to control the range of investigation in ascertaining what is to satisfy the requirements of the public interest." The finding of the lower court in the present case would dispense with any such functioning by the Commission.

It is not within the province of a court, as stated in *Radio Comm'n v. Nelson Bros. Co.*, 289 U. S. 266, 276, "to revise the Commission's decision and to enter such judgment as the court may think just". Such an action, this Court declares, constitutes the exercise of "functions which are essentially legislative or administrative" (page 275). See also *United States v. Jones*, 336 U. S. 641, 651, 666, and *Radio Comm. v. General Electric Co.*, 281 U. S. 464. The order sought by Rio Grande herein is of course a rate order and rate orders are "clearly legislative". The *Chicago Junction Case*, 264 U. S. 258, 263.

It is worthy of note that, despite its numerous errors in attempting to sustain the Commission's order "in part", when the three-judge court for the District of Nebraska came to write its final judgment and decree, it recognized these principles and limitations upon the courts in judicially reviewing an administrative order,

as indicated in the following language (page 211, transcript of record from the District of Nebraska, Nos. 117, 118, and 119)—

> "It is further adjudged and decreed that this Court has no power under the Interstate Commerce Commission Act to determine whether it would be in the public interest and consistent with good transportation practices to put into effect only that part of the order of the Interstate Commerce Commission held to be lawful, without regard to and independent of that part of the order held to be unlawful, and, that question being one which should under the law be determined by the Interstate Commerce Commission in the exercise of its informed judgment in its specialized field * * *."

That court "remanded" the case to the Commission for such further proceedings "as the informed judgment of the Commission may dictate", while the three-judge court for the District of Colorado "remanded" the case to the Commission "for further proceedings in conformity with the opinion and judgment of this Court" (R. 362).

Unless the decision of the district court is reversed the way will be open for the Rio Grande to go to the Commission with the "instructions" in the present opinion and insist that an order be made by the Commission that carries into effect all of the orders, observations and declarations of the district court without reference to or consideration of the independent statutory authority and powers of the Commission. Such a course of procedure would do violence to fundamental concepts of separation of powers and administrative law and invite further and unlimited review of all orders entered by the Commission. *Humphrey's Executor v. U. S.*, 295 U. S. 602, 629-630.

CONCLUSION

The judgment and decree should be reversed and the case remanded to the district court with direction to dismiss the complaint.

Respectfully submitted,

DON EASTVOLD, Attorney General of Washington,
ROBERT L. SIMPSON, Asst. Attorney General of Washington,
Attorneys for Washington Public Service Commission, State Capitol, Olympia, Washington.

C. W. FERGUSON,
Attorney for Public Utilities Commissioner of Oregon, Public Service Building, Salem, Oregon.

JAMES B. PATTEN,
Attorney for Board of Railroad Commissioners of the State of Montana, Helena, Montana.

GEORGE F. GUY, Attorney General of Wyoming,
Attorney for State Board of Equalization and Public Service Commission of Wyoming, Cheyenne, Wyoming.

CLARENCE S. BECK, Attorney General of Nebraska,
BERT L. OVERCASH,
State Capitol Building, Lincoln, Nebraska,
Attorneys for State of Nebraska and Nebraska State Railway Commission and *Counsel of Record for Appellants.*

PROOF OF SERVICE

I, BERT L. OVERCASH, counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 15th day of March, 1956, I served, on behalf of all appellants herein, copies of the foregoing brief on the several adverse parties in Nos. 117, 118, 119, 332, 333 and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

and with first-class postage prepaid to:

Donald R. Ross, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Neil Brooks, Esq.
Assistant General Counsel
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who work for The Denver and Rio Grande Western R. R. Co.; National Live Stock Producers Association; Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; West-

ern Forest Industries Association; Koppers Company, Inc.; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc.; and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

Lee J. Quasey, Esq.
139 N. Clark Street
Chicago 2, Illinois

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

and with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

6. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

BERT L. OVERCASH,
Counsel of Record for Appellants Herein,
State Capitol Building,
Lincoln, Nebraska.

APPENDIX A

The Pertinent Provisions of the Interstate Commerce Act (United States Code, Title 49), Involved in this Case are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1(4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to

part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3(4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15(1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers sub-

ject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportaton other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classification, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and mini-

ma, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. * * *"

Section 15(4)—

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however*, That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

Section 15(8)—

"In all cases where at the time of delivery of property to any railroad corporation being a common carrier, for transportation subject to the provisions of this part to any point of destination, between which and the point of such delivery for shipment two or more through routes and through rates shall have been established as in this part provided to which through routes and through rates such carrier is a party, the person, firm, or corporation making such shipment, subject to such reasonable exceptions and regulations as the Interstate Commerce Commission shall from time to time prescribe, shall have the right to designate in writing by which of such through routes such property shall be transported to destination, and it shall thereupon be the duty of the initial carrier to route said property and issue a through bill of lading therefor as so directed, and to transport said property over its own line or lines and deliver the same to a connecting line or lines according to such through route, and it shall be the duty of each of said connecting carriers to receive said property and transport it over the said line or lines and deliver the same to the next succeeding carrier or consignee according to the routing instructions in said bill of lading: *Provided, however*, That the shipper shall in all instances have the right to determine, where competing lines of railroad constitute portions of a through line or route, over which of said competing lines so constituting a portion of said through line or route his freight shall be transported."

Section 20(11)—(in part)

"That any common carrier, railroad, or transportation company subject to the provisions of this part receiving property for transportation from a point in one State or Territory or the District of Columbia to a point in another State, Territory, Dis-

trict of Columbia, or from any point in the United States to a point in an adjacent foreign country shall issue a receipt or bill of lading therefor, and shall be liable to the lawful holder thereof for any loss, damage, or injury to such property caused by it or by any common carrier, railroad, or transportation company to which such property may be delivered or over whose line or lines such property may pass within the United States or within an adjacent foreign country when transported on a through bill of lading, and no contract, receipt, rule, regulation, or other limitation of any character whatsoever shall exempt such common carrier, railroad, or transportation company from the liability hereby imposed; * * *."

Nos. 332 and 333

In the Supreme Court of the United States

OCTOBER TERM, 1955

NO. 332

WASHINGTON PUBLIC SERVICE COMMISSION, ET AL.,
Appellants,

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY.

NO. 333

UNION PACIFIC RAILROAD COMPANY, ET AL.,
Appellants,

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

MOTION TO REVERSE

Washington Public Service Commission; Public Utilities Commissioner of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization and Public Service Commission of Wyoming; State of Nebraska and Nebraska State Railway Commission, appellants in No. 332, and Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great

Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company, and Wabash Railroad Company, appellants in No. 333, move that this Court, without awaiting briefs and oral arguments, reverse the judgment of the district court[1] on the ground that it is so plainly erroneous as not to need further argument.[2]

STATEMENT[3]

This is a direct appeal from a final judgment entered February 14, 1955, by a three-judge district court convened pursuant to 28 U. S. C. 2284, 2325, annulling

---

1 Appellants in No. 334, United States of America and Interstate Commerce Commission v. The Denver and Rio Grande Western Railroad Company, also seek to reverse the judgment of the district court described herein.

2 See *Williamsport Co. v. United States*, 277 U.S. 551, 556-557. Counsel for appellants realize that this Court's rules do not expressly provide for a motion to reverse. However, this Court for several years has frequently disposed of similar direct appeals under the same statutory provisions (28 U.S.C. 1253 and 2101(b)) by affirming the three-judge district courts' judgments without awaiting briefs and oral arguments. *Goodman Lumber Co. v. United States*, and *A. O. Smith Corp. v. United States*, 301 U.S. 669 (June, 1937); *Ward Transport Inc. v. U.S.*, 75 S. Ct. 570; *Seaboard Air Line R.R. Co. v. U.S.*, 75 S. Ct. 579; *Interstate Com. Com. v. Mississippi Public Service Com.*, 75 S. Ct. 599.

Power to dispose of such appeals without briefs and oral arguments apparently is the same whether by affirming district court judgments that are plainly correct or by reversing judgments that are plainly erroneous.

In the interests of justice and in the exercise of its "supervisory powers," this Court has frequently granted certiorari and reversed judgments and remanded cases without briefs or oral arguments on the merits. *Smalls v. Atlantic Coast Line R.R.Co.*, 75 S.Ct. 439; *Calvaresi v. United States*, 75 S.Ct. 522; *Smaldone v. United States*, 75 S.Ct. 523; *State of Montana v. State Board of Land Commissioners*, 75 S.Ct. 524; *Bates v. United States*, 75 S.Ct. 529; *Moore v. United States*, 75 S.Ct. 531; *Simon v. United States*, 75 S.Ct. 531.

3 For a more detailed statement of the case see Appellants' Statements as to Jurisdiction, Nos. 332 and 333.

and setting aside an alleged "order" of the Interstate Commerce Commission. On April 22, 1955, the court entered an order overruling and denying a motion for new trial or reargument and reconsideration. The Commission's alleged order resulted from a complaint filed by The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") for the admitted purpose of improving its financial condition by diverting for a "bridge" haul over its line traffic originated and terminated on through routes of the Union Pacific Railroad Company and other railroads and hauled under joint rates maintained over those routes through Wyoming and Nebraska for 75 years, between points in the northwest area, embracing the States of Oregon, Washington, Montana and Idaho, and points in the eastern and southern parts of the United States.[4]

The joint rates do not apply via the Rio Grande and they are lower than the combination or sum of the local rates that would have to be charged if the traffic moved via that line.

The Rio Grande demanded that its line be included at equal joint rates in the many hundreds of thousands of existing through routes between the 39,000 railroad stations in the east and south and the 2,900 stations in the northwest area just indicated. It made this demand despite the facts, found by the Commission, that the Rio Grande has no trackage and performs no service in that area; that any route via the Rio Grande for movement of the involved traffic would be from 33 to 219 miles

4 The lines and termini of the Union Pacific and the Rio Grande (main lines) are indicated on the map attached as Appendix A to Statement as to Jurisdiction filed herein by Union Pacific Railroad Company, et al., No. 333.

longer than the Union Pacific and would range from 33 per cent to more than 50 per cent longer than many routes maintained by the Union Pacific with other railroads; that movement of the traffic over the Rio Grande as a "bridge" line would require at least 24 hours more time and one or two more terminal interchanges between carriers, and would short haul the Union Pacific and other railroads 925 miles.

The Commission further found that Union Pacific routes are not only shorter and faster than the Rio Grande, but are also efficiently operated, have surplus capacity and are adequate to move over their "direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future"; and it also found that the route of the Rio Grande is longer and "less favorably situated" than that of the Union Pacific, and that "operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental" lines.

The Rio Grande contended before the Commission that through routes at the combination or sum of local rates already existed via its line in connection with the Union Pacific and demanded that the lower joint rates maintained over Union Pacific routes be made applicable via its line, without regard to the short-hauling prohibition in Section 15(4) of the Interstate Commerce Act (App. H, p. 4, Railroad Appellants' Statement as to Jurisdiction, No. 333.

The Commission held that the through routes claimed by the Rio Grande did not exist for the involved traffic within the meaning of Section 15(3) and (4) of the Act and that if through routes and joint rates were ordered via the Rio Grande they would have to be grounded on

findings required by Section 15(4)(b), which permits the Commission to short haul existing routes only if it finds that "the through route *proposed* to be established is needed in order to provide adequate and more efficient or more economic transportation". The Commission found that through routes via the Rio Grande were "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" for certain commodities which comprise about one-third of the total volume of the traffic the Rio Grande seeks to divert to its line. The Commission concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained." The order issued requires that joint rates "the same" as those maintained over existing Union Pacific routes be made applicable via the Rio Grande to the commodities named in the order.

The order does not in terms deny, dismiss or withhold anything, nor does it make any reference to the remaining two-thirds of the traffic the Rio Grande seeks to divert to its line. For the purpose of having the Commission order through routes and joint rates via its line on the remaining two-thirds of the traffic, the Rio Grande brought this suit to enjoin and annul the Commission's *failure* to include that two-thirds of the traffic in the order it issued.

The district court overruled a motion to dismiss the case on the ground that, as the Rio Grande admittedly has no legal or other right to improve its financial position by diverting traffic from other railroads, it has no standing to maintain the suit. The court further held that through routes via the Rio Grande are already in existence for the involved traffic, that the Commission erred as a matter of law and upon the evidence in finding

that the claimed routes are not in existence, and that this finding by the Commission "obviously prejudiced the entire proceeding". The court enjoined and annulled the alleged "order" insofar as it denied and withheld relief from the Rio Grande, and "remanded" the case to the Commission for further proceedings in conformity with the court's opinion "insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief" to the Rio Grande (Apps. D, E and F, Railroad Appellants' Statement as to Jurisdiction, No. 333; decision reported August 1, 1955, *Denver & Rio Grande Western R. Co. v. United States*, 131 F. Supp. 372).

ARGUMENT

1. The district court treated the Commission's *failure* to require through routes and joint rates on the remaining two-thirds of the traffic as a "part" or a "negative portion" of the affirmative order issued. But examination of the order (App. C, Railroad Appellants' Statement as to Jurisdiction, No. 333) shows that this is clearly erroneous. While the Commission's *report* ends with the conclusion that, "except as indicated in the preceding findings, the allegations made in the complaint are not sustained", this conclusion is not mentioned in the order issued.

This Court has held that the Urgent Deficiencies Act (38 Stat. L. 219; 28 U. S. C. 1336, 1338) confers no jurisdiction upon the courts to review "matter embodied in a [Commission] report and not followed by a formal order", *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522, 528. In that case the Commission had made a finding of the amount representing the railroad company's investment in road and equipment. It issued no order, but concluded its report with this statement:

"The company will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report."

Rejecting the railroad's contention that the quoted language "amounts to an order", this Court held that jurisdiction to review was lacking because *"the action here complained of* is not in form an order", and, instead, "is a part of a report—an opinion as distinguished from a mandate". (Italics added.)

That Act clearly makes the existence or presence of an "order" embodying the matter complained of prerequisite to jurisdiction to review. There is no such order here. The order issued does not deny, dismiss or withhold anything. There is no "negative portion" of that order. It is a positive mandate to more than 200 railroads to establish in connection with the Rio Grande through routes and joint rates on a third of the traffic it seeks to divert from other railroads. But most assuredly the Rio Grande does not want that order enjoined, for every "part" of it is completely favorable to the Rio Grande, and indeed, it is now defending the validity of that order before this Court, No. 117, *The Denver & Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al.* The Rio Grande is clearly seeking in the instant case to enjoin and annul an alleged "order" that has not been issued, namely, an order "denying" the Rio Grande's demand for through routes and joint rates on the remaining two-thirds of the traffic.[5]

---

[5] The order reviewed in *U.S. v. Great Northern R. Co.*, 343 U.S. 562 (No. 451, Oct. Term 1951, Transcript of Record, pages 24-25), "denied" an application to abandon the Montana Western, ordered joint rates in lieu of combination rates, and prescribed divisions of the joint rates.

(Continued on next page)

As stated in *United States v. Atlanta, B. & C. R. Co.*, *supra*, page 528:

> "No case has been found in which matter embodied in a report and not followed by a formal order has been held to be subject to judicial review."

In *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, the Commission had issued an order requiring certain carriers to establish joint rates, but it declined to comply with the demand of some of the carriers that it also prescribe divisions of the joint rates required. This Court reviewed the affirmative order issued but refused to review the Commission's *failure* to fix divisions, holding that in seeking review of the Commission's failure to fix divisions, the appellants were in effect asking the Court to "exercise administrative authority where the Commission has failed or refused to exercise it". In *Chicago Junction Case*, 264 U. S. 258, the Court cited a number of cases at page 264, in which the Court said, judicial review was refused "not because the order * * * was negative in character," but that this Court declined to interfere "because to do so would have involved exercise by it of the administrative function of granting the relief" which the Commission had failed to grant.

(Continued from preceding page)

And compare orders granting "in part" and denying "in part," applications for motor carrier operating rights. In such proceedings the Commission's report generally relates the extent to which the evidence justifies the application, and an order is entered, as follows:

> "*It is ordered*, That said application, except to the extent granted in said report, be, and it is hereby, denied." (No. MC-61396 (Sub No. 32) Herman Bros. Inc., Extension—Kansas and Other States, June 30, 1955, unreported.)

While the district court said that the fact that "the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief", it is plain that the court either confused the abolition of the "negative order doctrine" by *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, with the jurisdictional necessity for an actual formal order embracing the matter of which the Rio Grande complained, or it attempted to "stretch" the ruling in the *Rochester* case to include a case in which the Commission has issued no order at all embodying its failure to grant all the Rio Grande's affirmative demands. Since that *failure*, and not the affirmative order issued, was the gravamen of the Rio Grande's complaint, the district court plainly should have dismissed the suit for lack of jurisdiction. It is certain that the complaint would have been dismissed for lack of jurisdiction in *Manufacturers Ry. Co. v. United States, supra*, if it had attacked only the Commission's *failure* to fix divisions of the joint rates if had required by its affirmative order.

2. The Rio Grande's complaint to the Commission demanded joint rates that would afford it the opportunity to improve its financial position by short-hauling the appellant railroads 925 miles and diverting for a "bridge" haul over its line through traffic from which the Union Pacific alone earns over $49,000,000 annually. The order issued by the Commission grants the demand to the extent of about one-third of the traffic from which the Union Pacific earns over $11,000,000 annually. The Rio Grande filed this suit in the district court for the purpose of obtaining equal joint rates which it "failed to secure from the Commission" on the remaining two-thirds of the traffic (see *Standard Oil Co. v. United States*, 283 U. S. 235, 241).

The district court conceded that the Commission's failure to grant the full demands "required no affirmative action by the Rio Grande" and took nothing away from the Rio Grande which it already had", and from that standpoint, "caused no pecuniary loss to the Rio Grande", but that, nevertheless, it would prevent the Rio Grande "from enjoying increased traffic and increased earnings" and, therefore, "will result in pecuniary injury to the Rio Grande", giving it a right to judicial review (App. D, pp. 20-21, Railroad Appellants' Statement as to Jurisdiction, No. 333).

Keeping in mind the consistent rulings of this Court, the fact that the Rio Grande's only purpose in prosecuting this suit is to reap financial gain beyond the extent permitted by the Commission's order, and the fact that the Rio Grande has no legal or other right to enhance its financial position by diverting traffic from other railroads, it is clear beyond doubt that the district court erred in holding that the Rio Grande has standing to maintain this suit.

This Court has consistently held that standing to maintain a suit to enjoin an order of the Commission requires a showing that the order assailed subjects the complainant to legal injury, actual or threatened, *Edward Hines Trustees v. U. S.*, 263 U. S. 143; *Sprunt & Son v. United States*, 281 U. S. 249, 257; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 486; *Moffat Tunnel League v. U. S.*, 289 U. S. 113, 119; or that the order would deprive the complainant of something it has long and lawfully possessed, or would disrupt the transportation situation causing the complainant financial or economic

---

6 Compare *United States v. Los Angeles R.R.*, 273 U.S. 299, 309-310.

loss, or that the right to maintain such suit rests upon some express statutory provision, *Western Pacific v. South. Pac. Co.*, 284 U. S. 47; *Claiborne-Annapolis Ferry v. U. S.*, 285 U. S. 382; *Chicago Junction Case*, 264 U. S. 258, 267; *Alton R. Co. v. United States*, 315 U. S. 15, 19.

This Court also held in *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 780, that:

> "There is no rule of law or practice which gives to a carrier the right to recapture traffic which it originated."

If, as held in that case, the railroads that originate and terminate the traffic have no right to retain it to their lines, or—as argued by the Rio Grande in the district court[7]—have no "absolute" or "unequivocal" right to their long hauls, then, *a fortiori*, the Rio Grande, which neither originates nor terminates the traffic, can claim no semblance of a legal or other right to enhance its financial position by diverting for a "bridge" haul over its line traffic originated and terminated by these railroad appellants and hauled by them for 75 years over their shorter, faster and more efficient routes.

---

7 On this point the Rio Grande argued as follows at page 111 of its original brief in the district court:

"Neither the Union Pacific nor any other railroad has an absolute right to the exclusive occupancy of a particular territory or to the traffic which terminates or originates in the territory. *Pennsylvania R. Co. v. United States*, 40 Fed. (2) 921; *Indian Valley R. Co. v. United States*, 52 Fed. (2) 485, and *Chesapeake and Ohio Ry. Co., Construction*, 267 I.C.C. 665, 679. In *United States v. American Railway Express Co.*, 265 U.S. 425, 437, the court held that a carrier has no absolute right to the traffic it originates or to its long haul. Such rights as a railroad may have to its long haul on interstate commerce are granted and limited by the Interstate Commerce Act. Moreover, that Act does not give the originating railroad or any railroad the unequivocal right to its long haul in connection with through routes."

The purpose of the short-hauling prohibition in Section 15(4) of the Act is "to protect the long haul routes of carriers", *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, 277, and it is a distortion of that purpose to contend or suggest that there is any hint of a legislative sanction of a right in the Rio Grande to short haul the railroad appellants 925 miles so that it may improve its financial condition by diverting for a "bridge" haul over its line through traffic originated and terminated on the lines of the railroad appellants. Indeed, Section 15(4) requires that the Commission shall—if it orders a new through route—"give reasonable preference to the carrier by railroad which originates the traffic." And that section contains the further mandate that:

> "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

All of this, we submit, conclusively demonstrates that the Rio Grande has no semblance of a legal or other right to take from Union Pacific routes the traffic it seeks, and, hence, no standing to maintain this suit.

Although the district court refrained from specifying the ground or reason for its holding that the Rio Grande has standing to maintain the suit, it did hold that the Rio Grande here seeks rates that "will result in pecuniary profit to the Rio Grande * * * the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings" (App. D, p. 25, Railroad Appellants' Statement as to Jurisdiction, No. 333), and that "the denial of the relief here challenged will result in pecuniary injury to the Rio Grande", but that such injury is not essential to the right to judicial review. (Id. pp. 20-21.)

In final analysis, and though lacking in clarity and specificity, the court's decision that the Rio Grande has standing to maintain the suit inescapably rests upon the proposition that, regardless of its utter lack of any legal or other right to the traffic it seeks, the Rio Grande has standing to maintain this suit because the Commission failed to grant its demands for an opportunity to reap "pecuniary profit" and enhance its revenues from *all*, instead of a part, of the traffic it seeks to divert for a "bridge" haul over its line.

There is no precedent for the court's holding, and it is directly contrary to the decisions cited above and to the rule laid down by this Court that in order to maintain a suit to enjoin acts of others the complainant must show that he is threatened not only with a "loss" but also one against which he is legally or equitably entitled to protection. *Railroad Co. v. Ellerman*, 105 U. S. 166; *Alabama Power Co. v. Ickes*, 302 U. S. 464; *Tennessee Power Co. v. T. V. A.*, 306 U. S. 118. If, as held in the cases just cited, a complainant has no standing to maintain a suit to enjoin acts of others *which threaten even to destroy his business* unless he shows that such acts invade some legal or equitable right of his own, *a fortiori* the Rio Grande has no standing to maintain suit to enjoin the Commission's failure to grant its full demands for "pecuniary profit" to be obtained by diverting to its line traffic to which it admits that it has no semblance of legal or other right, and the refusal of the district court to so hold clearly should be reversed.[8]

---

8 The American Short Line Railroad Association and several shipper organizations intervened as plaintiffs supporting the Rio Grande's complaint in the district court. That court did not comment on the question whether the interveners have any "independent" right

(Continued on next page)

3. The district court, in reversing the Commission's finding that through routes claimed by the Rio Grande are not in existence within the meaning of the Act, misconstrued or refused to be guided by this Court's decision in *Thompson v. United States*, 343 U. S. 549, and by the principles stated in *U. S. v. Great Northern R. Co.*, 343 U. S. 562, concerning proof of the existence of through routes and the legislative policy against diversion of traffic from one carrier for the benefit of another.

Although stating that the definition of "through route" in the *Thompson*[9] case "compels us to conclude

---

(Continued from preceding page)

or standing to sue, but obviously they have not, for, like the Rio Grande, they suffered no loss but, instead, gained a financial benefit from the order, and sought merely to reap "pecuniary profit" beyond and in addition to that permitted by the order. Their right to intervene in the Rio Grande's suit gave them no right to maintain a suit, independent of the Rio Grande's, to enjoin the alleged order. *Sprunt & Son v. United States*, 281 U.S. 249, 252-258; *Schenley Corp. v. United States*, 326 U.S. 432, 435; *Boston Tow Boat Co. v. U.S.*, 321 U.S. 632, 634; *Moffat Tunnel League v. U.S.*, 289 U.S. 113, 120. And since, as we have shown, the Rio Grande had no standing to maintain its suit, the interveners' complaints, along with the Rio Grande's, clearly should have been dismissed by the district court.

9 In the *Thompson* case this Court held at pages 557-558 that:

"In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.

"In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such through route. The fact that appellant's line connects with the Burlington at Concordia does not aid the Commission in proving the existence of a through route, since the power to establish through routes under Section 15 (3) and (4) also presupposes

(Continued on next page)

that the through routes contended for by the Rio Grande were in existence", the district court does not indicate which of the several elements of that definition compels such conclusion, but this Court's opinion in that case clearly shows at page 557 that the existence or absence of a through route is to be determined by consideration of the various incidents which tend "to establish a carrier's course of business with respect to through shipments." It is the "course of business"—not the exceptions to or departures from it—that governs.

The district court merely states that in the *Thompson* case there was no evidence that a shipment had ever been made from terminus to terminus (Lenora, Kans., to Omaha, Nebr., via the Missouri Pacific and Burlington railroads) of the route there in question or that the carriers had ever offered through service over that route. As if to prove a different case, the court then points to 18 shipments moved at combination of local rates in 1948 over the Rio Grande from 18 origins in the middlewest and southwest to destinations in the northwest area and to a few war and blizzard emergency shipments, and 37 shipments that moved from the northwest to destinations *on* the Rio Grande. Neither the latter nor the emergency shipments could prove anything in this case, for the "emergency" shipments are expressly exempted from the short haul prohibition by the last sentence of Section 15(4) to take care of "temporary" emergencies, and the 37 shipments to points on the Rio Grande were not

---

(Continued from preceding page)

such physical connection. And the showing that appellant publishes a local rate from Lenora to Concordia and that the Burlington publishes a local rate from Concordia to Omaha proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines.

"through" shipments of the "bridge" traffic sought by the Rio Grande.

The *Thompson* decision, page 557, footnote 13, makes it plain enough that even if the Rio Grande had proved that one or more isolated or sporadic shipments moved via its lines over each of the innumerable routes of which it claims to be a part, it still would have failed to prove "the carriers' course of business". *A fortiori*, its showing here of 18 shipments routed via its line by shippers over 18 of the millions of existing through routes between the 39,000 railroad stations in the east and south and the 2,900 stations in the northwest area is not even a *scintilla* of proof that the "course of business" of the carriers comprising the myriad of Union Pacific routes is to offer through transportation service in connection with the Rio Grande between the northwest and the eastern and southern parts of the country.[10]

Such a "course of business" is negatived by the fact, mentioned in the district court's opinion, that joint rates with the Rio Grande established by receivership courts in 1897, were cancelled after the receiverships terminated nearly 50 years ago. It is also negatived, as the Commission said, by the steadfast refusal of the appellant railroads during, and even before, that 50-year period to relinquish their long hauls.

---

10 At page 559, the *Thompson* decision holds:

"Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha unless we are to hold that compliance with Section 1 (4) causes the Missouri Pacific to lose its right to serve Omaha via its own lines, *a right guaranteed by Section* 1 (4). We reject the Commission's argument that the existence of through routes from Lenora to points on the Burlington line short of Omaha proves the existence of a through route to Omaha via the Burlington, as requiring 'an unwarranted distortion of the statutory pattern.'" (Italics supplied.)

That the cancellation nearly 50 years ago of the joint rates established in connection with the Rio Grande by the receivership courts in 1897 fully accomplished the "closing" of the through routes in question, is and has been the understanding of all railroads and shippers generally concerned during that 50-year period. It was the understanding of 137 shipper and public witnesses who opposed the Rio Grande and of some 50 witnesses who supported its complaint before the Commission, and it was the understanding of the Rio Grande's President, who testified that, ever since he became affiliated with the Rio Grande he had looked forward "to the opening of the Ogden Gateway". It was the admitted position of Rio Grande until after this Court handed down its decision in the *Thompson* case (June 2, 1952). In its publicity campaign, conducted before and after the filing of its complaint, August 1, 1949, the Rio Grande publicly asserted that its purpose was to "restore" to the northwest the "rates and routes" established by the receivership courts in 1897. As a part of its publicity campaign, the Rio Grande printed and widely distributed a pamphlet entitled "20 Questions—An Informative Quiz", (I. C. C. Ex. 30), in which it posed 20 questions and answered them with the arguments it thought would convince shippers to aid it in its efforts to "open" through routes via its line in connection with the Union Pacific to and from the northwest area. These questions clearly and indisputably show that the Rio Grande itself considered the prior through routes via its line "closed" by the cancellation of the joint rates by the Union Pacific.[11]

---

[11] Among the 20 questions were the following:

"2 What is Meant by the 'Closed' Gateway at Ogden?"

"3 What is the Effect of the Closed Gateway?"

(Continued on next page)

Every relevant or material factor recited in the opinion of the lower court in support of its conclusion that through routes exist as claimed by the Rio Grande was rejected or held insufficient by this Court in annulling the Commission's order in the *Thompson* case, because the order had the effect of reducing the short haul prohibition to "unnecessary surplusage," and was "without evidentiary support under the accepted tests for determining the existence of a through route" (pp. 560, 561).

The Commission in the instant case held that the few sporadic shipments moved in 1948 did not prove the existence of through routes via the Rio Grande for the involved traffic. Applying the principles of the *Thompson* decision, pages 557-558, the Commission correctly concluded that the carriers in this case do not "hold themselves out as offering through transportation service" for the involved traffic, as indicated by their "course of business" and by the Union Pacific's course of con-

"11 Will an Open Gateway at Ogden Benefit Colorado and Utah?"
"12 Will an Open Gateway at Ogden Benefit Shippers Outside of Union Pacific or Rio Grande Territory?"
"13 Will Opening of the Ogden Gateway Reduce Railroad Employment in the Closed-Door Territory?"
"14 Will the Opening of the Ogden Gateway Reduce Taxes Paid in the Closed-Door Territory?"

duct over many years in its steadfast refusal to relinquish its long haul. (See App. B, p. 10, Railroad Appellants' Statement as to Jurisdiction, No. 333.)

The district court's decision is vague and lacking in specificity as to the precise reason why it holds that through routes are in existence for the involved traffic via the Rio Grande, but it sanctions a new and unprecedented standard, or set of circumstances, for escaping the short-haul prohibition of Section 15(4) and for determining the existence of through routes, which not only conflicts with the principles laid down in the *Thompson* case, but is also at war with the plain purpose of the Act in conferring the through routes power on the Commission carefully limited so as to protect the long hauls of carriers, *Thompson* case, *supra; United States v. Mo. Pac. R. Co.*, 278 U. S. 269; *I. C. C. v. Columbus & Greenville Ry.*, 319 U. S. 551; *Atlantic Coast Line R. Co. v. U. S.*, 284 U. S. 288, 295.

In *U. S. v. Great Northern R. Co.*, 343 U. S. 562, this Court held at page 575, that:

> "Congress amended Section 15(4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs."

That being so, the district court clearly exceeded its authority in "tinkering" with through routes to enable the Rio Grande to reap additional "pecuniary profit" and to satiate its financial greed.

4. The district court held that the Commission's finding that through routes do not exist via the Rio Grande for the involved traffic "obviously prejudiced the entire proceeding", but the court "remands" the case to the Commission *only* "insofar as it denied and withheld relief" to the Rio Grande. Also contrary to the

Commission's finding, the court made its own administrative finding of fact that continuance of the Rio Grande's combination rates on the traffic not included in the Commission's order would result in discrimination against the Rio Grande and shippers over its line.

Thus, in remanding the case to the Commission "for further proceedings in conformity with this opinion", but only insofar as the Commission denied relief to the Rio Grande, the court would not only prevent the Commission from reconsidering the portion of the "prejudiced" proceeding which is favorable to the Rio Grande, but would also tie the Commission's hands by requiring it to reverse its previous administrative judgment and finding that the evidence did not prove discrimination against the Rio Grande. In short, apart from the fact that neither the Urgent Deficiencies Act (28 U. S. C. §1336) nor any other statute gives the court power to "remand" the case to the Commission, in doing so the court virtually directs the Commission to order joint rates on the remaining two-thirds of the traffic so that the Rio Grande may reap additional "pecuniary profit" from "increased traffic and increased earnings". The court clearly usurps the Commission's administrative authority and renders its functions useless, contrary to decisions of this Court, *Interstate Comm. Comm. v. Ill. Cent. R. R.*, 215 U. S. 452, holding at page 470 that the courts may not "under the guise of exerting judicial authority, usurp merely administrative functions"; *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, holding at page 483, that jurisdiction to review orders of the Commission "does not permit the court to exercise administrative authority where the Commission has failed or refused to exercise it;" and *Chicago Junction Case*, 264 U. S. 258, 264. Having failed to gain its full de-

mands from the Commission, the Rio Grande turned to the district court to accomplish that objective. But the district court was without authority to aid the Rio Grande in its attempt, by "direction" or by "indirection", to obtain through the court proceeding "the same relief it failed to secure from the Commission", *Standard Oil Co. v. United States*, 283 U. S. 235, 241.

The Urgent Deficiencies Act confers authority only to "enjoin, set aside, annul or suspend in whole or in part any order" of the Commission. In making its own finding of discrimination against the Rio Grande and in "remanding" the case to the Commission for further proceedings in conformity with that finding, the court has plainly violated the elementary principle stated by this Court in *Ford Motor Co. v. Labor Board*, 305 U. S. 364, at page 373, that in exercising the power to review an administrative order—

> "* * * the court must act within the bounds of the statute and without intruding upon the administrative province."

CONCLUSION

For the foregoing reasons and others more fully stated in appellants' jurisdictional statements, we submit that the decision and judgment of the district court are so clearly erroneous as not to need further argument. The judgment should accordingly be reversed by this Court without awaiting briefs and oral arguments and the case remanded to the district court with direction to dismiss the complaint.

Respectfully submitted,

BERT L. OVERCASH

PROOF OF SERVICE

I, ELMER B. COLLINS, one of counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 26th day of August, 1955, I served, on behalf of all appellants herein, copies of the foregoing Motion on the several parties thereto and parties to the appeal in No. 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

4. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

5. On Brotherhood Committees of employees of The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

6. On Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company, Inc.; Idaho Farm Bureau; Public Service Commission of Utah; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Struc-

tural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

ELMER B. COLLINS,

Supreme Court of the United States

OCTOBER TERM, 1955

No. 332

WASHINGTON PUBLIC SERVICE COMMISSION, ET AL., *Appellants,*

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY.

No. 333

UNION PACIFIC RAILROAD COMPANY, ET AL., *Appellants,*

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY.

On Appeal From the United States District Court for the District of Colorado

---

BRIEF OF APPELLEE IN OPPOSITION TO MOTION TO REVERSE

This brief is filed for appellee, The Denver and Rio Grande Western Railroad Company, herein called the Rio Grande, in opposition to the Motion To Reverse the judgment of the court below recently filed by the appellants in No. 332, Washington Public Service

Commission, et al., and the appellants in No. 333, the Union Pacific Railroad Company, et al.

For the reasons hereinafter stated, the Motion To Reverse should be denied.

PREFATORY STATEMENT

The decision and judgment of the court below is reported as *Denver & Rio Grande Western R. Co.* v. *United States,* 131 F. Supp. 372. In that decision the court dealt with the validity of the order of the Interstate Commerce Commission involved in *Denver & Rio Grande* v. *Union Pacific Railroad, et al.,* 287 I.C.C. 611. The court held that the Rio Grande had standing to maintain the suit and that the order of the Commission insofar as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with its opinion. The court decided, *inter alia,* that on the undisputed evidence before the Commission and by reason of the admissions of counsel and the principal traffic witness of the Union Pacific it erred in refusing to find that through routes existed in connection with the Rio Grande and the Union Pacific via Ogden, Utah, on the traffic and between the originating and destination territories involved.

The gist of the Denver decision is represented by the following pertinent paragraph from the that decision:

> "The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defendants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to

have the Commisison apply the provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act, free of any of the limitations imposed by Section 15(4) with respect to the establishing of through routes."

The Interstate Commerce Act, viewed as a whole, and without reference to any particular provision was clearly designed to assure, so far as possible, to the country as a whole and to all parts thereof a national and coordinated system of transportation, and not to permit any particular railroad to close off any section or area, and claim a monopoly with respect thereto as to the free flow of traffic to and from the area.

The "closed door" territory in Northern Utah, Idaho, Montana and Washington is one of the largest areas in the United States which a particular railroad claims as its own principality and asserts the right to control the traffic in and from that area, or as a matter of whim or otherwise to prefer certain railroad connections and to discriminate against the Rio Grande so as to exclude that area on traffic moving to and from that area via the Rio Grande. As to freight traffic moving to and from that area, the Union Pacific with the aid of its connections claims the right to say to the public, you may ship over its lines to and from Colorado common points or to and from points east and southeast of the Colorado common points at joint competitive through rates, or you may ship at joint through rates via routes which are longer than the route of the Union Pacific and its preferred connections than the distance via the route of the Rio Grande through Ogden, to wit: To and from Seattle, Wash., to and from Colorado common points or points east thereof via the Southern Pacific at Portland to Ogden, and the Union Pacific or the Rio Grande from Ogden

to Denver, or via the Southern Pacific at Portland through Southern California, Arizona and New Mexico to Kansas City, St. Louis, New Orleans, Chicago or other points. The Union Pacific also maintains joint rates and through routes from points in eastern Washington and Oregon in connection with the Great Northern, the Northern Pacific and the Milwaukee to Minneapolis, Chicago, New York, Cleveland, St. Louis and all points in the east in which it accepts less than 250 mile hauls as against its long haul to Omaha and Kansas City or as against the haul of over 800 miles it would get if the traffic moved via the Union Pacific and the Rio Grande via Ogden.

In the closed door area the Union Pacific has a practical monopoly and it asserts the right, free from any authority of the Interstate Commerce Commission or of the courts, to grant or withhold to other railroads favors as to rates and interchange practices as it sees fit. This is contrary to the provisions and the policy underlying the Interstate Commerce Act which require railroads to act together so as to constitute one national coordinated system of transportation, of which the Rio Grande is as much a part as any other railroad.

The appellee herein, The Denver and Rio Grande Western Railroad Company, instituted proceedings before the Interstate Commerce Commission (which are the proceedings on review here) to challenge the right of the Union Pacific Railroad to maintain such a transportation monopoly.

The Complaint before the Interstate Commerce Commission was filed August 1, 1949. It directly challenged the monopoly and overlordship exercised by the Union Pacific over the business and economic life of

a territory equal in size to twice the area of New England, New York, Pennsylvania and Maryland. A number of interested shippers and organizations and public service commissions intervened. After the taking of voluminous testimony the Interstate Commerce Commission Examiner, Mr. Frank Mullen, rendered a Report according to the Rio Grande and the shippers involved substantially the relief prayed for. Numerous exceptions to the Examiner's Report were filed, followed by voluminous briefs by the parties directly involved (the Rio Grande and Union Pacific), and by various intervenors on each side.

On January 12, 1953, the Commission made its Report and Order—the Order specifically making the Report "a part of the Order", by reciting in the Order that the "report is hereby referred to and made a part hereof". This Report and Order accorded relief to the Rio Grande and to the shippers involved with respect to certain named commodities and denied relief with respect to all other commodities to and from the Union Pacific's "closed door territory". Among the ten commissioners who participated in the Interstate Commerce Commission decision (one, Commissioner Knudsen, having disqualified himself), there was a wide difference of opinion, and several varying separate written opinions filed. Although there was a concurrence of six on the measure of relief granted as to the named commodities, there was a tie vote of five to five on what was alleged in the complaint and treated by all of the Commissioners as the basic issue of the case, namely, whether as claimed by the Rio Grande *through routes* were in existence so as to entitle the Rio Grande to relief apart from Section 15(4) of the Act which imposes limitations on the Commis-

sion with respect to the establishment of *through routes* when none exist.

The Report which is made a part of the Order shows on its face that only four of the ten voting members actually approved and adopted the Report and Order purportedly made "By the Commission". A reference to the Report (287 I.C.C. 611) shows:

(1) that Commissioner Patterson *concurred in part*, but thought the report inconsistent in failing to grant relief on lumber;

(2) that Commissioner Arpaia *concurred*, but *thought that through routes existed*, but would limit the competitive joint rates to the commodities as granted in the "master" report;

(3) that Commissioner Lee *concurred in part*, but *thought that through routes existed*, and would extend the relief;

(4) that Commissioner Mahaffie (with whom Commissioners Splawn and Cross joined) *dissented in part*, but *thought that through routes existed*, and would extend the relief.

Whatever is otherwise said of what the "Commission Decided" or did not decide, it is clear that there was no decision by a majority of the Commission on the first and foremost question of the existence of *through routes*, and that the failure of the Commission to decide this question colored and distorted its whole approach to the case.

The Denver court held that under the undisputed evidence before the Commission and by reason of the admissions of counsel and the chief traffic witness of the Union Pacific, that as a matter of law *through routes* existed, and that the Commission in considering the

matter erred in imposing upon itself the necessity of proceeding under the stringent limitations of Section 15(4). The Denver court also remanded the case to the Commission for further proceedings in accordance with the law as determined by that court with respect to the existence of *through routes*.

BACKGROUND OF CASE

Before dealing directly with the points relied upon by the appellants it is deemed appropriate briefly to describe the Rio Grande and the issues before the Commission and before the court below. The Rio Grande is a common carrier by railroad engaged in transportation of persons and property in intrastate, interstate and foreign commerce. It operates 2400 miles of railroad in Colorado, New Mexico and Utah. It has interchange track connections and interchanges traffic with the Union Pacific Railroad at Denver and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, Utah, and the Western Pacific at Salt Lake City. It also has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, the Santa Fe and the Colorado and Southern; at Colorado Springs with the Santa Fe and the Rock Island; at Pueblo with the Santa Fe, the Colorado and Southern and the Missouri Pacific Railroad; at Walsenburg, Colo., with the Colorado and Southern and at Trinidad, Colo., with the Santa Fe and the Colorado and Southern.

The Rio Grande filed its complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroads. The complaint alleged, *inter alia*, that the failure and refusal of the defendant railroads to establish joint competitive through rates and competitive through routes via

Ogden, Utah, and the Rio Grande on interstate and foreign freight traffic, in carloads, and in other quantities, resulted in through rates which are excessive, unjust, unreasonable and discriminatory in violation of Section 1, Section 3 and Section 15 of the Interstate Commerce Act and that such action is contrary to the national transportation policy since it deprives the public, shippers, and the Rio Grande of the use of available and reasonable through rates and rail facilities at just, reasonable and non-discriminatory through joint rates which are necessary and desirable in the public interest.

Plaintiff requested the Commission to enter an order requiring the Union Pacific Railroad Company and other railroad defendants to establish and maintain for the future just, reasonable, and non-discriminatory competitive joint rates and through routes on freight traffic via the route of the Rio Grande through its Colorado and Utah gateways between (a) points on the Union Pacific Railroad Company and its connections in Utah north of Ogden, Utah, and in Idaho, Montana, Oregon, Washington and British Columbia, herein called the closed door area, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colo., and points east thereof; and between Utah common points and the closed door territory served by the Union Pacific railroad and its connections already described.

The complaint also alleged that the through rates and charges applicable to such traffic between the points described via such through routes were and are based upon the combination of the intermediate, local or other rates which rates and charges in the aggregate were and are substantially higher than the

joint through rates maintained by defendant railroads on similar freight traffic between the same origin and destination places and territories which moves via the Union Pacific and the other defendant railroads; that the combination rates applicable on the traffic and between the territories described via said through routes of the Rio Grande and defendant railroads were and are unjust, unreasonable, and discriminatory and unduly prejudicial as compared with the competitive joint rates maintained by the Union Pacific railroad or via the Union Pacific and other defendant railroads on like freight traffic via other competitive routes.

At Ogden, Utah, looking west, the Union Pacific has two diverging lines of railroad which are in the shape of a large "Y". One line extends in a southwesterly direction through Salt Lake City and Provo, Utah, and Las Vegas, Nev., to Los Angeles, Calif. Between points on that line and Colorado common points and points east thereof, the Union Pacific maintains competitive joint through rates and through routes on all freight traffic in connection with the Rio Grande via Salt Lake City and Ogden. The other line of the Union Pacific extends in a northwesterly direction from Ogden through Utah, Idaho, Oregon, Washington and Montana. This is the closed door territory to and from which the Union Pacific and its connections refuse to maintain competitive joint rates on freight traffic via the routes of the Rio Grande through Ogden or Salt Lake City, except on sheep and goats from that territory to certain points and on lumber to Canon City, Colo.

Competitive joint rates and through routes were established in connection with the Rio Grande via

Ogden and Salt Lake City on the traffic and between the territories involved in 1897 by the Oregon Short Line Railroad Company and the Oregon Railroad and Navigation Company at a time when these two companies and the Union Pacific were in separate receiverships. The through routes thus established are still in effect since they have not been canceled by the Union Pacific or by any of its connecting railroads. By August 1906 the Union Pacific had reacquired control over the Oregon Short Line and the Oregon Railroad and Navigation Company, and between August 1906 and December 1915 it caused the joint rates for application via the Rio Grande to be canceled; but no action was taken then or later by the Union Pacific or the other interested railroads to cancel the through routes.

At page 1160 of the transcript of the hearing before the Commission at Boise, Ida., A. J. Stilling, the principal traffic witness of the Union Pacific, unequivocally stated that the through route via the Ogden gateway and the Rio Grande is open and available to shippers who are willing to pay through rates based on the aggregate of the intermediate local rates of the various carriers in the route. Stilling stated that—

> "The Interstate Commerce Act gives all shippers the right to specify the lines over which their shipments shall move so the Ogden gateway and route via the Rio Grande is actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon and Washington."

Counsel for the Union Pacific made a like admission at pages 2368 and 2369 of the transcript of the oral argument before the Commission on October 16, 1952,

as the result of a colloquy between himself and Chairman Alldredge on the question whether the tariffs which canceled the joint rates in 1906-1915 closed the route via the Rio Grande through Ogden. That colloquy ended as follows:

> "Chairman Alldredge: Do you think that closes this route for this traffic?
>
> "Mr. Collins: No, I don't think so, if they want to pay more, if they want to route via the Rio Grande and pay the price."

As is shown by Appendix 2 attached to this brief, the Commission granted the relief sought by the Rio Grande on nine commodities. The suit in the court below was filed by the Rio Grande upon the grounds that the refusal of the Commission to grant all of the relief sought was arbitrary and capricious, contrary to the statutes, and contrary to the evidence.

Although in the Statements As To Jurisdiction recently filed with the Court by the appellants they insist that the questions presented by their appeals are substantial and of general public importance and that a decision by this court is essential, their Motion To Reverse in practical effect repudiates the points they made in their Jurisdictional Statements. The Motion To Reverse is not only premature, but is not authorized by the Revised Rules of Practice of this court. The citations recited on page 2 of the Motion do not support the right of the appellants to file it. Moreover, in each instance where the case reached this court on appeal the action of the court *affirmed* the judgment *per curiam* on motions to affirm and in no such case cited did this court reverse the judgment of the court below. The other cases cited by the appellants

reached the court on petitions of *certiorari*. In the certiorari cases cited the court granted the petitions for certiorari and reversed the judgments. The appellants cited no decision of this court that reached the court on a statutory appeal which reversed the judgment below after Jurisdictional Statements were filed and before probable jurisdiction was noted.

Footnote 1, page 2 of movants' "Motion to Reverse" should be mentioned in passing. Although it is true that appellants in No. 334, United States of America and Interstate Commerce Commission, seek in their appeal to reverse the same judgment of the district court, the United States of America and the Interstate Commerce Commission have not filed any "Motion to Reverse" and do not join in the "Motion to Reverse" here under consideration, but the United States of America and the Interstate Commerce Commission set forth in their "Jurisdictional Statement" that this appeal involves substantial questions which need full hearing and clarification and settlement.

ERRORS OF STATEMENT AND OF RELEVANCY

An obvious effort has been made in the "Motion to Reverse" to confuse the real issues in the litigation. Only one or two of these will be referred to, but they should be negated because they have been repeated in the "Statement as to Jurisdiction" also filed by the Union Pacific.

It is represented at page 3 of the "Motion to Reverse" that the Rio Grande admittedly filed its complaint for the purpose of improving its financial condition. This is both an error of statement and an error of relevancy. No carrier ever filing a complaint before the Commission would be justified in the eyes of its

stockholders, and even of the public, if it did not in some manner have the objective of improving its financial condition. But the right to file such a complaint is not based upon pecuniary gain. It is filed in order to vidicate a statutory right. There was nothing alleged in the complaint with respect to improving the Rio Grande's financial condition.

There is appended to the "Jurisdictional Statement" of the Union Pacific, and reference is made to it in the "Motion to Reverse", a map which undertakes to represent that the distances to all points east and south of Colorado common points are longer if the traffic is routed over the Rio Grande than if routed over the Union Pacific. This map is based on routings purposely selected as favorable to the Union Pacific. Other maps and charts introduced into the record show situations favorable to the Rio Grande. It would seem unfair on a motion of this kind to leave the Court with the impression that this particular map represents the full and complete facts with respect to comparative distances. Presentation of matters of this character should await a full hearing of the case.

On page 9 of the "Motion to Reverse" figures are set forth as to what the Union Pacific might lose in case the Rio Grande were granted relief in accordance with the prayer of its complaint before the Interstate Commerce Commission, and what it might lose, if the Rio Grande were granted the lesser relief which the Commission accorded. These figures are not conceded by the Rio Grande. They are theoretical and self-serving and not properly a part of a "Motion to Reverse". Many other argumentative conclusions are set forth in the Motion. They can only be properly considered and tested upon a full hearing of the appeal.

It is asserted that the Rio Grande admittedly has no right to the traffic is is seeking. This is an error of relevancy. No carrier has a right to traffic. It is the shipper and not the carrier who determines how the traffic shall be carried. If the Rio Grande has no right to the traffic, neither has the Union Pacific, because as is disclosed by the evidence there are shippers in the area and elsewhere who even in the face of the higher rates enforced by the Union Pacific on routings over the Rio Grande have nevertheless routed their shipments over the Rio Grande.

Reference is here made to these errors of statement and of relevancy only to show that because of their very nature they are not matters which, on a summary motion, can be fully discussed, considered and disposed of.

THE PRINCIPAL POINTS RELIED UPON BY APPELLANTS

The Motion To Reverse is based principally upon three points:

1. That the decision of the Commission is not an order;

2. That even if the decision of the Commission is held to be an order, the Rio Grande has no standing to maintain the suit, and

3. That the court erred in deciding that the Commission erred, as a matter of law, in finding that the through routes via the Rio Grande, the Union Pacific, et al., via the Ogden Gateway are not through routes within the contemplation of Section 15 (3) and (4) of the Interstate Commerce Act and that this error, which resulted in self-imposed restrictions upon the authority of the Commission to establish reasonable

and non-discriminatory joint rates, prejudiced the entire proceeding. (*Denver & Rio Grande Western R. Co.* v. *United States*, 131 F. Supp. 372, 378-379).

Even when the appellants dealt with each of these points they were unable to resist the temptation to ramble off into the merits of the case which are unrelated to the points.

As to the first point: For the convenience of the court there is attached hereto as Appendix 1 to this brief a copy of the order of the Commission of January 12, 1953. It will be observed that the first paragraph of that order specifically states that the report containing the findings of fact and conclusions of the Commission "is hereby referred to and made a part hereof." There is also attached hereto as Appendix 2 the conclusions of the Commission which appear in its report, 287 I.C.C. 611, at page 659. We shall deal with the three points described in the order in which they are stated.

In support of the contention that the decision of the Commission involved in these appeals is not an order, the appellants rely very heavily on *United States* v. *Atlanta, B. & C. R. Co.*, 282 U.S. 522. The decision in that case is distinguishable from the facts of the instant case. In that case there is involved a complicated accounting situation growing out of the receivership and reorganization of the Atlanta, Birmingham and Atlantic Railway Company, 117 I.C.C. 181, and in the supplemental report of the Commission in the same case, 117 I.C.C. 439, 443. The order of the Commission in the case cited which authorized the new company to issue preferred and common stock imposed certain conditions with respect to the

accounting classification of "investment in road and equipment." When the new company set up its books it did not comply with those conditions. As a result of a further hearing and reconsideration of the questions involved, the Commission issued its report in *Atlanta, B. & A. Ry. Co. Reorganization,* 158 I.C.C. 6, 13, 14, in which it stated the value of the property of the railroad for rate making purposes and prescribed accounting rules and regulations but entered no order to which its report and finding was a part. The concluding paragraph of the last decision reads as follows:

> "Upon consideration of the record, as supplemented, we find and conclude that the amount to be included in the balance sheet statement of the new company representing investment in road and equipment as of January 1, 1927, may not exceed $9,261,043.87. The company will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report."

It will be seen that in that case the Commission merely stated that the company will be expected to adjust its accounts in accordance with its finding within 60 days from the service of its report. The findings there are not only not in the form of an order but did not purport to be an order.

That decision should be compared with the recent decision of the court in *Henderson* v. *United States,* 339 U.S. 816, which reversed with directions to remand the decision of the court below that sustained the decision of the Commission in *Henderson* v. *Southern Ry. Co.,* 269 I.C.C. 73, 78, wherein the Commission found that under the revised rules of the Southern Railway, Henderson was not subjected to unreasonable

prejudice and disadvantage. The Commission did not enter an order. In that case the United States on brief and oral argument supported the appellant on the ground that it was clear that he had standing to institute the suit and to bring the proceedings since he was an aggrieved party, free to travel again on the Southern Railway. This court sustained that view and overruled the Commission by finding that Henderson was subject to undue prejudice in violation of Section 3 of the Interstate Commerce Act and remanded the case with directions. It will thus be seen that in the *Henderson* case this court considered a decision of the Commission on which no order was entered, despite the old decision of the court in the *Atlanta, B. & C. R. Co.* case, 282 U.S. 522.

The fact that the order of the Commission in the instant case does not use the word "dismissed" is of no significance since, as was cogently stated in the *Rochester Telephone* case, 307 U.S. 125, at page 142:

> "The nature of the issues foreclosed by the Commission's action and the nature of the issues left open, so far as the reviewing power of courts is concerned, are the same."

The discussion of this general question by Mr. Justice Frankfurter at page 142 and other pages of the *Rochester Telephone* case is a complete answer to the contentions of the appellants that that part of the decision of the Commission which denied the relief sought by the Rio Grande and which is involved in the appeals here under consideration is not an order and therefore is not subject to review by this or any other court.

The appellants have also relied to a large extent upon *Standard Oil Co. (Indiana)* v. *United States*, 283 U.S.

235, to support its position. In *United States* v. *Interstate Commerce Commission*, 337 U.S. 426, the court upheld the right of the Government as a plaintiff and shipper to maintain a suit against itself. At page 436 of its opinion in that case, after referring to the doctrine of the *Standard Oil* case, the court made the statement that—

> "This doctrine was wholly abandoned in *Rochester Telephone Corp.* v. *United States*, 307 U.S. 125."

We will now discuss *Manufacturers' Ry. Co.* v. *United States*, 246 U.S. 457, another decision relied on by the appellants. The facts of that case are so completely different from the facts in the instant case as to make it wholly inapplicable. In *Manufacturers Ry. Co.* v. *United States*, a failure by the Commission "to fix divisions" was held not to be subject to judicial review because it involved a failure or refusal of the Commission to exercise its administrative authority. In the instant case, which was in all respects an adversary proceeding between active litigants, while the question of the existance of *through routes* was initially a mixed question of law and fact to be decided by the Commission, yet after the taking of evidence and extended hearings and arguments with a record before it in which the evidence on this issue was undisputed the issue became a question of law. The Commission's failure to resolve it was not merely a failure to make an administrative finding. It was a failure to correctly apply the law to the undisputed facts before it. The usual rule with respect to a mere administrative finding not being subject to judicial review became inapplicable and cannot and should not prevent the court examining into the question and deciding as a matter of law upon the whole record

whether *through routes* were in existence. This is exactly what the Denver court did.

It should be pointed out that both the *Atlanta* case and the *Manufacturers* case above referred to and so heavily relied upon by the movants were decided prior to the *Rochester Telephone* case, the *Youngstown* case, the *Mitchell* case and prior to the Administrative Procedure Act.

We shall now discuss the second point made by appellants, which is that even if the decision of the Commission is an order subject to review, the Rio Grande has no standing to bring or to maintain the suit in the court below. In dealing with this question the appellants indulge in a discussion of the right of one railroad to capture or recapture traffic which it originates or which moves by other railroads. Obviously such facts are wholly irrelevant to the question whether the Rio Grande has a right to maintain the suit. The court below did not err in finding that the Rio Grande has a sufficient interest to maintain the suit, the decision in which is here the subject of appeal.

Section 13(1) of the Interstate Commerce Act affirmatively provides that any person, firm, corporation, company, or association, *or any common carrier*, may file a complaint with the Commission against anything done or omitted to be done by any other common carrier subject to the provisions of this act, in contravention of such provisions, and that if the defendants in such a complaint do not satisfy the complaint, and there be any reasonable ground for investigating the complaint, it shall be the duty of the Commission to investigate it. Thus the Interstate Commerce Act conferred upon the Rio Grande, a

common carrier, the statutory right to complain against the Union Pacific and the other defendants of things which they did or failed to do in contravention of the provisions of the Interstate Commerce Act.

Paragraph (4) of Section 1 of the Interstate Commerce Act imposes upon common carrier railroads the duty to furnish transportation upon reasonable request and to "establish reasonable through routes with other such carriers, (and water carriers) and just and reasonable rates * * * applicable thereto; * * *." That section also imposes the duty upon railroads establishing through routes "to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates * * * to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Paragraph (1) of Section 3 makes it unlawful for any common carrier subject to the Act

> "to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be con-

> strued to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

Paragraph (4) of Section 3 provides:

> "All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, * * *."

The cited provisions of the Interstate Commerce Act impose duties upon common carriers by railroad subject to that act which are independent of the authority of the Commission to enforce obedience to those duties, which authority is principally in Sections 12 and 15 of the Act. These provisions coupled with Section 13(1) confer the right to complain where a railroad such as the Rio Grande is unable to persuade connecting lines to comply with them. It, therefore, follows that where, as here, it is claimed by the Rio Grande that the Union Pacific and the other railroad defendants before the Commission violate the Interstate Commerce Act by their failure and refusal to participate with the Rio Grande in the maintenance of reasonable and non-discriminatory joint rates, rules, and regulations with respect to the operation of through routes and have failed and refused to accord reasonable, proper and equal treatment in the matter of rates and the interchange of traffic, such railroad defendants have violated the provisions of the Interstate Commerce Act. They have also violated the

statutory rights of the Rio Grande conferred in the provisions of that act.

Section 1398 of Title 28 U.S. Code provides—

> "Except as otherwise provided by law, any civil action to enforce, suspend or set aside in whole or in part an order of the Interstate Commerce Commission shall be brought only in the judicial district wherein is the residence or principal office of any of the parties bringing such action."

In addition to the decision in the *Rochester Telephone* case there are numerous other decisions of this court which support the right of the Rio Grande to maintain the suit, the subject of this appeal. In *Youngstown Sheet & Tube Co.* v. *United States*, 295 U.S. 476, 479, in which contentions similar to those made here by the appellants were rejected by the court, it held that

> "The appellants were entitled to bring and maintain this suit to set aside the order. They were parties to the proceeding before the Commission, had a pecuniary interest in the rates and were affected by the order. The authorities cited by the appellees are to be distinguished on the ground that the plaintiffs either had no legal interest or capacity to sue or failed to allege that the rates under attack were unreasonable or discriminated against them."

The court below had jurisdiction to review the order of the Commission under 28 U.S.C. § 1398 of the Judicial Code. The complaint of the Rio Grande in that court alleged that it not only has a pecuniary interest in the issues raised; but that the order, unless remanded to the Commission for correction of errors alleged, will cause the Rio Grande irreparable injury

in that the alleged unjust, unreasonable and unjustly discriminatory rates, routes and practices of the defendant railroads that will be perpetuated by the order, violate the statutory right of the Rio Grande to participate on equal terms in the revenues from through traffic at joint competitive through rates and through routes under the provisions of the Interstate Commerce Act. The fact, that the part of the order of the Commission here involved is negative is not a bar to the right of the Rio Grande to maintain the suit.

In *Mitchell* v. *United States*, 313 U.S. 80, this Court considered the decision and order of the Commission in *Mitchell* v. *C. R. I. & P. Ry. Co.*, 229 I.C.C. 703, in which the Commission held that the treatment accorded Mitchell by the railroads which he claimed was unjustly discriminatory was neither that nor unduly prejudicial under the provisions of the Interstate Commerce Act. This Court did not hesitate to substitute its judgment for the judgment of the Commission in determining that the treatment accorded Mitchell was unjustly discriminatory and unduly prejudicial under the provisions of the Interstate Commerce Act. It based its reversal on that ground and not on the constitutional ground mentioned in the decision since, at page 93 of the opinion of the Court, it said that

> "He (Mitchell) presents the question whether the Act does forbid the conduct of which he complained."

In *Henderson* v. *United States*, 339 U.S. 816, this Court reversed and set aside a decision of the Interstate Commerce Commission in *Henderson* v. *Southern*

Ry. Co., 269 I.C.C. 73, in which no order was entered but which held that the practice of the Southern Railway in the treatment of negroes in its dining cars was not unduly prejudicial or preferential. Like the *Mitchell* case, this Court did not hesitate to substitute its judgment as to what constituted undue prejudice for the judgment of the Commission. Each of these cases were remanded with directions.

In *The Chicago Junction Case*, 264 U.S. 258, which dealt with an order of the Commission that authorized, but did not require, the New York Central to purchase control of the Chicago Junction Railway, the Court sustained the right of the Pennsylvania Railroad, the Baltimore and Ohio, and other competitors of the New York Central to maintain the suit to set aside the order of the Commission. It was there claimed by the defendants that the plaintiffs, as competitors, did not have a sufficient legal interest to permit them to bring or to maintain this suit. In that case the Court was moved in part by the consideration that the plaintiff railroads would lose large sums of money by virtue of the control of the Chicago Junction by the New York Central; that they were parties to the proceeding before the Commission and thereby acquired the right to sue, and also had such a right under Section 212 of the Judicial Code (28 U.S.C. Section 41(27) note). The Court stated, 264 U.S., at page 267, apropos of the large loss sustained by the railroad plaintiffs:

> "This loss is not the incident of more effective competition. Compare *Edward Hines Trustees* v. *United States*, 263 U.S. 143, 148, 44 Sup. Ct. 72, 68 L. Ed. . It is injury inflicted by denying to the plaintiffs equality of treatment. To such treatment carriers are, under the Interstate Com-

merce Act, as fully entitled as any shipper. *Pennsylvania Co.* v. *United States*, 236 U.S. 351, 35 Sup. Ct. 370, 59 L. Ed. 616."

In *Alabama Power Co.* v. *Ickes*, 302 U.S. 464, the plaintiff sought to enjoin the consummation of loans made by the Federal Emergency Administrator to four municipal corporations in Alabama. In its right to bring the suit the plaintiff relied strongly on the decision of this court in *The Chicago Junction Case*. However, the Court held that the Alabama Power Company did not have the right to bring the suit or to maintain it and, at page 483 of its opinion, 302 U.S., it distinguished *The Chicago Junction Case* from the *Alabama Power* case by stating that the suit in *The Chicago Junction Case* was brought by certain railroad companies to set aside an order of the Commission authorizing a competing company to acquire a terminal and that in *The Chicago Junction Case* "* * * this court held that the right to sue arose in virtue of a special interest recognized by certain provisions contained in Transportation Act 1920, 41 Stat. 456, and under section 212 of the Judicial Code, 28 U.S.C.A. Section 41(27) note, which gave any party to a proceeding before the Commission the right to become a party to any suit wherein the validity of an order made in the proceeding is involved."

The right of the Rio Grande to bring and to maintain the suit in the court below under the Interstate Commerce Act is also sustained by *Interstate Commerce Commission* v. *Parker*, 326 U.S. 60; *American Trucking Ass'n.* v. *U.S.*, 326 U.S. 77; *United States* v. *Interstate Commerce Commission*, 337 U.S. 426, 435; *Barrett Line, Inc.* v. *United States*, 326 U.S. 179; *Skinner & Eddy Corporation* v. *United States*, 249

U.S. 557; *United States* v. *New River Co.*, 265 U.S. 533; *Alton R. Co.* v. *United States*, 287 U.S. 229, and the revealing and comprehensive opinion by Judge Parker in *Anchor Coal Co.* v. *United States*, 25 F. (2d) 462.

In addition to the right of the Rio Grande to bring and to maintain the suit under the statutes cited, that right is buttressed by Section 10(a) of the Administrative Procedure Act, 5 U.S.C. § 1009. That act gives

> "Any person suffering a legal wrong because of any agency action, or adversely affected or aggrieved by such action within the meaning of any relevant statute shall be entitled to judicial review thereof."

In *American President Lines* v. *Federal Maritime Board*, 112 F. Supp. 346, 348, where the plaintiff sued to set aside the action of the Federal Maritime Board which granted a subsidy to a competitor, the court pointed out that while the plaintiff had not suffered any legal wrong he is within the terms of the second clause of Section 10(a) as a person "adversely affected or aggrieved" and that if these words mean affected or aggrieved in a legal sense they would add nothing to the phrase "Any person suffering a legal wrong." In these circumstances the court held that the plaintiff, being a person that was adversely affected or aggrieved, had the right to maintain the suit. In doing so the court relied upon *Federal Communications Com'n.* v. *Sanders Bros. R. S.*, 309 U.S. 470. The conclusion of the court and the position taken by the Rio Grande is also supported by *American P. & L. Co.* v. *Securities & Exchange*

Com'n., 325 U.S. 385; *State of Oklahoma v. United States Civil Serv. Com'n.*, 330 U.S. 127, and *Shaughnessy v. Pedreiro*, 75 S. Ct. 591.

Section 10(e) of the Administrative Procedure Act, 5 U.S.C. § 1009, also supports the right of the Rio Grande to bring and maintain this suit since it gives Federal courts jurisdiction to compel agency action "unlawfully withheld or unreasonably delayed" or to hold unlawful and set aside agency action, findings and conclusions found to be "not in accordance with law" or "short of statutory right." In addition to the arguments already made, the Rio Grade contends that by refusing to grant the relief prayed for in the instant suit the Commission unlawfully withheld action to which the Rio Grande is entitled.

The third point emphasized by the appellants is that the court below erred in deciding that the Commission erred as a matter of law in finding that the through routes via the Rio Grande, the Union Pacific, and other railroads through Ogden are not through routes within the contemplation of Section 15(3) and (4) of the Interstate Commerce Act. A reading of the opinion of the court below will quickly reveal that it gave this question very serious consideration. That opinion supports the view of the court below that the Commission misconstrued the decision of this Court in *Thompson v. United States*, 343 U.S. 549.

The *Thompson* case involved an order of the Commission entered in *Omaha Grain Exchange v. Missouri Pacific*, 278 I.C.C. 519. In that case the complainant did not assert that through routes existed or that joint rates and through routes should be established. It assumed that through routes existed for the movement

of grain from Lenora, Kans., and other points on the Missouri Pacific west of Concordia, Kans., to Omaha, Nebr., in connection with the Burlington at Concordia because (a) physical track connections for the interchange of traffic existed at Concordia between the Missouri Pacific and the Burlington, and (b) joint rates existed on grain from Lenora, Kans., and the other points involved via Concordia, Kans., and the Burlington to local or non-competitive points on the Burlington which are intermediate to Omaha.

The Commission found that the rates assailed were unreasonable to the extent that they exceed rates on grain traffic from the same origin points to Kansas City. That finding was made on the assumption that through routes on grain traffic from Lenora, Kans., and other points on the Missouri Pacific west of Concordia existed in connection with the Burlington through Concordia to Omaha. There was no evidence in that case that through transportation service on grain had ever been offered or performed from Lenora to Omaha via the Burlington.

The opinion of the Court in the *Thompson* case recites that the United States, having joined in the defense of the Commission's order in the District Court and on a motion to affirm in this Court, filed a memorandum conceding that the Commission erred in finding that through routes over the Burlington line already exist.

In the *Thompson* case, 343 U.S. 549, at page 557, the Court referred to the decision of the Commission in *Through Routes and Through Rates*, 12 I.C.C. 163, 166, and of this court in *St. Louis Southwestern Ry. Co. v. United States*, 245 U.S. 136, 139, in each of which

decisions a through route was defined as "an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a 'through rate.' This 'through rate' is not necessarily a 'joint rate.' It may be merely an aggregate of separate rates fixed independently by the several carriers forming the through route; as where the 'through rate' is 'the sum of the locals' on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation."

This Court also stated apropos of this question at page 557 of its opinion in the *Thompson* case:

> "In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service."

As we have already stated, there was no evidence in the *Thompson* case that through transportation service on grain had ever been offered or performed from Lenora, Kans., and the other points to Omaha via the Burlington.

What is a "holding out" as announced in the *Thompson* case, *supra?* In any form of business it does not require active, affirmative solicitation of business. The merchant who has his shop on any street, with his door open to the public, holds himself out to accept business and thus solicits business. There is a "holding out" whether he receives a large or a small amount of

business and whether his prices are higher or lower than a shop up the street. There is only a lack of holding out when he refuses to accept business. Under the undisputed evidence in the case and under its own admissions, the Union Pacific never refused to accept through shipments and issue through bills of lading over the Rio Grande where a shipper to or from the "closed door territory" was willing to pay the higher combination rate. As shown by the evidence and as set forth in the decision in the *Denver* case, and in spite of the higher rates, substantial shipments via the Rio Grande on through bills of lading issued by the Union Pacific were made during the years immediately preceding the institution of proceedings before the Commission. Thus the evidence showed that the contention that *through routes* were commercially closed was pure theory.

Through routes and joint competitive rates admittedly exist on shipments to and from Southern California and Nevada points on the Union Pacific to and from eastern points via the Rio Grande at Salt Lake City and Ogden, and on shipments to and from Seattle via the Union Pacific through Portland, thence Southern Pacific via Ogden and Rio Grande on the Union Pacific. Since the Union Pacific has its own line from Ogden and Salt Lake City to Denver and thence to Omaha and Kansas City, it is obvious that it does not either in the east, in California, or in Seattle solicit shippers to route traffic via these routes in connection with the Rio Grande at Ogden even though joint rates and through routes exist. It is, therefore, clear that in the *Thompson* case this court could not have meant that the holding out requires affirmative solicitation by particular railroads over

particular through routes as a test for determining whether through routes exist. The significance of the decision in the *Thompson* case is that a through route will be found to exist both in fact and in law where there is a holding out in the sense of a willingness to accept and transport the traffic or where as in the instant case a substantial volume of traffic has moved via the Rio Grande on through bills of lading issued by the Union Pacific or eastern railroads for movement via the Rio Grande through Ogden and the Union Pacific with the acquiescence of the Union Pacific and the other railroad defendants before the Commission.

The Union Pacific claims that when the joint rates via the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company were canceled between August 1906 and December 1912, the through routes were commercially closed. But there is nothing in the Interstate Commerce Act that says that the cancellation of a joint rate, without more, cancels a through route. There are many expressions of this court, the Commission, and of lower courts to the contrary. The decision of this court in the *Virginian Railway* case, 272 U.S. 658, 667, was confirmed in that respect by this court in *Thompson* v. *United States*, 343 U.S. 549, and in *United States* v. *Great Northern*, 343 U.S. 562, where, at page 572, the court said:

> "The Interstate Commerce Act contemplates the existence of through routes in the absence of joint rates. And this Court expressly has approved Commission's consistent recognition of the existence of through routes whether the through rates applicable thereto are joint rates or combinations of separately established rates. As a result, the establishment of joint rates is an act separate and distinct under the statute from the establishment of through routes."

In dealing with this question the Commission in its report in the instant case, 287 I.C.C. 611, at page 616, stated that the testimony of numerous shippers indicates that the routes via the Ogden Gateway and the Rio Grande "are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be open to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess."

In the light of the facts before the Commission in the instant case which show that in a ten year period there was a movement of more than over 24,000 carloads of traffic between various eastern points via the Rio Grande, the Ogden Gateway and the Union Pacific and its connections, it is impossible to reconcile the finding of the Commission that no through routes exist with the decision of this Court in *Virginian Ry. Co.* v. *United States,* 272 U.S. 658; *Great Northern* v. *United States,* 81 F. Supp. 921, affirmed in 336 U.S. 933; *United States* v. *Great Northern,* 343 U.S. 562, or with the *Thompson* case.

In the *Virginian Railway* case this Court rejected as "without legal significance" the contention of the railroads that routes which were commercially closed as the result of excessive and discriminatory combination rates are not through routes within the meaning of the Interstate Commerce Act. In reaching that conclusion Justice Brandeis first pointed out (pp. 660-661) that of 99 coal mines located on the Virginian Railway, 54 were denied the opportunity of reaching western markets, even though accessibility to such

markets was physically possible through a junction of the Virginian and the Chesapeake & Ohio. In that connection Justice Brandeis said:

> "But that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these fifty-four mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive. The complainants contended before the Commission that the existing rate schedule to the West subjects them to unjust discrimination, and, also, that the combination rates are unreasonable."

At page 667 of the *Virginian Railway* case the Court stated that where through routes exist Section 15(3) of the Act does not require that "The Commission must make a special finding of public interest before it can prescribe how an existing through rate found to be unreasonable and discriminatory shall be made conformable to law." To the same effect is the decision of this court in *Atchison, T. & S. F. Ry. Co. v. United States*, 279 U.S. 768, 776.

Appendix 3, attached hereto, contains a sketchy outline of the evidence of record before the Commission and before the lower court which shows the large and continuous movement of traffic via the route of the Rio Grande in connection with eastern railroads and the Union Pacific at Ogden, some of which moved on bills of lading issued by the Union Pacific or by its connections, in which it concurred.

The evidence described in Appendix 3 is in marked contrast with the evidence and the issues in the

Thompson case, 343 U.S. 549, at which page the court said:

> "But there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line or that the carriers have ever offered through service over that route * * *."

In addition to the movement of traffic in the instant case via the Rio Grande and the lack of any traffic in the *Thompson* case, there are other factors in the instant case which distinguish it from the *Thompson* case. We have already referred to the fact that joint competitive rates and through routes were established via the Rio Grande via Ogden and Salt Lake City on the traffic and between the territories involved in 1897; that the through routes thereby established are still in effect since they have not been canceled by the Union Pacific or other railroads; that in the period of August 1906 and December 1915 the Union Pacific caused the joint competitive rates for application over the Rio Grande via Ogden to be canceled, but that no action was taken then or later by the Union Pacific or other railroads to cancel the through routes.

It is too well settled to require argument that under the Interstate Commerce Act the cancellation of joint rates does not, without more, cancel through routes. This was recognized by this Court in its decision in *United States* v. *Great Northern*, 343 U.S. 562, and in other cases.

In *Routing via Quanah, A. & P. Ry. Co.*, 220 I.C.C. 137, 139, the Commission not only held that the cancellation of a joint rate did not cancel the through route; but also that when a joint rate is canceled it is the duty of the railroad to leave in effect over the

through route combination rates which in the aggregate will be just, reasonable and otherwise in accordance with the standards of the Interstate Commerce Act. That decision was sustained in *Thompson* v. *United States*, 20 Fed. Supp. 827. See also in this connection *Quanah, A. & P. Ry. Co.* v. *Atchison, T. & S. F. Ry. Co.*, 226 I.C.C. 201, 208; *Routing Grain and Grain Products via Chicago, R. I. & P.*, 198 I.C.C. 117; *Grain and Grain Products*, 161 I.C.C. 709; and *Routing on Iron and Steel Articles*, 168 I.C.C. 175.

Section 6(1) of the Interstate Commerce Act affirmatively recognizes the existence of through routes in the absence of joint rates. The pertinent part of Section 6(1), 49 U.S.C., § 6, provides:

> "(1) That every common carrier subject to the provisions of this part shall file with the Commission created by this part and print and keep open to public inspection schedules showing all the rates, fares, and charges for transportation between different points on its own route and between points on its own route and points on the route of any other carrier by railroad, by pipe line, or by water *when a through route and joint rate* have been established. If *no joint* rate over the *through route* has been established, the several carriers *in such through route* shall file, print and keep open to public inspection as aforesaid, the separately established rates, fares and charges applied to the through transportation." (Emphasis supplied.)

As we have already shown, the principal traffic witness of the Union Pacific unequivocally stated that the route via the Ogden Gateway and the Rio Grande is open and available to shippers who are willing to pay the higher through rates. We have also shown

that during the oral argument of the case before the Commission counsel for the Union Pacific, in answer to a question from the chairman as to whether he thought the through routes were closed in the period 1906-1915 when the joint rates were cancelled, answered:

> "Mr. Collins: No. I don't think so, if they want to pay more, if they want to route via the Rio Grande and pay the price."

At pages 16 and 17 of their Motion To Reverse appellants say that they have not solicited or otherwise tried to influence the routing of traffic via the Rio Grande through Ogden and that this is indicated by their steadfast refusal over a 50-year period to relinquish their long haul. The fact that the Union Pacific has not affirmatively solicited traffic over the routes of the Rio Grande between the "closed door" territory in Idaho, Montana, Oregon and Washington at the higher rates is of no significance. The Rio Grande as already shown participates in joint competitive rates with the Union Pacific on traffic to and from points on its line into California. It is conceded that through routes exist on the traffic moving between points on the California line of the Union Pacific and all eastern points. One would have to be *naive* indeed to assume that because the Union Pacific does participate in joint rates with the Rio Grande on that traffic it would act against its own interest in affirmatively soliciting shippers to use the Rio Grande route between Ogden and Denver rather than the Union Pacific route to Denver.

The contention that the Union Pacific and the appellants, as well as other railroads who were

defendants before the Commission, have steadfastly refused over a long period to relinquish their long hauls is refuted by the evidence of record which has been filed with the Clerk of this Court.

The appellants and other railroad defendants in the complaint before the Commission have not steadfastly refused to relinquish their long hauls in dealing with each other. They have however, refused to relinquish their long hauls in connection with the handling of the traffic involved insofar as the Rio Grande is concerned. On the other hand, the Union Pacific and the other appellants participate with each other in joint rates via routes in which each, or some of them, relinquish their long hauls. For example, a shipper at Seattle, Wash., may deliver a shipment consigned to Chicago, Kansas City or St. Louis, to the Union Pacific at that point and route the shipment at competitive rates via the Southern Pacific at Portland and thence via the Southern Pacific through southern California, Arizona, New Mexico, and other railroad connections; or the shipper may route such a shipment from Seattle via the Union Pacific to Portland, thence Southern Pacific through Ogden and thence either Union Pacific or Rio Grande from Ogden to eastern points. Under such routing the Union Pacific receives a haul of 184 miles from Seattle to Portland. It could haul the shipment from Seattle to Omaha, a distance of 1,954 miles.

The distance via the route through southern California, which is available to the shipper at Seattle, is 3,541 miles. If the joint rates sought by the Rio Grande were established through Ogden, the Union Pacific would receive a haul of 1,027 miles from Seattle to Ogden, which may be compared with the distance

of 184 miles which it voluntarily takes from Seattle to Portland.

On a shipment moving from Pendleton, Ore., to St. Louis, Mo., the long haul of the Union Pacific would be from Pendleton to Kansas City, a distance of 1,674 miles. The Union Pacific participates with the appellants and other railroads in joint competitive rates via Spokane, Wash., the Spokane International, Canadian Pacific and other railroads through Minneapolis, and thence via the Rock Island or the Wabash to St. Louis. The distance via this route is 2,317 miles, and the haul of the Union Pacific is 227 miles. If the joint rates sought via Ogden and the Rio Grande were established the distance from Pendleton to St. Louis would be 2,149 miles, and the Union Pacific would get a haul of 633 miles. Exhibit 3, introduced before the Commission by Witness Earley of the Rio Grande, contains numerous other examples in which the appellants participate with each other in joint competitive rates in which they take less than their respective long hauls. They refuse to accord like treatment to the Rio Grande.

In addition to the type of examples just referred to, the Union Pacific participates with appellants and other railroads in which some of the railroads take less than their respective long hauls on lumber which moves from points on the Union Pacific in Idaho, Washington and Oregon to points east of Denver and Pueblo, the Union Pacific relinquishes the traffic to its connections at Cheyenne and Denver. It refuses to accord like treatment to the Rio Grande on the eastbound movement of fruits, vegetables, grain and certain other commodities. The Union Pacific participates with other railroads in joint rates and

routes that apply via Denver to destinations in what is described as the Missouri River territory and Southwestern points. It is not deemed necessary or advisable to burden this brief with the numerous other examples.

The appellants attempt to justify these obvious discriminations because the rate situations referred to have the sanction of time and involve reciprocal arrangements in respect to the interchange of traffic the appellants consider satisfactory and in the interest of each. In *Pennsylvania Co.* v. *United States*, 236 U.S. 351, where the validity of an order of the Commission was assailed, the defendant there argued that the discriminatory treatment of the complaining railroad was not an unjust discrimination because of the lack of similar reciprocal interchange and traffic arrangements between defendants and the complaining railroad. In dealing with that contention, this Court said:

> "We agree with the Commission and the court below that the alleged reciprocal shipping arrangements do not remove the discriminatory character of the treatment of the Rochester road."

The decision of the Supreme Court in *Chicago, I. and L. Ry. Co.* v. *United States*, 270 U.S. 287, is to the same effect and deals with a situation substantially similar to the attempted defenses of the appellants in the instant case.

Many years ago the Commission stated that the policy of the Interstate Commerce Act is that the railroads of the country should unite themselves so that they will constitute one national system; that they must establish through routes, keep these routes open

and in operation, and furnish the necessary facilities for transportation. *Missouri & Illinois Coal Co.* v. *I. C. R. R. Co.*, 22 I.C.C. 39, 46. The policy of the Act, as amended since the decision in the *Missouri & Illinois Coal* case, was pointedly stated by the Commission in the recent decision of *Borough of Edgewater, N. J.* v. *Railroads*, 280 I.C.C. 121, at page 134. This decision was sustained in *Baltimore and Ohio* v. *United States*, 100 F. Supp. 1002. In that case, at page 134, the Commission said that it is the purpose and policy of Congress that rates be adjusted and other steps be taken to ensure adequate and efficient transportation for the country, and that the policy was not intended that it should accept as the guide, transportation service which is just barely adequate, or adequate only if needed or desirable improvements in service are lost sight of.

CONCLUSION

When all matters raised by the "Motion to Reverse" are resolved to their least common denominator, the Rio Grande had an undisputed statutory right to complain before the Commission; it had a right to predicate its compiaint primarily on the existance of *through routes;* it had a right to have the Commission decide that basic question; it suffered a legal wrong, in view of the undisputed evidence and admissions of the Union Pacific in the Commission's failure to decide that basic issue; this entitled the Rio Grande to resort to a statutory three-judge court. Whether the action of the Commission is to be treated as a complete failure to decide the basic issue, or whether it is said that because of the concurrence of Commissioner Arpaia in the general result, *even though he also found that through routes were in existence,* there was a

holding by the Commission of the non-existence of through routes—in either event, the Rio Grande was entitled to have the matter reviewed by a three-judge statutory court because the issue was an issue of law and not an administrative question. If that review was based as it was upon the proposition that the Commission incorrectly interpreted and misapplied the law, and if under the undisputed evidence and the admissions in the case the three-judge court at Denver so found, then it was proper for that court to make a conclusion of law accordingly and to remand the case to the Commission for further proceedings in conformity with that conclusion.

The "Motion to Reverse" should be denied—probable jurisdiction should be noted and the case allowed to stand for argument.

Proof of Service

I, ROBERT E. QUIRK, one of counsel of record for appellees herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 13th day of September, 1955, I served, on behalf of all appellants herein, copies of the foregoing Motion on the several parties thereto and parties to the appeal in No. 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope, postage prepaid to: (and air mail to D. E. Kelley)

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

4. On Brotherhood Committees of employees of The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

5. On Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company, Inc.; Idaho Farm Bureau; Public Service Commission of Utah; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

6. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

7. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

8. On the Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis and Omaha Railway Company; The Atchison, Topeka and Santa Fe Railway Company; Wabash Railroad Company; Northern Pacific Railway Company; Great Northern Railway Company, plaintiffs; and employee organization of Union Pacific Railroad Company, intervening plaintiffs; by mailing a copy in a duly addressed envelope with air-mail postage prepaid to their respective attorneys of record, as follows:

Elmer B. Collins, Esq.
Assistant Western General Counsel
Union Pacific Railroad
1416 Dodge Street
Omaha 2, Nebraska

F. O. Steadry, Esq.
Attorney for Chicago and North Western Ry. Co.
400 West Madison Street
Chicago, Illinois

Eugene S. Davis, Esq.
Attorney for Wabash Railroad Company
Railway Exchange Building
St. Louis 1, Missouri

Roland J. Lehman, Esq.
Attorney for The Atchison, Topeka and Santa Fe Railway Company
80 E. Jackson Boulevard
Chicago 4, Illinois

M. L. Countryman, Jr., Esq.
Attorney for Northern Pacific Railway Company
5th & Jackson Streets
St. Paul 1, Minnesota

L. E. Torinus, Jr. Esq.
Attorney for Great Northern Railway Company
175 East 4th Street
St. Paul 1, Minn.

M. P. Caveny, Esq.
Chairman, Union Pacific General Chairman's Asso.
Omaha, Nebraska

9. On the State of Nebraska and the Nebraska State Railroad Commission; Washington Public Service Commission; Public Utilities Commission of Oregon; Board of Railroad Commissioners of the State of Montana; State Board of Equalization of Wyoming; Public Service Commission of Wyoming; Public Service Commission of Utah; National Livestock Producers Association, by mailing a copy in a duly addressed envelope with air-mail postage prepaid to their respective attorneys of record, as follows:

Clarence S. Beck, Esq.
Attorney General of Nebraska
Lincoln, Nebraska

Bert L. Overcash, Esq.
Assistant Attorney General of Nebraska
Lincoln, Nebraska

Don Eastvold, Esq.
Attorney General of Washington
Olympia, Washington

John H. Carkin, Esq.
Counsel, Public Utilities Commission
State of Oregon
Salem, Oregon

John H. Riskin, Esq.
Secretary,
Board of Railroad Commissioners of Montana
Helena, Montana

Howard B. Black, Esq.
Attorney General of Wyoming
Cheyenne, Wyoming

10. On the National Live Stock Producers Association, American National Cattlemen's Association, Colorado Cattlemen's Association, Idaho Wool Growers Association and Horse Growers Association, Intervenors as Plaintiffs.

Lee J. Quasey, Esquire
139 N. Clark Street
Chicago 2, Illinois

ROBERT E. QUIRK
Attorney for Appellee
The Denver and Rio Grande
Western Railroad Company.

APPENDIX 1

Order

At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D. C., on the 12th day of January, A. D. 1953.

No. 30297

DENVER & RIO GRANDE WESTERN RAILROAD COMPANY

v.

UNION PACIFIC RAILROAD COMPANY, ET AL.

This proceeding being at issue upon complaint and answers on file, and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination:

It is ordered, That the defendants named in the complaint, according as they participate in the transportation, be, and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the

transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainants according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report; and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before

April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

GEORGE W. LAIRD,
Acting Secretary.

(SEAL)

APPENDIX 2

Conclusions

"1: That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the lower peninsula of Michigan and in Oklahoma and Texas.

"2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

"3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

"4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

An appropriate order will be entered.

APPENDIX 3

Movement of Traffic Via the Rio Grande During the Periods Shown

That during the period from November 1942 to August 17, 1945, the Rio Grande handled approximately 19,000 carloads of traffic from points on its line and from eastern points destined to points in Oregon and Washington which had been routed via the Rio Grande and the Western Pacific or the Rio Grande and the Southern Pacific, but were diverted to the Union Pacific at Ogden and Salt Lake City. (Hogue—66, 67.)

During January and February 1949 when blizzards and snowstorms blocked the Union Pacific main line between Cheyenne and Ogden, 4,208 carloads of freight eastbound and westbound were diverted to the Rio Grande for movement via its line between Denver and Utah junction points

and thence via the Union Pacific. Of that number about 1,400 carloads originated or were destined to Union Pacific points in the closed door territory at which competitive joint rates were not applicable.

During that same blizzard period, the Rio Grande handled 210 carloads of express and 276 carloads of mail between Denver and Salt Lake City for the Union Pacific. In addition, it handled 44 Union Pacific passenger trains, consisting of from 10 to 16 cars each, between Denver and Salt Lake City. (69)

The carload traffic described was diverted under emergency orders of the Commission, none of which purported to establish or did establish temporary through routes as authorized in Section 15 (4) of the Act. The traffic was diverted by the Commission to the Rio Grande under Section 1(15) on the obvious assumption that through routes and the facilities for operating such routes existed.

In addition to the traffic that was diverted to the route of the Rio Grande on emergency orders, a large volume of traffic was initially routed by the shippers via the Rio Grande on bills of lading via Ogden and the Union Pacific between points in the closed door territory and eastern points. For example, there were several special trains, consisting of troops and military supplies in freight cars, handled on freight billing and which consisted of from 30 to 50 cars per train.

One train, consisting of 24 cars of military supplies and six passenger cars, moved from Ft. Sill, Okla., in December 1941 to Ft. Lewis, Wash., via eastern connections, the Rio Grande through Ogden and the Union Pacific.

Another special train, consisting of 50 cars of military supplies and some troops, moved from Camp Claiborne, La., to Ft. Lewis, Wash., in February 1942 via different eastern railroads in connection with the Rio Grande through Ogden and the Union Pacific.

Another special train, consisting of 50 cars of military supplies, etc., moved from Camp Claiborne, La., to Ft. Lewis, Wash., in February 1942 via different eastern

railroads, the Rio Grande through Ogden and the Union Pacific.

Still another train, consisting of 50 cars of military supplies, etc., moved from Camp Claiborne, La., in February 1942 to Ft. Lewis, Wash., via the Rio Grande through Ogden and the Union Pacific.

In March, 1942 the Rio Grande handled 524 carloads of war material from eastern points originally consigned to Ogden and Clearfield, Utah, for the purpose of being stored. These cars were diverted on instructions of shippers to points in the northwest via the route of the Union Pacific and Ogden without ever having been unloaded at the original destinations named.

Thirty-nine carloads of freight moved eastbound in 1948 from points in the closed door territory on bills of lading issued by the Union Pacific consigned principally to Colorado common points and were routed via Ogden and the Rio Grande, some of which were probably diverted to points east. They contained canned goods, machinery, contractors equipment, paper bags, lumber, wallboard, flour, sheep, roofing, acid, newsprint and canned salmon.

The Rio Grande transported an equal number of carloads of a variety of commodities, such as tractors, canned goods, agricultural implements, furniture, soap, castings, feed, rubber, iron and steel, and other commodities from numerous eastern points, such as Springfield and Chicago, Ill., Menominee, Mich., Lewisburg, Pa., Jeffersonville, Ind., Forest City, Ark., Sedalia, Mo., Indianapolis, Ind., Wichita, Kans., and other points on bills of lading issued by eastern railroads which routed the traffic via the Rio Grande through Ogden and the Union Pacific to points in the closed door territory. The charges were assessed on the basis of the aggregate of the combination of intermediate rates. (67-70, Ex. 1)

At page 74 of the transcript of the hearing at Salt Lake City in December 1949, Vice President Hogue, of the Rio Grande, testified that he used the year 1948 because it was the last calendar year prior to the hearing and "that the same problems prevailed to about the same extent in prior years, and have continued thus far in 1949."

I. Case Company, National Livestock Producers Association, American National Cattlemen's Association, Colorado Cattlemen's Association, Idaho Wool Growers' Association, Utah Cattle and Horse Growers' Association, intervening plaintiffs respectfully request this Honorable Court to deny the motion to reverse filed in Cases Nos. 332 and 333 by counsel for the defendants.

STATEMENT

This case arises by reason of a complaint filed by the Rio Grande Railroad against the Union Pacific Railroad with the Interstate Commerce Commission in August of 1949. Pursuant to said complaint the matter came on for hearing in December of 1949 at Salt Lake City, Utah and subsequent hearings were had in Boise, Idaho and Cheyenne, Wyoming, in 1950.

The matter was heard initially by Frank E. Mullen, Chief Examiner of the Interstate Commerce Commission, and as a result of the hearings had, Examiner Mullen submitted a proposed report granting to the complainant, the Rio Grande all of the relief sought by the Rio Grande for the benefit of the shippers who are dependent upon the Rio Grande for rail transportation service.

Paragraph 2 of Sheet 31 of the Proposed Report reads as follows:

"The record clearly shows that shippers and receivers of freight in localities and districts in Colorado and in Utah depending for railroad service solely upon the Rio Grande are unduly handicapped by the lack of such transportation arrangements and facilities, at joint through rates, which have become of great importance in modern merchandising. Establishment of joint through rates from and to points in the Northwest on the Union Pacific and its connections via Salt Lake City or Ogden in connection with the Rio Grande to and from Utah common points and to and from Colorado common points and points east thereof, are necessary and desirable in the public interest to permit communities located only upon the Rio Grande to be adequately served by that Railroad as part of the national transportation system."

This Proposed Report was challenged by the Union Pacific and Intervenors in support of it before the full Interstate Commerce Commission. The matter was argued on two separate occasions by all of the parties and as a result of the briefs and arguments had the Interstate Commerce Commission did render a decision on January 12, 1953, and by its decision granted a portion of the relief sought in the original complaint. (287 ICC 611). This decision then became the subject of two appeals to statutory courts, one in Nebraska and one in Colorado. The order of the Nebraska Court is now on appeal to this Court in Nos. 117-119.

The District Court for the District of Nebraska accepted the Commission's apparent findings that through routes were not in existence but modified the Commission's Order to limit the new through routes and joint rates to certain types of in-transit traffic.

The District Court for the State of Colorado ordered that "insofar as the Interstate Commerce Commission denied relief to the Rio Grande the order will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with the Court's opinion."

ARGUMENT

Since the rules of this Court do not provide for a motion to reverse and since the importance of this case to a large number of shippers and a vast geographical area of the United States is involved, we cannot believe that the Court will seriously entertain the motion to reverse.

However, in the interests of pointing out to the Court the magnitude of this case, we submit that the situation prevailing in Colorado and Utah is unique indeed.

The Union Pacific Railroad operates from Omaha to Ogden and Denver with inter-connections at Cheyenne, thence to points in California and the Pacific Northwest traversing Wyoming and Utah. The Rio Grande, on the other hand, operates from Denver via the Moffat Tunnel and Pueblo via Tennessee Pass to Dotsero, Grand Junction and on to Ogden, Utah. The fact is that the two railroads parallel each other from Denver and Pueblo to Ogden, Utah, across the Continental Divide. The Rio Grande has always been desirous of, and willing to grant to its shippers joint through rates and through routings with transit privileges, the same as any other modern railroad does for its shippers. However, this railroad which serves a large segment of the State of Colorado and Utah, is precluded and prevented from giving to its patrons the type and kind of service at the same rates as the shippers in Wyoming and

that portion of Utah served by the Union Pacific, enjoy from the Union Pacific. This deprivation of privileges and rates which is economically injurious to the flow of commerce in Colorado and Utah is brought about solely by reason of the fact that the Union Pacific refuses to join with the Rio Grande in publishing and maintaining joint through rates on traffic moving via the Rio Grande and via Ogden. It is true that certain exceptions have been made on certain categories of livestock, but these are infinitesimal compared with all of the needs of these communities.

Counsel for the defendants motion to reverse indicates a cavalier attitude towards this whole proceeding as being merely a raid upon the pocketbook of the Union Pacific.

As counsel for many shippers and persons concerned with the public interest aspect of this case, as distinguished from the railroads, we cannot refrain from pointing out that of the sixteen persons who have "decided" this case in its various phases not one has said that the Rio Grande's complaint had no basis in fact. On the other hand, the Examiner, who was the trier of the facts and heard all the witnesses, granted relief on all of the commodities sought. The Interstate Commerce Commissioners were split 5 to 5 on the through routes issue, which left that question undecided, but decided 6 to 4 that certain commodities should be permitted to move via those through routes at joint rates. Of the six district court judges who have handled this case, two judges, making the majority of the Nebraska court, did not take away from the Rio Grande that which the Commission gave them but rather limited the service which had been ordered by the Commission. The three Judges of the Colorado Court unanimously determined that through routes were in existence and ordered the Commission to

take steps to consider the classes of commodities which had not heretofore been the subject of Commission order.

This would indicate to us at least that this case is of such importance and magnitude that it should be decided on its merits by this Honorable Court. It should not be disposed of by a motion to reverse without giving the parties litigant an opportunity to present all of the record, briefs, and arguments to this court in order that a final determination of the rights and duties of the parties may be satisfactorily adjudicated.

ISSUES IN CONFLICT

The basic issues in this case are whether there are in existence today through routes via the Rio Grande Railroad through the Ogden Gateway and whether the failure on the part of the Union Pacific to establish joint rates with the Rio Grande via Ogden unjustly discriminates against the shipping public and the Rio Grande Railroad and whether the *Thompson* case (343 U.S. 549) applies to the determination of these issues.

The answer to these questions can only be obtained by full adjudication by this court of finality because the District Court of Nebraska has in effect tacidly accepted the Commission in its findings in this matter and the District Court in Colorado has expressly reversed the Commission's apparent findings on these issues. We, therefore, have two intermediate court decisions which are in seeming conflict. If this court were to grant the motion to reverse the issues and questions of law would stand in a confused and muddled state neither granting relief nor vindication to either side. The interests of justice dictate that this Court entertain the appeals on their merits and render its judgment for the

guidance of the courts and the Commission to say nothing of the interests of the shipping public and the Railroads involved. We, therefore, respectfully request this Honorable Court to deny the defendants' motion to reverse in Cases numbered 332 and 333.

Respectfully submitted,
JOHN R. BARRY,
Counsel of record for Intervening Plaintiffs in Nos. 332 and 333.

PROOF OF SERVICE

I, John R. Barry, one of counsel of record for Intervenors herein and a member of the Bar of the Supreme Court of the United States, hereby certify that on the 14th day of September, 1955, I served, on behalf of the Intervenors herein, copies of the foregoing Brief of Intervening Plaintiffs in opposition to Motion to Reverse in Nos. 332 and 333 on the several parties thereto and parties to the appeals in Nos. 332, 333, and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

BRIEF OF THE AMERICAN SHORT LINE RAILROAD ASSOCIATION IN OPPOSITION TO MOTION TO REVERSE

STATEMENT

The American Short Line Railroad Association, hereinafter referred to as the Association, intervened in support of The Denver and Rio Grande Western Railroad, complainant before the Interstate Commerce Commission in Docket No. 30297, *Denver and Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, Et Al.*,

the administrative proceeding giving rise to this litigation. The Association also intervened in support of the Rio Grande in the judicial review proceedings in the U. S. District Court for the District of Colorado,[1] from which decision appeals have been taken by the Union Pacific and certain state commissions in Nos. 332 and 333, in the October Term, 1955 of this Court.

The Association is a voluntary, unincorporated association with a membership of 301 common carriers by railroad, of which all but three (3) are engaged in interstate and foreign commerce and therefore subject to the Interstate Commerce Act and related acts, and to the jurisdiction of the Interstate Commerce Commission. The Association, its members in general, and many of its members in particular, are vitally interested in the issues involved in these appeals with respect to the existence or establishment of through routes and rates, and fair and reasonable divisions of revenues, with particular reference to the establishment and maintenance of competitive joint through rates. The questions presented in these appeals are substantial and of public importance, and their determination will have a vital effect on the affairs of practically all of the members of this Association.

ARGUMENT

There is a serious question as to the propriety of the filing of appellants' so-called "Motion to Reverse." Certainly it cannot be said that the Revised Rules of this Court authorize the filing of such a pleading, and appellants do not so contend. They apparently seek to justify their action by reference to procedures set forth in Rule 16, providing for the filing of a Motion to Dismiss or Affirm. Such motions are available to an appellee in appeals of this type,

[1] *The Denver and Rio Grande Western Railroad Company* v. *United States, Et Al.*, Civil Action No. 4492.

to serve as a response to a Jurisdictional Statement, but the Rules do not provide for a Motion to Reverse. The Revised Rules have not been understood to permit multiple pleadings by an appellant. The fact that this Court on its own motion may summarily affirm a decision of a lower court does not suggest that an appellant may move for summary reversal.

It is conceivable that appellants' multiple pleadings will rebound to their disadvantage. Clearly it is paradoxical for the appellants in their separate Jurisdictional Statements to urge this Court to take jurisdiction and resolve the substantial questions presented in their appeals, and then suggest that the Court need not avail itself of the record nor the assistance of briefs and arguments by the parties.

Inasmuch as, as we show below, appellants' arguments failed to convince either the lower court or a majority of the Commission it is perhaps unnecessary to belabor the question of proper procedure.

1. Issues as to Through Routes

The principal interest of the Association in these appeals is centered on the proper interpretation and application of the Interstate Commerce Act and decisions of this Court as concerns the question of the existence of through routes. All of the members of this Association are participants in countless through routes and joint rates. The decisions of two District Courts on appeal to this Court in Numbers 332, 333, 117 and 118 (as well as in 334 and 119) being in conflict with each other on questions of law which the Commission in part could not, or at least did not itself decide, attest to the complexity of the questions presented. A decision resolving all appeals requires re-examination and clarifying expression of the appropriate criteria to be used

by the Commission and courts in determining the existence or non-existence of through routes.[2]

Sufficient details are available in the pleadings now filed in these cases to briefly state the elements of the key issue requiring decision by this Court.

In the initial phase of its report the Commission unequivocally states that the first question it had to decide was whether there were, as claimed by the Rio Grande, existing through routes. Its report shows that five of the ten voting Commissioners found that through routes *did* exist.

It is clear, therefore, that there was support for the lower court's conclusion that the Commission by proceeding to decide the case on the basis that there were no existing through routes "obviously prejudiced the entire proceeding." (Jur. State., No. 333, App. D, p. 11.)

Noting the equal division within the Commission, the lower court properly proceeded to determine that question, and found that "the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence."

It is significant to note at this point that the report of the Commission and the lower court's decision show that the court's decision, and that of each of the conflicting groups within the Commission, were based on conclusions reached after their respective analyses and interpretations of this Court's opinions in the *Thompson*[3] and related cases.

Although appellants contend that the lower court's decision is "vague and lacking in specificity as to the precise

---

[2] The Government in No. 334 describes the "Question Presented" as follows:

> "Whether the district court, in setting aside the Commission's order establishing new through routes (and joint rates) on the ground that the 'uncontradicted evidence' showed that through routes were already in existence, applied an erroneous standard for determining the existence of a through route." (Jur. State. No. 334, p. 4)

[3] *Thompson V. United States*, 343 U.S. 549 (1952).

reason why it holds that through routes are in existence," we suggest that a fair reading of the opinion shows why appellants' earlier similar arguments have not been persuasive to the Court or to a majority of the Commission.

To supply some of the findings not commented upon by the appellants, we observe that the district court noted that the principal traffic witness of the Union Pacific testified before the Commission "that a shipper who was willing to pay the higher combination rate had the right to specify under 15(8) of the Act a route via the Rio Grande," and that "It should be observed that this right exists only when through routes and through rates have been established." (Jur. State. No. 333, App. D, p. 12.)

Neither did appellants refer to the fact that Union Pacific counsel expressed the opinion at the hearing before the Commission, in response to interrogation by Commissioner Alldredge, that the cancellation of joint rates did not close the through routes admittedly long before established, and that shippers were free to route via the Rio Grande if they were willing to "pay the price" of higher rates.

With reference to the finding in the *Thompson* case, that there was no evidence in that case that "any *through transportation service* has ever been offered from Lenora to Omaha via the Burlington" (emphasis supplied) on any commodity, the court below found that the record here disclosed that there was a representative movement of a variety of commodities in *through transportation service* via the Rio Grande over the routes involved, despite the higher combination rates charged. The court found that admittedly *through transportation service* has been continuous on sheep and goats; and at through rates published *jointly* by the Union Pacific and the Rio Grande. It is submitted that if these facts had been established in the *Thompson* case, the Court would have held otherwise on the through routes issue.

It is clear that the lower court also refused to support the Commission's holding that a "commercially closed through route" is not a "through route." The decisions of this Court in *Thompson* and *Great Northern*[1] cases, and earlier cases therein referred to, completely refute the validity of the Commission's holding in this regard.

In summary, the Association urges that due recognition of this Court's past decisions does not sustain the view that routes are only through routes when there is a joint rate published by the carriers involved. On the contrary, in the *Great Northern* case, *supra*, at page 572, this Court said: "The Interstate Commerce Act contemplates the existence of through routes in the absence of joint rates." It is again urged that the existence of published joint through rates applicable to the routes involved—consistently recognized by the Union Pacific for the transportation of sheep and goats, coupled with the issuance of through bills of lading on other commodities even though the rates were higher, clearly proves that there are existing through routes. The only real issue in the case before the Commission was whether such routes should be made commercially available to shippers of other commodities by the establishment of competitive joint through rates.

2. Scope of Judicial Review

It is believed unnecessary to comment in detail on other points mentioned in appellants' motion. Its first point, raising the technical question whether there was a Commission order susceptible of the scope of review given by the lower court, is answered by the fact that the order *in terms* refers to and incorporates the Commission's report containing its findings of fact and conclusions. (Jur. State. No. 333, App. C, p.).

Equally devoid of substance is the contention that the Rio Grande lacks standing to maintain this action. Even

[1] *United States* v. *Great Northern*, 343 U.S. 562 (1952).

in the absence of the record it is evident that the only relief the Rio Grande sought in its complaint to the Commission was the establishment of reasonable competitive joint through rates, and it must be admitted this relief can only be obtained by primary resort to the Commission. It is equally clear that the Judicial Code gave the Rio Grande the right to obtain judicial review of a decision substantially denying that relief. (28 U.S.C. 1253, 1336, 2101(b); and 2321-2325.)

CONCLUSION

It is submitted that the foregoing comments clearly disclose the lack of merit, independent of the propriety, of appellants' Motion to Reverse, and require its denial by this Court. Determination of the issues presented by the appeals are of paramount importance to the general public, the railroad industry, and members of this Association. It is suggested that the Court may wish to accept the more judicious appraisal of the substance of the issues given in the Jurisdictional Statement of the Government appellants in Number 334, that:

> "The questions presented by this appeal are substantial and of public importance. There is also a serious conflict of decisions. It is respectfully submitted that probable jurisdiction should be noted, and it is further suggested that this case should be consolidated for argument in Nos. 117-119."[5]

Respectfully submitted,

WILLIAM J. HICKEY
Counsel for Appellee
The American Short Line
Railroad Association
2000 Massachusetts Ave., N.W.
Washington 6, D. C.

[5] As a footnote to this conclusion Government appellants stated—
"The two cases are interdependent, since the Court will not reach the issues in Nos. 117-119 if it affirms the judgment in this case."

BRIEF IN OPPOSITION TO APPELLANTS' MOTION TO REVERSE ON BEHALF OF THE NATIONAL LIVE STOCK PRODUCERS ASSOCIATION, AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION, COLORADO CATTLEMEN'S ASSOCIATION, IDAHO WOOL GROWERS ASSOCIATION, UTAH CATTLE AND HORSE GROWERS ASSOCIATION.

FOREWORD.

This brief is in opposition to a joint motion by appellants in Nos. 332 and 333 to reverse a final judgment of a three-Judge United States District Court for the District of Colorado without awaiting briefs, and oral argument. It is filed on behalf of the five above named livestock associations (hereinafter called appellees) more particularly described as follows:

The National Live Stock Producers Association, is a cooperative organization composed of over 500,000 live stock growers and feeders throughout the live stock producing areas of the country, and twenty-two cooperative live stock associations, with its principal offices at 139 North Clark Street, Chicago 2, Illinois.

The American National Cattlemen's Association, is a voluntary non-profit organization of live stock producers with principal membership in the seventeen States west of the Missouri River, also in the States of Florida, Louisiana, Oklahoma and elsewhere, with executive office and postoffice address 515 Cooper Building, Denver, Colorado.

The Colorado Cattlemen's Association, is a non-profit association organized under the laws of the State of Colorado, with offices at 4651 Lafayette Street, Denver, Colorado; it is composed of 48 local associations throughout the State of Colorado, comprising approximately 5,000 members, many of whom have cattle ranching operations contiguous to The Denver and Rio Grande Western Railroad.

The Idaho Wool Growers Association, is a voluntary non-profit organization in the State of Idaho, with executive office and postoffice address 17 Broadbent Building, P. O. Box 2598, Boise, Idaho.

The Utah Cattle & Horse Growers Association, is a voluntary, non-profit organization composed of twenty local associations and numerous individuals totaling approximately 2,000 members in the State of Utah with executive office and postoffice address at Heber, Utah.

These appellees have an important and pecuniary interest in the issues involved in the above entitled proceeding and they and their members are engaged in the production, buying, selling and shipping of live stock within, to, and from the area involved in this proceeding and that they pay and bear the charges for the transportation of such live stock.

The appellees herein were intervening complainants before the Interstate Commerce Commission (hereinafter referred to as the Commission) in *The Denver and Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company, et al.*, 287 I. C. C. 611, decided January 12, 1953.

That proceeding was brought because of the failure and refusal of the U. P. to establish just, reasonable and nondiscriminatory competitive joint through rates and charges in connection with the Rio Grande via its Colorado and Utah gateways in violation of Section 1 (4), Section 3, and Section 15 (1), (3), and (4) of the Act as amended:

> (1) between (a) points on or via the U. P. in Utah north of Ogden, Idaho, Montana, Oregon, Washington, and British Columbia, Canada, and
> (b) Colorado common points and points east thereof; and
>
> (2) between Utah common points and same northwest territory specified in (1) (a) above.

Appellees also submitted brief and participated in oral argument on appeal before the District Court for the District of Colorado in *The Denver and Rio Grande Western*

Railroad Company v. *United States of America and Interstate Commerce Commission*, Civil Action No. 4492.

The Commission granted only partial relief to live stock producers and feeders. The Commission's order, herein, provided in part that the defendants and the complainant according as they participate in the transportation, be, "* * * required to establish * * * and thereafter maintain through routes via Ogden and Salt Lake City, Utah, in connection with the line of the complainant for the interstate transportation of various named commodities, in carloads, including ordinary live stock, from origins in the territory north and west of Ogden to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming."

Thus the majority decision of the Commission denied relief to and from the important live stock market at Denver and the other Colorado common points and including the eastern part of Colorado, all of the State of Kansas, Nebraska, South Dakota, North Dakota, Minnesota, Wisconsin, northern part of Iowa and Illinois, and the upper peninsula of Michigan.

Appellees contend that, to the extent indicated, the

order of the Commission herein referred to is unlawful, arbitrary, capricious and contrary to the evidence of record and the provisions of the Interstate Commerce Act, in that it failed to find and to prescribe in the public interest the same relief to the restricted territory above described that it accorded to the territory to which relief was granted.

The District Court held that the order of the Interstate Commerce Commission is invalid and unlawful insofar as it denied relief, prayed for by the plaintiff and the intervening plaintiffs and ordered that the same be annulled and set aside insofar as it denied relief to the plaintiff and intervening plaintiffs and remanded the matter to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of the District Court.

Appellants in No. 332 and No. 333 appealed to this Court from the final judgment and decree of the District Court below.

Subsequently appellants have filed a joint motion before this Court to reverse the judgment of the District Court without awaiting briefs and oral argument.

ARGUMENT.

Appellants' motion to reverse is without support of any rule of this Court and is repugnant to their respective statements as to jurisdiction on appeal to this Court.

Under identically worded headings appellants declare that "the questions are substantial."

The appellants in No. 332 list ten questions beginning on page three of their jurisdictional statement. Appellants in No. 333 beginning on page seven of their statement of jurisdiction list fourteen separate questions presented by their appeal, and on page twenty-seven state that the questions presented have a far-reaching future effect not only upon the railroads generally * * * and upon the public * * * but also in the field of judicial review of the Commission's orders, especially the through routes provision of Section 15(3) and (4).

The appellees herein agree that the questions presented are substantial and are of vital interest and concern to the live stock producers, their Associations and others, but contend that the number and nature of the many questions presented by appellants undeniably refute their motion to reverse the decision and judgment of the District Court without brief and oral arguments.

It should be noted that the decision of the Commission corrected only in part an unlawful rate adjustment of long standing that has discriminated against live stock producers and others. We contend that the action of the Commission should not be restricted to only a partial correction of an unlawful rate adjustment.

The Act contemplates that there should be no excluded territory with respect to any commodity or persons.

The District Court properly found that the Commission erred as a matter of law in reaching the conclusion that upon consideration of undisputed facts such through routes are not in existence.

1. Movants' first contention is that the District Court was without jurisdiction to consider the complaint, because the action complained of is not in conformity with the order. The movants contend that the Urgent Deficiencies Act confers no jurisdiction upon the courts to review "matter embodied in a (Commission) report and not followed by a formal order," *United States* v. *Atlanta B. & C. R. Co.*, 282 U. S. 522, 528; and state that that Act clearly makes the existence and presence of an "order" embodying the matter complained of pre-requisite to jurisdiction to review and that there is no such order here.

This is a wholly unwarranted contention and contrary to the view of the Supreme Court in *Mitchell* v. *United States*, 313 U. S. 80. Notwithstanding that no order was entered, the Court held that the Commission erred in refusing and in failing to find that the treatment accorded Mitchell by the railroads constituted an unjust discrimination and an undue prejudice in violation of the Interstate Commerce Act. The Supreme Court having reversed the decision of the Commission remanded it with directions, whereupon the Commission reconsidered its original decision and upon reconsideration in *Mitchell* v. *Chicago, R. I. & P. Ry. Co.*, 248 I. C. C. 149, found that Mitchell had suffered undue prejudice in violation of the Interstate Commerce Act.

Furthermore in a later decision, in *Henderson* v. *United States*, 339 U. S. 816, this Court held that the complainant was entitled to removal of the undue discrimination notwithstanding the fact that the Commission found that the modified rules did not violate the Interstate Commerce Act and that no order for the future was necessary.

We believe it is also significant to point out that the Commission in its order of January 12, 1953 said in part:

> "This proceeding being at issue upon complaint and answers on file and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof * * *."

This clearly shows that the Commission made its report in the case below a part of the order issued thereon. Obviously, in view of the holdings of this Court and the action of the Commission, the above contention of the movants is wholly untenable.

2. In connection with second contention in support of movants' motion, we wish to point out that in addition to the interests of the Rio Grande, the interests of live stock producers and other shippers, and the public interest are entitled to careful consideration.

The decision of the Commission corrected only in part an unlawful rate adjustment that has discriminated against live stock producers and other shippers.

The District Court annulled and set aside the order of the Commission insofar as it denied relief to complainants.

We submit that the facts shown in the record in this proceeding justify the complete relief from discriminatory rates as was held by this Court in the *Mitchell* and *Henderson* cases, *supra*, on the ground that the Act contemplates that there should be no excluded territory with respect to any commodity or persons.

Therefore movants' second contention above referred to is without merit.

3. Movants' third contention that the District Court in reversing the Commission's finding that the through routes via Ogden and Salt Lake are not in existence within the meaning of the Act, misconstrued or refused to be guided by this Court's decision in *Thompson* v. *U. S.*, 343 U. S. 549.

The decision in the *Thompson* case is not applicable here. In that case, the United States Supreme Court held that the Commission's efforts to support its finding that a through route from Lenora, Kansas, to Omaha via the Burlington Line already exists are inconsistent with the meaning of the term "through route" as used in the Interstate Commerce Act. Since there was admittedly no evidence that the Missouri Pacific ever offered through transportation over the route in question the Commission's order was wholly without evidentiary support under the accepted tests for the determining of an existence of a through route. In defining a through route the Supreme Court stated "In short, the test of the existence of a through route is whether the participating carriers hold themselves out as offering through transportation service. *Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.*" (Italics supplied.)

In this case, the route is open, applicable rates are in effect, but they are unjust, unreasonable, and unduly prejudicial, and discriminatory rates, being composed of combinations or arbitraries in addition to rates based on a mileage scale. All this means that the route can be used, the evidence shows it has been used, but subject to a penalty of paying excessive rates and charges. In view of this the limitations of Section 15(4) do not apply.

However, the provisions of Section 15(3) are definitely applicable. The pertinent part thereof reads as follows:

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, * * * and joint rates. * * *"

It should be noted that the Commission may prescribe joint rates and through routes if either or both are necessary or desirable in the public interest. *Stickell Case*, 255 I. C. C. 333, 338; *Cancellation of Rates and Routes*, 245 I. C. C. 183, and *Inland Waterway Case*, 151 I. C. C. 126.

We believe that the decision of the United States Supreme Court in *Virginian Railway* v. *U. S.*, 272 U. S. 658 (referred to in the *Thompson* case, *supra*), is also applicable here. In that case, it was stated that the route in question was commercially closed because the carriers had not established any joint rates and that only a combination of local rates was applicable that resulted in charges so high as to be prohibitive. The Commission there found that the combination rate was both unreasonable and discriminatory and prescribed through rates which it found were reasonable and non-discriminatory. The order was made under Section 1 and Section 3, and we contend that relief under these same sections of the Act is justified in this case without any territorial limitations.

Movants also cited *U. S.* v. *Great Northern R. Co.*, 343 U. S. 562, and quoted a single sentence from page 575 in support of their contention that the District Court misconstrued or refused to be guided by the principles in that case.

The quotation below includes the first sentence quoted by movants and the remaining part of the paragraph and all of the following paragraph as follows:

"Congress amended Sec. 15(4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs. But the provisions

of Sec. 15(4)—the restrictions against short hauling, the financial needs prohibition and the emergency route provision—all deal with the Commission's power to establish through routes.

"Congress could well have prohibited the Commission from considering financial needs in issuing any order under Sec. 15 (3). This was proposed in one bill and expressly rejected by a congressional committee. Or, Congress could have prohibited consideration of financial needs in ordering establishment of joint through routes where through routes were in existence, as was also proposed. Instead, Congress adopted a provision prohibiting reliance on financial needs only in respect to orders establishing through routes. It is our judicial function to apply statutes on the basis of what Congress has written, not what Congress might have written. Where, as here, the Commission did not establish through routes, Sec. 15 (4) has no application."

Furthermore, in the course of the oral argument before the Interstate Commerce Commission on October 16, 1952, Mr. Collins, Counsel of the Union Pacific, in answer to a question by Chairman Alldredge as to whether the routes via the Rio Grande were closed, said:

"No, I don't think so, if they want to pay more, if they want to route via the Rio Grande and pay the price."

From the above it is evident that the movants and not the District Court misconstrued or refused to recognize the true significance of the above cases cited by them.

4. Now we come to movants' fourth and last contention in support of their motion to reverse (page 19 of motion to reverse). This is nothing more than an attempt to make a play on words. The phrase, referred to by movants must in all fairness to the Court be construed in the light of the entire opinion or so much of it as is necessary to give the phrase the application it is intended to have.

The more pertinent part of the opinion is as follows:

"We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding.

The undisputed evidence bearing upon the crucial question of existing through routes must be summarized. In 1897, the Union Pacific established joint through competitive rates with the Rio Grande to and from points in the northwest area through Ogden. These rates were in effect until canceled by Union Pacific in 1906 from and to some points and in 1912 from and to remaining points. But the through routes were not closed.

Counsel for Union Pacific expressed the opinion at the hearing before the Commission, in response to interrogation by Chairman Alldredge, that the cancellation of the joint rates did not close the through routes and that shippers were free to route via the Rio Grande if they wanted to pay more.

The principal traffic witness of the Union Pacific testified at the hearing that a shipper who was willing to pay the higher combination rate had the right to specify under Sec. 15(8) of the Act a route via the Rio Grande. It should be observed that this right exists only when through routes and through rates have been established. This witness further testified that some joint through rates are now published in a Union Pacific tariff for application to shipments of sheep and goats from the northwest area via Ogden and the Rio Grande to points on the Missouri River and east thereof.

A continuous use of the Rio Grande route in the movement of traffic to and from the closed door area at

through combination rates, without objection of the Union Pacific or participating railroads, is shown by the evidence, although the volume of traffic involved is comparatively small, etc."

The opinion is 29 pages long and after the part above quoted the opinion continued for about seventeen more pages ending with a last paragraph as follows:

> "The order insofar as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with this opinion."

It is therefore clearly apparent that phrase referred to by movants does not contravene the final conclusion of the District Court.

CONCLUSION.

In consideration of the above comments and in view of the importance and the far-reaching nature of the issues involved, appellees respectfully urge that the appellants' joint motion to reverse be denied and that the matter be given consideration in accordance with the regular procedure of this Court.

Respectfully submitted,

LEE J. QUASEY,
Counsel for Appellees Herein.

PROOF OF SERVICE.

I, Lee J. Quasey, Counsel of record for appellees herein and a member of the Bar of the Supreme Court of the United States, hereby certify that on the 13th day of September, 1955, I served, on behalf of the appellees herein named copies of the foregoing brief, in opposition to appellants' motion to reverse on the several parties, by mailing a copy in a duly addressed envelope with airmail postage prepaid, as follows:

1. On the United States of America:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

2. On the Interstate Commerce Commission:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On Counsel of record for the five appellants in No. 332:

Bert L. Overcash, Esq.
Asst. Attorney General of Nebraska
State Capitol Building
Lincoln, Nebraska

Also:

Clarence S. Beck, Esq.

Attorney General of Nebraska
Lincoln, Nebraska

Don Eastvold, Esq
Attorney General of Washington
State Capitol
Olympia, Washington

C. W. Ferguson, Esq.
Counsel for Public Utilities Commissioner of Oregon
Public Service Building
Salem, Oregon

James B. Patten, Esq.
Secretary
Board of Railroad Commissioners
Helena, Montana

George F. Guy, Esq.
Attorney General of Wyoming
Cheyenne, Wyoming

Richard H. Shaw, Esq.
560 Denver Club Building
Denver 2, Colorado

4. On Counsel of record for railroad appellants in No. 333:

Elmer B. Collins, Esq.
1416 Dodge St.
Omaha 2, Nebraska

Also:

F. O. Steadry, Esq.
Chicago and North Western Railway Company
400 West Madison Street
Chicago 6, Illinois

Warren H. Ploeger, Esq.
Northern Pacific Railway Company
St. Paul 1, Minnesota

L. E. Torinus, Esq.
Great Northern Railway Company
175 East 4th Street
St. Paul 1, Minnesota

Roland J. Lehman, Esq.
Atchison, Topeka and Santa Fe Railway
80 East Jackson Blvd.
Chicago 4, Illinois

Eugene S. Davis, Esq.
Wabash Railroad Company
Railway Exchange Building
St. Louis 1, Missouri

5. On the Denver and Rio Grande Western Railroad Company:

Robert E. Quirk, Esq.
116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

Frank E. Holman, Esq.

CONSOLIDATED REPLY BRIEF

OF

THE NATIONAL LIVE STOCK PRODUCERS ASSOCIATION,
AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION,
COLORADO CATTLEMEN'S ASSOCIATION,
IDAHO WOOL GROWERS ASSOCIATION,
UTAH CATTLE AND HORSE GROWERS ASSOCIATION,

Intervening Appellees.

STATEMENT.

The intervening appellees (hereinafter called the live stock associations) are voluntary organizations of live stock producers more particularly described as follows:

The National Live Stock Producers Association, is a cooperative organization composed of over 500,000 live stock growers and feeders throughout the live stock producing areas of the country, and twenty-two cooperative live stock associations, with its principal offices at 139 North Clark Street, Chicago 2, Illinois.

The American National Cattlemen's Association, is a voluntary non-profit organization of live stock producers with principal membership in the seventeen States west of the Missouri River, also in the States of Florida, Louisiana, Oklahoma and elsewhere, with executive office and postoffice address 515 Cooper Building, Denver, Colorado.

The Colorado Cattlemen's Association, is a non-profit associafion organized under the laws of the State of Colorado, with offices at 4651 Lafayette Street, Denver, Colorado; it is composed of 48 local associations throughout the State of Colorado, comprising approximately 5,000 members, many of whom have cattle ranching operations contiguous to The Denver and Rio Grande Western Railroad.

The Idaho Wool Growers Association, is a voluntary non-profit organization in the State of Idaho, with executive office and postoffice address 17 Broadbent Building, P. O. Box 2598, Boise, Idaho.

The Utah Cattle & Horse Growers Association, is a voluntary, non-profit organization composed of twenty local associations and numerous individuals totaling approximately 2,000 members in the State of Utah with executive office and postoffice address at Heber, Utah.

These live stock associations have an important and pecuniary interest in the issues involved in the above entitled proceeding and they and their members are engaged in the production, buying, selling and shipping of live stock within, to, and from the area involved in this proceeding and that they pay and bear the charges for the transportation of such live stock.

The live stock associations intervened in support of the complaint filed by the Denver and Rio Grande Western Railroad Company (hereinafter called the Rio Grande) before the Interstate Commerce Commission reported in *Denver and Rio Grande Western R. R.* v. *Union Pacific R. R.*, 287 I. C. C. 611 (Consol. R., II, 1518-1594).

The proceeding was brought because of the failure and refusal of the Union Pacific Railroad Company (hereinafter called the Union Pacific) to establish just, reasonable and non-discriminatory competitive joint through rates and charges in connection with the Rio Grande via its Colorado and Utah gateways in violation of Section 1 (4), Section 3, and Section 15 (1), (3), and (4) of the Act as amended:

(1) between (a) points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington, and British Columbia, Canada, and (b) Colorado common points and points east thereof; and

(2) between Utah common points and same northwest territory specified in (1) (a) above.

The live stock associations actively participated in the proceedings before the Interstate Commerce Commission, including the presentation of witnesses, filing of briefs, and participation in the oral argument before the entire Commission.

The Commission's decision granted only partial relief to live stock producers and feeders from the unreasonable

and unduly discriminatory rates complained of. Accordingly the Commission's order* provided in part that the defendants and the complainant according as they participate in the transportation, be, * * * required to establish * * * and thereafter maintain through routes via Ogden and Salt Lake City, Utah, in connection with the line of the complainant for the interstate transportation of various named commodities, in carloads, including ordinary live stock, from origins in the territory north and west of Ogden to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

Thus the majority decision of the Commission denied relief to and from the important live stock market at Denver and the other Colorado common points and including the eastern part of Colorado, all of the States of Kansas, Nebraska, South Dakota, North Dakota, Minnesota, Wisconsin, northern part of Iowa and Illinois, and the upper peninsula of Michigan.

Subsequently the live stock associations again intervened in support of an action by the Rio Grande before the United States District Court for the District of Colorado

* (Appendix A, p. 119, Consolidated opening brief of the Denver and Rio Grande Western R. R. Co.)

(hereinafter called the Colorado Court), seeking to enjoin, annul and set aside in part the order of the Commission above referred to, filed a brief and participated in the oral argument in that proceeding.

The live stock associations contended that the order of the Commission herein referred to is unlawful, arbitrary, capricious and contrary to the evidence of record and the provisions of the Interstate Commerce Act to the extent in that it failed and to prescribe in the public interest the same relief to the restricted territory above described that it accorded to the territory to which relief was granted.

In the *Denver & Rio Grande Western Railroad Company* v. *United States*, 131 F. Supp. 372, the Colorado Court held that the Interstate Commerce Commission erred:

1. In failing to hold, under the undisputed evidence that through routes are in existence as a matter of law over the Rio Grande via the Ogden gateway in connection with the Union Pacific Railroad Company (hereinafter called the Union Pacific), and

2. In narrowly limiting itself to a consideration of the case under the restrictions of Section 15(4) of the Interstate Commerce Act, since that section does not apply

(a) where through routes are in existence, or

(b) where under the evidence of the case, and as a matter of law, relief should be granted under Sections 1(4), 3(4), 15(1) or 15(3) of the Act.

The live stock associations regard the action of the Colorado Court just and proper in remanding the entire cause for further proceedings in conformity with its opinion and judgment, because they believe that it will afford further relief, particularly to the important live stock territory to which relief was denied.

Appeals were taken to the decision of the Colorado Court by the Union Pacific in No. 333, the Washington Public Service Commission and certain other state commissions in

No. 332, and the Interstate Commerce Commission and the Secretary of Agriculture in No. 334. These appellants generally seek reversal of the judgment of the Colorado Court, except that the Secretary of Agriculture is not a party to the appeal from the Colorado Court. (Footnote 1, page 2, of the Government Brief.)

Appellants in Nos. 332, 333 and 334 urge that the decision of the Colorado Court be reversed mainly on the ground that the Court erred; as a matter of law, in holding contrary to the opinion of the Commission, that through routes exist via the Ogden gateway and the Rio Grande between the points in controversy on the Union Pacific and other railroads involved; and in its conclusion that the Commission's failure to so find was in error and so prejudiced its disposition of the entire proceeding.

Since the brief of the Washington Public Service Commission, *et al.*, is in support of and follows closely the arguments and authorities set forth in the brief of the Union Pacific, we believe that they do not require separate answers.

ARGUMENT.

PROCEDURAL QUESTIONS AGAIN REPEATED BY THE UNION PACIFIC.

In order to avoid unnecessary repetition, the intervening live stock associations adopt as their own, so far as their interests are concerned, the statements contained in the consolidated opening brief by the Rio Grande, filed pursuant to an order for consolidation of this Court on October 24, 1955, and also adopt that part of the Rio Grande's reply brief relating to procedural questions again raised by the Union Pacific, viz.:

1. That the Colorado Court had no jurisdiction to set aside the order of the Commission.

2. That the Rio Grande had no standing to bring suit to set aside the order of the Commission.

However, we submit a few supplementary comments in connection with the above points in the order shown above.

The Colorado District Court Had Jurisdiction to Set Aside the Order of the Commission.

The decision of the Commission corrected only in part the rate adjustment complained of by the live stock producers and other shippers.

The Colorado Court annulled and set aside the order of the Commission insofar as it denied full relief to complainant.

The undisputed facts shown in the record in this proceeding that through routes exist justify complete relief from discriminatory rates as was held by this Court in *Mitchell* v. *Chicago R. I. & P. Ry. Co.*, 246 I. C. C. 149, and *Henderson* v. *United States*, 339 U. S. 816, on the ground that the Act contemplates that there should be no excluded territory with respect to any commodity or persons.

The live stock producers and other shippers are entitled to just, reasonable and non-discriminatory joint through rates between points on the Union Pacific via the Rio Grande and points on all other railroads to the extent that need therefor is shown by the evidence of record in these proceedings.

This is in accord with the inherent purpose and policy of the Interstate Commerce Act as stated by the Commission in one of the early cases, *Missouri and Illinois Coal Co.* v. *Illinois Central Railroad*, 22 I. C. C. 339 (1911), where in giving special consideration to the Section 1(4) and Section 3(4) of the Act the Commission said:

> "Reading these provisions together, there can be no doubt as to the intent of Congress. Our railroads are called upon to so unite themselves that they will constitute one national system; they must establish through

routes, keep these routes open and in operation, furnish the necessary facilities for transportation, make reasonable and proper rules of practice as between themselves and the shippers, and as between each other."

Congress confirmed the Commission's view of the inherent purpose and policy of the Interstate Commerce Act in its statutory declaration of transportation policy as now set forth in the preamble to the Interstate Commerce Act (United States Code, Title 49).

As to the relief denied, the Colorado Court held that the Commission erred in denying and withholding relief by mistakingly regarding the provisions of Section 1(4), 3(4), 15(1) and 15(3) of the Interstate Commerce Act, subject to the restrictions of Section 15(4), that under the unpredicted evidence as to the existence of through routes, is not applicable to the proper disposition of the matters complained of. This is clearly an error of law, and by so doing it failed to properly apply the full force of the sections above referred to, to the issues in this proceeding. The grounds on which the Commission's decision are subject to review by the Courts are pointedly summarized in *ICC v. Union Pac. Railroad Co.*, 222 U. S. 241, where at page 548 this Court stated:

"It has been settled that the orders of the Commission are final unless (1) beyond the power which it could constitutionally exercise; or (2) beyond its statutory power; or (3) based upon a mistake of law, so that an order, regular on its face, may be set aside if it appears that (4) the rate is so low as to be confiscatory and in violation of the constitutional prohibition against taking property without due process of law; or (5) if the Commission acted so arbitrarily and unjustly as to fix rates contrary to evidence, or without evidence to support it; or (6) if the authority therein involved has been exercised in such an unreasonable manner as to cause it to be within the elementary rule that the substance, and not the shadow, determines the validity of the exercise of the power."

Further in *Southern Pacific Company, et al. v. Interstate Commerce Commission*, 219 U. S. 433, the court held that the Commission's order may be set aside if it has acted unreasonably; in *United States of America and Interstate Commerce Commission v. Abilene & Southern Railway Company, et al.*, 265 U. S. 274, it held to the same effect where the Commission disregards or misinterprets important testimony or bases its order upon improper or insufficient evidence. Also, in the cases of *Interstate Commerce Commission v. L. & N. Railroad Company*, 227 U. S. 88, and *Florida East Coast Railway v. United States*, 234 U. S. 167, the court laid down the very important principle that a finding without evidence is beyond the power of the Commission and that the order of the Commission must conform to the record in the case.

The Rio Grande Had Standing to Bring Suit to Set Aside the Order of the Commission.

Pursuant to provisions of Section 13 of the Interstate Commerce Act, the Rio Grande, as a common carrier by railroad, was authorized to file a complaint before the I. C. C. the same as any other party likewise authorized to do so. The applicable provisions of Section 13 of the Act states that: "* * * any common carrier complaining of anything done, or omitted to be done by any common carrier, subject to the provisions of this part, in contravention of the provisions thereof, may apply to the Commission by petition * * *."

Since the Rio Grande had a right to bring a complaint the same as any other party it logically has the right to bring suit to set aside an order of the Commission the same as any other party has a right to do. In view of this, contentions by the Union Pacific to the contrary are wholly unjustified and untenable.

SUBSTANTIVE ISSUES IN COLORADO CASE

In view of the comprehensive treatment given by the Rio Grande in its reply brief to comments made of the Union Pacific and the intervening state commissions on their side, our reply will be directed to certain specific issues or statements of particular concern to the interests of live stock producers.

Union Pacific Contentions of Impoverishment Are Fantastic Speculations.

At page 3, and at pages 11, 13 and 35 the Union Pacific claims that in the event the Rio Grande prevails in obtaining reductions in the rates complained of that it, the Union Pacific, would suffer heavy financial loss and become impoverished.

We doubt that the Union Pacific would lose any appreciable live-stock traffic to the Rio Grande as a result of the establishment of joint through rates via the Ogden gateway. The Union Pacific provides a very good service for the transportation of live stock and the mere establishment of a parity of joint through rates as here sought would not result in a divergence of traffic for that reason alone. What additional live stock would be moved by the Rio Grande would depend almost wholly on the needs of the shippers along the Rio Grande mainly in connection with feeding in transit services that live stock shippers along the Rio Grande cannot avail themselves of under the existing rates.

The establishment of a parity of joint through rates would stimulate competition in the service on the part of both lines. This obviously would redound to the benefits of the live stock shippers via both rail carriers.

In any event, the needs of the live stock shippers are en-

titled to primary consideration. The claims of the Union Pacific about impoverishment are nothing short of fantastic speculations designed to obscure the basic issues of the case.

Live Stock Producers and Other Shippers Actively Interested in Obtaining Relief Sought.

At page 12 of its brief the Union Pacific states that no complaint has ever been filed by shippers or the public or by any state public service commission demanding the longer through routes and joint rates via the Rio Grande.

The very nature and extent of the problem, its broad scope and the many interests affected affords the best answer to that contention.

The Rio Grande, as a common carrier by railroad, was the logical party to initiate the matter by filing a complaint before the Interstate Commerce Commission. It was the only single party that could bring a complaint broad enough to enable various commodity interests to intervene without involving the hazard of unduly broadening the issues. The Rio Grande had the right to bring the complaint as a matter of law.

A total of forty-two separate interests intervened in support of or testified on behalf of the complaint by the Rio Grande (pages 25 and 27, Consolidated Opening Brief of Rio Grande) including the United States Department of Agriculture, the Public Service Commission of Utah, and the five live stock associations, intervening appellees herein.

This clearly shows that the Rio Grande is only one of a large number of interested parties, that intervened in support of its complaint. Many of the supporting interveners represent large numbers of vitally interested members, located in the various areas throughout the country, who would receive the primary benefits from the relief sought

in the complaint and any benefit or pecuniary gain to the Rio Grande would be mainly incidental.

A summary of the testimony of live stock witnesses clearly shows that relief from the excessive unreasonable and discriminatory rates complained of is necessary between all points in all the important regions of the country involved in these proceedings.

Mr. I. H. Jacob of Salt Lake City, General Manager of the Producers Live Stock Marketing Association, and Manager of the Wasatch Live Stock Loan Company, who has held his present positions for over fifteen years and has had long and extensive experience in raising and marketing live stock prior to that time, stated that the marketing association of which he is Manager is composed of live stock producers, that it operates branches at Ogden and North Salt Lake, Utah, Los Angeles, Calif., Denver, Colo., and Billings, Mont.; that these organizations are members of the National Live Stock Producers Association (intervenor in support of complainant in this proceeding) which handled an equivalent of 30,000 carloads of all species of edible live stock in 1948, and that of this number about 15,000 carloads moved by rail; that in the marketing activities his organization handled shipments on consignment at the markets; rendered a sales service off the markets, at ranches and pastures and other country points, and also bought stocker and feeder animals on order; that live stock was raised, grazed and fed along the lines of the UP and the D&RGW respectively between Ogden and Denver; that a substantial volume of live stock that is grazed, pastured and fed in the D&RGW territory is brought in from points on the UP and its connections north and west of Ogden; that the live stock from the D&RGW territory then goes to Denver, Omaha and other eastern markets; that some of the animals are sold for slaughter and others move to the Kansas wheat pastures

and other areas and eventually to Kansas City and other eastern markets; that all this live stock moves and is sold in competition with live stock from points on the UP; that the pasturing of sheep on the wheat pastures of Kansas plays an important part in both the raising of wheat and production of live stock for meat; that live stock men along the D&RGW are at a disadvantage because of the relatively higher rates that they have to pay when moving to the Denver market, the Kansas wheat pastures or other eastern destinations; that freight billing is of value in obtaining a higher price for live stock at both public markets and at country points; that the reduction of the rates would benefit live stock producers by removing the penalty now imposed on traffic moving via the D&RGW; that it would promote greater competition in service between the UP and the D&RGW, stimulate more competition for live stock in the territory north of Ogden and Salt Lake, put live stock men in the D&RGW territory in better competitive position with those along the UP between Ogden and Cheyenne and encourage the movement of live stock, particularly the sheep and lambs into the wheat pastures of Kansas and the lower Mississippi River markets. (Consol. R. I. 310-319.)

Mr. W. H. Hilbert of Denver, Colo., stated that he is head of the Sheep Department of the Producers Life Stock Marketing Association, at Denver; that he had thirty-four years experience in the live stock business; that he is familiar with the Denver and other live stock markets and with the general live stock producing and feeding areas of the country; that freight billing is of value in obtaining a higher price when live stock is sold for shipment to farther points beyond the market or place where it is sold; that the reduction of the higher rates would give live stock producers the benefit of another important route without a rate disadvantage and place them on a parity in the sale

of their livestock as far as freight rates are concerned. (Consol R. I. 453.)

Mr. Elmer J. Wagner of La Mar, Colorado, President of the Arkansas Valley Stock Feeders Association, stated that the 215 members of his Association carry on live stock feeding operations in the Arkansas Valley east of Pueblo, Colo., on lines of the Santa Fe and Missouri Pacific Railroads; that they want to be able to purchase live stock in Idaho, Oregon, Washington and Montana on a competitive basis, with feeders of live stock in other localities, for instance, Northern Colorado and Nebraska; that prior to 1932 members of his Association could buy feeder lambs in large numbers in the territory north of Ogden because the freight rates via Ogden and the D&RGW and beyond to slaughter points on the Missouri River were on a competitive basis; that since 1932 when the competitive rates via the D&RGW were cancelled, the Arkansas Valley feeders have been at a disadvantage because live stock feeders along the UP can overbid them. He stated further that he and the members of his Association like the northwest lambs and would like to buy them if they had the same freight basis; that in 1928 they could compete with the Northern Colorado and Nebraska feeders, but at present their freight rates on lambs from a point like Baker, Oregon, to the Missouri River points via the Ogden gateway and the D&RGW and the Santa Fe is 49 cents higher than the rate that the Northern Colorado and Nebraska feeders have to pay and that with the tax this amounts to over $100 a car and makes it impossible for them to compete; that in 1928 their Association fed over 400,000 lambs in the Arkansas Valley and that at the present time there were only 100,000 lambs in the area. (Consol. R. I. 488-491.)

Mr. Don Clyde of Heber, Utah, stated that he is principally engaged in the production of sheep; that his opera-

tions are spread over 20,000 acres of land and that his operation consists of about 4,000 breeding ewes and about 200 head of cattle; that about 100,000 breeding ewes are handled annually in the area in which he is located; that most of his herd replacements come from points in Idaho and Montana; that a substantial percentage of every sheepman's output are sold as feeders and that these usually go to points in Mid-western States; that the arbitrary additional charge of about 19 cents per 100 lbs. that they have to pay means that the returns to the Utah grower are about that much less than the returns to the grower located on the UP. (Consol. R. I. 324.)

Mr. Charles Redd of La Sal, Utah, testified that in 1949 his company had 27,000 head of sheep and about 2,500 head of cattle; that some of the best sheep in the country, for range purposes, comes from Eastern Oregon and Western Montana and that the best fattening lambs come from Idaho; that he would like to bring in and handle the sheep in the Rio Grande territory on an equal basis of rates with those applicable via the UP. (Consol. R. I. 375-376.)

Mr. Angus McIntosh of Las Animas, Colorado, President of the Colorado Wool Growers Association, which consists of 832 members, stated that prior to 1932 a part of the members of his Association who had operations along the D&RGW bought their herd replacements in the Northwest and enjoyed through rates to Denver and the Missouri River and other eastern points via Ogden; that since 1932 they can no longer compete with the sheep men in Wyoming and in those other States on the UP, because of the lower rates via that line; that when he was able to ship via Ogden and the D&RGW he was able to do so with only two feeds in transit as against three and four feeds enroute via the UP to Denver and the Santa Fe beyond. (Consol. R. I. 494-496.)

Mr. David G. Rice, Jr. of Denver, Colo., Secretary of the Colorado Cattlemen's Association, composed of 5,000 members, stated that live stock feeders in Colorado have to go out of Colorado to an increasing degree to purchase animals for their feeding operations. He also stated in effect that his Association is very much interested in the opening of the Ogden Gateway because its members want to purchase cattle north and west of Ogden, to be shipped to Western Colorado and the Arkansas Valley areas. He agreed with Witness Benton's testimony that the reduction in forest pastures has increased the number of cattle necessary to be brought into Colorado for feeding. (Consol. R. I. 344-356.)

Mr. Herbert B. Heidel, of Pueblo, Colorado, with the Pueblo Division of The American Stores, Inc., Lincoln Packing Company, that operates a slaughterer and cold storage plant at Pueblo, Colo., stated that he received carload shipments of lambs from origins in Idaho and Oregon on the UP; that because of being able to get delivery of the shipments more quickly and because a stop for feed, water and rest enroute between Ogden and Pueblo via the D&RGW, was not necessary, he has been routing such shipments via the D&RGW at Ogden during the past year, notwithstanding that the freight charges average from $70 to $80 per car higher than if routed via the UP to Denver and via connections to Pueblo and beyond. (Consol. R. I. 412-413.)

Mr. Roger S. Smith of Denver, Colo., Supt. of live stock operations of the Holly Sugar Corporation, stated that his company has from 25,000 to 60,000 tons of beet pulp annually for feeding cattle and lambs at Delta, Colo., located southeast of Grand Junction on the D&RGW, and that there are also available several thousand tons of molasses; that he purchases live stock on the UP in Montana, but that he cannot move them to Delta for feeding in

transit at through competitive rates; that live stock produced in the Northwest, particularly in Idaho and Western Montana on the UP, is of excellent grade for use in their feeding operations; that the higher basis of rates through Ogden via the D&RGW hinders their operations and favors those of live stock feeders on the UP in Wyoming and Nebraska. It is the desire of the company, he represents to have all possible routes open and available so that it can go to producing areas where they can get the lowest price. (Consol, R. I. 270-281.)

Mr. L. C. Montgomery of Heber, Utah, is Secretary of the Heber City Cattle Company. His individual operation and those of the company embrace about 5,000 head of cattle; that his operations are substantially similar to those of Mr. Clyde, that Mr. Clyde is engaged in sheep operations while Mr. Montgomery is engaged in cattle operations. Mr. Montgomery also testified as President of the Utah Cattle & Horse Raisers' Association which markets about 75,000 head of beef cattle each year. He expressed the view that opening of the Ogden Gateway would be beneficial to the producers in the State of Utah, and that the burden of the higher freight rates which they are now forced to pay on the movement of live stock from the Northwest via Ogden and D&RGW when moving to eastern markets handicaps the growers and feeders along the Rio Grande. (Consol. R. I. 442-446.)

Mr. Roscoe C. Rich of Burley, Idaho, past President of the Idaho Wool Growers Association, the National Wood Growers Association and the American Wool Council, stated that he has ranches in three locations in Idaho and that he sheared about 8,000 sheep in 1949; that a transit arrangement for Colorado feeding and raising of lambs at competitive through rates would be a benefit to Idaho lamb growers and that he supports the testimony of other

Colorado live stock witnesses who testified in support of the complainant's side of the case. (Consol. R. I. 509.)

The testimony of live stock witnesses was not limited to any particular market or area destinations, and it did specifically include the Denver market and pasture and grazing areas immediately east thereof, to which no relief was granted.

This testimony shows very comprehensively the disadvantages and handicaps suffered by live stock producers under the rate adjustment and reasons why complete relief should be accorded.

It should be particularly noted that partial relief granted by the Commission falls far short of the relief that the live stock producers are entitled to. For instance, live stock producers along the Rio Grande have been denied relief from the exorbitant arbitraries and excessively high combination rates in shipping their live stock to their nearest public market at Denver, and to other markets and destinations in the territory north and east of Denver to which no relief was accorded.

Furthermore, much of the relief the Commission intended to give the live stock industry is defeated by the so-called three-way rule that is applicable generally on the lines of the western railroads. This rule as published in the railroad tariffs provides in substance that on live stock fed or grazed in transit the through rate to be applied shall be the rate:

(a) From original point of shipment to the final destination, or

(b) From original point of shipment to the stop-off point or points, or

(c) From stop-off point or points to the final destination, whichever is highest, in effect on date of initial

shipment from original shipping point, plus the prescribed transit charge.

Illustrating the effect of this rule, the following table shows the rates on cattle and sheep in double-deck cars originating at Blackfoot, Idaho, moving via the Ogden gateway over the Rio Grande and transited at Burlington, Colo., a point on the Rock Island near the Colorado-Kansas State Line, and the rates via the Union Pacific from Blackfoot to Omaha, Kansas City, and St. Louis.

From Blackfoot, Idaho To	Rates in Cents Per 100 Pounds
Burlington, Colo.	133
Omaha, Nebr.	112
Kansas City, Mo.	112
St. Louis, Mo.	130

The rate from Blackfoot to Burlington via the Ogden Gateway and the Rock Island of $1.33 is constructed on combination 43 cents to Ogden as named in Agent Haynes' I. C. C. No. 1514, and 90 cents beyond, Rio Grande I. C. C. No. 951. The rates from Blackfoot to Omaha, Kansas City, and St. Louis are named in Union Pacific I. C. C. No. 5323.

Because the Ogden combination must be observed as minimum rate to Omaha, Kansas City and St. Louis, on a shipment transited at Burlington, the rate would be 21 cents higher than the concurrent rate of $1.12 to Omaha and Kansas City, and by 3 cents higher than the rate to St. Louis, Missouri.

This clearly shows how the denial of relief to the intermediate area (between the Colorado common points and the Missouri River gateways) created an anomalous situation that results in violations of Section 1, Section 3, and Section 4 of the Interstate Commerce Act and should also be remedied upon further consideration by the Commission.

SUBSTANTIVE ISSUES UNDER POINTS III, IV, V AND VI OF THE UNION PACIFIC OPENING BRIEF.

The Union Pacific opening brief under points III, IV, V, and VI (pages 53 to 102) endeavors to deal various phases of substantive issues.

There is considerable overlapping. In the interest of brevity and clarity the live stock associations believe it desirable to summarize these substantive issues under basic questions as follows:

1. Was the Colorado Court correct in holding that the Commission erred, as a matter of law, in failing to hold in the face of uncontradicted evidence that through rates exist over the Rio Grande via the Ogden gateway in connection with the Union Pacific?

2. Was the Colorado Court correct in holding that the Commission erred in limiting its consideration of the case under the restrictive provisions of Section 15(4) of the Interstate Commerce Act, thereby limiting the relief granted to only part of the territory, particularly as far as live stock was concerned, that obviously prejudiced its proper consideration of the entire case?

I.

The Colorado Court Was Correct in Holding That the Commission Erred as a Matter of Law in Failing to Hold in the Face of Uncontradicted Evidence That Through Routes Exist Over the Rio Grande Via the Ogden Gateway in Connection With the Union Pacific.

In its attempt to show that the Colorado Court erred in holding that the Commission was in error as a matter of law in failing to hold in the face of uncontradicted evidence that through routes exist over the Rio Grande via the Ogden gateway in connection with the Union Pacific, the Union Pacific beginning on pages 53 to 82 of its Colo-

rado opening brief makes the general contention that the routes via the Ogden gateway are commercially closed and relies chiefly on the decisions of this Court in *Thompson* v. *United States* 343 U. S. 549, and *Beaman Elevator Co.* v. *Chicago & N. W. Ry.*, 155 I. C. C. 313.

The first and second findings of the Colorado Court refer specifically to the matter of through routes, viz:

> (1) The Commission recognized that the first question for its determination was "whether or not the present routes by way of the Ogden Gateway constitute 'through routes' as that term is used in Sec. 15 (3) and (4) of the Act." *Only five of the ten participating members of the Commission joined in the report and order of the Commission,* wherein it was first determined that through routes were not in existence over the Rio Grande in connection with the Union Pacific through the Ogden Gateway. Having reached this conclusion, the Commission proceeded upon the assumption that any order requiring the establishment of such through routes and joint rates over them must be grounded on findings as specified in Sec. 15(3) and (4). (R. I. 286-287.)
>
> (2) We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden Gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding. (R. 287-288.)

In view of the fact that only five of the ten participating commissioners joined in the report and order of the Commission, it seems appropriate to consider the views indicated by five of the commissioners on the point that through routes exist.

Commissioner Arpaia expressed the opinion that there

are through routes over the Rio Grande and the Union Pacific via the Ogden Gateway on traffic between the territories included in this proceeding, and therefore a finding under the provisions of Section 15(4) of the Interstate Commerce Act is not required. The evidence of record shows that these routes presently are open and available to shippers on combination rates. The history of the relationship between these carriers leaves no doubt as to that fact.

In his concurring opinion, Commissioner Lee made a very realistic and forthright comment wherein he stated, that the decision in this case will correct in part, a long standing unlawful rate adjustment, but expressed the opinion that the action of the Commission should not be limited to partial correction of this unlawful rate adjustment, that on the facts shown in the record the act requires that the rates on all commodities between the points in excluded territory and Colorado common points and the points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes, that the act contemplates that there shall be no excluded territory with respect to any commodity or persons, that numerous shippers testified that these routes are open and available and that they can route traffic over them, and further, that this testimony was not challenged or contradicted, but that on the contrary a responsible traffic official of the U. P. testified that the Rio Grande routes are "actually available today on traffic to and from points on the U. P. and its connections in Utah, north of Ogden, Idaho, Montana, Oregon and Washington."

Commissioner Mahaffie, in his profound dissenting opinion, that was concurred in by Commissioners Splawn and Cross, stated that a finding that the routes are open and fully available to shippers today is fully supported by the evidence, that all of this evidence clearly supports

a finding that the routes are existing established through routes over which through rates apply and that the railroads participating therein consent to their use as through routes and freely hold themselves out to shippers as ready and willing to perform transportation service over them. They meet completely the requirements necessary as prerequisites for a finding that they are established through routes announced by this Court in *Thompson* v. *United States*, 343 U. S. 549, where it stated "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." However, as stated by the court, there was no evidence that any through transportation had ever been offered from and to the points involved in the suit and, therefore, no through routes existed between those points.

Commissioner Mahaffie stated further that the situation here is in striking contrast to that in the *Thompson* case. Here there is substantial evidence of a holding out that through transportation will be furnished and of execution of such offers by the issuance of through bills of lading and the performance of through service over many years. We cannot ignore the fact that the joint rates over these routes that were in effect from 1897 to 1906 and 1912 were canceled by the Union Pacific without canceling its participation in the same through routes thereafter at higher through combination rates. That railroad's course of conduct evidenced no more than a desire to discontinue joint rates so as to make the higher combinations applicable. Its action in canceling its participation in joint rates did not, without more, cancel its participation as a carrier in the through routes. The latter were never disestablished but continued to exist. The record taken as a whole in-

evitably leads to that conclusion. *To find under such a state of facts that no through routes exist for commodities generally is directly contrary to the evidence.* (Italics supplied.)

The finding of the majority (of the Commission) that there are at present no through routes, as that term is used in the Act, over the Rio Grande via Ogden or Salt Lake on traffic under consideration, except on eastbound shipments of sheep or goats, is definitely in error. As a matter of fact, the evidence is clear and uncontradicted that as to live stock and various other commodities that the Rio Grande route is open. However, any shipper using it is put to the pains of paying a rate penalty that we believe the statute gives the Commission power to remove as to all territory, without regional restriction.

The holding of the majority is not only contrary to the uncontradicted facts in the case, that the Rio Grande route is open, but it is also contrary to law.

In the case before the Court in the *Thompson* case, there was no evidence that the Missouri Pacific ever offered through transportation over the route in question, nor was there any evidence as to any shipments having been made. The Commission's order was wholly without evidentiary support under the accepted tests for determining the existence of a through route in accordance with the doctrine laid down by this Court in that case.

In the *Beaman* case there was evidence of only one shipment that subsequently was admitted to have been made in error.

In the case before the Court the route is open and has been open for many years. There is evidence that the route has been used, but its use is subjected to penalty of paying excessive rates and charges. The evidence in this case clearly meets all the essential requirements of the existence of a through route.

The uncontradicted evidence of through route shipments warrants the holding of the Colorado Court that through routes exist to and from points on the Union Pacific in the northwest over the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways, and beyond. The Union Pacific also contends that the Ogden gateway route is closed. The decision of this Court in the *Virginian Railway* U. S. 272, U. S. 678 (also referred to in the decision of the *Thompson* case) is in point here. In that case, it was stated that the route in question was commercially closed because the carriers had not established any joint rates and that only a combination of local rates was applicable that resulted in charges so high as to be prohibitive. The Commission there found that the combination rate was both unreasonable and discriminatory and prescribed through rates which it found was reasonable and non-discriminatory. The order was made under Section 1 and Section 3, and we contend that relief under these same sections of the Act is justified in this case without any territorial limitations.

II.

The Colorado Court Correctly Held That the Commission Erred in Limiting Its Consideration of the Case Under the Restrictive Provisions of Section 15(4) of the Act Prejudiced Its Proper Consideration of the Entire Case.

The Union Pacific beginning at page 87 of its Colorado opening brief contends that even if the Commission erred in its failure to find that through rates exist over the lines of the Rio Grande via the Ogden gateway, and even if this was an error of law it manifestly did not serve as a "restriction" or a deterrent in giving the Rio Grande relief.

If the Commission's failure to find that through routes exist, did not serve as a "restriction" or deterrent, then why was the relief granted in certain areas and denied in other areas as indicated in the fore part of this brief.

This is conclusively shown by Commissioner Lee's concurring statement in which he said:

> "The decision in this case will correct in part, a long standing unlawful rate adjustment, but expressed the opinion that the action of the Commission should not be limited to a partial correction of this unlawful rate adjustment, that on the facts shown in the record the act requires that the rates on all commodities between the points in excluded territory and Colorado common points and the points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes, that the act contemplates that there shall be no excluded territory with respect to any commodity or persons, * * * ".

Furthermore on page 88 of the Union Pacific brief there appears a statement concerning the proposed report by the Chief Examiner as follows:

> "The chief examiner in his proposed report also found, as did the Commission, that the through routes claimed by the Rio Grande were not in existence, but nevertheless proceeded to recommend that the Commission order through routes and joint rates on all commodities, because he thought the evidence proved necessity for them in the public interest. Thus, the short-haul limitation in Section 15(4) operated as no restriction whatever upon the chief examiner, nor upon the Commission to the extent that it thought the evidence proved that joint rates were necessary in the public interest."

This is definitely incorrect and conveys a completely erroneous impression of the true nature of the proposed report by Mr. Frank Mullen, Chief Examiner, who conducted all the hearings for the presentation of evidence and testimony in the proceedings before the Commission.

Nowhere throughout the thirty-two mimeographed sheets of the very comprehensive proposed report is there any statement to the effect that the Examiner either found "that through routes were not in existence" or made any recommendation that the Commission so find.

On the contrary, the existence of the routes is specifically recognized in the 1st of 7 recommended findings, viz:

> "1. That the routes via Salt Lake City or Ogden in connection with the Rio Grande over which joint rates are sought in this proceeding are not unreasonably long or unduly circuitous."

The second recommended finding relates to the establishment of "joint rates" over such routes:

> "2. That the failure and refusal of the Union Pacific and the other defendants, to the extent they participate in the traffic, to join with the Rio Grande in joint rates over such routes from and to the Northwest territory, described herein, via Salt Lake City or Ogden in connection with the Rio Grande to and from Utah common points and to and from Colorado common points and points east thereof, result in undue disadvantage and undue prejudice to shippers and receivers of freight and to the localities and districts in Utah and Colorado served by the Rio Grande."

Since the question of whether or not through routes exist is the most vital issue in this proceeding we believe it appropriate to quote at least two more of the recommended findings, viz:

> "4. That it is necessary and desirable in the public interest that such joint rates over through routes over the Union Pacific and its connecting railroads, defendants herein, via Salt Lake City or Ogden in connection with the Rio Grande from and to points in Utah north of Ogden, Idaho, Montana, Oregon and Washington to and from Utah common points and to and from Colorado common points and points east thereof should be established and maintained." and

"6. That such joint rates over said routes are needed to provide adequate and more efficient and more economic transportation to the shippers and receivers of freight and localities and districts in the Northwest in order that they may ship over those routes at the joint rates, livestock, agricultural commodities, lumber and lumber products, and other commodities, to points on the Rio Grande under marketing and transit arrangements with right to reship beyond to Colorado common points and points east thereof."

It should be observed that the majority decision of the Commission did not follow the "existing route," concept indicated so clearly by the Chief Examiner in his proposed report, but adopted the "closed route" concept that inevitably brought the restrictive provisions of Section 15(4) into play with the result that the relief granted was accordingly restricted.

CONCLUSION

For the reasons stated the Colorado Court was correct in holding that the Commission erred as a matter of law in failing to hold in the face of uncontradicted evidence that through routes exist over the Rio Grande via the Ogden gateway in connection with the Union Pacific, and

Furthermore the Colorado Court correctly held that the Commission erred in limiting its consideration of the case under the restrictive provisions of Section 15(4) of the I. C. Act prejudiced its proper consideration of the entire case.

Wherefore the decree and judgment of the United States District Court of Colorado should be affirmed and the cause remanded to the Interstate Commerce Commission for proceedings in conformity with the opinion of that Court.

Respectfully submitted,

LEE J. QUASEY,
139 No. Clark St.,
Chicago, Illinois,
Counsel for Intervening Appellees.

April 12, 1956.

PROOF OF SERVICE.

I, Lee J. Quasey, Counsel of record for intervening appellees herein and a member of the Bar of the Supreme Court of the United States, hereby certify that on the 13th day of April, 1956, I served, on behalf of the intervening appellees herein named copies of the foregoing reply brief to the opening briefs of appellants in Nos. 332, 333 and 334, including the several parties, shown below, by mailing a copy in a duly addressed envelope with air mail postage prepaid as follows:

1. On the United States of America:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

2. On the Interstate Commerce Commission:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On Counsel of record for the five appellants in No. 332:

Bert L. Overcash, Esq.
Asst. Attorney General of Nebraska
State Capitol Building
Lincoln, Nebraska

Also:

Clarence S. Beck, Esq.
Attorney General of Nebraska
Lincoln, Nebraska

Don Eastvold, Esq.
Attorney General of Washington
State Capitol
Olympia, Washington

C. W. Ferguson, Esq.
Counsel for Public Utilities Commissioner of Oregon
Public Service Building
Salem, Oregon

James B. Patten, Esq.
Secretary
Board of Railroad Commissioners
Helena, Montana

George F. Guy, Esq.
Attorney General of Wyoming
Cheyenne, Wyoming

Richard H. Shaw, Esq.
560 Denver Club Building
Denver 2, Colorado

4. On Counsel of record for railroad appellants in No. 333:

Elmer B. Collins, Esq.
1416 Dodge St.
Omaha 2, Nebraska

Also:

F. O. Steadry, Esq.
Chicago and North Western Railway Company
400 West Madison Street
Chicago 6, Illinois

Warren H. Ploeger, Esq.
Northern Pacific Railway Company
St. Paul 1, Minnesota

L. E. Torinus, Esq.
Great Northern Railway Company
175 East 4th Street
St. Paul 1, Minnesota

Roland J. Lehman, Esq.
Atchison, Topeka and Santa Fe Railway
80 East Jackson Blvd.
Chicago 4, Illinois

Eugene S. Davis, Esq.
Wabash Railway Company
Railway Exchange Building
St. Louis 1, Missouri

5. On the Denver and Rio Grande Western Railroad Company:

Robert E. Quirk, Esq.
116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

Appeals From The United States District Court for The District of Colorado

---

BRIEF OF THE AMERICAN SHORT LINE RAILROAD ASSOCIATION, APPELLEE

STATEMENT

The American Short Line Railroad Association, hereinafter referred to as the Association, intervened in support

of The Denver and Rio Grande Western Railroad, complainant before the Interstate Commerce Commission in Docket 30297—*Denver and Rio Grande Western Railroad Co.* v. *Union Pacific Railroad Co.*, the administrative proceeding giving rise to this litigation. The Association also intervened in support of the Rio Grande in the judicial review proceedings in the United States District Court for the District of Colorado [1] from which decision appeals have been taken by certain state commissions (No. 332), the Union Pacific Railroad Co. (No. 333), the United States, and the Interstate Commerce Commission (No. 334), in the October term 1955 of this Court.

The Association is a voluntary unincorporated association with a present membership of 289 common carriers by railroad of which all but three (3) are engaged in interstate and foreign commerce and therefore subject to the Interstate Commerce Act and related acts, and to the jurisdiction of the Interstate Commerce Commission. The Association, its members in general and many of its members in particular are vitally interested in the issues involved in these appeals with respect to the existence or establishment of through routes and rates and fair and reasonable divisions of revenues with particular reference to the establishment and maintenance of competitive joint through rates. The questions presented in these appeals are substantial and of public importance and their determination will have a vital effect on the affairs of practically all of the members of this Association.

In conformity with the spirit of the order of consolidation of this Court entered October 24, 1955, the Rio Grande, which is an appellant in No. 117 in this term and an appellee in Nos. 332, 333 and 334, filed on March 15, 1956 a consolidated opening brief covering the series of appeals from the decisions of the District Court of Colorado and the

[1] *The Denver and Rio Grande Railroad Co.* v. *United States*, 131 F. Supp. 372.

District Court of Nebraska[2] concerning the validity of the order entered by the Commission in the above-described proceeding.[3] The Rio Grande brief sets forth the appropriate recitals of jurisdiction and questions presented, and the Association adopts as its own the views expressed therein.

In Nos. 332, 333 and 334, appellants urge this Court to reverse the judgment of the Colorado court primarily on the basis that the court erred in finding as a matter of law that through routes exist between the points in dispute in connection with the Rio Grande, and the court's further conclusion that the Commission's failure to so find was erroneous and substantially prejudiced its disposition of the entire proceeding.

It is the view of the Association that the issue relating to the existence or non-existence of through routes represents the core of the controversy. Determination of this issue upon the facts of record in the light of pertinent judicial precedents will necessarily represent an important interpretation of applicable provisions of the Interstate Commerce Act and establish a substantial precedent for continued application by the Commission in its disposition of similar controversies. Inasmuch as members of this Association participate in countless through routes throughout the country and it is to be expected that a number of such railroads will be involved in future controversies concerning through routes and their establishment, it is the intention of the Association to present in this brief its views as to the merits of contentions advanced by the appellants regarding this key issue.

SUMMARY OF ARGUMENT

I

The opinion of the Colorado court sets forth substantial findings to support its conclusion as a matter of law that

[2] *Union Pacific R. R.* v. *United States*, 132 F. Supp. 72.
[3] 287 I.C.C. 611.

through routes exist between the points involved, and its further finding that Commission's failure to so find substantially prejudiced the entire proceeding.

II

Contentions advanced by the Union Pacific to show the invalidity of this conclusion by the Colorado court attempt to support the erroneous theory that cancelation of joint rates "closed" the through routes, despite admissions of record that such routes are now open and available for through service at through combination rates. In substance the untenable position of the Union Pacific appears to be that routes are not through routes if increased rates applying thereon cause a decrease in the volume of traffic moved in through service. The Union Pacific has not legally and factually closed the routes to through service although the Interstate Commerce Act (sections 6, 15(3) and 15(7)) authorizes, subject to certain safeguards, a carrier to do so. The *Thompson* and *Great Northern* cases and authorities therein cited although relied upon by the Union Pacific, clearly support a finding that through routes exist.

III

Contentions advanced by the government and other appellents reiterating contentions similar to those of the Union Pacific, and urging others of equally doubtful substance in support of the so-called "majority" report of five of the ten participating members of the Interstate Commerce Commission, disclose that the Commission's failure to find that through routes existed resulted from a confusion of its power to determine this question, separate and apart from its further authority and duty to determine under section 15(3) of the Act to what extent joint competitive through rates should be established. The Commission's procedure and conclusion are contrary to the Court's ruling in the *Great Northern* case.

ARGUMENT

The opinion of the Colorado court (R. 279) includes the following substantial findings with respect to the existence of through routes:

> (1) The Commission recognized that the first question for its determination was "whether or not the present routes by way of the Ogden Gateway constitute 'through routes' as that term is used in section 15 (3) and (4) of the Act." *Only five of the ten participating members of the Commission joined in the report and order of the Commission*, wherein it was first determined that through routes were not in existence over the Rio Grande in connection with the Union Pacific through the Ogden Gateway. Having reached this conclusion, the Commission proceeded upon the assumption that any order requiring the establishment of such through routes and joint rates over them must be grounded on findings as specified in § 15 (3) and (4). (R. 286-287)
>
> (2) We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden Gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding. (R. 287-288)

The Colorado court in summarizing the "undisputed evidence bearing upon the crucial question of existing through routes," found—

> (1) That in 1897 the Union Pacific established joint through competitive rates with the Rio Grande to and from points in the northwest area through Ogden and

that while these rates were canceled by the Union Pacific in the period between 1906 and 1912, the through routes themselves were not canceled. (R. 288)

(2) That counsel for the Union Pacific and its principal traffic witness, respectively expressed the opinion and testified that the cancelation of the joint rates did not cancel the through routes, and that shippers at the present time are free to route traffic in through service via the Rio Grande if they are willing to pay the higher rates resulting by a combination of locals. The traffic witness further testified that some *joint* through rates are now published by the Union Pacific for application over the routes involved in the transportation of sheep and goats from the northwest area involved via the Ogden Gateway and the Rio Grande to points on the Missouri River and east thereof. (R. 288)

(3) That the evidence discloses the Rio Grande route has been used in the continuous movement of traffic to and from the closed door area at through combination rates without objection of the Union Pacific or participating railroads. The Colorado court then proceeded to describe the nature and volume of the through transportation service performed over the routes involved in the year 1948, and found that such movements were substantially similar for the years prior to 1948 and subsequent thereto until the commencement of hearings before the Commission in 1949. The Colorado court further noted that in the period November 1942 to August 1945 a number of shipments were diverted from other routes between the points involved to the Rio Grande route under orders issued by the Commission. (R. 288-289)

(4) After proceeding to evaluate and discuss the decision of the Commission and its purported reliance upon the *Thompson* case[4] as well as contentions ad-

[4] *Thompson* v. *United States*, 343 U.S. 549.

> vanced by the Union Pacific and railroads intervening in its support, the Colorado court concluded that the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific and the northwest area and Rio Grande via Ogden Gateway to and from Colorado common points, the Missouri River gateways and beyond. (R. 292)

It is the position of the Association that the opinion of the Colorado court is based on substantial evidence of record adequately described therein, and is in accord with prior rulings by this Court relating to the question of through routes. It is submitted that the contentions of the appellants fail to correctly interpret and apply pertinent prior decisions by this Court and do not afford a basis for reversal of the decision of the Colorado court.

Contentions Advanced by the Union Pacific (No. 333)

The opening brief submitted on behalf of the Union Pacific contains in its pages 53 to 82 the principal grounds urged by that appellant to show that the Colorado court erred in deciding that the Commission's finding that "there are at present no through routes, as that term is used in the Act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned" was a finding not supported by substantial evidence and erroneous as a matter of law.

In substance the Union Pacific attempts to have this Court hold that a route is "closed"—consequently in *its* opinion not a through route—if there are no *joint* through rates applicable thereon and if the volume of traffic moved thereover is small as compared to movements over other existing routes as to which lower joint rates apply and over which the volume of traffic is far greater. Admittedly such a statement of its position would not be accepted by the Union Pacific, yet analysis of the contentions advanced

warrant such an appraisal.

In paragraph numbered 1 (UP Br. p. 62), being the first of a series of numbered paragraphs in which the Union Pacific *theorizes* as to the holding of the Colorado court and the significance of its conclusions, the Union Pacific advances the view that if the Colorado court was correct in its conclusion that through routes via the Rio Grande now exist because the routes did exist from 1897 to 1912 and were not canceled by the cancellation of joint rates applying thereon, it was "unnecessary and irrelevant" for the Colorado court to discuss the movement of transportation over such routes. Whereas we can agree with the Union Pacific that once it is apparent that through routes have been established and remain uncanceled it is unnecessary to show that there have been through movements thereover[*], yet this additional finding by the Colorado court based on evidence of record cannot be held to diminish the weight of the basic finding. In our opinion the additional findings by the Colorado court simply disclose its careful consideration of the *Thompson* case wherein this Court—faced with a Commission decision containing its bare conclusion, unsupported by any findings as to prior establishment of routes or movements thereon, or as to a "holding out" of through service by the carriers involved—held that the lack of evidence showing use of the route negatived its existence. In the instant record the Colorado court not only had before it the fact of prior establishment and non-cancelation of the routes, in addition to admissions by Union Pacific officials of their present existence and availability for through service, but evidence of their use by shippers, attesting to recognition—the "holding out"—

[*] *Great Northern Ry.* v. *United States*, 81 F. Supp. 921, affirmed *per curiam* 336 U.S. 933, wherein the court in finding that the Commission had in a prior proceeding ordered the establishment of through routes and rates, but which the Great Northern claimed were "commercially closed" due to the absence of joint rates permitting transit privileges, had no hesitancy in sustaining the Commission's finding that through routes existed despite the absence of through movements thereover due to the higher combination rates published by the Great Northern.

by the carriers involved. It was appropriate for the Colorado court to make complete and adequate findings on all the evidence.

At a later point in the same numbered paragraph the Union Pacific by reference to cases decided by the Commission in the period 1913-1915, undertakes to support the allegation that it is indisputable that the Commission and every one concerned regarded the action of the Union Pacific (in canceling joint rates) as "closing" the through routes and gateways in connection with the Rio Grande. The Union Pacific obviously weakens this point by its further statement that the routes were thus "closed", even though the routes then and now are available for use by shippers who are willing to pay high combination rates.

This argument of the Union Pacific, though difficult to follow, appears to suggest that a carrier simply by adjustment of the *level* of his rates can accomplish the legal and factual closing of a through route. In order for the statement to be comprehensible, it must be assumed that the Union Pacific is using the term "closed" as synonymous to "cancelation." It is true that increased rates may make a route commercially unattractive or uneconomical for a shipper, and perhaps cause a decrease in the volume of traffic over such a route. Such a result could occur if any railroad and its connections were to substantially increase joint rates over through routes between points as to which other transportation at lower cost was available. To argue that the route is being canceled or even "closed," in any significant sense obviously cannot be supported. It is equally clear that the action of the Union Pacific in canceling joint through rates with the Rio Grande and publishing higher local rates for through transportation, should be given no greater significance. The argument here advanced by the Union Pacific simply amounts to a factual statement that shippers will not ordinarily pay high rates if lower rates are available. The fact that shippers are being "commercially" deterred from fully utilizing the through routes in

connection with the Rio Grande, does not permit the conclusion that such through routes are canceled, are nonexistent, or are *in fact* closed.[6]

The cases cited at this point by the Union Pacific give no real support for the point that cancelation of joint rates here involved also canceled the through routes over which they applied.[6] An accurate appraisal of the cases cited will show that through routes or joint rates, either or both may, when justified, be canceled by a carrier through the use of *appropriate* tariff publications. We therefore agree with that part of the Union Pacific's statement (UP Br. p. 66) that tariff publications can be efficacious to cancel gateways and through routes, as we discuss in more detail at a later point, when properly descriptive of the cancelation being effected and consistently adhered to.

It is also true that the absence of competitive joint rates is what causes substantial injury to the Rio Grande and its supporting shippers. The routes are available, Union Pacific admits that, but the through rates resulting from the combination of locals published by the Union Pacific and the Rio Grande and their connections for through service are higher than the joint rates published by the Union Pacific with other connections for movements of similar traffic. The relief sought is therefore clear—the establishment of competitive joint rates, which the Commission has the authority to do without recourse to Section 15 (4) where there are existing through routes.[7]

---

[6] Such a conclusion is contrary to, *Cancelation of Rates and Routes via Short Lines*, 245 I.C.C. 183, 185; *Quanah, A. & P.* v. *Atchison, T. & S. F. Ry. Co.*, 226 I.C.C. 201, 208; *Routing via Quanah, A. & P. Ry. Co.*, 229 I.C.C. 137, 139; sustained in *Thompson* v. *U. S.*, 20 F. Supp. 827; *Atchison, T. & S. F. Ry Co.* v. *United States*, 275 U.S. 768; and *Virginian Ry. Co.* v. *United States*, 272 U.S. 658.

[7] Section 15 (3) provides in substance that "The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish . . . joint rates, fares, or charges, applicable to the transportation of passengers, or property by carriers subject to this part, . . . or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided. . . ."

In its paragraph 2 (UP Br. p. 69) the Union Pacific seeks to minimize the significance of its admissions of record as to its recognition and use of the involved routes for through service by misuse of the *Thompson* case, *supra*. It is clear that the Court there cannot be understood to have held that routes are not through routes when they are admitted to be open for through shipments at regularly published local rates recognized and applied by the carriers participating therein and over which a volume of representative through shipments has moved. As we discuss more fully below the further contention in this paragraph that shippers have the right to route traffic "over any series of connecting railroads wherever physical interchange is possible" cannot be accepted on face value, in consideration of the fact that there is nothing in the Act that requires a carrier to accept any traffic as to which it has no published rate (49 USC 6). It is equally true that a carrier cannot be required to participate in through transportation where local rates are restricted against shipments in through transportation. Cf. *Southern Ry.* v. *Reid*, 222 U.S. 424.

In its paragraph 3 (UP Br. p. 70) the Union Pacific seeks to have this Court hold that there are no through routes in connection with the Rio Grande despite the fact that it admits it has in conjunction with the Rio Grande published joint through rates over such routes for the transportation of sheep and goats. No help for its position is afforded by the reference to the *Adrian Grain* case which when properly analyzed is simply descriptive of the Commission's power under § 15(4) of the Act. The Court might well feel constrained to inquire at this point as to what further proof of the existence of through routes is required when it is shown that as to specific traffic there are through routes admittedly open at *joint through rates* published by the Union Pacific, the Rio Grande and other connections.

In its paragraphs numbered 4 and 5 (UP Br. pp. 70, 72), the Union Pacific attempts to underplay the significance

of the through shipments it has accepted for transportation over its routes with the Rio Grande. The views there expressed lend clear support for our earlier appraisal of its position that in reality the Union Pacific is seeking to have the Court hold that routes are not through routes even though there are applicable thereon through rates by combination which have been and are now recognized and applied by the Union Pacific in the movement of a representative number of shipments. The fact that at the same time there are other through routes enjoying a substantially greater volume of traffic due to lower joint through rates does not reveal anything more than the fact that most of the traffic will follow the lower rates. No support from the *Thompson* case is afforded the Union Pacific here, because as there stated no traffic moved over the route involved. The fact that traffic has moved over the routes involved here clearly suggests that if lower combination rates applied the volume would be more comparable to that on the other routes.

In its paragraph numbered 6 (UP Br. p. 74) the Union Pacific suggests that the cancelation of joint rates is the only lawful way it could show that the routes were "closed." This contention of the Union Pacific fails completely to reveal any understanding or knowledge of the numerous findings by this Court and the Commission that the initial power to establish rates lies with the carrier, *Georgia* v. *Penna. R. Co.*, 324 U.S. 438, 459. Section 6 of the Interstate Commerce Act requires a carrier to publish rates applicable to the type of service it undertakes or holds itself out to perform. Sections 3 (4) and 1 (4) require carriers to establish *reasonable* interchange facilities and *reasonable* through routes with other rail carriers. Clearly it is within the contemplation of the provisions of such sections that all possible interchange facilities and through routes need not be established by rail carriers, and the Commission in full recognition of this interpretation has sustained actions of carriers in failing to provide interchange facilities and

interchange traffic when the effect thereof would be to permit the performance of competitive through transportation short-hauling the establishing carrier. *Northwest Metal Products* v. *C. M. St. P. R. Co.*, 272 I.C.C. 401, 406 (1948); *Sheboygan* v. *C. & N. W. Ry. Co.*, 227 I.C.C. 472, 478 (1938).

Thus it is apparent that the Union Pacific is in error when it seeks to suggest that it is powerless to prevent or avoid the performance of through transportation service which it conceives to be unnecessary in the public interest. The Union Pacific appears equally unaware of the numerous existing tariffs whereby rail carriers have restricted through transportation over certain routes. At this point we do not intend to admit that such action by the Union Pacific would be considered reasonable in consideration of the public interest, (see sections 15 (6) and 15 (7) of the Act) but we do suggest that if the Union Pacific clearly intended to close the routes via the Rio Grande to the performance of through transportation rather than enjoy the increased revenue from the high local rates, it could have sought to publish appropriate restrictions in its local tariffs, and consistent therewith refused to accept through shipments.

Union Pacific's reference to the provisions of Section 20 (11) of the Act are equally irrelevant. This section fixing the liability of carriers in the performance of rail transportation cannot be construed to require any carrier to perform a service for which no tariff has been published. *Boston & Maine* v. *Hooker*, 233 U.S. 97; *Southern Railway* v. *Reid*, 222 U.S. 424; *Cleveland, etc. R. Co.* v. *Hays*, (Ind. 1914) 104 N.E. 581; *Hunter* v. *American Ry. Express Co.* (Mo. App. 1928) 4 S.W. 2d 847; *Cook* v. *Northern Pac. Ry. Co.*, 203 P. 512. The Commission has held that where through routes do exist, Section 20 (11) requires the issuance of through bills of lading. *Seatrain Lines, Inc.* v. *A. C. & Y. Ry. Co.*, 226 I.C.C. 7, 31 (1938). It follows therefore that Union Pacific is not required to issue through bills of lading

if its tariffs restrict the use of any route to through carriage.

Union Pacific's remaining arguments in its paragraphs numbered 7-9 (UP Br. pp. 76-82), constitute a further effort to show that the opinion of the Colorado court is in other respects contrary to the Court's ruling in the *Thompson* case. Earlier in this brief we have set forth the substantive findings of the Colorado court in support of its conclusion as a matter of law that through routes are legally and factually existent. The significance of the *Thompson* case is further disclosed by the Court's opinion in the *Great Northern*[8] case, decided the same day. In that case the Court had no difficulty in finding that "the through routes in question already exist since the carriers concerned have continuously provided through service over the same through routes at a combination of separately established rates." (pp. 563-564) Such a finding should be made in the instant case.

In the *Great Northern* case the Commission was requested to and did establish joint rates for application over the routes involved. Similar relief is requested by the Rio Grande here. There also the Court held that (pp. 572-573).

> "The Interstate Commerce Act contemplates the existence of through routes in the absence of joint rates. And this Court expressly has approved the Commission's consistent recognition of the existence of through routes whether the through rates applicable thereto are joint rates or combinations of separately established rates."

The finding by the Colorado court is consistent with this ruling.

And finally the Court held that (pp. 573-574)

> "Whatever theories may be advanced as to determining the existence of a through route *where no traffic*

[8] *United States* v. *Great Northern Ry. Co.*, 343 U.S. 562.

passes over the route" citing the *Thompson* case "it is not questioned that through routes over the Montana Western and appellee's lines long have been in existence." (Emphasis supplied)

It is clear therefore that the Court in deciding the *Great Northern* case treated the *Thompson* case as one based on particular facts—a case involving an alleged route as to which no joint rates had ever been applicable, and over which no traffic moved. On the other hand the facts establishing a through route in the *Great Northern* case are strikingly similar to those in the instant case, but we suggest not nearly so conclusive. Here in addition to the combination rates applicable to a variety of commodities, *joint rates* now exist over the routes involved for the transportation of sheep and goats, and joint rates earlier existed with respect to other commodities. In refutation, the Union Pacific can only rely on the fact that its cancelation of the earlier joint rates—but not the routes—simply reduced the volume of transportation over the routes involved.

Contentions advanced by Government Appellants (No. 334)

The brief submitted on behalf of the United States and the Commission, contains a realistic summary of the law bearing on the question of the existence of through routes —a question which is there characterized as a ". . . vexing problem—one which has occupied the attention of the Congress, the Commission, and the courts for a good many years. . . ." (Govt. Br. p. 60.)

Although seemingly contrary to the views of the Union Pacific the government appellants recognize that the Court's opinion in the *Thompson* case involved a case ". . . concededly . . . distinguishable on its facts" (Govt. Br. pp. 49-50), yet the government seeks to urge that a similar conclusion should here be reached.

We differ also with the rationale of the conclusions reached by the government. At one point it is suggested

that the Commission's judgment on the question "largely factual in nature," of the existence of through routes, "is plainly entitled to great weight and should not be disturbed unless found to be arbitrary." Whether or not in respect to this type of question such a suggestion is usually pertinent, it should not be accepted in the instant case, where as found by the Colorado court *only five of the ten* Commissioners participating in the decision held that through routes did not exist.[9]

At pages 69-70 of their brief government appellants in stating that the Union Pacific never solicited shipments for movement over the Rio Grande, suggest that the record shows the shipments it accepted were so routed through "ignorance or inadvertance of shippers or originating carriers." In reply to this statement it is appropriate to suggest that if the course of business of the Union Pacific was thus so unascertainable, it cannot be understood as having legally and factually closed the route to through shipments. The existence of published rates unrestricted as to through transportation, clearly made the routes available to all the public. In the same vein, if the Union Pacific's "whole course of conduct . . . so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic," (Gov't. Br. p. 73)—why, it is pertinent to ask, did the Union Pacific fail to legally and factually close the through routes, and paradoxically publish rates unrestricted as to through transportation, and accept shipments over such routes?

The government further suggests that the "holding-out" by the Union Pacific to perform through transportation of sheep and goats by its publication of *joint through rates* for their transportation, does not warrant a holding-out to perform through transportation of other commodities. (Gov't. Br. pp. 73-74). We suggest that the correct answer is that the "holding-out" is clearly evident by the showing

[9] See opening brief for the Rio Grande pp. 50-52.

of acceptance of through shipments. The willingness to move sheep and goats at competitive joint through rates, and other commodities at through combination rates clearly proves the basic issue that through routes exist. The disinclination of the Union Pacific to move most commodities on rates equal to those applying over its other routes cannot be used as the sole criteria to support a conclusion that such routes are not in existence.

Much of the argument in the government brief is of course directed to supporting the theories advanced by the Commission in the report subscribed to by five of the ten participating Commissioners. These five Commissioners must be understood as supporting the theory that a finding that through routes exist, was tantamount to short hauling the Union Pacific. Such a view is clearly contrary to the holding of this Court in the *Great Northern* case, where it is said "... the establishment of joint rates is an act separate and distinct under the statute from the establishment of through routes." (343 U.S. 573) Thus the mere finding that through routes existed, as was alleged by the Rio Grande in its complaint to the Commission, would not grant the relief it or interested shippers seek. This is no more clearly shown than by the fact that routes are admitted to be open and available to shippers who are willing to pay the higher charges applicable. Obviously, therefore, it is the level of rates which is the impediment to full utilization of the routes. To what degree this impediment is to be removed is a question which remains unanswered by the Commission, and which the Colorado court's judgment requires the Commission to determine free of the limitations of section 15 (4).

Brief reference would seem appropriate to the basic criteria available for disposition of this question, as relied on by the Court in the two much discussed recent decisions in the *Thompson* and *Great Northern* cases. In *Through*

Routes and Through Rates, 12 I.C.C. 163, 167, the Commission said:

> "Therefore, it is settled that, whatever other facts or incidents of a shipment may serve to prove the existence of a through route, a through bill of lading is, as to the carriers recognizing it, *conclusive evidence* of the existence of such through route." (Emphasis supplied)

In the light of this standard, the acceptance by the Union Pacific of through shipments on through bills of lading becomes highly significant.

At page 165 of the report in the above-cited proceeding the Commission said:

> "A joint rate is simply a through rate, every part of which has been made by express agreement between the carriers making the through route. *The joint rate is a rate of a through route*, but it not the only through rate recognized by the Act and the decisions. (Emphasis supplied)

In the light of this statement the "holding-out" of the Union Pacific to accept through shipments of sheep and goats at *joint rates* is equally highly significant.

We submit these facts are critical in the determination of this question. The court in the *Great Northern* and *Thompson* cases reiterated the substance of the Commission's conclusions in its *Through Routes and Through Rates* proceeding, supra, stating—

> "In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service."

The government appellants like other defendants find themselves in the position of contending that the *volume* of movements rather than the *fact* of such movements, rep-

resents the conclusive element in determining whether through routes exist.

This position is practically a restatement of the position which the Commission was ultimately forced to take when it concluded that the routes are *legally existent but commercially closed*. What is the legal significance of such a conclusion as affecting the determination of the issue relating to the *existence* of through routes?

To attribute it any legal significance, is to assume that the Commission believed that if it made a finding that the routes were open and available, it also believed that this alone would make such routes commercially competitive with other routes. Although this is clearly erroneous, because as the Court said in the *Great Northern* case, "the establishment of joint rates is an act separate and distinct from the establishment of through routes," and there thus remained the further question whether the Commission would establish competitive joint rates for all or any commodities, it would appear from other statements in the "majority" report of the Commission that such was its thinking. Pursuing this faulty reasoning the Commission stated that it would be error to hold that evidence of a few shipments could justify a finding of through routes because

> "Any other holding would constitute an open invitation for any shipper to set aside the provisions of section 15(3) and (4) of the Act simply by preliminarily making a shipment or two over a route sought to be opened commercially. . . ." (R. p. 65)

Whether or not the acceptance by a carrier of a few shipments over a route, clearly not the situation here, would justify a finding of the existence of a through route, it is apparent that such a finding would not as the Commission suggests "set aside the provisions of section 15 (3)" of the Act, and there would still remain, as here, the question whether the rates applicable should be modified.

The finding by the Court of existing through routes was crucial to its ultimate disposition of the *Great Northern* case, and it is equally important here. The further question as to what extent the through routes shall be made available to shippers at *competitive joint rates* is the question which when answered will determine to what degree such routes are to be competitive with other existing routes. This question the Commission did not reach because, by the above-described line of faulty reasoning it believed that the provisions of section 15 (4) precluded it from making such a finding.

Consequently the determination of the existence of through routes should have been made without consideration of the provisions of section 15 (4), but on the basis of the criteria clearly set forth in the *Thompson* and *Great Northern* cases and other authorities therein cited. The Commission obviously erroneously confused its power to find through routes with that relating to the establishment of joint rates.

Thus there was complete support for the finding by the Colorado court that the failure of the Commission to find free of the limitations of section 15 (4), that through routes existed, prejudiced the entire proceeding.

Other contentions advanced by the government and other appellants bearing on the issue of through routes, we submit are adequately answered by the foregoing comments and by the briefs submitted by the Rio Grande, and further discussion here is unnecessary.

CONCLUSION

For the reasons stated here and in the briefs submitted by the Rio Grande, The American Short Line Railroad Association respectfully submits that the decision of the United States District Court for the District of Colorado, involved in appeals Nos. 332, 333 and 334 should be affirmed,

with directions to the Interstate Commerce Commission that it proceed to a determination of the issues on the basis that through routes via the Ogden gateway are in existence, and that the Rio Grande is entitled to have the evidence considered and the case decided by the Commission free of the limitations of Section 15 (4).

Respectfully submitted,

WILLIAM J. HICKEY

BRIEF OF THE PUBLIC SERVICE COMMISSION OF UTAH, THE PUBLIC UTILITIES COMMISSION OF THE STATE OF COLORADO, ET AL, INTERVENING APPELLEES IN CASES No. 332, 333, and 334.

JOHN R. BARRY,
738 Majestic Building, Denver, Colorado
Counsel of Record for Appellees.

rates and charges via the route of the Rio Grande, through its Colorado and Utah gateways, between (a.) points on the Union Pacific Railroad and its connections north and west of Ogden, and in Idaho, Montana, Oregon, Washington and British Columbia, and, (b.) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad, Colorado, and points east thereof, and between Utah common points, such as Salt Lake City, Ogden and Provo, Utah, and the northwest territory served by the Union Pacific Railroad and its connections.

The intervening plaintiffs herein participated in the proceedings before the Commission as intervenors, or as interested parties, and testified as to the need for joint rates as requested by the Complaint of the Rio Grande.

The hearings were had in 1949 and 1950 at Salt Lake City, Boise, Idaho, and Cheyenne, Wyoming, before an examiner of the Interstate Commerce Commission. In December, 1950, the examiner submitted his proposed report and order, and found that the Ogden gateway should be opened for all traffic, both East and West, originating or terminating in the so-called "Closed Door Territory." Among other things the examiner's report found:

> "The record clearly shows that shippers and receivers of freight in localities and districts in Colorado and in Utah depending for railroad service solely upon the Rio Grande are unduly handicapped by the lack of such transportation arrangements and facilities, at joint through rates, which have become of great importance in modern merchandising. Establishment of joint through rates from and to points in the Northwest on the Union Pacific and its connections via Salt Lake City or Ogden in connection with the Rio Grande to and from Utah common points and to and from Colorado common points and points east thereof, are necessary and desirable in the public interest to permit communities located only upon the Rio Grande

to be adequately served by that railroad as part of the national transportation system."

Subsequently the Commission set this matter for oral argument after the submission of briefs by all parties. Argument was had, and the case was then re-argued approximately a year later. On January 12, 1953, the Commission in a divided opinion handed down its order relative to the issues being adjudicated herein, both the Rio Grande and the Union Pacific and their intervenors appealed this decision of the Commission to statutory three-man courts in Nebraska and Colorado.

Intervenors, in supporting the Rio Grande, did not participate in the Nebraska case, but did appear, submit briefs and argue the matter in the Colorado case.[3]

QUESTIONS PRESENTED

1. Whether the Colorado Court erred in setting aside the order of the Interstate Commerce Commission on the grounds that the Commission erred as a matter of law in failing to find that through routes were already in existence and, therefore, applying an improper statutory standard in determining whether or not competitive joint rates should be prescribed as to all commodities moving over the Rio Grande and through the Ogden Gateway.

STATUTES INVOLVED

These appeals involve the following statutes:

The Interstate Commerce Act, Title 49 U.S.C., particularly the declaration of National Transportation Policy (preceding Section 1), and Sections 1(4), 1(5), 1(15), 3(1), 3(4), 6(1), 13(1), 15(1), 15(3), 15(4), and 15(8).

SUMMARY OF ARGUMENT

The statutory declaration of national transportation policy, (U.S. Code, Title 49) as set out by the Congress of the

United States, provides among other things that there shall be "... fair and impartial regulation of all modes of transportation, subject to the provisions of this Act (Chapters 1, 8, 12 and 13 of this Title), so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical and efficient service, and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services without unjust discriminations, undue preferences or advantages or unfair or destructive competitive practices; . . ."

Section 1(4)—Title 49

"It shall be the duty of every common carrier, subject to this chapter, to provide and furnish transportation upon reasonable requests therefor, and to establish reasonable through routes with such carriers, and just and reasonable rates, fares, and charges and classifications applicable thereto; . . ."

The intervening parties herein seek through this case to obtain the transportation services which they feel they are entitled to as a matter of right, which right has been enunciated and promulgated by the Congress of the United States.

ARGUMENT

(A) The Colorado Case

The Colorado case involves the question of whether the Colorado Court was correct when it found that the Interstate Commerce Commission, in its majority opinion, did not properly apply the law to the facts as demonstrated by the record. This court in *Shield v. Utah, Idaho, Central Railway Company*, 305 U.S. 177, through Justice Holmes, speaking for the Court, set out the test, which must be followed in matters appealed from the Interstate Commerce Commission. In that case, he said:

> "The condition which Congress imposed was that the Commission should make its determination after

hearing. There is no question that the Commission did give a hearing. Respondent appeared and the evidence which it offered was received and considered. The sole remaining question would be whether the Commission in arriving at its determination departed from the applicable rules of law and whether its finding had a basis in substantial evidence or was arbitrary and capricious. Id. That question must be determined upon the evidence produced before the Commission."

The Colorado Court concluded that the Commission's majority opinion misapplied the law as laid down in the case of *Thompson v. United States*, 343 U.S. 549, 556, 72 Supreme Court 978, or misapplied the facts as applicable to the law enunciated by the Thompson case. The Colorado Court said:

> "'We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding." *Denver and Rio Grande Western R. R. Company v. United States*, 131 Federal Supp. 372, see 379.

The Colorado Court in applying the facts as disclosed by the record, to the applicable law, found that through routes do exist between the Rio Grande and the Union Pacific at Ogden. This fact was shown by the statements of counsel and witnesses for the Union Pacific, as well as by the commodities which were shipped over the through route. The Colorado Court adopted the following test in determining this fact:

> "In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves

out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." *Rio Grande Western R. R. Company v. United States*, 131 Federal Supp. 378.

To substantiate the application of this test by the Colorado Court, we wish to point out to this Court the direct testimony of one witness at the original hearing in dealing with the commodities shipped over the through route, which the Colorado Court found in existence.

Testimony of Herbert P. Heidel, of the Lincoln Packing Division of the American Stores:

"Q. There is a joint through rate published by the Union Pacific, and applicable by the Union Pacific, to Denver, or through Denver, and thence via any one of the three railroads that operate from Denver to Pueblo, is it not?

"A. That is right.

"Q. Then there are combination rates via Ogden, Utah, if the lambs move Union Pacific to Ogden, and then Denver and Rio Grande to Pueblo?

"A. That is right.

"Q. Which of those routes have you been using in the past years?

"A. In the past year, we used the rate from Ogden direct to Pueblo.

"Q. Does that make a higher per car charge than if you used the Union Pacific through Denver to Pueblo?

"A. It does.

"Q. Do you have any rough idea how much that would average per car?

"A. It averages about $70.00 to $80.00, I would say roughly, depending on the tonnage of the car handled.

"Q. Why do you use the Rio Grande route in view of that extra charge?

"A. Our experience in the past years indicated that we would be able to get delivery of the lambs more rapidly, and thus suffer less shrink, by using the D&RG from Ogden to Pueblo direct.

"Q. Is that because of the necessity of stopping the cars oftener when they move via Union Pacific for feed, then when they move via Ogden and the Rio Grande?

"A. If we move Ogden and the Rio Grande, we do not have to stop to feed between Ogden and Pueblo, that is right.

"Q. What happens if you move via the Union Pacific?

"A. With very few exceptions, we at least have to feed at Denver.

"Q. Do you buy these lambs on the Ogden market?

"A. A good portion of them, yes, sir." (R. 1 P. 412, 416.)

This direct testimony, we feel, is basic and certainly takes this case out from under the rule in the Thompson case, which the Interstate Commerce Commission misapplied in their order of January 12, 1953:

(B) Arbitrary Nature of Commission Order

The Commission's order is as follows:

"That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads,

from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, at Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

This order indicates a lack of comprehension of the essential issues, or a compromise as to what the record disclosed when the Commissioners voted on this issue, because the commodities which the Commission did order the Union Pacific to file joint through rates on, are of such a divergent nature that they give rise to the suspicion that an illogical approach was made to the problem.

For example, a classification of livestock could be reasonable, a classification of fresh fruits and vegetables could be reasonable, frozen foods, poultry, butter and eggs, all of which commodities are of a perishable nature, would be a reasonable classification, but when the Commission, in conjunction with these perishable commodities, included dried beans, wheat and granite and marble monuments, the order becomes arbitrary and capricious.

The Interstate Commerce Commisssion is clothed with the duty and the obligation to implement the necessary administrative machinery and to protect these rights for the good of all of the shipping public and for the public interest.

The crying inequity of the Ogden situation is simply this. The Rio Grande Railroad operates generally between Denver

and Pueblo, Colorado, on the east, and Ogden, Utah, on the west. It traverses a vast segment of the state of Colorado and nearly all of the state of Utah, and in a sense parallels transcontinentally the Union Pacific to the north and the Santa Fe Railroad to the south.

Large numbers of people and many communities, local distribution points, and agricultural marketing centers are wholly dependent upon the Rio Grande for rail service; the pity being that even though the Rio Grande is ready, willing and able to do its duty for these shippers, it is precluded and prevented and estopped from rendering the type and kind of service which is essential to modern merchandising because the defendant, Union Pacific Railroad (which does not serve this territory at all), has failed and refused and continues to fail and refuse to enter into joint through rates on traffic moving over the Ogden gateway.

(C) Classification of Shippers and Needs

The intervening complainants can be classified into three groups, and by enumeration no preference for one as to the other is intended. Group one constitutes the shippers who reside north and west of Ogden, Utah, and are served by the Union Pacific Railroad. Group two consists of the shippers residing in Rio Grande territory between Ogden, Utah, on the one hand and Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad, Colorado, on the other hand. The third group consists of the shippers who reside south and east of the Colorado common points and are dependent upon other railroads for service, such as the Santa Fe, the Missouri Pacific, Rock Island, Colorado and Southern, and the Burlington.

Since these three groups have separate and distinct problems, we will treat them separately.

1. The requirements of agricultural shippers in the so-called "Closed Door Territory," consisting of points and places

north and west of Ogden, Utah, are such that they need—and the record amply demonstrates that they must have—rail service at joint competitive rates via the Rio Grande and its connections at the Colorado common points, in order that they may merchandise their products throughout the United States and not be excluded from any geographical section of the country.

Potatoes, fruit, livestock, wheat, beans and other commodities need to be moved from this territory.

For some unknown reason the Commission failed and refused to afford favorable consideration to lumber. This to us seems incomprehensible because the "Closed Door Territory" comprises the largest lumber producing section of the United States and there is adequate evidence in the record to demonstrate the need for lumber to move via the Rio Grande at competitive rates. The Commission's failure to include lumber was responsible for Commissioner Patterson submitting a concurring opinion relative thereto.

2. The second group consists of those people who reside along, or are served by, the Rio Grande Railroad, between Denver and Pueblo, Colorado, and Ogden, Utah. As heretofore stated, this constitutes a large segment of the geographical portions of these two states. Furthermore, it represents a territory which is rich in natural resources, abundant with agricultural production, and is today vital to the national defense of this nation.

We take the liberty to point this up because this record was originally made in 1949 and 1950. We feel that this court can take judicial notice of the fact that western Colorado and eastern Utah are the principal producers and processors of the essential ingredients of atomic or fissionable materials. Certainly this area, which is served by the Rio Grande Railroad only, should be afforded the same type and kind of transportation which the Union Pacific to the north affords to the peoples and communities which it serves.

Basically the Public Utilities Commissions of the state of Colorado and the state of Utah recognize the need for joint through rates on any and all commodities which may have occasion to move into or out of this territory, and to that end intervened in behalf of the Rio Grande Railroad in this proceeding, because they felt that the opening of the Ogden gate way would best serve the public interest, which it is their duty to protect.

3. The last or third group comprises those people who are served by connecting railroads, that is railroads which connect with the Rio Grande at Denver, Colorado Springs, Pueblo and Trinidad. These railroads are the Santa Fe, the Missouri Pacific, the Rock Island, the Burlington and Colorado and Southern Denver and Fort Worth. These railroads serve the vast area between the Colorado common points, Missouri River points, Texas points, Mississippi River points, as well as connections from Illinois. Since all of these roads have their western terminus in Colorado (except the Santa Fe, which proceeds to southern California), it seems self evident that the transportation policy of this nation should be implemented to the extent that traffic moving via any of these roads will not be dead-ended, so to speak, on the west at the Colorado common points, or that at best be penalized by being required to carry a combination of local freight rates if such traffic moves westward beyond the Colorado common points.

CONCLUSION

This case has been before the Interstate Commerce Commission and the courts of this nation since 1949.

Exhaustive hearings have been had, briefs have been written, arguments have been made on both sides. The examiner, who was the tryer of the facts, held in favor of the Rio Grande and recommended that full relief be granted to the Rio Grande. The Commission, or at least a majority thereof, misapplied the law and granted only limited relief. The two statutory courts handed down divergent opinions.

The defendant, Union Pacific, has spread a tale of woe across this whole picture during all of this time, but the basic fact remains that the shipping public, whose interest is paramount, have not been afforded the relief which they are entitled to; relief which the national transportation policy of this country decrees they should have; relief which the Interstate Commerce Commission has the power to grant. Therefor, for the foregoing reasons the judgment of the District Court of the state of Colorado should be sustained, and the case should be remanded to the Interstate Commerce Commission to make findings in conformance with its duty under the law.

Respectfully submitted,

JOHN R. BARRY,

Denver 2, Colorado

Counsel of Record for
the Appellees, Intervening
in Cases No. 332,
333, and 334

PROOF OF SERVICE

I, John R. Barry, one of counsel of record for Intervenors herein and a member of the Bar of the Supreme Court of the United States, hereby certify that on the 14th day of April, 1956, I served, on behalf of the Intervenors herein, copies of the foregoing Brief of Intervening Plaintiffs on the several parties to the appeals in Nos. 332, 333, and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

and with first-class postage prepaid to:

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado.

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah.

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

and with first-class postage prepaid to:

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

4. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Henry Zarlengo, Esq.
Assistant Attorney General
State of Colorado
Denver, Colorado

5. Peter M. Lowe,
Assistant Att. General of Utah
State Capitol, Salt Lake City, Utah

6. On Brotherhood Committees of employees of The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with first-class postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

STATEMENT AS TO JURISDICTION

In compliance with Rules 13 and 15, Revised Rules of the Supreme Court of the United States (effective July 1, 1954), appellants, Union Pacific Railroad Company; Chicago and North Western Railway Company; Chicago, St. Paul, Minneapolis & Omaha Railway Company; Northern Pacific Railway Company; Great Northern Railway Company; The Atchison, Topeka and Santa Fe Railway Company; and Wabash Railroad Company, submit herewith their statement particularly disclosing the basis upon which this Court has jurisdiction on appeal to review the judgment of the district court entered in this case on February 14, 1955, following which that court modified its opinion and entered an order on April

22, 1955, overruling and denying motion for new trial or reargument and reconsideration.

Opinion Below

The report of the Interstate Commerce Commission is found in 287 I. C. C. 611, and is attached hereto as Appendix B. The opinion of the three-judge district court was filed January 13, 1955, and has not been reported, but is attached hereto as Appendix D. The opinion, by the court's order entered April 22, 1955, was "modified by substituting for pages 14, 29, 31, 32 and 36 thereof" rewritten pages bearing the same numbers. Copy of that order and the rewritten pages are attached hereto as Appendix E. The court made no separate findings of fact or conclusions of law.

Jurisdiction

This action was brought in the United States District Court for the District of Colorado by The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") against the United States of America and the Interstate Commerce Commission, pursuant to 28 U. S. C. 1336, 1398, 2284 and 2321-2325, to enjoin, annul, suspend and set aside "in part" an alleged "order" issued January 12, 1953, by the Commission in a proceeding entitled "Docket No. 30297, Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co. et al." These appellants and the public service commissions of Washington, Oregon, Montana, Wyoming and Nebraska intervened as defendants in the district court.

The order was issued upon complaint filed with the Commission by the Rio Grande for the admitted purpose

of improving its financial condition by diverting traffic and revenues to its line from Union Pacific routes. The Rio Grande claimed that through routes via its line had "existed" many years for the traffic concerned, and that the prohibition in Section 15(4) of the Act against short-hauling existing routes did not apply. (See App. H, p. 4.) It demanded that joint rates be established via its line "the same" as joint rates maintained over shorter through routes by the Union Pacific and other defendant railroads named in the complaint for about 172,000 carloads of traffic moved annually by those railroads for more than 75 years between points in the northwest area and points in the eastern and southern parts of the country described in the order.[1] The order issued by the Commission (copy attached hereto as Appendix C) requires, among other things, that these appellants and over 200 other railroads establish through routes and joint rates in connection with the Rio Grande "the same" as the joint rates maintained by them on the several commodities named in the order, which comprise about 57,000 carloads, or one-third of the traffic annually that the Rio Grande seeks to divert over its line, short-hauling the Union Pacific at least 925 miles and subjecting it and others of these appellants to large revenue losses.[2]

But the Commission did not order through routes and joint rates on about two-thirds of the traffic, and it

---

1 The lines and termini of the Union Pacific and the Rio Grande (main line) are indicated on the map attached hereto as Appendix A. Figures in the oblongs on the map show the number of additional miles shipments would move via the Rio Grande compared to mileage via existing Union Pacific routes.

2 The validity of the order issued is now before this Court in Nos. 117, 118, and 119, appeals docketed May 31, 1955, from the final decree of the United States District Court for the District of Nebraska.

is the Commission's *failure to order* through routes and joint rates on the remaining two-thirds of the traffic which the Rio Grande seeks to annul and enjoin in this case. Such failure is not embraced in the order issued or in any "order" of the Commission.

Several shipper organizations, interested in obtaining financial benefit of a reduction in rates via the Rio Grande to the level of the joint rates over the shorter Union Pacific routes, intervened before the Commission and as plaintiffs in the district court.

The case presents the novel and unique situation of an admitted attempt by the Rio Grande through judicial proceedings to further enhance its financial gains by diverting to its longer line for a "bridge" haul, traffic that originates or terminates on the railroads that have the shortest, fastest and most efficient routes and lowest rates between the points at which the traffic originates and points of its destination.

Final judgment and decree of the specially constituted three-judge district court, dated February 1, 1955, was entered February 14, 1955, annulling and setting aside the Commission's alleged order "insofar as it denied and withheld relief to the plaintiff and intervening plaintiffs". On April 22, 1955, the district court entered an order in which it overruled and denied a motion of these appellants and others for new trial or reargument and reconsideration. Copies of the final judgment and decree and the order entered April 22, 1955 denying that motion are attached hereto as Appendices F and G.

Notice of appeal was filed by these appellants in the United States District Court for the District of Colo-

rado on June 20, 1955. On that date notices of appeal were also filed by the United States, the Interstate Commerce Commission and the States of Washington, Oregon, Montana, Wyoming and Nebraska.

The jurisdiction of this Court to review the judgment by direct appeal is conferred by 28 U. S. C. 1253 and 2101(b).

The following decisions sustain the jurisdiction of this Court to review the judgment in this case on direct appeal: *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522; *Edward Hines Trustees v. U. S.*, 263 U. S. 143; *Sprunt & Son v. United States*, 281 U. S. 249; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479; *Moffat Tunnel League v. U. S.*, 289 U. S. 113; *United States v. Mo. Pac. R. Co.*, 278 U. S. 269; *U. S. v. Great Northern R. Co.*, 343 U. S. 562; *Thompson v. United States*, 343 U. S. 549; (see also *Interstate Comm. Comm. v. Nor. Pac. Ry.*, 216 U. S. 538).

Statutes Involved

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out verbatim in Appendix H hereto:

National Transportation Policy (preceding Section 1), and Sections 1(4), 3(4), 15(1), 15(3) and 15(4).

Questions Presented

As stated, the Rio Grande contended before the Commission that through routes at the combination or sum of local rates already existed via its line for the traffic it seeks, and demanded that the lower joint rates maintained over the existing Union Pacific routes be made ap-

plicable via its line. The Commission held that through routes via the Rio Grande did not exist for the involved traffic but found they were necessary in the public interest to provide adequate and more economic transportation (Section 15(4)(b), App. H, p. 4) for certain commodities named in the order, which comprise about one-third of the total volume of traffic, and required that the joint rates maintained over existing Union Pacific routes be made applicable via the Rio Grande to those commodities. The Commission concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained." The order issued does not, in terms, deny or withhold anything, nor does it make any reference to the remaining two-thirds of the traffic the Rio Grande seeks to divert to its line.

For the purpose of having the Commission order through routes and joint rates via its line on the remaining two-thirds of the traffic, the Rio Grande brought this suit to enjoin and annul the Commission's *failure* to include that two-thirds of the traffic in the order it issued.

The district court overruled a motion to dismiss the case on the ground that, as the Rio Grande admittedly has no legal or other right to the traffic it seeks to divert to its line for its financial gain, it has no standing to maintain the suit. The court held that through routes via the Rio Grande do exist for the involved traffic and that the Commission had erred as a matter of law and upon the evidence in finding that through routes via the Rio Grande did not exist. The court enjoined and annulled "the order" insofar as it denied and withheld relief from the Rio Grande, and to that extent, it "remanded" the case to the Commission for further proceedings in conformity with the court's opinion.

The following questions are presented by this appeal:

(1) Whether the court erred in refusing to dismiss the Rio Grande's complaint and intervening complaints on the ground that, as the Commission's failure to order through routes and joint rates on *all* instead of only a part of the traffic is not an "order" or a part of any order issued by the Commission, there is no jurisdictional basis for judicial review.

(2) Whether the district court erred in holding that plaintiff, the Rio Grande, admittedly lacking any legal or other right to traffic it seeks to divert to its line from other carriers, has standing to maintain this suit for the purpose of obtaining a "pecuniary profit" from that part of the traffic for which the Commission failed to order through routes and joint rates via the Rio Grande.

(3) Whether the court erred in making its own administrative finding that, "under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines", contrary to the Commission's finding that the evidence did not prove discrimination, and erred further in relying upon its own administrative finding to sustain the standing of the Rio Grande to maintain this suit.

(4) Whether the court erred in holding, in effect, that the Commission's finding that the evidence failed to prove discrimination against the Rio Grande and its failure to order through routes and joint rates on *all* instead of a part of the traffic, amounts to the denial

of a right given the Rio Grande by the [Interstate Commerce] Act adversely affecting its traffic and revenues, causing it to suffer pecuniary injury, and giving it "a right to judicial review of the order".

(5) Whether, in resting its decision that the Rio Grande has standing to maintain this suit upon several hypothetical or "if" propositions, the court erred in ignoring or giving no effect to the fact that, after full hearings and thorough consideration of the evidence, the Commission found that, except to the extent indicated in its findings, the evidence failed to prove discrimination against the Rio Grande or that through routes and joint rates by the Rio Grande are necessary in the public interest to provide adequate and more economic transportation, and concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained".

(6) Whether the court erred in failing to hold that neither the Rio Grande nor intervening plaintiffs had standing to maintain this suit.

(7) Whether the court erred in holding that the Commission's finding that "there are at present no through routes, as that term is used in the Act", over the Rio Grande via Ogden or Salt Lake City "on the traffic here concerned" is not supported by substantial evidence and is erroneous as a matter of law, and whether the court further erred in its own holding that the existence of such through routes is established by the evidence and the law.

(8) Whether, in holding that through routes for the "bridge" traffic here concerned were in existence via the

Rio Grande, the court erred in refusing to consider the fact that the evidence showed through movement of only one shipment of non-emergency traffic via the Rio Grande over each of only 17 of the many hundreds of thousands of through routes of which the Rio Grande claims to be a part between the 2,900 railroad stations in the northwest area and the 39,000 stations in the eastern and southern parts of the country.

(9) Whether, in holding that through routes were in existence via the Rio Grande for the traffic here concerned, the court erred in failing and refusing to indicate or specify the through routes held to be in existence via the Rio Grande or the termini of, or the railroads comprising such through routes, or the commodities for which the court holds that through routes exist via the Rio Grande.

(10) Whether, in view of the fact that the Commission overcame the short haul prohibition in Section 15(4) by ordering through routes and joint rates on all the commodities it considered upon the evidence to be necessary in the public interest, the court erred in holding that the Rio Grande and the "entire proceeding" were "prejudiced" by the Commission's finding that through routes did not already exist via the Rio Grande for the traffic it seeks.

(11) Whether, if the last preceding question is answered negatively, the court erred in annulling and setting aside "the order" *only* "insofar as it denied and withheld relief" to the Rio Grande.

(12) Whether the court erred in holding that the Rio Grande was entitled to have the Commission, in de-

terminating whether joint rates via the Rio Grande should be required "apply the provisions of §1(4), §3(4), §15(1) and §15(3) of the Act, free of any of the limitations imposed by §15(4) with respect to establishing through routes".

(13) Whether the court exceeded its powers in making its own finding that the evidence proved discrimination against the Rio Grande, and thereupon in "remanding" the case to the Commission "for further proceedings in conformity with the opinion and judgment of this Court".

(14) Whether the court erred in failing to consider and review the entire record and all the issues tendered in briefs and arguments of the parties.

Statement of the Case

The Rio Grande operates a short-line railroad with its eastern termini at Denver, Pueblo and Trinidad, Colorado, and its western terminus at Ogden, Utah, the distance between Denver and Ogden being 607 miles via its main line, and 782 miles via Pueblo. Its history has been essentially one of financial difficulty and of bankruptcy. It has been a "financial needs" railroad throughout most of its existence.[3] Its mountainous location and tortuous physical features have resulted in "operating conditions on the Rio Grande" that are "more onerous than those on the lines of the Union Pacific" or any other transcontinental railroad (App. B, p. 74), and caused the Commission in prior cases to grant the Rio Grande's demands for higher rates, based on its "financial neces-

sities", than rates prescribed for other western railroads.[4]

Constructed in 1870 as a narrow-gage line and converted to standard gage in 1890, the "Rio Grande was built for the purpose of handling the local business tributary to its line"[5] but its management soon determined to enhance its financial position by diverting traffic from other lines for a "bridge"[6] haul over its line, including transcontinental Pacific Coast traffic moving over the Union Pacific-Central (now Southern) Pacific route, construction of which had been completed from Council Bluffs, Iowa, through Ogden, Utah, to Oakland, California, in 1869.

Concentrating on its purpose to enhance its financial position by diverting traffic and revenues from other railroads, the Rio Grande's revenues from "bridge" traffic increased over 326 per cent in the 15-year period ending with 1948, while traffic originated and terminated on its line increased only 155 per cent and its local traf-

5 *Commercial Club, Salt Lake City v. A.T. & S.F. Ry., supra*, P. 221.

6 The term "bridge traffic" is used to designate traffic hauled by a carrier on whose line the traffic neither originates nor terminates. A "bridge haul" is the transportation of such "bridge" traffic some part of the distance between its point of origin and its final destination. "Bridge" traffic is most attractive because it is generally least expensive to haul since the "bridge" carrier performs none of the expensive branch line, gathering or switching services required at the point of origin and point of final destination. The Rio Grande's President testified that the reason it is pressing for more "bridge" traffic is that "there is more money in it" than in traffic it originates or terminates.

The traffic the Rio Grande seeks to divert to its line is "bridge" traffic which originates and terminates outside of Rio Grande territory. Joint rates already apply to traffic originated at or destined to points on the Rio Grande.

fic originating and terminating at points on its line was less annually throughout that period than during the period 1924-1929.

Further pursuing its "bridge" traffic policy, the Rio Grande filed its complaint with the Commission in this case on August 1, 1949. Although the complaint alleged violations of Sections 1(4), 3, 15(1) and 15(3) of the Interstate Commerce Act, the Rio Grande's President testified that the complaint was filed for the purpose of improving and enhancing its financial position by diverting for a "bridge" haul over its line so much as it can of about 172,000 carloads annually of transcontinental freight traffic now and for some 75 years moved under joint transcontinental rates[7] over through routes which include lines of the Southern Pacific, Great Northern, Union Pacific, Northern Pacific and Milwaukee railroads (designated herein as "Union Pacific routes") between points in the northwestern states of Oregon, Washington, Montana, Idaho and Utah, north of Ogden (designated in this statement as "northwest area"), and points in the eastern and southern parts of the United States, generally east of the Missouri and Mississippi rivers, including points on the Atlantic and the Gulf coasts.[8]

---

7 "Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions." (App. B, p. 6.)

8 The Commission found that the traffic the Rio Grande seeks to divert to its line in this case ordinarily moves over the Union Pacific through Wyming and Nebraska to and from Missouri River gateways rather than over the Rio Grande, "because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande" for that traffic. (App. B, p. 21.)

These joint rates do not apply via the Rio Grande, except in connection with routes over the Southern Pacific to Ogden and over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City, on traffic to and from that part of the northwest area lying north of the southern boundary of Oregon and west of the irregular black line shown near the left or west end of the map attached hereto as Appendix A. The joint rates over Union Pacific routes are lower than the combination or sum of the local rates that would have to be charged if the traffic moved via the Rio Grande.

The Rio Grande demanded before the Commission that its line be included in all of the multitude of through routes of other railroads to and from the northwest area over which the joint rates are applicable, despite the fact it has no trackage and performs no service in that area; that any route via the Rio Grande for movement of the involved traffic would be from 33 to 219 miles longer than the Union Pacific (see figures in oblongs on map, Appendix A hereto), and would range from 33 percent to more than 50 percent longer than routes maintained by the Union Pacific with other railroads; that movement of the traffic over the Rio Grande as a "bridge" line would require at least 24 hours more time and one or two more terminal interchanges between carriers, and would short haul the Union Pacific and other railroads 925 miles.

Consistent with the protection afforded by Section 15(4) of the Act against short-hauling, and having their own direct and shorter routes, the Union Pacific and other roads serving the northwest area have always insisted,

with immaterial exceptions, upon retaining their long hauls on traffic to and from that area.[9]

No complaint has ever been filed by shippers or the public or by any state public service commission demanding the longer through routes and joint rates sought by the Rio Grande.

After lengthy hearings, a proposed report of its examiner recommending the granting of the Rio Grande's full demands, exceptions to that report, two oral arguments before the full Commission, it issued the order herein assailed, January 12, 1953. Petitions for reconsideration were denied June 10, 1953.

The order (App. C, hereto) requires the Union Pacific and numerous other railroads, whose connecting lines form through routes extending from the Pacific to the Atlantic and Gulf coasts, to establish through routes with the Rio Grande and "the same" joint rates maintained on Union Pacific routes on westbound carloads of granite and marble monuments from Vermont and Georgia to points in the northwest area and on eastbound carloads of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from points in the northwest area to points in the eastern and southern parts of the country, indicated

---

9 Union Pacific and some of the other railroad appellants have served the northwest for more than 75 years. Union Pacific now owns and operates 5,606.7 miles of railroad in that area, of which 2,913.19 miles, or over 50 per cent, consist of numerous branch lines extending from and serving as "feeders" to its main lines. About 50 per cent of the traffic the Rio Grande wants routed via its line originates and terminates on these branch lines. The Rio Grande demands and the effect of the order is that, all these main and branch lines serve as "feeders" of bridge traffic to its line.

above. These articles comprise about 57,000 carloads annually, or a third of the total volume of the traffic the Rio Grande seeks to divert to its line. Diversion of the traffic permitted by the order would result in a potential estimated revenue loss to the Union Pacific alone of more than $1,000,000 annually, and in very large losses to others of the railroad appellants.

The order does not require through routes and joint rates with the Rio Grande on the remaining two-thirds of the traffic, and the Rio Grande's purpose in this suit is to enhance its financial gains still further by having the Commission require that the joint rates over existing Union Pacific routes be made applicable via the Rio Grande on the remaining two-thirds of the traffic.

The Commission's Findings and Conclusions

The Commission made the following statement of the Rio Grande's contention concerning the existence of through routes via its line:

> "The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15(4) are not applicable and need not be considered." (8)[10].

After discussing the decision in *Thompson v. United States*, 343 U. S. 549, in which this Court nullified a Commission order based on the theory that a through route already existed over two connecting railroads because

10 Figures in parentheses refer to findings at pages of the Commission's report, as printed in Appendix B hereto.

the route was open to traffic at the combination of their local rates, the Commission carefully analyzed the contentions and the testimony concerning the alleged existence of through routes via the Rio Grande in this case, and made the following finding and statements which are material to consideration of the questions presented by this appeal:

> "We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic[3] [3 Except on east-bound shipments of sheep or goats, to which reference is made later in this report.] here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.
>
> "The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15(3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower than the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together." (14)

Other findings by the Commission[11] that are material to consideration of the questions presented are:

1. That the proposed new route via the Rio Grande could not be required "unless the existing (Union Pacific) routes can be found not to provide 'adequate' transportation" (72);

2. That the Union Pacific has surplus transportation capacity, is efficiently operated, furnishes good service to shippers over its line, and its "facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseable future" (60) over routes that are shorter than Rio Grande routes;

3. A large number of shippers and representatives of communities served by the Union Pacific, traffic, commercial and civic associations, opposed the Rio Grande's complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado (64-65);

4. Shippers in opposition to the Rio Grande's complaint testified to the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. They testified that they had never experienced any difficuty in marketing their products by reason of the lack of competitive joint

11 The Commission's findings are set out here rather fully not only because of their materiality to consideration of the questions presented but also because of the apparent conflict and inconsistency between them and the district court's findings and conclusions.

through rates over the Rio Grande, and would not use that carrier in any event (65);

5. That the Rio Grande route is from 33 to 219 miles longer than the Union Pacific (25), and that routes via the Rio Grande would be from 33 to 50% longer than many of the Union Pacific routes (75);

6. That evidence as to physical characteristics of the two lines shows that the Rio Grande is less favorably situated than the line of the Union Pacific; that traffic routed over the Rio Grande as a bridge line would require at least 24 hours more time in transit than when routed over the Union Pacific and would require one or two more terminal interchange services (60), and that operating conditions on the Rio Grande are "more onerous than those on the lines of the Union Pacific or any of the other transcontinental" lines (74);

7. That diversion of the traffic over the Rio Grande would deprive the Union Pacific of its long haul and would short haul it at least 925 miles in each instance (27);

8. That the traffic sought by the Rio Grande ordinarily moves over Union Pacific routes through Wyoming because those routes are shorter and they offer lower rates than the Rio Grande (21);

9. Concerning public need for the proposed Rio Grande route and damage to Union Pacific routes by diversion of traffic from them to the Rio Grande, the Commission found that it was impossible to determine or estimate accurately what volume of traffic might be diverted to the Rio Grande if all of the joint rates were made ap-

plicable over its line (67); but that whatever the volume so diverted would be the result of "active solicitation" by the Rio Grande "to persuade" shippers and receivers to use its line as an overhead or "bridge" route, the value of its service to shippers, and the extent to which the Rio Grande can "induce" shippers to route traffic via its line for the purpose of using transit facilities at points on its line and subsequent reshipment beyond at the balance of joint through rates from the point of origin (35);

10. That there are substantial dissimilarities or differences between transportation conditions, operating conditions and lengths of hauls over Union Pacific routes and over the Rio Grande but that the differences in transportation conditions become "relatively insignificant" and "substantially similar" when "spread" over the longer hauls between the northwest area and the eastern and southern parts of the country (76);

11. That the evidence failed to prove that the Union Pacific and other lines maintaining present through routes and joint rates discriminate against the Rio Grande (except at points on the Bamberger Railroad between Ogden and Salt Lake City) under Section 3(4) of the Act in refusing to include its line in present through routes and joint rates (77);

12. That (notwithstanding the dissimilarities in transportation conditions over the respective routes) the combination rates via the Rio Grande on the articles named in the order from and to the areas therein described are and for the future will be unjust and unreasonable and unduly prejudicial to shippers using, or desiring to use, the Rio Grande routes and unduly pref-

erential of shippers and receivers using the Union Pacific routes, to the extent those rates exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes (79);

13. That the Rio Grande, a railroad, could not raise in its own behalf an issue of undue prejudice and preference under Section 3(1) against another railroad, but that testimony of intervening shippers raised that issue, and also raised a question as to a need for "more" adequate and economic service than afforded by Union Pacific routes with respect to perishable food articles (72);

14. That the present complex and far-flung marketing system for perishable food articles requires that such articles move to market with expedition and care "over as many routes as possible" (73) to "as many markets and outlets as possible" (51) with "as much flexibility as possible" and without "unnecessary interruptions" (73);

15. That, while through service over Union Pacific routes in general is as satisfactory to shippers as the service which could be provided over routes including the Rio Grande, this is not true with respect to perishable food articles, and that shippers of those articles from the northwest area "are debarred from effective participation in the widespread system developed for the marketing of such commodities" (73), (apparently, only because, if routed over the longer Rio Grande route to eastern and southern markets, higher rates apply than when routed via Union Pacific routes, for the undisputed evidence shows that those shippers market their products

via Union Pacific routes in all 48 states and several foreign countries);

16. That on shipments of perishable food articles reconsigned or accorded transit privileges such as stop-off for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, *at points on the Rio Grande*, "the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply", and that "on such traffic the defendants' (Union Pacific) routes are inadequate and less economical than are the Rio Grande routes" (74);

17. That through routes via the Rio Grande and joint rates "the same" as apply over Union Pacific routes for the commodities named in the order between points in the areas described therein are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" (78).

Opinion of the District Court

The district court decided only two of the numerous issues tendered by the pleadings, briefs and oral arguments. On these two issues it held:

1. That the Rio Grande has standing to maintain suit to enjoin and annul the Commission's failure to include in its order about two-thirds of the "bridge" traffic for which the Rio Grande demanded joint rates via its line, and the court overruled a motion to dismiss the suit for lack of such standing;

2. That the Commission erred as a matter of law and upon the evidence in finding that the through routes

claimed by the Rio Grande were not already in existence, that the evidence and the law established the existence of the claimed through routes, and that the Commission should have applied the provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act "free of any of the limitations imposed by §15(4) with respect to establishing through routes."

In reaching its conclusion that the Rio Grande has standing to maintain its suit, the court made and apparently relied upon the following administrative finding of fact:

> "Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines." (App. D, p. 23.)

The court held that the Rio Grande is here seeking rates "which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings" (App. D, p. 25), and that "the denial of the relief here challenged will result in pecuniary injury to the Rio Grande" (App. D, pp. 20-21), giving it a right to judicial review.

With respect to the Commission's finding that the claimed through routes via the Rio Grande were not in existence, the court held—

> "This erroneous self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding." (App. D, p. 11.)

Nevertheless, the court "remanded" the case to the Commission "with appropriate instructions" for fur-

ther proceedings in conformity with the opinion *only* insofar as the Commission failed to order through routes and joint rates on the traffic not included in the order.

The court's opinion is vague, ambiguous and lacking in specificity with respect to the grounds or reasons for its conclusions. For example, in holding that the Rio Grande has standing to maintain its suit the court admits that in ordering only such through routes and joint rates as it found to be in the public interest, and in failing to include all of the traffic in its order the Commission "required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had" and from these points of view "caused no pecuniary loss to the Rio Grande" (App. D, p. 19). It holds, nevertheless, that the Rio Grande suffers "pecuniary injury" because the Commission's order does not include all of the traffic, but it then holds that "we do not think such injury is essential to the right to judicial review."

The court holds that the Commission's failure to order joint rates that would result in "pecuniary profit" to the Rio Grande from traffic not included in the order prevented it from "enjoying increased traffic and increased earnings", but it does not hold that the Rio Grande has any legal or other right to divert the traffic to its line from Union Pacific routes to create or produce such additional pecuniary profit or increased earnings, nor does it hold that the Commission's failure to order joint rates on the portion of the traffic not included in its order is beyond its power or without support of evidence or adequate findings.

The court holds that "if" the Rio Grande's presentation to the Commission entitled it to an order re-

quiring joint rates on all of the traffic then the Commission's failure to issue such an order was the denial of a right granted by the Act giving the Rio Grande "a right to judicial review of the order." Such speculative or hypothetical discussions ignore the fact that the Commission had already found upon the evidence that the Rio Grande had failed to sustain the allegations of its complaint, except to the extent indicated in the order; and, as just stated, the court does not hold that the Commission acted arbitrarily or contrary to law or the evidence in limiting the required joint rates to the commodities named in the order for which the Commission found through routes and joint rates necessary in the public interest to provide adequate and more economic transportation.

Contrary to the Commission's finding, the court holds that continuance of the combination rates via the Rio Grande on traffic not included in the order results in discrimination adversely affecting the Rio Grande and shippers over its line, but it does not hold that its own finding of discrimination, or a finding of discrimination even if made by the Commission, would justify or require the Commission to order joint rates with the Rio Grande for all or any part of the traffic. In short, the court refrains from specifying or permitting its opinion to disclose any particular reason or ground for its conclusion that the Rio Grande has standing to maintain this suit.

The court's conclusion that through routes already exist via the Rio Grande for the traffic concerned is likewise shrouded in vagueness and lack of specificity concerning the reason or ground upon which the conclusion

rests. The opinion does not indicate or specify the through routes it holds are in existence via the Rio Grande, or the termini of, or the railroads comprising such through routes, or the commodities for which any of such through routes are in existence via the Rio Grande.

The opinion states that the definition of a "through route" in *Thompson v. United States*, 343 U. S. 549, compels the conclusion that the through routes claimed by the Rio Grande are already in existence, but it fails to disclose what language of that definition compels its conclusion that through routes exist here. The opinion describes a few shipments of traffic moved via the Rio Grande in 1948 at combination rates and relied upon by the Rio Grande to prove that through routes exist via its line for all of the involved traffic, but the court refused to commit itself to the proposition that evidence showing that a few shipments of a few commodities moved via the Rio Grande during one year from a few points east of Denver to the northwest area is sufficient to prove that through routes for all commodities exist via the Rio Grande or that the Rio Grande is a part of each of the many hundreds of thousands of through routes presently maintained by other carriers, for the traffic concerned between some 2,900 railroad stations in the northwest area and more than 39,000 stations in the eastern and southern parts of the country.

In holding that through routes via the Rio Grande were open and in existence through the Ogden gateway, the court not only reversed the Commission but also ignored the testimony of the Rio Grande's President that "ever since I have been with the property I have been looking forward *to the opening of the Ogden gateway*

and the publishing of through rates through there" (I. C. C. Transcript, p. 43), and ignored also the testimony of "numerous shippers in this proceeding" that Rio Grande routes through the Ogden gateway are not considered as open or through routes, "but as routes that are closed to shippers because of the higher rates applicable" (I. C. C. Report, App. B, pp. 8-9).

The court does not give any reason or indication why it disagrees with the Commission's finding that through routes claimed by the Rio Grande do not exist within the meaning of the Interstate Commerce Act.[12] Instead, the court simply asserts, without reason, that the claimed

12. In deciding that the claimed through routes via the Rio Grande do not exist, the Commission said:

"So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, 'the carriers' course of business' has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads eastbound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

"Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co. v. Chicago & N.W. Ry. Co., supra*, cited with approval by the Supreme Court in

(Continued on next page)

through routes *do* exist, and undertakes to direct the Commission to proceed further upon that assumption but *only* insofar as it has previously failed to require through routes and joint rates as demanded by the Rio Grande on all commodities.

The Questions Are Substantial

The questions presented have a far-reaching future effect not only upon railroads generally that have established through routes and channels of commerce and upon the public that is dependent upon such established routes, but also in the field of judicial review of the Commission's orders and those of other Federal agencies, in the relations between those agencies and the Federal courts and in the Commission's administration of the Interstate Commerce Act, especially the through routes provisions of Section 15(3) and (4).

1. This Court has held that jurisdiction is lacking to review "matter embodied in a [Commission] report and not followed by a formal order." *United States v.*

(Continued from preceding page)

Thompson v. United States, supra. Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15 (3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15 (4) made in 1940 (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I.C.C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra*.

"We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned, and that any order requiring the establishment of such routes and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation." (App. B, pp. 12-14).

Atlanta, B. & C. R. Co., 282 U. S. 522, 528.[13] This seems necessarily to follow from the fact that the act that confers jurisdiction (Urgent Deficiencies Act, 38 Stat. L. 219; 28 U. S. C., Secs. 1336, 1398) clearly makes the existence or presence of an "order" embodying the matter complained of prerequisite to jurisdiction to review.

The order issued in the instant case (Appendix C hereto) affirmatively requires through routes and joint rates for about one-third of the traffic demanded by the Rio Grande, but the order does not embody or mention the Commission's failure to grant through routes and joint rates nor does it dismiss the complaint as to the remaining two-thirds of the traffic. While the Rio Grande's complaint asked the lower court to enjoin and annul the "order," "in part, if its arguments (except as to the existence of through routes) were directed to the Commission's failure to require through routes and joint rates on the remaining two-thirds of the traffic. But, as noted, such failure was not embodied in the order issued or in any other order.[14]

---

13 In that case the Commission had made a finding of the amount representing the railroad's investment in road and equipment. It issued no order, but concluded its report with this statement:

"The company will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report."

14 The Commission's report concludes with the statement:

"That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

"An appropriate order will be entered."

The Rio Grande argued in the district court that the order must be read in the light of the report, and that by doing so here, the language just quoted becomes the "equivalent" of an order. But this cannot be sound, for the statute confers jurisdiction to review any "order"—and not an "equivalent" of an order. A much closer "equivalent" to an order was held insufficient to afford jurisdiction in the *Atlanta, B. & C.* case *supra*.

(Continued on next page)

Apparently recognizing that there is no order embodying the matter of which the Rio Grande complained, the district court sought to overcome that obstacle by saying (App. D, p. 19) that—

> "The fact that the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief"

citing *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, and *Mitchell v. United States*, 313 U. S. 80. But in both of those cases formal orders had been issued. Thus, the court construed the Commission's failure to grant the Rio Grande's full demands as a "negative portion" of the affirmative order actually issued, and in that way attempted to create the prerequsite for its jurisdiction. The court confused the abolition of the "negative order doctrine" in the *Rochester* case with the jurisdictional necessity for an actual formal order embracing the matter of which the Rio Grande complained, and it also overlooked the fact pointed out in *United States v. Atlanta, B. & C. R. Co., supra*, that—

> "No case has been found in which matter embodied in a report and not followed by a formal order has been held to be subject to judicial review." (p. 528)

In *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, the Commission had issued an order requiring the carriers to establish certain specified joint rates, but it declined to comply with the demand of some of the car-

---

(Continued from preceeding page)

Moreover, while this Court has held that the order may be read in the light of the report for the purpose of clarifying ambiguity or vagueness in the order issued, *Georgia Comm. v. United States*, 283 U.S. 765, 771, this Court has never held that this may be done for the purpose of creating an order, or of "importing" into an unambiguous order matters not embodied therein.

riers that it also prescribe divisions of the joint rates required. This Court noted at pages 482-483 that—

> "* * * the real complaint of appellants respecting the order now under consideration is directed not to what the order requires to be done, but to what it does not require. It granted a part of the relief for which appellants had applied to the Commission. * * * The real ground for resorting to the courts in this case is the failure to fix divisions."

The Court reviewed the affirmative order issued but refused to review the Commission's failure to fix divisions, holding that in seeking review of the Commission's failure to fix divisions, the appellants were in effect asking the Court to "exercise administrative authority where the Commission has failed or refused to exercise it."

In *Chicago Junction Case*, 264 U. S. 258, the Court cited several cases in which—

> "judicial review was refused, not because the order was permissive, or because it was negative in character, but because it was a denial of the affirmative relief sought,"

and the Court "declined to interfere" because to do so would have involved exercise by it of "the administrative function of granting the relief which the Commission, in the exercise of its jurisdiction, had denied" (p. 264).

The district court erroneously "stretched" this Court's "negative order" ruling in the *Rochester* case to include cases in which the Commission has issued no order at all embodying its failure to grant all of the Rio Grande's affirmative demands.

Since the statute confers jurisdiction only where an "order" has been issued embodying the matter com-

plained of, and as no such order has been issued in this case, we submit that this Court should correct the lower court and refuse to permit a new ground for increasing the volume of litigation in Federal courts in attempts of litigants to override the Commission's exclusive administrative functions.

2. This Court has consistently held that standing to maintain a suit to enjoin an order of the Commission requires a showing that the order assailed subjects the complainant to legal injury, actual or threatened, *Edward Hines Trustees v. U. S.*, 263 U. S. 143; *Sprunt & Son v. United States*, 281 U. S. 249, 257; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 486; *Moffat Tunnel League v. U. S.*, 289 U. S. 113, 119; or that the order would deprive the complainant of something it has long and lawfully possessed, or would disrupt the transportation situation causing the complainant financial or economic loss, or that the right to maintain such suit rest upon some express statutory provision, *Western Pacific v. South. Pac. Co.*, 284 U. S. 47; *Claiborne-Annapolis Ferry* v. U. S., 285 U. S. 382; *Chicago Junction Case*, 264 U. S. 258, 267; *Alton R. Co. v. United States*, 315 U. S. 15, 19.

Disregarding the settled rule of these decisions, the district court held that the Rio Grande has standing to maintain this suit despite its frank admission that its purpose in complaining to the Commission was to improve its financial position by diverting traffic from Union Pacific routes for a "bridge" haul over its line, and despite its utter lack of any legal, equitable or other right to the traffic it seeks to divert to its line, *A., T. & S. F.*

Ry. v. United States, 279 U. S. 768, 780.[15] Although the district court refrained from specifying the ground or reason for its holding that the Rio Grande has legal standing to maintain the suit, it did hold that the Rio Grande here seeks rates that "will result in pecuniary profit to the Rio Grande * * * the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings" (App. D, p. 25), and that "the denial of the relief here challenged will result in pecuniary injury to the Rio Grande," but that such injury is not essential to the right to judicial review (App. D, pp. 20-21).[16]

---

15 On this point the Rio Grande argued as follows at page 111 of its original brief in the district court:

"Neither the Union Pacific nor any other railroad has an absolute right to the exclusive occupancy of a particular territory or to the traffic which terminates or originates in the territory. *Pennsylvania R. Co. v. United States*, 40 Fed. (2) 921; *Indian Valley R. Co. v. United States*, 52 Fed. (2) 485, and *Chesapeake and Ohio Ry. Co., Construction*, 267 I.C.C. 665, 679. In *United States v. American Railway Express Co.*, 265 U.S. 425, 437, the court held that a carrier has no absolute right to the traffic it originates or to its long haul. Such rights as a railroad may have to its long haul on interstate commerce are granted and limited by the Interstate Commerce Act. Moreover, that Act does not give the originating railroad or any railroad the unequivocal right to its long haul in connection with through routes."

16 The confused and hypothetical rationale of the district court's opinion seems to be: that the Rio Grande had a right to complain of discrimination to the Commission; that "if" the evidence proved the discrimination or that the Rio Grande was entitled to an order requiring establishment of the joint rates, then the failure of the Commission to order joint rates on all of the traffic "was the denial of a right given [the Rio Grande] by the Act," and, therefore, the Rio Grande has standing to maintain suit to enjoin such failure or denial.

But this ignores the fact that the Commission found that the evidence did not prove discrimination against the Rio Grande, or that joint rates were necessary in the public interest except as to articles named in the order, and it ignores also the Rio Grande's utter lack of any legal or other right to the traffic it seeks. Its right to complain to the Commission clearly gave it no standing to sue. *Edward Hines Trustees v. U.S.*, supra; *Sprunt & Son v. United States*, *supra*, *Pittsburgh & W. Va. Ry. v. U.S.*, *supra*.

In final analysis, the court's decision that the Rio Grande has standing to maintain the suit inescapably rests upon the proposition that, regardless of its utter lack of any legal or other right to the traffic it seeks, the Rio Grande has standing to maintain this suit because the Commission failed to grant its demands for an opportunity to reap pecuniary profit and enhance its revenue from *all*, instead of a part, of the traffic it seeks to divert to its line.

There is no precedent for the court's holding, and it is directly contrary to the decisions cited above and to the rule laid down by this Court that in order to maintain a suit the complainant must show that he is threatened with a "loss" against which he is legally or equitably entitled to protection. *Railroad Co. v. Ellerman*, 105 U. S. 166; *Alabama Power Co. v. Ickes*, 302 U. S. 464; *Tennessee Power Co. v. T. V. A.*, 306 U. S. 118. If, as held in the cases just cited, a complainant has no standing to maintain a suit to enjoin acts of others which threaten even to destroy his business unless he shows that such acts invade some legal or equitable right of his, *a fortiori* the Rio Grande has no standing to maintain suit to enjoin the Commission's failure to grant its full demands for "pecuniary profit" to be obtained by diverting to its line traffic to which it admits that it has no semblance of legal or other right. *Atchison, Topeka and Santa Fe Ry. Co. v. United States*, 130 F. Supp. 76.

The decision of the district court thus opens up a new approach and avenue for a very considerable increase in the already heavy volume of litigation in the Federal district courts and in this Court involving the validity of orders of the Commission and other Federal agencies. We submit that it is of substantial public

importance that this Court prevent any such future potentiality by reviewing and reversing the holding of the district court that the Rio Grande has standing to maintain this suit.

3. In reversing the Commission's finding that through routes via the Rio Grande are not in existence within the meaning of the Act, the district court misconstrued or refused to be guided by this Court's decision in *Thompson v. United States*, 343 U. S. 549, and by the principles stated in *U. S. v. Great Northern R. Co.*, 343 U. S. 562, concerning the existence of through routes and the legislative policy against diversion of traffic from one carrier for the benefit of another.

Instead of reviewing and considering all of the evidence as required by this Court's decision in *Universal Camera Corp. v. Labor Bd.*, 340 U. S. 474, 488, the district court was content to "rest our decision upon a narrow ground," and upon a "brief and sketchy statement of the case" (App. D, p. 11). It purported to "summarize" the evidence bearing on the question whether through routes via the Rio Grande already existed for the traffic it seeks. It cited the fact, admitted by counsel and a traffic witness for the Union Pacific, that the traffic *could* move via the Rio Grande if shippers wanted to pay the higher combination rates.[17]

The court also cited the fact that through routes and joint rates via Rio Grande had been established by the receivership courts in 1897 and that the joint rates were cancelled by Union Pacific in 1906 and 1912, after the receiverships ended, but the court holds that this

17 This same fact was admitted in the *Thompson* case, *supra*, but was held to be no proof of the existence of a through route within the meaning of the Act (p. 558).

did not close the through routes. In so holding the court ignored the testimony of Rio Grande's President that for many years he had looked forward to the "opening" of the Ogden gateway, and the testimony of numerous shippers that the routes were considered as "closed to shippers because of the higher rates applicable" (App. B, pp. 8-9). The court further ignored the fact that, in a "pamphlet" propaganda campaign before and after filing its complaint August 1, 1949, the Rio Grande asserted that its purpose was to "restore" to the northwest the "rates and routes" established by the receivership courts in 1897. As a part of its publicity campaign, the Rio Grande printed and widely distributed a pamphlet entitled "20 Questions—An Informative Quiz", (I. C. C. Ex. 30), in which it posed 20 questions and answered them with the arguments it thought would induce shippers to aid it in its efforts. These questions clearly and indisputably show that the Rio Grande itself considered the prior through routes via its line "closed" by the cancellation of the joint rates by the Union Pacific.[18]

---

18 Among the 20 questions were the following:

" 2 What Is Meant by the 'Closed' Gateway at Ogden?"
" 3 What Is the Effect of the Closed Gateway?"
" 4 How Does the Rio Grande Seek to Open the Ogden Gateway?"
" 5 How Will the Rio Grande Benefit from Opening of the Ogden Gateway?"
" 6 Why Does the Union Pacific Oppose Opening of the Ogden Gateway?"
" 7 Will the Open Ogden Gateway Reduce Freight Rates?"
" 8 Will the Open Gateway Provide Improved Service?"
" 9 With Opening of the Gateway, Will There be More Freight Cars Available for Northwest Shippers?"
"11 Will an Open Gateway at Ogden Benefit Colorado and Utah?"
"12 Will an Open Gateway at Ogden Benefit Shippers Outside of Union Pacific or Rio Grande Territory?"
"13 Will Opening of the Ogden Gateway Reduce Railroad Employment in the Closed-Door Territory?"
"14 Will the Opening of the Ogden Gateway Reduce Taxes Paid in the Closed-Door Territory?"

The district court states that the definition of "through route" in the *Thompson* case "compels us to conclude that the through routes contended for by the Rio Grande were in existence", but it does not specify which of the several elements of that definition compels such conclusion. It merely states that in that case there was no evidence that a shipment had ever been made from termini to termini of the route there in question or that the carriers had ever offered through service over that route. The court then points to 18 shipments moved at combination of local rates in 1948 over the Rio Grande from 18 origins in the middlewest and southwest to destinations in the northwest area and to a few emergency shipments, and 37 shipments that moved from the northwest to destinations on the Rio Grande. Neither the latter nor the emergency shipments could be involved in this case.

But the court refused to decide whether these few isolated and sporadic shipments during the year 1948 were sufficient, under the "user" test of the *Thompson* decision, to prove the existence of through routes via the Rio Grande between the 39,000 railroad stations in the eastern area and the 2,900 stations in the northwest area, between each of which there is at least one through route, or a minimum of 113,100,000 through routes, of which the Rio Grande claims to be a part.

Every relevant or material factor recited in the opinion of the lower court in support of its conclusion that through routes exist as claimed by the Rio Grande was rejected or held insufficient by this Court in annulling the Commission's order in the *Thompson* case.

The Commission in the instant case held that the few sporadic shipments moved in 1948 did not prove the existence of through routes via the Rio Grande for the involved traffic (*ante* p. 26). Applying the principles of the *Thompson* decision, the Commission correctly concluded that the carriers in this case do not "hold themselves out as offering through transportation service" for the involved traffic, as indicated by their "course of business" and by the Union Pacific's course of conduct over many years in its steadfast refusal to relinquish its long haul.

Although the district court's decision is indefinite and lacking in specificity as to the precise reason why it holds that through routes are in existence for the involved traffic via the Rio Grande, it sanctions a new and unprecedented standard or set of circumstances for determining whether through routes exist, which not only conflicts with the principles laid down in the *Thompson* case, but is also at war with the plain purpose of the Act in conferring the through routes power on the Commission carefully limited so as to protect the long hauls of carriers except under specified circumstances. *Thompson* case *supra*, *United States v. Mo. Pac. R. Co.*, 278 U. S. 269, *I. C. C. v. Columbus & Greenville Ry.*, 319 U. S. 551.

If the lower court is correct in holding upon the facts and circumstances in this case that through routes for the involved traffic are in existence via the Rio Grande, then through routes are established and are in existence over the lines of all railroads that physically connect and have published local rates as required by Section 6(1) of the Act. And, under that holding, the line of every railroad is a part of every through route

in the country by virtue of such physical connections and required publication of local rates over its line.

The decision would have a drastic and revolutionary effect upon the Commission's administration of its through routes powers[19] and as held in the *Thompson* case, *supra*, p. 560—

> "* * * would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage".

The decision would have a devastating effect upon appellants and railroads generally that have established through routes and channels of commerce, in reliance upon the protection afforded by Section 15(4) of their long hauls of traffic they originate or terminate.[20] Towns

---

19 In a recent case, *Steinmetz v. Atchison, T. & S.F. Ry. Co.*, 293 I.C.C. 202 (decided Aug. 17, 1954), the Commission held that a through route does not exist within the meaning of Section 15 (4) of the Act over the lines of railroads that have published only the local rates for their respective lines, i.e. where the carriers have not published joint rates. At pages 203-204 the Commission said:

"Consideration has been given to the decision in *Thompson* v. *United States*, 343 U.S. 549, decided since the reparation awards were made in prior decisions. There in the Supreme Court makes plain that a route such as that used for the instant shipment may not be regarded as a through route under section 15 (4) of the Interstate Commerce Act. Thus, the route used by this shipment was a 'closed' route, and the complainant was apprised of that fact by the publication of the joint through rate from and to these points for application over routes other than that used. This does not mean that a shipper may not specify routing for a shipment over such a 'closed' route and expect compliance with the routing thus specified, but it does mean that when such routing is specified and complied with, the carriers concerned have a right to charge a combination rate. * * *"

20 See *U.S. v. Great Northern R. Co.*, 343 U.S. 562, wherein this Court held at pages 574-575:

(Continued on next page)

and communities that have grown up and are dependent upon such established routes and channels of commerce would also suffer seriously adverse economic consequences if the district court's decision is allowed to stand.[21]

4. The district court's decision and judgment present aspects of the relations between the Commission and the courts which are of fundamental public importance. The district court holds that the Commission's finding that through routes do not exist via the Rio Grande for the involved traffic "obviously prejudiced the entire proceeding", but the court "remands" the case to the Commission *only* "insofar as it denied and withheld relief" to the Rio Grande. Contrary to the Commission's finding, the court made its own administrative finding of fact that continuance of the Rio Grande's combination

---

(Continued from preceding page)

"It is one form of regulation to redistribute revenues between connecting carriers by determining divisions of revenues received on existing through routes. The economic ramifications are quite different if the Commission establishes through routes which divert traffic to the lines of a financially weak carrier. Such action not only serves to assist that carrier financially but can also, at the same time, cause important changes in the movement of traffic, diverting traffic to a new geographic area at the expense of other carriers and other areas. Congress amended Section 15 (4) to prohibit tinkering with through routes for the purpose of assisting a carrier to meet its financial needs."

21 This is evidenced by the following statement of position in their brief in the district court by the five intervening States that have also appealed from the decision below:

"These states were moved to intervene in the proceeding before the Commission because of the overwhelming detriment the shippers and general public of such states would suffer as a result of the diversion of traffic away from the Union Pacific proposed by the Rio Grande. Any such diversion of traffic would immediately affect the service of the Union Pacific to shippers and would also inflict

(Continued on next page)

rates on the traffic not included in the Commission's order would result, in discrimination against the Rio Grande and shippers over its line.

Thus, in remanding the case to the Commission "for further proceedings in conformity with this opinion", but only insofar as the Commission denied relief to the Rio Grande, the court would not only prevent the Commission from reconsidering the portion of the "prejudiced" proceeding which is favorable to the Rio Grande, but would also tie the Commission's hands by requiring it to reverse its previous administrative judgment and finding that the evidence did not prove discrimination against the Rio Grande. In short, apart from a complete lack of power to "remand" the case to the Commission, in doing so the court virtually directs the Commission to order joint rates on the remaining two-thirds of the traffic. The court would clearly usurp the Commission's administrative authority and render its functions useless, contrary to decisions of this Court. *Interstate Comm. Comm. v. Ill. Cent. R. R.*, 215 U. S. 452, 470.

(Continued from preceding page)

very serious consequences upon employees of the Union Pacific that are now engaged in the handling of such traffic. Moreover, such diversion, as shown by testimony reviewed hereafter, would greatly impair the capacity of the Union Pacific to continue to provide at lowest cost the transportation service so essential in all this territory.

"It was made indisputably clear by these states that in their area there is no substantial need for the new routes and joint rates proposed by Rio Grande and that the granting of proposed relief to this local mountain railroad of Colorado and Utah would adversely affect the economy of all these intervening states."

Conclusion

It is submitted that the questions presented by this appeal are substantial and of general public importance, and that a decision of this Court correcting and reversing the decision of the lower court is essential.

Respectfully submitted,

ELMER B. COLLINS,
Counsel of Record for Appellants,
1416 Dodge Street,
Omaha, Nebraska.

F. O. STEADRY,
L. E. TORINUS,

ROLAND J. LEHMAN,
EUGENE S. DAVIS,
JAMES C. WILSON,
Of Counsel.

August, 1955.

PROOF OF SERVICE

I, ELMER B. COLLINS, counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 19th day of August, 1955, I served, on behalf of all appellants herein, copies of the foregoing Statement as to Jurisdiction on the several parties thereto, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

4. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

5. On Brotherhood Committees of employees of The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

6. On Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company, Inc.; Idaho Farm Bureau; Public Service Commission of Utah; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc., and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

APPENDIX B

INTERSTATE COMMERCE COMMISSION

No. 30297

DENVER & RIO GRANDE WESTERN RAILWAY COMPANY v. UNION PACIFIC RAILROAD COMPANY, ET. AL.

Submitted October 16, 1952. Decided January 12, 1953

---

1. Through routes and joint rates found necessary and desirable in the public interest via Ogden or Salt Lake City, Utah, in connection with complainant, on certain commodities from and to points in the excluded territory in the northwest area as described in the report, to and from points in official, southern, and southwestern territories, including Missouri and a portion of Iowa.

2. Rates on the same commodities from and to the same points over complainant's routes via Ogden or Salt Lake City, found unreasonable and unduly prejudicial to and preferential of shippers and receivers.

3. Maintenance by defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the line of complainant south of Ogden, found to subject complainant to unlawful discrimination.

4. Order entered requiring removal of unlawfulness found to exist and establishment of through routes and joint rates found reasonable.

Robert E. Quirk, Otis J. Gibson, and *H. L. Mulliner* for complainant.

Elmer B. Collins, L. H. Anderson, John B. Burchell, Robert H. Bierma, L. E. Clarahan, F. H. Cole, Jr., Eugene S. Davis, Lee S. Davis, P. H. Draver, F. G. Fitzpatrick, P. F. Gault, R. J. Hagman, L. W. Hobbs, Roland J. Lehman, B. P. Leverich, James E. Lyons, E. F. McGuire, F. J. Melia, Conrad Olson, W. R. Rouse, James S. Souby, Jr., Carson L. Taylor, and *L. E. Torinus, Jr.,* for defendants.

C. A. Miller for a railroad association; *Chas. B. Bowling, Carl R. Bullock, Henry A. Cockrum,* and *J. L. Pease* for Secretary of Agriculture; *Ralph C. Horton, John H. Winchell, Joseph W. Hawley, T. S. Wood,* and *Ralph Sargent, Jr.,* for Public Utilities Commission of the State of Colorado; *W. B. Joy, H. N. Beamer, B. Auger* and *L. F. Purvis* for Public Utilities Commission of Idaho; *Byron M. Gray* for State Corporation Commission of the State of Kansas; *Edwin S. Booth* and *Sidney T. Smith* for Board of Railroad Commissioners of the State of Montana; *Clarence S. Beck, Harold A. Palmer, Bert L. Overcash,* and *Harry C. King* for State of Nebraska and Nebraska State Railway Commission; *John H. Carkin* and *Thomas W. Dench* for Public Utilities Commissioner of Oregon; *Smith Troy, Phil H. Gallagher, Joseph Starin,* and *Bartlett Burns* for Washington Public Service Commission; *Norman B. Gray* and *Jefferson C. Church* for the State Board of Equalization and Public Service Commission of Wyoming; *Hal S. Bennett, Donald Hacking, W. R. McEntire,* and *Chas. A. Root* for Public Service Commission of Utah; and *George F. Guy* for the city of Cheyenne, Wyo., interveners.

Calvin L. Blaine, Chas. E. Blaine, Maurice H. Greene, Alden T. Hill, E. K. Kohlwes, Lowe P. Siddons, Reginald T. Titus, and *Lee J. Quasey* for other interveners.

Report of the Commission

BY THE COMMISSION:

Exceptions to the report proposed by the examiner were filed by the complainants, the defendants, and cer-

tain interveners and the issues were twice argued orally. Our conclusions differ in part from those recommended. Exceptions and requested findings not discussed in this report nor reflected in our findings or conclusions have been given consideration and found not justified.

The complainant, sometimes called the Rio Grande, a common carrier by railroad operating in interstate commerce within the States of Colorado, Utah, and New Mexico, requests us to order the Union Pacific Railroad Company, which with its leased lines is referred to as the Union Pacific system or the Union Pacific, and the other defendants to establish and maintain for the future just, reasonable, and non-discriminatory competitive joint through rates[1] and charges for the transportation of freight in connection with the complainant through Salt Lake City or Ogden, Utah, referred to as the Ogden gateway. More particularly, we are asked to require the defendants to establish such joint rates on freight traffic in connection with the complainant through its Colorado and Utah gateways, (1) between (*a*) points on the Union Pacific or its connections in Utah north of Ogden and in Idaho, Montana, Oregon, Washington,[2] and British Columbia, Canada, and (*b*) Colorado common points and the northwest territory specified in 1 (*a*).

No evidence was submitted with respect to rates from or to British Columbia, and such rates will not be considered.

---

1 Rates and rate differences named herein are per 100 pounds and are those in effect at the time of the hearing herein.

2 This area is referred to in this report as the northwest area or territory.

Interveners in support of the complaint include the Secretary of Agriculture of the United States, the public utility commissions of the States of Colorado and Utah, the American National Live Stock Association, other livestock and stock-feeder associations, various shippers' and producers' associations, milling companies, farm bureaus, chambers of commerce, and certain groups of employees of the complainant.

Interveners in support of the defendants include the State of Nebraska, city of Cheyenne, Wyo., the public utility commissions of the States of Montana, Washington, Oregon, Wyoming, Nebraska and Kansas, various chambers of commerce and other associations, certain employee groups in Wyoming, and employee groups of the Union Pacific, the Chicago and North Western Railway Company, and the Wabash Railroad Company.

In its exceptions to the proposed report, the State Corporation Commission of the State of Kansas took the position that the recommended finding that joint rates should be established over the existing through routes by way of Ogden and the Rio Grande is amply sustained by the evidence with respect to the rates on wheat and livestock but not otherwise, and that the recommended findings as to commodities generally are too broad in scope.

The Public Utility Commission of the State of Idaho intervened but presented no evidence. It filed a brief in which it took the position that the relief sought by the complainant should be denied, except that joint through competitive rates should be required to be established via Ogden and the Rio Grande on livestock and fruits and vegetables.

We granted a petition for leave to intervene filed by the American Short Line Railroad Association. That association appeared in support of the complaint and was represented at the hearing and the oral argument, but offered no evidence. The defendants filed a petition for reconsideration of the order permitting intervention. The request was denied at the hearing, but it is renewed on brief. It appears that 44 of the defendants named in the complaint are members of the association and that 8 defendant members are subsidiaries under common control and management with other defendants. Additional facts were developed at the hearing with respect to the relation of certain members of the association as defendants and indicating that they, as well as some others, opposed the complaint. The association filed a brief from which it appears that it has a current membership of 314 common carriers by railroad and that the association as such and many of its members are interested in the issues presented in the complaint. The intervention sought and granted was by the association as such, and not by or in behalf of the respective members thereof named herein as defendants. The petition of intervention was properly granted, and the petition for reconsideration is denied.

Immediately prior to the oral argument, counsel for the defendants submitted a memorandum of additional authorities and discussion relating to certain exceptions filed by the Union Pacific to the proposed report of the examiner. The complainant and certain interveners objected to the receipt of the document. Our rules of practice do not permit the submission of such a document so late in the proceeding. Permission to file it was not requested in time to permit opposing parties to examine it and to make reply thereto prior to the oral argument when

the proceeding was finally submitted. The objection to its receipt in the proceeding is sustained.

The complainant alleges that the defendant's failure and refusal to join with it in establishing joint rates to and from the territories described on transcontinental and other traffic through the gateways referred to result in violations of sections 1 (4) and 3 of the Interstate Commerce Act, and is contrary to the national transportation policy as declared by the Congress. We are asked to prescribe just and reasonable rates over the Rio Grande routes to remove the alleged unlawfulness.

Transcontinental rates apply between points in the Pacific Coast States, Nevada, Arizona, the northern part of Idaho, western New Mexico, and parts of British Columbia, on the one hand, and points in the United States lying generally east of a line along the eastern borders of Montana and Wyoming, thence through Cheyenne and Denver, Pueblo, and Trinidad, Colo., to El Paso, Tex., on the other hand. In the absence of exceptions or restrictions, the rates generally apply over all routes, but there are many exceptions. The principal ones of importance in this proceeding are those under which the Union Pacific for the most part restricts routing on traffic to and from points in Utah north of Ogden and in Idaho, Montana, Oregon, and Washington over its lines so that it may obtain the long haul from and to the Missouri River. On transcontinental traffic that moves over its lines to and from California, Nevada, and portions of Utah, the Union Pacific participates in through routes and joint rates with other lines, including the Rio Grande. On that traffic interchange is made with the Rio Grande at Salt Lake City and Provo, Utah.

As hereinafter explained, the Rio Grande participates in joint rates on transcontinental traffic with all of its connections at its Utah junctions, except the Union Pacific, from and to the western portions of the northwest area. Routes are available to and from points in the northwest area over the Union Pacific from and to Ogden and the Rio Grande and its eastern connections beyond, but generally shippers must pay combination rates when using such routes. The maintenance of those rates produces higher charges than those resulting from the joint rates maintained by the defendants over other routes. The higher rates and charges act as deterrents to shippers and, in effect, close the Ogden gateway in a commercial sense. We are asked to exercise our authority under section 15 (3) of the act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest.

The power to establish through routes and joint rates is limited by the provisions of section 15 (4), which declares that, except as provided in section 3 of the act, and except where one of the carriers is a water line, we may not require a railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (*a*) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (*b*) unless we find that the through route proposed is needed in order to provide "adequate, and more efficient or more economic, transportation." The foregoing provisions are subject to the further proviso that in prescribing through routes,

we shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (*a*) and (*b*), give reasonable preference to the carrier by railroad which originates the traffic. The section further provides that no through route and joint rates applicable thereto shall be established by us for the purpose of assisting any carrier that would participate therein to meet its financial needs.

The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15 (4) are not applicable and need not be considered. It further contends that the principal task here is to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such through routes are unjust, unreasonable, or discriminatory, in violation of sections 1 and 3 of the act, and contrary to the national transportation policy. The complainant argues that there is public need for joint rates via the Ogden gateway equal to the joint rates now maintained by the defendants over the competitive routes, and the public interest as well as the national transportation policy will be served by the establishment of such rates.

Through Routes

The first question for our determination, therefore, is whether or not the present routes by way of the Ogden gateway constitute "through routes" as that term is used in section 15 (3) and (4) of the act. As above stated and as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or

through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess.

In *Thompson v. United States*, 343 U. S. 549, decided June 2, 1952, the Supreme Court considered the question of the content of the term "through route" as used in the act, upon an appeal from a decision of a lower court sustaining our order in *Omaha Grain Exc. of Omaha, Nebr. v. Missouri Pac. R. Co.*, 278 I. C. C. 519. Therein, we had affirmed a prior finding of division 2 that a through route on grain from points on the Central branch of the Missouri Pacific Railroad Company in Kansas, Concordia and west thereof (Lenora, Kans., was used as a typical origin), to Omaha, Nebr., and Council Bluffs, Iowa, in connection with the line of the Chicago, Burlington & Quincy Railroad Company beyond Concordia, was already in existence and therefore did not have to be established preliminary to the exercise of our power to prescribe reasonable rates under sections 1 and 15 (1) of the act. The Court held:

> In short, the test of the existence of a "through route" is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.
>
> In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such

> through route. * * * Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha * * *. Since there is admittedly no evidence that the Missouri Pacific ever offered through transportation service over the route in question, the Commission's order is without evidentiary support under the accepted tests for determining the existence of a through route.

The Court cited with approval *Beaman Elevator Co. v. Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, wherein the Commission held that proof of one shipment on a through bill of lading over a particular route was not sufficient to show the existence of a through route, because, as stated by the Court, "that one shipment was not representative of the carriers' course of business." It thus becomes necessary to determine whether the carriers in this proceeding "hold themselves out as offering through transportation service" from and to the points here concerned via the Ogden gateway as indicated by their "course of business" in respect of traffic over the routes in question.

The evidence shows that 37 carload shipments were made in 1948, which may be accepted as a representative year, on through bills of lading from origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo, and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned goods, canned salmon, machinery, contractors' equipment,

paper bags, lumber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that 2 carloads of canned salmon moved from Seattle, Wash., to Provo, 2 carloads of acid from Dupont, Wash., to Louviers, 2 carloads of canned goods from Logan, Utah, to Denver, 2 carloads of sheep from Bellevue, Idaho, to Pueblo, 3 carloads of lumber from McCall, Idaho, to Salt Lake City, 3 carloads of canned goods from Logan to Pueblo, and 6 carloads of lumber from Emmett, Idaho, to Midvale. No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points.

West-bound, in the same year, 18 carload shipments were made on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed hull bran, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destinations so as to avoid paying the applicable combination rates on Ogden.

In that same year, 21 carload shipments moving on through bills of lading from various origins east of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint through rates were not applicable over that road via the Ogden gateway. Under service orders issued by us during and subsequent to World War II, a substantial number of shipments were diverted from the regularly used routes to the routes here sought to be opened commercially. For example, in February, 1949, when the main line of the Union Pacific in Wyoming was blocked by snowstorms, the traffic was diverted to the route of the Rio Grande between Denver and junctions with the Union Pacific in Utah. During World War II, special combination trains of troops in passenger cars and of military supplies in freight cars from eastern and southern origins to destinations in the northwest area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific. The rates and charges for these freight movements were not filed with us and were adjusted, under the authority of section 22 of the act, on the basis of the joint rates applicable over the Union Pacific routes through Wyoming. These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable and have no bearing upon the issue of whether or not those routes constitute "through routes" within the meaning of that term as used in the act.

So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by

the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior connecting carrier. In other words, so far as this record shows, "the carriers' course of business" has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic. That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads eastbound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co. v. Chicago & N. W. Ry. Co., supra,* cited with approval by the Supreme Court in *Thompson v. United States, supra.* Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15 (3) and (4) of the act simply by preliminarily making a shipment or two over

the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15 (4) made in 1940 (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra.*

We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic[3] here concerned, and that any order requiring the establishment of such routes and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.

The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15 (3) and (4). In addition, evidence was presented bearing upon the issues of the reasonableness of the assailed rates charged on that traffic, discrimination between connecting lines resulting from the refusal of the defendants to join in establishing joint rates lower that the assailed rates, and undue prejudice against shippers using or desiring to use the Ogden-gateway routes. These issues are closely related and will be considered together.

---

3 Except on east-bound shipments of sheep and goats, to which reference is made later in this report.

Before proceeding to a discussion of the evidence relating to the foregoing issues, we shall give consideration to a procedural contention and a motion made by the defendants. The contention is that an allegation of undue prejudice and preference under section 3 (1) of the act is not properly before us. As stated, the complaint embodies an allegation, among other things, of violation of section 3, without specifying any particular paragraph or paragraphs of that section. We agree that complainant, a railroad, could not raise, in its own behalf, an issue under section 3 (1) against another railroad. Intervening shippers, however, have raised such an issue. Testimony, pro and con, was received on this issue and we think it has been fairly tendered here for decision.

The motion is that the complaint be dismissed on the ground that the request of the complainant for joint rates over the Rio Grande via the Ogden gateway is for the purpose of assisting that carrier to meet its financial needs. As stated, section 15 (4) of the act forbids us to require the establishment of any through route and joint rate applicable thereto for the purpose of assisting any carrier that would participate therein to meet its financial needs. Consistently throughout the proceeding, the complainant disclaimed any intent to prosecute the complaint with the object of assisting it in meeting its financial needs. The prohibition referred to is directed to us; not to any complaining carrier. In reaching our conclusions herein, no consideration has been given to the financial needs of the complainant. The motion is overruled.

Proponents' Testimony

Joint rates now apply via the Ogden gateway over the Rio Grande on traffic from and to Colorado common

points and points east thereof to and from California and certain Pacific coast points in connection with the Union Pacific, the Southern Pacific Company, The Western Pacific Railroad Company, and The Great Northern Railway Company, as more particularly described later.

The Union Pacific with its leased lines has operated since January, 1936, as a single system. It consists of the Union Pacific Railroad Company operating from Omaha, Nebr., and Kansas City, Mo., to Ogden via Julesburg, Colo., Cheyenne and Granger, Wyo., and via Limon and Denver, Colo., and Cheyenne; the Oregon Short Line Railroad Company operating in Utah north of Ogden, and in Wyoming, Idaho, Oregon, Montana, and Nevada, extending from Salt Lake City to Butte, Mont., and Huntington, Oreg., the Oregon-Washington Railroad and Navigation Company operating in Idaho, Oregon, and Washington north and west of Huntington to Spokane, Wash., Portland, Oreg., and Seattle, Wash.; the Los Angeles & Salt Lake Railroad Company from Salt Lake City to Los Angeles, Calif.; and the St. Joseph & Grand Island Railroad Company in Kansas, Nebraska, and Missouri from St. Joseph, Mo., and Grand Island, Nebr. Lease of the properties of the foregoing roads, which had been operated with the Union Pacific under common control and management, was considered and approved in *Union Pac. R. Co. Unification,* 189 I. C. C. 357 (1933) and 207 I. C. C. 543 (1935).

The railroad now operated by the complainant was originally the Denver, Rio Grande Railway organized in 1870 as a narrow-gage line. After passing through various hands and receiverships, the Denver and Rio Grande Railroad Company was organized in 1886 to operate the property. When the main line was converted to standard

gage in 1890, the railroad was opened for through traffic between Denver and Ogden by way of Pueblo, Rio Grande, and Tennessee Pass, Colo. Prior to that date, the Rio Grande could participate in transcontinental traffic only by transferring the lading to its narrow-gage cars. In 1901, it acquired the Rio Grande Western Railroad Company operating between Grand Junction, Colo., and Ogden via Provo and Salt Lake City.

Although opened for through business, the line was handicapped by the fact, among others, that traffic originated at or destined to its Colorado gateways or east thereof could not be interchanged at joint through rates at Ogden or Salt Lake City with its connections, the Oregon Short Line, to or from points on that line in Utah north of Ogden and through southern Idaho to Butte and Huntington. Also, traffic from and to Oregon over the Southern Pacific, to or from Colorado common points and east, could not be transported over the Rio Grande at joint rates equal to those over competitive routes. In 1897, however, the Union Pacific and its controlled lines, the Oregon Short Line and the Oregon-Washington Railroad and Navigation Company operating north and west of Huntington, were in separate receiverships. In that year the two lines last named established joint through rates to and from points in the northwest area with the Rio Grande via Ogden and thus opened that gateway at rates equal to the rates then in effect over the Wyoming line of the Union Pacific through Cheyenne and Granger. Those rates applied on traffic between the Pacific coast terminals, including Portland, Tacoma, and Seattle, and Missouri and Mississippi River points and numerous points east thereof.

In the same year, the Oregon-Washington Railroad and Navigation Company established joint through rates

between its Oregon and Washington stations and points on, or reached by, the lines of the Great Northern and Northern Pacific Railway Company through Spokane and Wallula, Wash. Joint rates through those junctions from and to Union Pacific stations have been continued in effect.

Ogden remained as an open gateway through which joint rates over the Rio Grande applied until 1906, when such rates were canceled by the Union Pacific from and to Colorado common points and east, to and from points in Montana, Idaho, and Oregon on the Oregon Short Line and its connections. In 1912, transcontinental freight rates to and from points on the Oregon-Washington Railroad and Navigation Company (resulting from reorganizations in the interval) over the Rio Grande and its Utah junctions were also canceled. During this period the Southern Pacific was controlled by the Union Pacific and that circumstance greatly influenced the routing of freight and passenger traffic over the Union Pacific to and from Oregon and California. As a result of competitive stresses, as well as for other reasons, the Rio Grande financed the construction of a new railroad, the Western Pacific, to obtain an outlet to the Pacific coast. The Western Pacific was opened in July 1911 and participates in through routes and joint rates on transcontinental traffic via Salt Lake City with the Rio Grande and the Union Pacific, its two connections at that point. In 1912, the Union Pacific was required to divest itself of control of the Southern Pacific. *United States v. Union Pac. R. Co.*, 226 U. S. 61.

Through passenger fares also were in effect over the lines of the Union Pacific and the Rio Grande via the latter's Colorado and Utah junctions from 1897 to 1915,

when they were canceled by the Union Pacific. *Ogden Gateway Case,* 35 I. C. C. 131.

In 1915, the Western Pacific and, in 1918, the Rio Grande, went into receivership. After various changes, the latter was reorganized on April 11, 1947, as the Denver and Rio Grande Western Railroad Company. *Denver & R. G. W. R. Co. Reorganization,* 267 I. C. C. 862. As a part of its reorganization on that date, the Rio Grande merged with the Denver and Salt Lake Railway Company, and thereby acquired the Moffat tunnel line of that carrier. By that line and the Dotsero cut-off, completed in 1934, from Orestod, Colo., on the Denver & Salt Lake to Dotsero, Colo., on its own line, the Rio Grande obtained a route from Denver to Ogden 175 miles shorter than its route through Pueblo.

The Rio Grande now operates between Denver and Ogden over the two routes. By way of the Moffat tunnel the distance is 607 miles, and the other route through Pueblo is 782 miles. These two are the main lines and constitute 951 miles, or 51 percent, of the Rio Grande standard-gage tracks. In addition, there are 1,452 miles of branch lines, of which 527 miles are narrow gage serving western Colorado and northwestern New Mexico in areas of small population and light traffic. In all, it operates about 2,400 miles of road.

Eastern connections of the Rio Grande are in Colorado at Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad. At Denver, it connects and interchanges traffic with the Union Pacific, the Chicago, Burlington & Quincy Railroad Company, called the Burlington, the Chicago, Rock Island and Pacific Railroad Company, called the Rock Island, The Atchison, Topeka and Santa

Fe Railway Company, called the Santa Fe, and The Colorado and Southern Railway Company, of the Burlington system. At Colorado Springs, 75 miles south of Denver, it interchanges with the Rock Island and the Santa Fe. At Pueblo, 119 miles south of Denver, it interchanges with the Missouri Pacific Railroad Company (Guy A. Thompson, trustee), the Santa Fe, and the Colorado & Southern. At Walsenburg, 51 miles farther south, it interchanges with the Colorado & Southern. At Trinidad, a short distance from the Colorado-New Mexico State line and 92 miles south of Pueblo, it interchanges with the Colorado & Southern and the Santa Fe.

Western connections of the Rio Grande are in Utah at Ogden, Salt Lake City and Provo. At Ogden, the connecting lines are the Union Pacific and the Southern Pacific. At Salt Lake City, 37 miles south of Ogden, the connections are the Western Pacific and the Los Angeles line of the Union Pacific. At Provo, 44 miles south of Salt Lake City, it again connects with the Union Pacific's Los Angeles line.

Since 1890, when its standard-gage line was completed between Denver and Ogden via Pueblo, the Rio Grande, through its eastern and western connections, has been a part of several transcontinental routes. It now participates in through routes and joint rates on equal terms with other carriers on transcontinental traffic between (1) points in an area generally described as west of a line beginning at Vancouver, British Columbia, thence south, just east of Seattle and Portland, and southeasterly to a point west of Ogden and Salt Lake City, crossing the line of the Union Pacific at Lynndyl, Utah, 118 miles west of Salt Lake City, and thence southwesterly, east of the Union Pacific's Los Angeles line, to a point

south of San Diego, Calif., and (2) all points in the United States east of a line beginning at the Canadian border and extending southward along the Montana-North Dakota State line and the western border of South Dakota, thence southwesterly through the extreme southeastern portion of Wyoming, west of Cheyenne, and the eastern part of Colorado just west of Denver, Pueblo, and Trinidad, thence southwest and south through the central or western part of New Mexico to a point just west of El Paso. However, joint rates generally do not apply in connection with the Rio Grande on transcontinental traffic originating at or destined to points in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington east of the line first described. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande such traffic would move at higher combinations of rates to and from Ogden or Salt Lake City.

The area in Utah north of Ogden, and in Idaho, Montana, Oregon, and Washington, to and from which joint rates generally do not apply in connection with the Union Pacific and the Rio Grande, will be referred to as the excluded territory. Transcontinental traffic to or from such territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than over the Rio Grande route because the Union Pacific routes are shorter and, as stated, joint rates are not available over the Rio Grande route. The Rio Grande desires to participate as a bridge line on such traffic via its Colorado gateways and Ogden at the joint through rates. This also would include traffic to or from points in the excluded territory on lines which join with the Union Pacific in joint rates.

Representative origins, destinations, commodities, rates distances, average loadings per car, and revenues per car-mile are shown in an appendix to this report, for east-bound and west-bound movements, compiled from exhibits of record. The distances shown are those over existing routes over the Union Pacific and its connections by which joint through rates apply, and over the Rio Grande and its connections over which combination rates apply. Revenues per car-mile are computed for such rates and distances and, in addition, for the distances over the Rio Grande at joint rates on the same basis as those over the Union Pacific routes, as sought herein.

Traffic between the excluded territory and Colorado common-point territory (points in eastern Colorado from Denver south to Trinidad and west to Canon City) generally must move over the Union Pacific through Denver to get the lowest rate. Similarly, traffic between the excluded territory and Utah common-point territory (points in Utah from Ogden south to Provo and Payson) generally must move over the Union Pacific to get the lowest rate. There are some exceptions, however, with respect to rates between Utah common points on the Rio Grande and the northwest area on livestock, lumber, grain, and other commodities.

An analysis of distances from and to 5 representative points[4] on the Union Pacific in Utah north of Ogden, and in Idaho and Washington, to 14 destinations, Denver and east, over restricted routes of the Union Pacific for distances, computed over the short routes, ranging from 649 miles to Denver to 3,279 to Boston, Mass., shows that routes via Ogden and the Rio Grande to the same points

4 Logan, Utah; Boise, Idaho Falls, and Twin Falls, Idaho; and Spokane, Wash.

are longer by from 1 percent (from Spokane to New Orleans, La.) to 16 percent (from Idaho Falls to Kansas City). To the same destinations from nine other representative points[5] on the Union Pacific, from which through routes and joint rates are available in connection with the Chicago, Milwaukee, St. Paul, and Pacific Railroad Company, referred to as the Milwaukee, the Great Northern, the Northern Pacific, or the Southern Pacific, the routes via Ogden and the Rio Grande would be longer than the short workable and service routes by from 1 percent (from Seattle to Fort Worth, Tex., and Oklahoma City, Okla.) to 37.5 percent (from Yakima to Minneapolis, Minn.). To Minneapolis from seven of the nine origin points, the routes via the Great Northern form the short workable and service routes.

The Ogden-gateway routes of the Union Pacific consist of two lines. The Los Angeles line runs southwesterly through Salt Lake City, Provo, and Delta, Utah, Caliente and Las Vegas, Nev., and Barstow, Calif., to Los Angeles. Through routes with joint rates are maintained over that route in connection with the Rio Grande, as hereinbefore described. The other line of the Union Pacific runs north from Ogden, 111 miles to McCammon in southeastern Idaho. At that point it meets the Wyoming line of the Union Pacific leading west 186 miles from Granger, the junction point with the main line through Cheyenne to Ogden from the east. From McCammon the line extends north to Pocatello, Idaho, 22 miles, and from that point the main line runs in a northwesterly direction across Idaho into Oregon and Washington. From Pocatello another line extends northerly to Butte. From

5 Hood River, Milton, Pendleton, Portland, Elgin, and Redmond, Oreg., and Yakima, Kent, and Seattle, Wash.

Cheyenne, the main line extends east across Nebraska to Omaha, 507 miles, and south to Denver, 109 miles. From Ogden through Granger to Cheyenne the distance is 483 miles.

All shipments to or from points in Idaho, Montana, Oregon, and Washington north or west of McCammon over present Union Pacific routes, or over routes through Ogden and the Rio Grande, must pass through McCammon. That point therefore, is used as the point of divergence in computing distances over the Union Pacific routes and the routes over the Rio Grande by way of Ogden. A shipment from McCammon over the Union Pacific to Cheyenne would move 529 miles; and to the Denver gateway, also over the Union Pacific, 623 miles. But over the Union Pacific to Ogden, thence the Rio Grande to the Denver gateway, the shipment would move 718 miles, or 198 miles farther than over the Union Pacific route to Cheyenne and 95 miles farther than over its route to Denver. On shipments carried through to the Missouri River and points east, the Union Pacific route through Cheyenne also has the advantage in distance.

From Cheyenne to Kansas City a shipment would move 624 miles, as compared with 636 miles for a movement off the Rio Grande from Denver to Kansas City over the Rock Island, its short-line connection. A through shipment, therefore, from McCammon to Kansas City over the direct line of the Union Pacific through Granger and Cheyenne would move 1,153 miles, as compared with 1,352 miles, 199 miles longer, via Ogden and the Rio Grande to Denver, thence the Rock Island. The latter route on such a shipment would be 17.2 percent circuitous. To points east of Kansas City the maximum excess mileage from McCammon over the Rio Grande route is on a

haul to Pittsburgh, Pa. Over the Union Pacific to Omaha, thence the Chicago & North Western to Chicago, Ill., and The Pennsylvania Railroad Company beyond, the haul would be 1,991 miles, and over the Union Pacific to Ogden, the Rio Grande to Denver, the Burlington to Chicago, thence the Pennsylvania, the haul would be 2,203 miles, 212 miles longer, or a circuity of 10.7 percent.

In the following table are shown representative destinations and the distances from McCammon over routes using the Rio Grande from Ogden to Denver, as compared with distances over routes using the Union Pacific through Wyoming. Joint through rates apply over the latter routes. Over routes that include the Rio Grande higher combination rates apply. The table does not contain complete routing, except over the Union Pacific direct to Omaha and Kansas City. The last column of the table shows the percentages by which the Rio Grande routes are longer, or the circuity, from the point of divergence, McCammon, to the points shown.

From McCammon, Idaho, to—	Via Union Pacific	Distance	Via Rio Grande	Distance	Difference	Circuity via Rio Grande
		Miles		Miles	Miles	Percent
Omaha, Nebr.	(1)	1,036	(2)	1,255	219	21.1
Kansas City, Mo.	(3)	1,153	(2)	1,352	199	17.2
Minneapolis, Minn.	(3)	1,396	(2)	1,593	197	14.1
St. Louis, Mo.	(3)	1,428	(2)	1,627	199	13.9
Chicago, Ill.	(1)	1,524	(2)	1,735	211	13.8
Pittsburgh, Pa.	(1)	1,991	(2)	2,203	212	10.7
Charleston, W. Va.	(3)	2,018	(2)	2,218	200	10.0
Columbia, S. C.	(3)	2,274	(2)	2,473	199	8.8
Baltimore, Md.	(1)	2,319	(2)	2,521	202	8.7
Norfolk, Va.	(3)	2,438	(2)	2,637	199	8.2

Atlanta, Ga.	(3)	2,044	(5)	2,204	160	7.8
Savannah, Ga.	(3)	2,327	(5)	2,486	159	6.8

1 Union Pacific through Wyoming to Omaha.
2 Union Pacific to Ogden, Rio Grande to Denver.
3 Union Pacific through Wyoming to Kansas City.
4 Union Pacific to Pacific Junction, Kans.
5 Union Pacific to Ogden, Rio Grande to Pueblo.
6 Union Pacific to Denver, Colorado & Southern to Sixala, N. Mex.

The differences in the distances to destinations in the Southwest over routes including the Rio Grande from points in the excluded territory, as compared with the Union Pacific routes through Wyoming, are much less than they are to Missouri River crossings and points east and southeast. About 90 per cent of the traffic upon which joint through rates are sought via Ogden and the Rio Grande moves to the latter areas, and about 10 percent to the Southwest.

Over its routes through Wyoming, the Union Pacific gets its long haul from McCammon to Omaha, 1,036 miles, and to Kansas City, 1,153 miles. If joint rates were prescribed over the Union Pacific to Ogden and the Rio Grande to Denver, the Union Pacific's haul from McCammon to Ogden on traffic to Omaha or Kansas City and beyond would be 111 miles. However, if such traffic were routed beyond Denver over the Union Pacific, the latter would get a further haul of 560 miles to Omaha via Julesburg, or 640 miles to Kansas City via Salina, Kans., a total haul from McCammon of 671 miles to Omaha or 751 miles to Kansas City. Joint through rates are in effect over that route on sheep from Union Pacific origins in southern Idaho and eastern Oregon, but are 19 cents higher to the Missouri River and east (20 cents to Chicago) than rates over more direct routes of the Union Pacific. That railroad would establish a similar basis on cattle if requested. Over the route in connection with the Rio Grande, it would lose its haul of 529 miles from McCammon to Cheyenne, or 623 miles to Denver. On traffic routed via Ogden, the Rio Grande, and Pueblo to destinations east thereof, the Union Pacific would not be in a position to get any additional haul.

All of the foregoing distances, as stated, are computed from McCammon as the point of divergence. The great bulk of the traffic, however, from the excluded territory in Idaho, Montana, Oregon, and Washington originates or terminates on the Union Pacific or its connections west and north of that junction. On such traffic the Union Pacific would have a substantial haul in addition to that of 111 miles from McCammon to Ogden.

The hauls to Ogden would be, for example, from Lewiston, Idaho, 847 miles; from Centralia, Wash., 937 miles; and from Seattle, 1,029 miles. Over the Union Pacific direct from those respective origins to Omaha, the hauls would be 1,772, 1,862, and 1,954 miles. Those figures show the extent to which the Union Pacific would lose its long haul, the loss in mileage being 925 miles in each instance.

From and to points in the excluded territory in Oregon and Washington, and on the Burke and Headquarters branches of the Union Pacific in northern Idaho, the Union Pacific and certain other defendants have arrangements for the interchange of traffic in various commodities at junctions or gateways in Oregon, Washington, and Idaho, under joint rates. On traffic through such gateways moving under the joint rates, the Union Pacific in many instances foregoes its long haul. The gateways through which the rates are in effect, with certain limitations upon their application specified in the tariffs, are: Portland, in connection with the Southern Pacific; Marengo, Wash., and Plummer, Idaho, in connection with the Milwaukee; Spokane, in connection with the Great Northern; Wallula, Wash., and Spokane, in connection with the Northern Pacific; and Spokane, in connection with the Spokane International Railroad Company con-

necting with the Canadian Pacific Railway Company at Eastport, Idaho, at the Canadian border.

Illustrative of the hauls over the Union Pacific on traffic routed through these gateways are the following: From Lewiston, 132 miles via Marengo or 193 miles via Spokane; from Centralia, 393 miles on a route through Marengo; from Seattle, 184 miles through Portland; and from Pendleton, Oreg., 165 miles via Marengo, 227 miles via Spokane, or 70 miles via Wallula, Wash., on traffic routed over its connections at such points. If joint rates were established from the same origin points to Omaha and beyond via Ogden and the Rio Grande, the hauls of the Union Pacific to Ogden would be substantially greater than many of its hauls via other junctions with its connections, as illustrated.

For example, from Pendleton, a representative point, on traffic to Chicago the Union Pacific has a haul of 1,560 miles on its route through Omaha, but only 70 miles over an established through route via Wallula and the Northern Pacific and connections. The rates are the same over both routes. Over a route via Ogden and the Rio Grande to Denver, thence the Burlington, the distance is 2,257 miles, or 6.4 percent longer than the route via Wallula and 10.4 per cent longer than the Union Pacific route through Omaha. The Union Pacific's haul over the Rio Grande route would be 633 miles. From Pendleton to St. Louis, the Rio Grande route sought would be shorter by 168 miles than a through route now available via Spokane and the Spokane International and its connections, and would be 201 miles, or 10.3 percent, longer than the Union Pacific route through Kansas City. To Oklahoma City, Okla., the haul of the Union Pacific would be increased from 227 miles, over the present route via Wal-

lula and the Northern Pacific and connections, to 633 miles via Ogden and the Rio Grande to Pueblo and the Santa Fe beyond. The distance over the latter route is 1,910 miles, or only 34 miles, 1.3 percent, longer than the route which gives the Union Pacific its long haul; and 692 miles, or 36.2 percent, shorter than the foregoing route through Wallula.

The foregoing are illustrative of numerous established through routes in which the Union Pacific participates from points in the excluded territory which short haul that carrier. Many of such routes are longer than those here sought via Ogden and the Rio Grande, and this is true to all sections of the country east of the Rocky Mountains, except western trunk-line territory. To the latter territory the short-hauling routes are generally shorter than the routes by which the Union Pacific retains its long haul, and considerably shorter, for example, by 37.5 percent from Yakima to Minneapolis, than the routes sought via Ogden and the Rio Grande. As indicated, the portion of the excluded territory from and to which this short hauling of the Union Pacific occurs does not include points in Utah nor points in Idaho, except on the Burke and Headquarters branches of the Union Pacific in the northern portion of that State.

These short-hauling routes have been in effect for many years. Most of them were established prior to the dates when the Union Pacific assumed control of the portions of its line west of Huntington and south of Salt Lake City. Joint rates with the Southern Pacific through Portland have been in effect since about 1910, with the Milwaukee through Marengo and Plummer since about 1902, with the Great Northern through Spokane since about 1894, with the Northern Pacific through Wallula

since about 1883, and with the Spokane International through Spokane since about 1907.

On some of the traffic interchanged at these gateways the Union Pacific obtains a short haul, as compared with its connections, and on other traffic a long haul. East-bound traffic through the specified Washington and Idaho gateways consists of apples, pears, lumber and other forest products, some steel products, and miscellaneous commodities. A large portion of the traffic, particularly lumber, moves to North and South Dakota, Minnesota, and Wisconsin over the northern routes. Traffic over such routes moves also to Midwestern States and to States east of the Mississippi River. West-bound traffic through the same gateways consists of manufactured products and miscellaneous commodities from the Middle West and from eastern and southern territories.

These interchange arrangements are warranted and in the public interest, according to the defendants, because each carrier shares in long hauls on some traffic as well as short hauls on other traffic, and because the arrangements make it possible for the carriers to handle traffic over shorter routes in many instances. This latter statement, however, applies only, except to an insignificant extent, to such routes to and from points in western trunk-line territory.

As indicated, through routes and joint rates apply in connection with the Rio Grande through Provo on traffic to or from points on the Los Angeles line of the Union Pacific. Such routes generally are shorter than routes over the Union Pacific direct to or from Omaha, Kansas City, or Denver. The following is illustrative:

From Los Angeles, Calif., to—	Via Union Pacific	Distance	Via Rio Grande	Distance
		Miles		Miles
Omaha, Nebr.	(1)	1,808	(2)	1,813
Minneapolis, Minn.	(1)	2,168	(2)	2,152
Kansas City, Mo.	(3)	1,925	(2)	1,911
St. Louis, Mo.	(3)	2,200	(2)	2,185
Denver, Colo.	(4)	1,395	(2)	1,276
Chicago, Ill.	(1)	2,296	(2)	2,293
Atlanta, Ga.	(3)	2,816	(5)	2,762
Little Rock, Ark.	(3)	2,430	(5)	2,272
Dallas, Tex.	(4)	2,226	(5)	2,045

1 Union Pacific to Omaha.
2 Union Pacific to Provo and Rio Grande to Denver.
3 Union Pacific to Kansas City.
4 Union Pacific to Denver.
5 Union Pacific to Provo and Rio Grande to Pueblo.

Other defendants also participate in through routes with joint rates on traffic moving to or from points on the Union Pacific in the excluded territory from and to eastern points and voluntarily forego their long hauls. For example, the Burlington, the Rock Island, the Santa Fe, and the Missouri Pacific participate in joint rates with the Union Pacific through Kansas City and Omaha. The railroads named could haul the traffic for longer distances over their own rails to Pueblo, Denver, or Cheyenne, instead of permitting shippers to route through Kansas City and Omaha in connection with the Union Pacific.

The total amount of traffic moving between the four Northwestern States and points east of the Colorado common points is substantial. According to figures computed by the Union Pacific, transcontinental carload traffic from the East in the year 1948 over the Union Pacific through Wyoming to those Northwestern States totaled 55,631 cars. Of these, (1) 81.7 percent originated in eastern

Colorado, Kansas, Missouri, Kentucky, Virginia and all States north thereof, (2) 10.8 percent in Texas, Oklahoma, Arkansas, and Louisiana, and (3) 7.5 percent in Tennessee, Mississippi, Alabama, Georgia, Florida, North Carolina, and South Carolina. About 62 percent of the total consisted of manufactures and miscellaneous traffic, most of which originated in group (1). East-bound traffic from the four States to the same three groups in the same year totaled 116,278 carloads, of which 84.1 percent went to group (1), 10.5 percent to group (2), and 5.4 percent to group (3). About 75 percent of that total consisted of agricultural and forest products.

Of the total carloads, 171,909 in both directions, 121,909 originated or terminated in the excluded territory and the remainder, 50,000, originated or terminated at points in Oregon and Washington west of that territory. The Rio Grande is in a position to solicit movements of the latter traffic over its line at competitive joint through rates in connection with longer routes over the Southern Pacific from Portland to Ogden or over the Great Northern to Bieber, Calif., and the Western Pacific to Salt Lake City. These joint rates are the same as the rates which apply over the direct routes of the Union Pacific from origins on that road in the same area west of the excluded territory. For example, from Seattle to Denver the distance is 1,588 miles over the Union Pacific direct and 1,894 miles over the Union Pacific to Portland, the Southern Pacific to Ogden, and the Rio Grande beyond. In addition to the joint rates sought via the Ogden gateway from the excluded territory, the complainant is also seeking joint rates from the northwest area west of the excluded territory, the same as those in effect over the Union Pacific, Southern Pacific, and Great Northern-

Western Pacific routes, for application in connection with the Union Pacific via the Ogden gateway.

A substantial volume of traffic is handled by the Rio Grande in connection with the described routes over which it participates in competitive joint through rates to and from Oregon, Washington, and British Columbia. For example, in 1948 the Rio Grande handled 30,486 carloads in connection with the Southern Pacific and 7,152 carloads in connection with the Western Pacific-Great Northern. In 1947, the volume was 22,722 and 8,909 carloads over the respective routes. Most of this consisted of lumber from Southern Pacific origins south of Portland.[6]

The complainant's estimate of the traffic in carloads that would be potentially available to and from the excluded territory for solicitation by the Rio Grande, in the event competitive joint rates were established over its line via Ogden, from Idaho, Montana, Oregon, and Washington is about 29 percent greater than the volume of traffic, according to the Union Pacific, that moved in 1948 over its Wyoming lines. The estimate was based upon the total carload traffic originated and terminated by the Union Pacific in the years 1944 to 1948, inclusive. It included commodities within the description of products of agriculture, animals and animal products, products of mines, products of forests, and manufactures and miscellaneous commodities. The total carloads estimated as ori-

6 Prior to February 1, 1949, joint rates applied over the Bieber route in connection with the Rio Grande to competitive territory in Colorado and east thereof on lumber from certain origins in Oregon and Washington on the Oregon Trunk Railway and the Spokane, Portland and Seattle Railway Company (subsidiaries of the Great Northern and Northern Pacific). Those rates were canceled on February 1, 1949, in connection with the Rio Grande; there is no indication that the cancellation was protested.

ginated by the Union Pacific annually in the area specified was 101,476 and the number terminated 56,286, a total "potential" of 157,762 carloads.

This estimate did not include any shipments that might originate or terminate off the line of the Union Pacific and moved over that carrier as a part of a longer haul. Although stated to be a conservative estimate of potential traffic, it was computed from a substantial number of reliable sources, and represents the complainant's best analysis of the traffic considered available for solicitation. No attempt was made to estimate the amount of traffic that the Rio Grande might actually obtain from these potential sources other than a statement that there was no probability that it would get more than 10 percent and that the amount probably would be less than 10 percent because of the vigorous competition of the Union Pacific. This figure of 10 percent as a maximum was derived from the experience of the Rio Grande in obtaining other transcontinental traffic now moving at joint rates in competition with the Santa Fe, Southern Pacific, Union Pacific, Great Northern, Northern Pacific, and Milwaukee. If the Ogden gateway were opened to traffic to and from the four States named, there would be active competition with the Union Pacific, the Wabash, the Chicago & North Western, and the Missouri River connections that favor Union Pacific routing. At the present time the Rio Grande gets less than 5 percent of the traffic to and from California over the available through routes, with joint rates in connection with its line, because of competition with other routes.

A transportation specialist of the United States Department of Agriculture testified that the Rio Grande would be doing well if it obtained 1,000 cars additional

annually from this traffic, an amount that is less than 1 percent of the estimated potential total traffic.

Whatever the amount, it would be the result mainly of (*a*) active solicitation by the Rio Grande to persuade shippers and receivers of freight to use its line as an overhead or bridge route, and (*b*) the value of its service to shippers. It would also depend upon the extent to which the Rio Grande and receivers of freight on its line use, and can induce shippers to use, transit facilities available on that line so as to attract the movement of commodities thereto for various purposes for subsequent reshipment beyond at the balance of the joint through rates from the point of origin. The development of such activities is of particular interest to shippers and receivers of freight on the Rio Grande. This is indicated by the growth of traffic over that railroad in the 15-year period, 1934 to 1948, inclusive, and by the testimony of shippers and receivers served by it.

Since 1934, when the Dotsero cut-off was constructed, affording a shorter route by the Rio Grande between Denver and the Utah gateways, there has been a marked increase in the traffic carried over that railroad. For the 2 years prior thereto, the total tons carried were less than 6,000,000 although the tons carried exceeded that figure in each year before that, back to 1924. Beginning in 1934, the traffic gradually increased and reached a maximum of 18,517,000 tons in the war year of 1944. In 1945 it dropped to 14,213,000 tons, but increased in 1947 to 18,331,000 tons and in 1948 to 18,473,000 tons. This tonnage has shown a considerable increase percentagewise in traffic received from connecting lines and a decrease in traffic originated. In 1924, 23.2 percent was received from connections and 76.8 percent originated. In 1934, the respective percent-

ages were 39.3 and 60.7. In 1947, they were 49.8 and 50.2, and in 1948 they were 52.3 and 47.7 percent. This traffic in 1948 did not differ markedly from the traffic handled in the four war years 1942-45, when the percentages of traffic received from connections ranged from 52.6 percent in 1942 to 58.2 percent in 1945.

Of the traffic received from connections in the 15-year period 1934 to 1948, inclusive, the percentage terminated on the line of the Rio Grande has ranged from 16.4 percent in 1941 to 20.7 percent in 1948. In the war years the percentages were 16.7 to 19.9 percent. In the same 15-year period, of the traffic received from connections, the amount delivered to connections, that is, bridge traffic ranged from 20.7 percent in 1935 to 39.6 percent in the war year of 1945. Excluding the war years, the percentage of traffic received from connections that was delivered to connections was 30.1 percent in 1947 and 31.6 percent in 1948. In 1934, the corresponding percentage was 21.7 percent and in 1924 it was 9 percent. These percentages show the increasing importance of the Rio Grande as a bridge line. In tons of freight carried in 1947, such traffic accounted for 5,519,239 tons out of a total of 18,331,176 tons, and in 1948 accounted for 5,846,793 tons of a total of 18,473,356 tons carried. In revenue, the Rio Grande received in 1947 from its bridge traffic $22,894,412, which was 43.3 percent of its total revenue of $52,883,339; and in 1948, $27,654,086 or 44.2 percent of its total revenue of $62,505,951.

Although the percentage relation of the traffic originated on the Rio Grande to the total traffic of that carrier has decreased, such traffic both in tonnage and revenue has increased in the same 15-year period. In 1934, the tons originated were 3,826,049 and the revenue received therefrom was $8,311,254; in 1947, the tons originated were 9,202,867 and the revenue therefrom $20,190,318; and in

1948, the corresponding figures were 8,804,334 tons and $22,018,519. The 1947 and 1948 figures exceeded those of the war years. The volume of strictly local traffic; that is, traffic both originated and terminated on the line, also increased; this traffic in 1934, for example, accounted for 2,048,544 tons and $4,351,807 in revenue, and in 1948, for 3,307,374 tons and $7,630,587. Strictly local traffic was less annually throughout the 15-year period, including the war years, than during the 6-year period 1924 to 1929, inclusive.

The reasons given for the decline or lack of proportionate growth in traffic originated are (1) depletion of nonferrous ores in Colorado and the closing of smelters, except one now operating at Leadville, Colo.; (2) decline in the amount of coal originating on the road; (3) decline in production of lumber and its products in the area served, and the discontinuance of operation by many sawmills; and (4) loss of local traffic to other forms of transportation.

The relative decline in strictly local traffic has been offset by increases in traffic originated and shipped out over connecting lines, and traffic received from connecting lines and terminated. Such traffic affords a measure of the increasing importance of the Rio Grande to the shippers and receivers of freight in the localities and areas in the States of Colorado and Utah served by it. Although percentagewise, bridge traffic in relation to the total was greater in 1948 than in 1934, and increased by over 326 percent in the 15-year period, traffic originated or terminated also increased by substantial amounts, or over 155 percent. In terms of revenue, however, less was received from bridge traffic than from the other traffic. In 1934, for example, the Rio Grande received from bridge traffic $5,648,891, and

in 1948 it received $27,654,086; from the other traffic, it received $11,519,335 in 1934 and $34,851,865 in 1948.

The record shows that both the Rio Grande and the Union Pacific sought to interest the public in the controversy and to inform other persons, especially shippers, as to the merits of their respective views. For example, the Rio Grande issued a pamphlet entitled "20 Questions" as a means of informing the public of the Rio Grande's side of the case and its reasons for seeking opening of the gateway. In its brief, the Railroad Commission of the State of Montana states that it had informal conferences with official representives of both the complainant and the defendants before it intervened in the proceeding. A number of witnesses related that they had listened to representatives of both sides before appearing to give testimony. All witnesses were men of responsibility in their communities and were successfully engaged in their respective occupations. Many appeared and testified as representatives of large groups of producers, shippers, and receivers of freight in their areas. There is no indication that these witnesses, whether for or against the complaint, were improperly influenced, or that their respective interests in the subject matter of the controversy had been stimulated in any questionable manner.

Transit.—In transportation by rail, arrangements offered by railroads to shippers under which shipments may be stopped in transit for various commercial operations and reshipped at the balance of the joint rate from the point of origin are of great value to shippers, receivers, and distributors of freight. They are of substantial value in many marketing operations and permit a freer flow of traffic through the transit points.

The Rio Grande, like other railroads, offers a large number of such transit arrangements, including stops for partial loading or unloading, storage, processing, washing and packing fruits, sorting and consolidating commodities, concentration, milling, fabrication, assembling and distributing, and, in the case of livestock, grazing and feeding. Such arrangements are of importance to shippers and receivers in the territory served by the Rio Grande. Traffic from the excluded territory consists of perishable commodities, other agricultural products, milled products, livestock, and lumber and its products. West-bound traffic to that territory is made up for the most part of manufactures and partially manufactured articles, some of which are stopped for storage, partial unloading at a number of points, and fabrication in transit.

On traffic from Colorado common points and points east thereof through Pueblo, Colorado Springs, or Grand Junction, and Price, Utah, to final destinations north or west of Ogden on the Union Pacific or points on its connecting lines, failure to have joint through rates in connection with the Rio Grande hinders the use of the stoppage-in-transit arrangements offered by that railroad at such Rio Grande points. Pueblo has a population of about 75,000; Colorado Springs, 50,000; Grand Junction, 17,500; and Price, 5,000. All of these are distributing points for surrounding areas. A shipper at Chicago, for example, may have a carload containing shipments for consignees at Pueblo and Boise, Idaho. If the car is partially unloaded at Pueblo it cannot be reshipped over the Rio Grande to Boise at a joint through rate; but the car can be moved to Boise via Pueblo and Denver, thence the Union Pacific at a joint through rate. If stops are desired on the Rio Grande at Grand Junction, Price, or Provo, for example, joint through rates would not be available.

A discussion of the evidence offered by shippers and receivers of particular commodities who testified in support of the complainant follows:

Building Materials.—A dealer in and distributor of general building materials in Salt Lake City, who handles from 400 to 500 carloads annually, obtains from 150 to 200 cars from points east of Colorado common points, including cellotex from Marrero, La., roofing from Cincinnati, Ohio, doors from Louisville, Ky., hardwoods and plywoods from Algoma, Wis., and Orangeburg, N. C., asbestos products from St. Louis, and asphalt siding from Minneapolis. Distribution is made in carloads, from pool cars, and from warehouses to customers located on the Rio Grande on the western slope of Colorado, such as Glenwood Springs and Grand Junction Colo., and in Utah, such as Price, Helper, Ephraim, and Manti; and also on the Union Pacific in northern Utah; in Wyoming, Rock Springs and west; and in southern Idaho northward to and including Ashton on the West Yellowstone branch and westward to and including Magic, Shoshone, and Buhl. This dealer cannot now serve these customers from shipments made in through cars at joint rates over the Rio Grande when such cars also carry shipments for points on the Union Pacific beyond Ogden. Ephraim and Manti are on a branch line about 52 and 59 miles, respectively, south of Thistle, Utah.

In some instances this shipper has had to forego business east of Salt Lake City at points as far as Glenwood Springs because of the rate situation. If joint through rates were established, this distributor could give customers at a number of intermediate points on the Rio Grande, who generally are small dealers and can take only less-

than-carload quantities, better service through partial unloading in transit and more efficient service by frequent deliveries under more flexible schedules, instead of being limited, as at present to furnishing service in connection with pool cars consigned to Salt Lake City as the ultimate destination. Pool cars with partial loads for that point or Ogden and points on the Union Pacific beyond do not now move over the Rio Grande, but are routed over the Union Pacific to get the benefit of joint rates.

Of the 150 or more cars annually from the east, this distributor estimated that he would have stopped for partial unloading about 25 percent. Witness made no mention of commercial competition, but indicated that his chief concern was better service to his customers and a saving in cost to his company if such carloads could be stopped for partial unloading at intermediate points on the Rio Grande while moving at the through rates to Union Pacific destinations in the area served by him.

Farm machinery.—A distributor of farm machinery and equipment at Salt Lake City receives carloads of these commodities from eastern origins, including farm tractors from Detroit, Mich., and distributes them by his own motor vehicles to points in Utah and Idaho. This business was established in 1947, at which time the production of these commodities was insufficient to meet all demands, and a system of allocations based on prior needs was introduced. While the system of allocations was in effect, it was found to be more convenient and efficient to bring all shipments to Salt Lake City and distribute them by truck. This distributor is located on the Rio Grande at Salt Lake City and all shipments move over that line. He expressed a desire for joint through rates from eastern origins to points in

Utah and Idaho in connection with the Rio Grande, but admitted that no attempt was being made to partially unload shipments at points on the Rio Grande south of Salt Lake City when carloads are consigned to the latter point, or to ship over the Union Pacific to Salt Lake City where carloads could be partially unloaded or stored and later shipped to Union Pacific destinations in Utah and Idaho at joint through rates. The witness for this distributor stated that he preferred to slfip in-bound over the Rio Grande and forego the stopping-in-transit provisions that are now in effect at Salt Lake City and other points on the Union Pacific when traffic is routed over that line.

A factory branch of a large manufacturer of farm machinery and equipment which distributes in the intermountain area is located on the Rio Grande at Salt Lake City. In 1949 it received 369 carloads from its eastern manufacturing points. Of these, 70 percent were sold at points north of Salt Lake City, mostly at points served by the Union Pacific as far as Ontario, Oreg., and the remainder in Utah and western Colorado. About one-half of the shipments to Salt Lake City moved over the Rio Grande route and one-half over the Union Pacific. Shipments which move in over the Union Pacific may be stopped at Salt Lake City for partial unloading or storage in transit at the joint through rates when the ultimate destinations are on the lines of that carrier, but combinations of rates to and from Salt Lake City apply when such shipments move into that point over the Rio Grande. The manager of this branch testified that it would be desirable to establish joint through rates over the Rio Grande so that shipments moving over that line could be stored in transit at Salt Lake City and later reshipped, or partially unloaded thereat and the remainder forwarded to points on the Union Pacific at charges no greater than apply on similar

shipments moving over the Union Pacific. However he did not know what effect this would have on the parent company as some shipments have been routed over the Rio Grande when Union Pacific routing was requested. To indicate a need for joint through rates reference was made to a shipment of tractors which were routed over the Rio Grande to Salt Lake City. At that time a customer at Ontario needed two tractors and it cost about $50 each to ship them from Salt Lake City by motor carrier. If joint through rates had been in effect the car could have been partially unloaded at Salt Lake City and the two tractors could have been forwarded to Ontario at the joint rate from origin to Ontario. The record fails to show the difference in the joint rates to Salt Lake City and to Ontario. On a 34,000-pound shipment of tractors from Chicago, the joint through rate is $2.68 to Ogden and $2.98 to Boise, which is southeast of Ontario, representing a difference of $102 in charges.

Monuments.—A fabricator and wholesaler of granite and marble monuments at Brigham City, Utah, on the Union Pacific 21 miles north of Ogden, obtains his stone from Vermont, Georgia, Wisconsin, and Minnesota and sells in Colorado, Utah, Idaho, Wyoming, Montana, Oregon, and Washington. This dealer has keen competition with dealers in like articles in Salt Lake City. Its business is such that straight carloads rarely can be shipped to retailers. If joint through rates were established over the Rio Grande through Ogden, cars could be stopped in transit at Colorado points, such as Grand Junction. A retailer at the latter point testified that he finds it impracticable, except in unusual instances, to purchase the various kinds of monuments needed in the trade in carloads, and that the keen competition cannot be met when

shipments are made in less than carloads. There is thus an urgent need for the establishment of joint through rates on this traffic to destinations in the excluded territory with stop-off privilege at intermediate points on the Rio Grande. A substantial portion of this traffic has been lost to the trucks, chiefly because of rate differences and the lack of stop-off privileges on the Rio Grande at competitive through rates.

Livestock.—Large volumes of traffic are involved in connection with the livestock industry and with the processing and marketing of agricultural products. With respect to livestock, evidence was submitted by producers, feeders, and marketers. A number of producers in the northwest area, particularly in Idaho at such points as Pocatello, Burley, Soda Springs, and Blackfoot, desire joint rates via Ogden and the Rio Grande to markets in Denver, Pueblo, and east thereof on the same basis that applies on shipments moved over the Union Pacific through Cheyenne. Much of the evidence dealt with the advantages from such joint rates when applied on livestock shipped to grazing and feeding areas in Utah and Colorado on the Rio Grande for reshipment beyond under transit arrangements. In the areas in Utah and Colorado served by the Rio Grande are good pasture lands for grazing livestock. In addition to livestock produced locally in those areas, substantial quantities are shipped in the summer season from other sections of Colorado, Utah, and surrounding States, both for feeding in feed lots and pastures and for grazing on the livestock ranges. Movements of livestock, both sheep and cattle, into and out of Colorado are substantial in volume.

Evidence as to the needs of raisers of livestock and operators engaged in fattening livestock for markets was

submitted by persons engaged in those pursuits, individually and as representatives of livestock and feeder associations. These came from several representative points or districts served by the Rio Grande, such as Heber City and La Sal, Utah, and Burns, Lamar, and Las Animas, Colo. Those served only by the Rio Grande generally buy from areas from which joint rates apply in connection with that road in order to obtain the benefit of grazing or feeding in transit on feeder stock when the fattened animals are shipped to Denver or markets east thereof. The evidence shows that such operators have to absorb the difference in transportation costs and are not able to purchase cattle or sheep economically in the northwest area in competition with buyers from Iowa, Wyoming, Nebraska, Colorado, and Kansas that have the benefit of competitive joint rates from the excluded territory over Union Pacific routes with grazing or feeding in transit arrangements.

Due to the curtailment of the use of grazing lands in national forests in Colorado, as part of a general policy for all such forest lands, livestock raisers in Colorado have curtailed their operations in raising livestock, and have engaged more in fattening stock by grazing in private pastures or feeding in feed lots. They purchase most of their feeder stock in Colorado and surrounding areas, but for supply, quality and price reasons they have been seeking some feeder stock from more distant origins, and the need for doing so, particularly by reason of the curtailment of the pasture area, has been increasing. Livestock produced in the northwest area, particularly in Idaho, Montana, and Oregon, is of excellent grade, does well on the range, and is considered very desirable for feeding and breeding purposes. About 90 percent of the

sheep produced in Colorado are produced in the area served by the Rio Grande, and the operators in this territory purchase replacement or breeding ewes in the excluded territory for summer grazing and the production of white-faced or mutton-type lambs. One witness indicated that in-bound billing on breeding ewes is used under the feeding-in-transit arrangements, when available, at points on the Rio Grande when the new-born, fattened lambs are shipped to markets, but the feeding-in-transit arrangements apparently do not apply for breeding in transit.

Operators on the Rio Grande in western Colorado and those in the eastern Arkansas Valley sections (in southeastern Colorado east of Pueblo and in southwestern Kansas) feel that they cannot now profitably purchase stock in the excluded territory for feeding in transit in competition with similar operators on the Union Pacific in Wyoming, Colorado, Nebraska, and Kansas, due to the rate situation. For example, from Dillon, Mont., to Kansas City the rate on sheep or goats in double-deck cars is $1.21 over the Union Pacific direct and $1.40 over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond, a difference of 19 cents. The 19-cent differential over the latter route applies generally on sheep and goats from Union Pacific origins in the excluded territory to Missouri River markets and points east thereof. These rates are published as joint rates over through routes via Ogden and the Rio Grande. On sheep and goats to destinations west of the Missouri River, including Colorado common points, and on cattle to all of the territory Colorado common points and east thereof, via Ogden and the Rio Grande, the rates are on a combination basis. Cattle and sheep may be shipped from the excluded territory over the Union Pacific to Denver and con-

necting lines beyond to points in the Arkansas Valley, such as Lamar, for feeding in transit and subsequent reshipment to Missouri River markets, or markets east thereof, at the rates applicable over the Union Pacific direct to the Missouri River markets, plus an arbitrary of 8.5 cents per 100 pounds. Feeders of livestock located on the Union Pacific in northern Colorado and Nebraska are now able to overbid the Arkansas Valley feeders on northwest stock when destined to the Missouri River and east thereof, and the latter are thus unable to compete successfully because of their unfavorable rate situation. The northern Colorado-Nebraska operators feed a majority of the lambs fattened for market in the United States.

A packing plant at Pueblo purchases lambs at the Ogden market, some of which originate at points on the Union Pacific in Idaho and Oregon. These shipments are routed over the Rio Grande from Ogden even though it costs from $70 to $80 per car more than the total charges would be if the shipments were routed over the Union Pacific to Denver t the transit balance of the through rate. The Rio Grande is used from Ogden because shipments do not have to be stopped for feed and water en route to Pueblo, whereas shipments routed from Ogden over the Union Pacific usually require feed and water at Denver. There is less shrinkage on shipments moved over the Rio Grande, but not enough to offset the additional freight charges.

The rates on livestock in western territory were prescribed in *Livestock, Western District Rates*, 176 I. C. C. 1, 190 I. C. C. 175, 190 I. C. C. 611, 200 I. C. C. 535. Generally, the rates are predicated on the shortest routes over which carload traffic can be moved without transfer

of lading, but the carriers were not required to maintain the rates over such routes where it would result in short hauling within the meaning of section 15 (4) of the act. The rates on stocker or feeder livestock were prescribed on a basis not in excess of 85 percent of the rates prescribed on the same kind of stock when fit for slaughter, and the carriers were authorized to establish tariff provisions which allow stock moving toward a market to be fed in transit at intermediate points on the basis of the through rates plus a reasonable charge for such privilege. On December 6, 1932, the Rio Grande was authorized (196 I. C. C. 175) to add certain arbitraries to the rates prescribed for mountain-Pacific territory for hauls over its standard-gage lines between Pueblo and Walsenburg on the east, and Provo on the west, including branch lines connecting with the main lines between those points. For hauls of 500 miles or more, the arbitrary authorized at that time was 6 cents on cattle and on hogs and sheep, double deck. Later, these same arbitraries were authorized for application between Denver and Provo over the Dotsero cut-off (200 I. C. C. 535).

In establishing the prescribed rates on livestock, the carriers appear to have limited their application over routes which do not result in short hauling, and over other and longer routes to have provided higher rates, either by the addition of arbitraries or the application of the mileage scales over the longer routes, giving consideration to the distance involved. As indicated, operators in the Arkansas Valley may now obtain cattle and sheep in the excluded territory for feeding in transit at an arbitrary of 8.5 cents, and this same arbitrary applies when the stock originates on the Burlington in Montana and Wyoming. On the other hand, such operators may at

tain feeder stock in other areas, such as Texas and New Mexico, for feeding in transit and reshipment to the Missouri River markets or markets east thereof, at lower rates than would apply if the same stock were fed in transit by operators on the Union Pacific in Colorado, Nebraska, or Kansas. For example, the rate on cattle from Las Vegas, N. Mex., to Chicago is $1.13 when stopped for feeding at Lamar, but if the same cattle were fed at Barton, Nebr., just east of Julesburg on the Union Pacific, the rate would be $1.26, or 13 cents higher. On cattle from Raton, N. Mex., fed in transit at Lamar, the rates are $1.07 to Chicago and 76 cents to Kansas City, but if the same cattle were fed in transit at Barton the rates would be $1.21 and 89 cents, respectively. Many other examples of a similar nature are shown.

The arbitrary of 19 cents, originally 13 cents, applicable on lambs from the northwest area and moving over the Union Pacific to Ogden, the Rio Grande to Denver, and the Union Pacific beyond was established prior to the opening of the Dotsero cut-off, and was based in part on the mileage over the Rio Grande via Pueblo. The evidence indicates that this arbitrary was based on the difference between the prescribed scale rates for the average distance from 12 representative origins, on the line of the Union Pacific from Pocatello north to Butte and west to Pendleton, to the several Missouri River markets over the Union Pacific direct and over that road to Ogden, the Rio Grande to Denver via Pueblo, and the Union Pacific beyond. Using the same formula, but giving consideration to the shorter distance over the Rio Grande's Dotsero cut-off, the Union Pacific states that the arbitraries on traffic routed over the Rio Grande should be 5 cents to Denver and Pueblo and 15 cents to the Mis-

souri River markets, and it is willing to establish these arbitraries and make them applicable to cattle as well as sheep. The arbitrary of 8.5 cents on cattle and sheep from origins on the Union Pacific and the Burlington when fed in transit at points in the Arkansas Valley and reshipped to the Missouri River and beyond apparently is based on a similar formula. Reasonable groupings were authorized in *Livestock Western District Rates, supra.*

In seeking to have the rates on livestock which apply over the Union Pacific made applicable over its lines from Ogden, the Rio Grande indicates a desire to waive the arbitraries which were authorized over its line from Provo to Denver and Pueblo and, in addition, to have established over its routes lower rates than would result from the application of the prescribed scales for the distances over its routes. On shipments moving over the Union Pacific-Ogden-Rio Grande route, this would result in short hauling the Union Pacific by 512 miles to Denver and 1,042 miles to Kansas City, which are the differences in the Union Pacific distances from McCammon to Ogden and from McCammon to Denver and Kansas City.

Reference is made to *Crouch v. Nevada N. Ry. Co.*, 208 I. C. C. 586, which concerned the rates on feeder cattle moved from East Ely, Nev., to Davis, Calif., over the lines of the Nevada Northern Railway Company to Shafter, Nev., thence the Western Pacific to Sacramento, Calif., and the Southern Pacific beyond, 760.4 miles. A rate of 47.5 cents was applicable over the Nevada Northern to Shafter and the Southern Pacific beyond, 705 miles. This rate was collected, but the defendants later sought to collect a rate of 58 cents, which was the combination rate based on Sacramento. Division 4 found that the combination rate was applicable but unreasonable to the ex-

tent that it exceeded 49.5 cents, which was the prescribed scale rate for distances of 775 miles and over 750 miles. See also *Routing Livestock to and from Oregon Points*, 209 I. C. C. 349. We think, however, that the situation here as to livestock is no different from that portrayed as to certain other commodities with respect to the need for competitive rates over the Rio Grande via the Ogden gateway.

Agricultural commodities.—Growers of wheat, potatoes, onions, peas, other vegetables, and fresh fruits at Idaho Falls, Burley, Twin Falls, Blackfoot, Aberdeen, Caldwell, and Parma on the Union Pacific and also those engaged at such points in buying, selling, packing, and distributing vegetables and fresh fruits, market such products throughout the United States. In order to get as wide a distribution as possible those growers and other growers in the northwest area need as many markets and outlets as possible.

In marketing the large production of such products, particularly Idaho potatoes, it is the general practice to divert carloads in transit as markets are found and sales are made. Routes over which joint through rates apply are generally used so that a shipment can be diverted or reconsigned without the application of a combination of rates. If a shipment reaches a point through which a combination of rates applies and the sale is lost, it is frequently necessary to dispose of the shipment at that point at a forced or distress price. Such points are called closed or pocket markets.

The principal outlets for Idaho fruits and vegetables vary from year to year, but large markets are in the Central, Southwestern, and Southeastern States. Carloads

moved over the Union Pacific to the Central States can be diverted to the Southeastern States at the joint through rates if they move east through Omaha, Kansas City, St. Louis, or Chicago, but if the cars are routed to points in the Southwest over the Union Pacific and connections through Denver they cannot be diverted to southeastern markets east of New Orleans at joint through rates. The southwestern markets are pocket markets in that respect: Idaho producers are in competition with shippers in other producing areas and find it difficult to compete on shipments routed over the Rio Grande via Ogden or Salt Lake City. One Idaho shipper has made few sales of potatoes in the Southwest in the last several years because of pocket markets there.

Wichita and Liberal, Kans., are described as pocket markets on potatoes and other vegetables originating in Idaho because they cannot be diverted or reconsigned therefrom to points east of the Missouri River at joint through rates. However, the record indicates that shipments refused at these two points may be diverted or reconsigned to destinations in the Southwest at the joint through rates. Wichita is not located on the direct line of any carrier operating between the Colorado common points and the Missouri River gateways, and Liberal is located in the southwestern part of Kansas near the Oklahoma border. Shipments to Kansas City and east thereof would require an out of line haul via Wichita and a substantial back haul via Liberal.

Storage facilities are available at Pueblo for the storage of perishables, including potatoes, onions, apples, pears, frozen poultry, frozen foods, butter and eggs. Joint through rates are applicable from the excluded territory via Pueblo on shipments routed over the

Union Pacific to Denver and connecting lines beyond to destinations in the Southwest and to points west of the Missouri River. The route of the Rio Grande from Ogden would be used if joint through rates were available over that route to additional destinations with storage in transit at Pueblo. Storage operators at Pueblo are now handicapped, in relation to two competitors at Denver, because the through rates do not apply via Pueblo to Denver and other northern destinations where a back haul would be required on shipments routed to Pueblo via Denver, whereas the competitors can ship at the through rate in all directions, except westward. The application of the through rates via Ogden and the Rio Grande is sought so that these shippers may have available the same distribution markets as their competitors.

A shipper who deals in dried beans from Idaho and other Western States is located at Colorado Springs. His principal markets are in southeastern territory. Beans which originate in California, Colorado, and Wyoming may be stopped at Colorado Springs for cleaning and packaging and reshipped at the balance of the joint through rates. Beans which originate in Idaho may be shipped over the Union Pacific to Denver and the Rio Grande or other connections to Pueblo and reshipped therefrom at the balance of the through rates, except to points east of the Missouri River. The route of the Rio Grande from Ogden would be used on Idaho beans if it would result in the application of joint through rates to points east of the Missouri River on the same competitive basis as is now applicable when such beans are transited at points on the Union Pacific. Another bean dealer at Fruita, Colo., on the Rio Grande about 10 miles west of Grand Junction, would like to transit Idaho beans

on the same competitive basis as is applicable at Union Pacific points. This dealer is now engaged primarily in buying pinto beans from growers in the vicinity of Fruita and shipping them in carload lots to others, including the shipper at Colorado Springs. These dealers in dried beans are in competition with like dealers at points on the Union Pacific who have the benefit of transit at the through rates to destinations, among others, east of the Missouri River.

A company which is engaged in the purchase and sale of dried beans and peas maintains plants in Nebraska at Morrill on the Burlington and at Gering on the Union Pacific. Carloads of dried beans and peas originating in California, Utah, Oregon, Washington, Idaho, Colorado, Wyoming, Montana, and Nebraska are shipped to Morrill and Gering where they are cleaned, sorted, and packaged, and reshipped generally eastward and to Oklahoma and Texas. This company can obtain Idaho beans and reship them from Gering to eastern and southern destinations at the joint through rates. It was stated, however, that a substantial amount of pinto beans (about 6,000,000 pounds per year) are obtained from Colorado, mostly on the Rio Grande, on which an out-of-line charge of 7 cents per 100 pounds is applicable in addition to the joint through rates over direct routes when such beans are processed at Gering and reshipped to the Missouri River and points east thereof; also that when such beans are processed at Gering and reshipped to destinations west of the Missouri River, combinations of rates to and from Gering are applicable.

The Utah Growers' Cooperative operates throughout Utah in the production and shipment of vegetables,

including potatoes and onions. It has two branches on the Union Pacific and three on the Rio Grande in Utah, the latter at Midvale, American Fork, and Springville, all south of Salt Lake City. These three points are served by the Union Pacific and the Rio Grande, but track connections exist only at Midvale. Shipments of box shooks and of seed potatoes from Idaho and of fertilizer from Montana may move into American Fork and Springville over the Union Pacific at lower rates than when they are interchanged with the Rio Grande at Ogden or Salt Lake City, but when they are received over the Union Pacific they must be trucked to the plants on the Rio Grande. The differences in the rates are not shown.

Various flour mills at southern Kansas points, such as Moundridge and Wichita, support the complaint because they cannot at present purchase wheat at points on the Union Pacific in Idaho, Oregon, and Washington, mill it in transit, and reship to the Missouri River and points east thereof at the same rates that are applicable when similar wheat is milled at points on the Union Pacific. A specific instance was shown where nine carloads of wheat moved from Ogden to Moundridge on which the Ogden shipper applied in-bound transit billing on wheat originating at Idaho Falls. The shipments moved from Ogden over the Union Pacific to Denver, the Rio Grande to Pueblo, and the Missouri Pacific beyond. Moundridge is a local point on a branch line of the latter carrier north of Eldorado, Kans. After the wheat was milled at Moundridge the in-bound billing thereon was applied against an out-bound movement of flour to New Cumberland, Pa. The rate on flour from Idaho Falls to New Cumberland over the route of movement through Denver and Moundridge was $1.335, or 12.5 cents higher than the

rate would have been if the same wheat had been milled at a point on the Union Pacific. The distances over the route of movement through Denver and Moundridge and the more direct route of the Union Pacific are not shown.

The rate restrictions complained of by shippers of and dealers in fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from the excluded territory to Colorado common points and east thereof have placed these shippers and dealers at a serious disadvantage in marketing their products, as compared with competing shippers and dealers located on the Union Pacific and having the benefit of the lower joint through rates from and to the same points. Some of these restrictions complained of, such as those by operators of flour mills in southern Kansas, could be remedied by the establishment of additional joint through rates from the excluded territory over routes of the Union Pacific to Denver and connecting lines beyond. From McCammon and points north thereof such routes would in all instances be shorter than the routes over the Union Pacific to Ogden, the Rio Grande to Denver or Pueblo, and connecting lines beyond. The Union Pacific states that it has not been requested to establish additional joint through rates via Denver. Its position with respect thereto is that the rates on agricultural commodities are on a low basis and, therefore, the carriers should be permitted to limit their application to more direct routes, thereby maintaining their long hauls and preventing undue circuity. For example, it believes that if competitive joint through rates were established on grain for milling at Wichita and other southern Kansas points and reshipment beyond to the Missouri River and east, other and longer routes probably would be demanded on the

same basis at points in Oklahoma and Texas where competing mills are located.

The establishment of additional routes and rates by way of the Union Pacific, however, would not remedy the disadvantage complained of by the shippers of and dealers in these products in the excluded territory who are compelled to pay combination rates on shipments diverted or reconsigned at intermediate points on the Rio Grande, including those stored at Pueblo or Colorado Springs on that road, and reshipped to Colorado common points and east thereof. The only effective remedy in those instances would appear to be the establishment of through rates, the same as those over the Union Pacific routes, over Rio Grande routes via Ogden or Salt Lake City.

Lumber.—A number of lumber dealers and lumber mills are located at Grand Junction and other points, and a wood-treatment or preserving plant is located at Salida, Colo., all on the Rio Grande. Generally, the complaints of these parties relate to their inability to ship lumber and millwork from the excluded territory on competitive joint rates via Ogden and the Rio Grande with stoppage in transit for partial unloading, storage, milling, or treatment and reshipment beyond to Colorado common points and east thereof at the balance of the joint rates. Mention also was made of a handicap in diverting or reconsigning at the joint rates to such points carloads originally shipped to local stations on the Rio Grande via Ogden. As previously indicated, joint through rates apply on lumber and mill work from points in California and in Oregon and Washington west of the excluded territory, including areas around Seattle, Tacoma, and Portland, over the Southern Pacific or the Western Pacific and the Rio Grande through the Utah gateways to points

on the Rio Grande and east thereof, with storage, milling, and treatment under transit arrangements. Lumber may be shipped at joint through rates from the excluded territory when the final destinations are local points on the Rio Grande, but such rates are not applicable from that territory over the Union Pacific to Ogden and the Rio Grande when the final destinations are Colorado common points or points east thereof, whether the shipments move direct or are stopped for milling or other transit purposes.

A lumber company with a wholesale yard, a box factory, a mill, and a storage and drying yard is located at Grand Junction. This company buys most of its lumber, both rough and dressed, and plywood and doors at points west of the excluded territory and sells in Colorado and points east and south thereof. This company also has a financial interest in a wholesale lumber company at Colorado Springs. It has purchased some lumber at points in the excluded territory, such as Cascade and Winchester, Idaho, Burns, Oreg., and Metaline Falls, Wash. Lumber shipped from Cascade, Winchester, and other points in the excluded territory over the Union Pacific to Ogden and the Rio Grande to Grand Junction could not be stored in transit at the latter point and later reshipped to Colorado common points or points east thereof at the joint through rates as those rates apply only over the Union Pacific routes.

Another lumber company on the Rio Grande at Military Junction, Colo., about 10 miles south of Denver, purchases lumber in California and Oregon; also a small amount in Washington, for milling in transit and reshipment beyond. Lumber from the excluded territory can now be milled in transit at Military Junction and re-

shipped to Colorado points south thereof and to points in the Southwest at the joint through rates to final destination, but this is not true to other destinations east of the Rocky Mountains. Military Junction is about 1 mile outside of the Rio Grande's switching limits at Denver.

The wood-treatment plant at Salida purchases some lumber, poles, piling, and cross ties in Colorado, Utah, and New Mexico but most is obtained from points in Oregon and Washington west of the excluded territory. This plant has a contract for treating cross ties for the Rio Grande, but about 60 percent of the forest products which it treats are reshipped to points outside of Colorado. It has not purchased products in the excluded territory, but probably would do so if the joint through rates to eastern and southern destinations were made applicable over the Union Pacific to Ogden and the Rio Grande through Salida. The company which owns the plant at Salida has a similar plant at Denver and 22 others scattered throughout the country. The plant at Denver can perform treatment in transit at the joint through rates from the excluded territory to final destinations in the East, South, and Southwest, and apparently joint through rates apply on about 40 percent of the business at Salida which does not move outside of Colorado.

Opposition Testimony

The Union Pacific operates about 9,724 miles of railroad serving over 1,000 points in 13 States.[7] It reaches the Pacific coast at Seattle, Portland, and Los Angeles, and the Missouri River at Council Bluffs, Iowa, and Kansas City. Its line between Pocatello and North Platte,

7 Iowa, Nebraska, Wyoming, Idaho, Oregon, Washington, Missouri, Kansas, Colorado, Montana, Utah, New Mexico, and California.

Nebr., the point of divergence of traffic via Council Bluffs and Kansas City, runs through a substantial portion of the territory principally involved in this proceeding. It has over $600 million invested in the routes concerned. Its present facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future.

Evidence of the amounts expended by the Union Pacific for improvements in line, heavier tracks, yard facilities, traffic control, and other facilities, and as to its capacity and efficiency in operation, shows that the railroad has surplus capacity, is efficiently operated, and furnishes good service to shippers over its line.

The maximum elevation on the Union Pacific route between Pocatello and Cheyenne is 8,013 feet at Sherman, Wyo., for 1 mile, as compared with the maximum elevation of 9,239 feet between Ogden and Denver on the line of the Rio Grande, which operates at an elevation of 8,000 feet or more for about 35 miles. East-bound on the Union Pacific the maximum grade at any point is 1.52 percent and west-bound 1.55 percent. The Rio Grande's maximum grade is 2 percent over substantial mileage. There is much greater curvature in the Rio Grande line than in that of the Union Pacific. The total rise and fall in feet on the Rio Grande is 66.3 percent greater than that of the Union Pacific. Other data as to the physical characteristics of the two lines show that the Rio Grande line is less favorably situated than that of the Union Pacific. Traffic routed over the Rio Grande as a bridge line would require at least 24 hours additional time in transit than when routed over the Union Pacific, and would require one or two more terminal-yard services.

The Union Pacific objects to the establishment of joint through rates to points beyond Denver or Pueblo via Salt Lake City or Ogden over the Rio Grande upon the principal grounds that such routes would short haul the Union Pacific and that the diversion of traffic over such route from the Union Pacific routes now available would curtail the service and growth of the Union Pacific in the teritories it alone serves and in which it pioneered in railroad construction. Such diversion, it fears, would adversely affect the operation of its numerous branch lines in Idaho, Montana, Oregon, and Washington, which are feeders for its main line and are not self-sustaining. In those States the Union Pacific operates a fotal of 5,606 miles of railroad, with 2,913 miles of branch lines upon which about 46 percent of the total traffic in that territory originates or terminates. It contends that unless it has a substantial main-line haul on branch-line traffic, the operation of many, if not most, of such branches would not long be justified.

Another objection is that yard facilities of the Ogden Union Railway and Depot Company, referred to as the Depot Company, jointly owned by the Southern Pacific and the Union Pacific, at Ogden terminal are inadequate to interchange any additional volume of traffic with the Rio Grande that may be routed to or from the northwest area through Ogden, and that expansion of facilities there is not possible. Several instances of delays to trains, particularly in the fall when traffic is heavy, are shown. The record describes in detail the yard and track lay-out at this terminal and interchange point. At present the Union Pacific finds it necessary to bypass the Ogden terminal as much as possible by taking its trains for Pocatello, Salt Lake City, or Green River over an outside wye

track which avoids the terminal proper. In addition to these deficiencies, icing facilities now maintained at Ogden for east-bound and west-bound traffic are not considered adequate for icing perishable commodities from Idaho and the Pacific Northwest for delivery to the Rio Grande. The Depot Company estimated that the cost of interchanging cars between the Rio Grande and the Union Pacific and Southern Pacific is at least twice the average cost of cars in the terminal because of the additional handling required.

The largest volume of traffic was moved through the Ogden terminal in the war year 1945, when a total of 2,847,277 cars were handled. In July, the peak month in that year, the total was 284,711 cars in 2,966 trains, an average of 96 trains daily, which required an average of 70 switching shifts a day. Of that number in July, 894 were solid trains that moved through the terminal without switching. The handling of such a large volume caused considerable congestion and delays to trains. In 1949 the total number of cars handled was 1,955,219. In the peak month of that year, 2,359 trains were handled, an average of 76 trains per day, requiring about 59 switching shifts daily. These figures show that 892,058 fewer cars were handled in 1949 than in the peak year of 1945.

To show that the Union Pacific cannot afford to lose any part of its haul on traffic, attention is directed to the large deficits which the Union Pacific incurred in its passenger service. In 1948, that deficit amounted to $28,462,000, equivalent to $4,291 per mile of road operated, as compared with a passenger deficit incurred by the Rio Grande of $4,954,000, equivalent to $3,127 per mile of road. In the last 20 years the Union Pacific in only 6 years, principally in the war years, has had railway

operating income sufficient to pay fixed charges plus declared dividends, and in 1949 it had a net railway operating income of $21,707,437, which was not sufficient by $10,269,865 to pay declared dividends and interest on funded debt. That is contrasted with the results on the Rio Grande, which in 1948 had a net railway operating income of $12,156,284, out of which it provided for all fixed charges, paid a declared dividend, provided for sinking-fund requirements, and had left for its surplus account $5,167,148.

The Wabash and the Chicago & North Western, important eastern connections of the Union Pacific, furnished estimates of the possible loss of traffic to those roads, and its effect upon train service and employment on their lines in the event that the volume of traffic embraced in the Rio Grande estimate of potential traffic were diverted over the Rio Grande route.

The Wabash in 1948 participated in 9.07 percent of the total traffic handled by the Union Pacific from the Northwest and about one-half of that on west-bound traffic to that area. It estimates the value to it of the potential traffic which it might lose at $1,602,000.

The revenue derived by the Chicago & North Western from the traffic to and from the northwest territory handled in connection with the Union Pacific in 1948 was about $4,000,000. Based on the loss of the potential traffic as estimated by the Rio Grande, it urges that it will lose that amount of revenue if the joint through rates sought in this proceeding are established.

The Great Northern, Northern Pacific, Santa Fe, and Milwaukee oppose granting the Rio Grande's re-

quest for the establishment of competitive joint through rates via Ogden. Neither of these defendants, except the Santa Fe, connects with the Rio Grande. They participate, however, in joint rates with the Union Pacific on traffic between the northwest area and eastern points, but there are numerous exceptions. For example, from origins on the Great Northern joint rates are not applicable via Spokane and the Union Pacific on wool, livestock, ores, concentrates, or smelter products, and the joint rates east-bound on fruits and vegetables over that route are limited to destinations reached by the Union Pacific. These restrictions became effective on September 15, 1932, although they were protested by various shipping interests. On lumber from origins on the Great Northern, joint rates apply over that line to Spokane and the Union Pacific only when the traffic is destined to points on and west of the Missouri River, Council Bluffs to Kansas City, thence the line of The Kansas City Southern Railway Company to the Gulf of Mexico. Reference is made also to *Transcontinental Traffic Routed via Bieber, Calif.*, 213 I. C. C. '87, wherein the Great Northern was permitted to cancel joint rates via Bieber and Salt Lake City on transcontinental traffic originating at or destined to various points on the Great Northern in Idaho and Washington.

The Milwaukee, the Santa Fe, and the Wabash, in a joint brief, contend, as does the Great Northern, that upon the evidence submitted the establishment of joint rates which would short haul the defendants is not warranted.

A large number of shippers and representatives of communities served by the Union Pacific, and traffic asso-

ciations, opposed the complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado. Those three supported the complaint in whole or in part, and as indicated, the Kansas commission later qualified its opposition by supporting the position of the complainant insofar as it pertains to wheat and livestock.

It is not practicable to deal with all of this evidence in detail, but the testimony and position of the parties have been considered. Most of the shippers in opposition to the complaint commented upon the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. Many of them testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event. Most of the opposition arises from the assumed effects of the diversion from the Union Pacific of the full amount, or a very large portion, of the traffic estimated by the Rio Grande as the potential traffic that would be subject to solicitation by that carrier for movement over its lines if the joint rates sought should be established. Upon the assumption that the Union Pacific would lose its long haul on the full estimated potential traffic of 101,476 carloads originated and 56,286 carloads terminated annually on the Union Pacific in the four Northwestern States, a total of 157,762, that number was used as a base by the Union Pacific to determine possible revenue losses. These were computed as amounting, in the aggregate, to $49,880,000 yearly.

Diversion of traffic with such a large loss in revenue would result, according to Union Pacific estimates, in (*a*) the discontinuance of four trains daily east-bound and four trains daily west-bound between Pocatello and North Platte; (*b*) three trains east-bound and three west-bound daily between North Platte and Council Bluffs; and (*c*) one train east-bound and one west-bound daily between North Platte and Kansas City. Extending this loss to show the direct effect upon employment, it was calculated that 1,240 employees, with annual payroll earnings of $5,000,000 yearly, would be laid off, with additional losses in employment by employees in other departments, bringing the total to about 5,300. Other losses are calculated, such as loss of employment of Union Pacific employees engaged in moving fuel coal from the company's mines in Wyoming. Based on these assumptions, derivative losses were computed by communities and localities on the Union Pacific's line whose local industries and merchants depend more or less upon the wages paid to railroad employees.

Considerable evidence of the same general character was submitted by representatives of employees of the Union Pacific, to show the effect upon them if all of the potential traffic were routed via Ogden and the Rio Grande. The number of employees that might be laid off was computed as 5,144, with a total loss of wages of $21,080,400. Losses by reason of possible loss of homes due to forced changes in places of employment, decline in real-estate values, and other contingent losses were calculated. Similar figures for possible loss of employment were calculated for certain lines connecting with the Union Pacific, such as the Wabash, the Chicago & North Western, and the Milwaukee.

The record contains detailed computations and estimates upon all of these matters. Employee representatives contend that if joint rates are required to be established we must determine what would be the probable extent of diversion of traffic from one or more routes to the route via Ogden and the Rio Grande. Based on such a finding, they further contend that we must determine the probable adverse effects of the diversion on employees of the railroads affected and impose measures to compensate or to protect such employees from loss, as conditions upon the establishment of the joint rates and through routes.

There is no specific provision in section 15 (3) or (4) requiring that such conditions be imposed, but it is argued that in finding joint rates and through routes necessary and desirable in the public interest, as required by section 15 (3), the interests of employees must be considered as they are in proceedings involving consolidations, mergers, and abandonments. Reference is made to the decision in *Cancelation of Rates and Routes via Short Lines*, 245 I. C. C. 183. In that proceeding certain carriers sought to cancel their joint rates over through routes with specified short lines. It was found that cancellation of the rates and routes would result in abandonment of the short lines with resulting inconvenience and loss to shippers and to carrier employees. Permission to cancel certain of the routes was denied.

Upon the record before us it is impossible to find definitely, or to estimate with any degree of accuracy, how much traffic might be diverted to the Rio Grande if all of the rates sought were to be made applicable over that carrier, nor how much traffic will be diverted to the Rio Grande under the restricted findings herein made.

Shippers have a right to route their own traffic, and where traffic is not routed by the shipper, the originating carrier has the right to control the routing within certain limitations.

General Discussion and Ultimate Fact Findings

In support of its contention that the assailed rates over its line are unreasonable, the Rio Grande submitted a large number of comparisons showing the differences in such rates and the competitive joint through rates on various commodities, together with the car-mile and ton-mile revenue under the respective rates and what the revenue would be if the lower joint rates were made applicable over its line. Neither factor of the combination rates is assailed, but the aggregates of such factors are alleged to be unreasonable to the extent that they exceed the competitive joint rates.

Many of the present joint rates on the transcontinental traffic here affected are commodity rates which were established originally on particular commodities to meet water competition. Others, such as those applicable on agricultural commodities, were established from producing areas in the excluded territory to enable growers and shippers to market such commodities in eastern and midwestern territories. For these reasons, and others, the defendants contend that it would be unreasonable to require the application of the joint rates over the Rio Grande, as it would result in depleting their revenues and in wasteful transportation over circuitous routes, as well as in short hauling the defendants, especially the Union Pacific. For example the rates on potatoes to Chicago are 96 cents from Monte Vista and Greeley, Colo., and $1.14 from Idaho Falls, Idaho, a difference of 18

cents, although the distance from Idaho Falls to Chicago, 1,597 miles, is 315 miles greater than from Monte Vista and 590 miles greater than from Greeley. Computations were submitted which indicate that on a carload of potatoes weighing 45,120 pounds from Idaho Falls to Chicago the joint rate of $1.14 would yield a net profit of $1.97 per car when moved over the Union Pacific to Omaha and the Chicago & North Western beyond, and a net loss of $62.93 per car if routed over the Union Pacific to Ogden, the Rio Grande to Denver, and the Burlington beyond, 1,809 miles. The computed costs were based on general cost scales compiled by our Bureau of Accounts and Cost Finding and were not based on studies of particular movements of traffic over the respective routes. Many other examples of this nature were submitted.

With unimportant exceptions, the only rates of record with which comparison is made by or in behalf of the complainant are the joint rates in effect over routes embracing the lines of the Union Pacific which are sought for application over the lines of the Rio Grande and the Union Pacific via Ogden or Salt Lake City. As above indicated, many of those rates are the result of competition. However, they are the going rates on this traffic and, except for authorized general increases therein, have been in effect for many years. There is no claim that any of those rates is below a minimum reasonable level. It follows that the joint rates sought, as presently applied, are within the zone of reasonableness and must be regarded as reasonable rates.

With respect to the issue under section 15, the facts before us here are in some respects similar to those con-

sidered in *United States v. Union Pac. R. Co.*, 28 I. C. C. 518, and *Western Pac. R. Co. v. Northwestern Pac. R. Co.*, 191 I. C. C. 127, in both of which the complaints were dismissed. In the first, the complainant sought through routes and joint rates over the Rio Grande, among others, in connection with the Santa Fe at Pueblo or Denver on the east and the Oregon Short Line at Salt Lake City or Ogden on the west, on traffic moving between Chicago and certain Mississippi and Missouri River points, on the one hand, and stations on the Oregon Short Line, on the other. The joint rates sought were the same as those then in effect over generally shorter routes of the Union Pacific and other defendants. The short-hauling provision of the statute was held to be a bar to the establishment of the routes and rates sought.

In the second proceeding, the Western Pacific alleged that the failure of the defendants to join with it in the establishment and maintenance of joint rates between points in California on the Northwestern Pacific Railroad Company, controlled by the Southern Pacific, on the one hand, and eastern defined groups, on the other hand, over routes in which the Western Pacific would be an intermediate participating carrier, was discriminatory and prejudicial, and that the combination rates between such points over such routes were unreasonable. Therein, division 2 said, at pages 136 and 137:

> In requesting the application of the joint rates over its line complainant is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic which, under the act, belongs, in the absence of emergency, to the Northwestern Pacific and Southern Pacific.

The instant complainant likewise is not here as a shipper or receiver of traffic but solely as a carrier seeking to participate in traffic on which the Union Pacific refuses to relinquish its long haul. In that proceeding, the distance over the Southern Pacific route to Ogden was about 200 miles shorter than the route sought, which is substantially the extent to which the Union Pacific route is shorter than the route sought by the Rio Grande to and from points between which most of the traffic here concerned moves. Again, the short hauling provision was held to be a bar to the relief sought.

Since the two decisions last above referred to, section 15 (4) has been amended (in 1940), so that now the prohibition against short hauling is subject, not only to the exception that such inclusion of lines must not make the through route unreasonably long as compared with another practicable through route which could otherwise be established, but to the additional exception that the short-hauling provision may be disregarded where the "through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation." Thus, where as here we are asked to disregard the short-hauling provision, we must give consideration, first, to the adequacy of the transportation, and second, to the efficiency and economy of the transportation. In *Pennsylvania R. Co. v. United States*, 323 U. S. 588, which affirmed the judgment of a lower court sustaining an order of division 2 in *D. A. Stickell & Sons, Inc. v. Alton R. Co., supra*, the Supreme Court said that the expressions "more efficient or more economic" transportation, as used in section 15 (4), "may well embrace both shippers' and carriers' interests," * * that both interests should be considered and a fair balance found."

These latter considerations are not determinative, however, unless the existing routes can be found not to provide "adequate" transportation.

In the proceeding just mentioned, the Supreme Court said that adequacy of transportation relates only to the interest of the shipping public, whereas, as above stated, efficient and economic transportation embraces both shipper and carrier interests.

There is no contention here by complainant that the present routes of the defendants are not adequate for the traffic hauled, and no finding is sought by complainant to that effect. The absence of such a request may well be due to complainant's contention, not sustained herein except as to sheep and goats to points on the Missouri River and east thereof, that through routes via Ogden and the Rio Grande already exist within the meaning of section 15 (3) of the act. Testimony on behalf of shippers, however, does raise a question as to the need for more adequate and economic service than afforded by existing routes with respect to some commodities.

In order properly to evaluate the testimony of shippers it is necessary to consider the nature, extent, and functioning of our intricate and far-flung commodity marketing system. The growth of our population and the development of the country have required a constantly expanding flow of diverse commodities. Great consuming areas in many instances are far distant from the points of production of the necessities of every-day life, particularly articles of food. Movements of transcontinental proportions are involved in important instances. That is true here. A complex but efficient marketing system has been evolved to provide as orderly a distribu-

tion of food commodities as possible. Adequate transportation facilities and services are required for the proper functioning of the system. Because of their generally perishable nature, food articles, such as fresh fruits and vegetables, frozen poultry, frozen foods, butter, eggs, ordinary livestock, and dried beans, must be moved to market with expedition and care, and over as many routes as possible. This requires that many routes be open in order that unnecessary interruptions of the free flow of such commodities may be avoided and that as much flexibility as possible in the distribution process be permitted. A number of services, not only at origin and destination, but en route, which are not usually required in the movement of ordinary traffic, must be provided for these perishable and semiperishable commodities. *Southeastern Vegetable Case*, 200 I. C. C. 273, and *Routing Lumber and Fruits, South to C. F. A. Territory*, 256 I. C. C. 223.

While the through service over defendants' routes, in general, is as satisfactory to the shipping public as the service which could be provided over routes including the Rio Grande, via Ogden or Salt Lake City, this is not true with respect to the commodities we have enumerated. The shippers in the originating area involved in this complaint with respect to these commodities are debarred from effective participation in the widespread system developed for the marketing of such commodities. This conclusion is also supported and emphasized by the situation with respect to the operation of many of the in-transit privileges and services which are generally accorded such traffic and are necessary for its efficient marketing. For instance, on this traffic reconsigned or accorded transit privileges, such as stopoff for partial unloading, storing,

or processing in transit, or for feeding or grazing livestock in transit, at points on the Rio Grande, the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply. On such traffic the defendants' routes are inadequate and less economical than are the Rio Grande routes.

In addition to the above-mentioned commodities, we are of the opinion that a special need for joint routes and joint rates on granite and marble monuments, in carloads, from origins in Georgia and Vermont to destinations in the excluded area, has been established.

The situation as to the commodities above named, as to which the defendants' routes are inadequate, is largely similar to that considered in *D. A. Stickell & Sons, Inc. v. Alton R. Co., supra.* There is one point of difference. There, the operating conditions, mile for mile, on the respective routes were substantially similar. Here, as indicated previously herein, the operating conditions on the Rio Grande are more onerous than those on the lines of the Union Pacific or any of the other transcontinental defendants herein. This fact was recognized by the Commission in prior proceedings. See *Livestock, Western District Rates, supra*; and *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486. There is before us no data from which the exact differences in costs over the Union Pacific routes and the Rio Grande routes can be determined. Several estimates were made by witnesses for both the Rio Grande and the defendants, but the estimates vary so widely and are so obviously incomplete as to be practically useless. The record is sufficiently complete, however, to enable us to make a rough approximation of the differences in the operating con-

ditions and to appraise the weight which should be given to those differences, as well as to the differences in the distances over the respective routes, in determining the issues before us.

The differences in the distances between the Union Pacific routes through Wyoming, on the one hand, and the Rio Grande routes sought, on the other, using Boise, Idaho, as a representative point in the excluded territory, vary approximately, from 95 miles or 11 percent to Denver, short-route distance 880 miles; 200 miles or 14 percent to Kansas City, 1,410 miles; 211 miles or 8 percent to New York, N. Y., 2,691 miles; 200 miles or 9 percent to Atlanta, Ga., 2,289 miles, to 33 or 35 miles, or 2 percent, to New Orleans, and to Fort Worth and other points in the Southwest, with short-route distances varying from 1,612 miles at Oklahoma City to 2,282 miles at New Orleans. From most of the excluded territory to western trunk-line destinations north of the route of the Union Pacific and Chicago & North Western between Omaha and Chicago, and in the Dakotas, the short routes are in connection with the Northern Pacific, Great Northern, or Milwaukee, and to such destinations the Rio Grande routes sought via Ogden are longer generally by at least 33 percent, and range up to more than 50 percent, than the short routes. From many points in the excluded territory to points in Colorado east of and including the common points, Kansas west of points on the Missouri River, and Nebraska, except Omaha, the short-route distances are less than 1,000 miles. We are of the view that the differences in transportation conditions, by which is meant operating conditions and lengths of hauls, over the Union Pacific routes and over the Rio Grande routes via the Ogden gateway are substantial for hauls

between the excluded territory, on the one hand, and points in Colorado east of and including the common points, Kansas west of points on the Missouri River, Nebraska, except Omaha, the Dakotas, Minnesota, Wisconsin, and Iowa and Illinois north of points on the route of the Union Pacific and the Chicago & North Western extending between Omaha and Chicago, on the other hand, but that for hauls between points in the excluded territory and points in the United States east and south of the points and territory above described, the differences in the transportation conditions are, in general spread over hauls of such great lengths that, considered as a whole, they become relatively insignificant. Thus, over these respective routes from and to the latter points the transportation conditions are substantially similar.

As pointed out, the evidence shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments westbound, and ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs eastbound, who reconsign such shipments or take advantage of transit arrangements at intermediate points on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific routes, and constitutes adequate support for a finding of undue prejudice and preference under section 3 (1) of the act.

As before indicated, on a number of commodities, from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates the same as those in effect over the routes of

the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections here defendant, its long haul, while refusing to apply the same joint rates over routes in connection with the Rio Grande via the Ogden gateway. Such routes by which the Union Pacific and certain of its connections short haul themselves are generally about as long as, and in many instances substantially longer than, the Rio Grande routes here sought, and the hauls of the Union Pacific, as well as of certain of the other defendants, are shorter over such established routes than over routes in connection with the Rio Grande via Ogden.

There is upon this record, however, no substantial evidence as to the transportation conditions over the established routes referred to. A finding of discrimination under section 3 (4) of the act must be supported by a showing that the transportation conditions are no less favorable over the routes alleged to be discriminated against than the over routes said to be preferred. No such a showing has here been made.

The situation is different with respect to traffic between Utah common points, on the one hand, and the northwest area, on the other. On such traffic the Union Pacific interchanges with the Bamberger Railroad Company at Ogden at joint through rates to and from points on that line, including Salt Lake City. There is no apparent reason why similar arrangements should not apply on like traffic interchanged with the Rio Grande. The Bamberger operates, for about 36 miles, between Ogden and Salt Lake City, and it appears that there is no important dissimilarity between the transportation conditions in connection with the Bamberger and those in connection with the Rio Grande.

The evidence is convincing that the joint rates sought, which now apply over the Union Pacific routes, would be reasonable for application also over the Rio Grande routes via the Ogden gateway on the traffic, and from and to the points, embraced within the findings of unlawfulness herein made.

The testimony dealing with the terminal facilities at Ogden has been carefully considered. We are persuaded that the additional traffic over the Rio Grande routes which will result under the findings herein made can be interchanged at that point or at Salt Lake City by the use of the present facilities and without serious detriment to the operating efficiency of the railroads concerned.

Conclusions

We conclude:

1. That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans.,

to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas.

2. That the assailed rates on the commodities and from and to the points described in the foregoing finding are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes.

3. That the maintenance by the Union Pacific and other defendants of joint rates between points in the northwest area, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section 3 (4) of the act.

4. That except as indicated in the preceding findings, the allegations made in the complaint are not sustained.

An appropriate order will be entered.

LEE, *Commissioner*, concurring in part:

I concur in the conclusions of the majority that joint rates the same as apply over the Union Pacific and its

connecting lines should be established via Ogden or Salt Lake City, in connection with the Rio Grande, on the commodities and from and to the origins and destinations specified by the majority; that the rates assailed on such commodities from and to such origins and destinations are and for the future will be unjust and unreasonable, and unduly prejudicial of shippers and receivers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, in and to the extent that they exceed or may exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes; and that the maintenance by the Union Pacific and other defendants of joint rates from and to points on the Bamberger Railroad south of Ogden, while refusing to participate in like rates from and to the same points on the Rio Grande south of Ogden, subjects the Rio Grande to discrimination in violation of section (3) (4) of the act. The decision in this case will correct in part, a long-standing, unlawful rate adjustment, an adjustment which has discriminated against the industries and people of Washington, Oregon, Idaho, Montana, and Utah, the area from and to which such unlawful adjustment applies being referred to in the report as the "excluded territory." However, I am of the opinion that the action of the Commission should not be limited to a partial correction of this unlawful rate adjustment. On the facts shown in the record, the act requires that the rates on all commodities, between points in the excluded territory and Colorado common points and points east thereof, over the Rio Grande routes shall be no higher than those over the Union Pacific routes. The act contemplates that there shall be no excluded territory with respect to any commodity or persons.

Transcontinental joint rates on freight traffic were established in 1897, from and to the territory here considered, applicable over the Rio Grande routes via Ogden. These joint rates were in effect for many years, until 1906 from and to some points and until 1912 from and to other points, when they were canceled by the Union Pacific and higher combination rates became effective. However, the through routes were not closed. Numerous shippers testified that these routes are open and available and that they can route traffic over them. This testimony was not challenged or contradicted. On the contrary, a responsible traffic official of the Union Pacific testified that the Rio Grande routes are "actually available today on traffic to or from points on the Union Pacific and its connections in Utah north of Ogden, Idaho, Montana, Oregon, and Washington." That these routes are open and used is proved by evidence in the record (1) of east-bound shipments of various commodities made in 1948 from points on the Union Pacific in the excluded territory to Colorado common points, and which moved over the Rio Grande routes, including the entire length of the Rio Grande line, on through bills of lading issued by the Union Pacific, (2) of west-bound shipments of various commodities made in the same year from various eastern points to points in the so-called excluded territory, and which moved on through bills of lading over carriers east of Colorado junctions to the Rio Grande at such junctions and thence over the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond, and (3) of numerous shipments moved over the Rio Grande routes between eastern points and the excluded territory during World War II and in 1949 when the Union Pacific main line in Wyoming was blocked by snow. The year 1948, the calendar year immediately preceding the hearing, was selected as typical of the sit-

nation which prevailed in the prior years and which continued up to the time of the hearing.

"I am unable to agree with the majority that the shipments referred to above must be regarded as of an isolated nature and as falling in the same category as the single shipment considered in the *Beaman Elevator case*, 155 I. C. C. 313, referred to in a footnote to the opinion of the United States Supreme Court in *Thompson v. United States*, 343 U. S. 549. In the *Beaman* case single carload shipment of grain moved over the lines of two connecting railroads from Beaman, Iowa, via Clinton, Iowa, to St. Louis, Mo. The evidence plainly showed that the bill of lading covering this shipment was issued and recognized by these railroads through error. There was no evidence "of any like movement before or since." Adequate service was available over nine other routes. A wholly different situation is before us in this proceeding. Numerous shipments of a variety of commodities have been transported in both directions over the Rio Grande routes on through bills of lading deliberately issued and recognized by the Union Pacific and the other participating carriers. The situation here before us is similar to that considered by the Supreme Court in *Virginia Ry. v. United States*, 272 U. S. 658, also referred to in a footnote to the decision in *Thompson v. United States, supra*, in which, in referring to the route over which the Commission there prescribed reasonable and nondiscriminatory rates, the Court stated that "that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive."

The Court held however, that even though the route was closed commercially, open through routes to the West were in existence.

In the *Thompson* case the court pointed out that "there is no evidence that any shipment has ever been made from Lenora to Omaha via the Burlington line" or that the carriers have ever offered through service over the Missouri Pacific-Burlington route. Thus, the facts before the Court in that case likewise were wholly different from those before us in this proceeding. I think that the Court's opinion in that case supports the conclusion that through routes on freight traffic over the Rio Grande routes have existed for many years and now exist and that the short-hauling provision of section 15 (4) is not applicable.

If, however, the Rio Grande routes were actually closed, the short-hauling provision of section 15 (4) of the act would not be a bar to the correction in full of the present discriminatory rate adjustment. The discrimination in violation of section 3 of the act, shown by the evidence, makes that provision of section 15 (4) inapplicable. In any event, the Rio Grande routes are shown to be needed in order to provide adequate, and more efficient and more economic transportation, and, if they were not already open through routes, we could and should require that they be opened.

As stated in the report of the majority, the evide shows a substantial disadvantage or handicap on the part of shippers or receivers of monuments, livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter and eggs, who reconsign shipments or take advantage of transit arrangements at intermediate points

on the Rio Grande, as compared with the lower rates, together with similar reconsignment and transit privileges, enjoyed by their competitors located on the Union Pacific. The evidence is equally impressive with respect to the disadvantage or handicap to shippers or receivers of lumber, building materials, farm machinery, and other commodities. For instance, the lumber company at Military Junction, Colo., referred to in the majority report, is handicapped in its efforts to compete with mills at Denver and Kansas City because it cannot obtain lumber from the excluded territory for milling in transit on the same basis as these competing mills. A representative of that company testified that it would purchase several million feet of lumber annually from points in the excluded territory if it had available reasonable and nonprejudicial joint rates over the Rio Grande routes. By reason of the rate situation complained of, the lumber dealer at Grand Junction, Colo., who is also referred to in the majority report, has lost business to competitors who have the benefit of transit at the joint rates applicable over the Union Pacific routes. This evidence is only typical; it was presented as representative of the prevailing situation.

Shippers and receivers of freight at points in eastern Oregon and southern Idaho, on the line of the Union Pacific, have been, and are, excluded from additional markets that would be available to them if reasonable and nonprejudicial joint rates were in effect over the Rio Grande routes. Some of these shippers express the belief that the establishment of such joint rates would provide them with a better car supply, in that the Rio Grande would furnish additional cars to move out shipments routed over its line. It is common knowledge that better supply of cars is available to shippers who have com-

petitive routes to the consuming markets. The record clearly establishes that the present rate adjustment results in a substantial disadvantage to the industries, shippers, and receivers located in the considered territory, and in undue prejudice to them.

Likewise, the evidence establishes that the defendant railroads discriminate against the Rio Grande, in that from and to points in northern Idaho and in Oregon and Washington to and from points in southwestern, southern, and official territories, the defendants, particularly the Union Pacific, short haul themselves by maintaining joint rates, the same as those in effect over the routes of the Union Pacific and its connections through Wyoming, over routes which fail to give to the Union Pacific, or one or more of its connections, its long haul, while refusing to establish the same joint rates over the Rio Grande routes. The routes by which defendants short haul themselves are generally as long as, and in many instances substantially longer than, the Rio Grande routes, and the hauls of the Union Pacific and of other defendants are shorter over such established routes than over the Rio Grande. The evidence does not establish that transportation conditions are more favorable over these routes than over the Rio Grande routes which are discriminated against by defendants. On the contrary, the record, in my opinion, warrants finding that the transportation conditions over such routes are, in general, no more favorable than over the Rio Grande routes. The Union Pacific and the other defendants are, and for the future will be, violating section 3 (4) of the act by failing and refusing to participate in joint rates with the Rio Grande, from and to points in the excluded territory, to and from points in official, southern, and southwestern territories, while participating with each other in joint rates from

and to the same points, over routes over which the Union Pacific and other defendants short haul themselves.

The Union Pacific is a strong and progressive railroad. It is ably managed and efficiently and economically operated. Being the only railroad in southern Idaho, every shipper in that area is dependent on it for rail service. I am persuaded that, instead of being allowed to continue to maintain an "excluded territory," it should be required to provide these shippers with joint rates which will enable them to buy and sell in all markets on an equality with other shippers, and that such joint rates will not result in any substantial diversion of the traffic now moved over its lines.

The joint rates now in effect on freight traffic over the Union Pacific routes are shown by the record to be reasonable for application over the Rio Grande routes. We should require that these rates be maintained over the latter routes.

PATTERSON, *Commissioner*, concurring in part:

I concur in the relief granted to the Rio Grande and transit operators thereon who are handicapped by the lack of through routes and joint rates the same as those over the Union Pacific routes. It seems to me, however, that the findings of unlawfulness are inconsistent in that they fail to include lumber and articles taking lumber rates in the relief granted.

The showing made of a need for such through routes and joint rates, in my opinion, is more persuasive as to lumber and articles taking lumber rates than as to any of the commodities included in the foregoing findings, with the possible exception of livestock. The record shows,

that at least one lumber dealer at Grand Junction, another at Military Junction, near Denver, and a wood-treatment plant at Salida, all on the Rio Grande, are handicapped in their efforts to compete with like dealers on the Union Pacific routes, and that at least the dealer at Grand Junction has lost business, by reason of the rate situation complained of, to competitors who have the benefit of transit at the joint rates over the Union Pacific routes. I believe this evidence is adequate support for the inclusion of this commodity group in the findings of unlawfulness made.

The order entered in connection with this report requires the establishment on particular commodities in connection with the Rio Grande, of through routes and joint rates the same as those now in effect over the Union Pacific routes. The formation of those through routes is appropriately left, in large measure, to the carriers. I want to make it clear that in my view, on traffic to or from the area east of the Colorado common points, where the provisions of the order so permit, these new routes should be formed in such a manner as to short haul the Union Pacific only to the extent necessary to afford the Rio Grande its line haul and avoid unduly circuitous routes.

ARPAIA, *Commissioner*, concurring:

In my opinion there are through routes over the Rio Grande and the Union Pacific via the Ogden Gateway on traffic between the territories included in this proceeding, and therefore a finding under the provisions of section 15 (4) of the Interstate Commerce Act is not required.

The evidence of record shows that these routes presently are open and available to shippers on combination

rates. The history of the relationship between these carriers leaves no doubt as to that fact.

When joint rates over these routes, which were in effect from 1897 to 1906 and 1912, were canceled by the Union Pacific, no specific cancellation was made of the through routes over which the joint rates applied. To my mind it would be necessary for the Union Pacific to have shown affirmatively that it refused traffic on through billing over the Ogden Gateway in order to negative the existence of such through routes. Instead, the record shows information elicited from an official of the Union Pacific to the effect that routes via Ogden were available subject to the application of combinations of local rates.

The question then is to what extent should we compel joint rates. Joint rates over the routes through Ogden, I believe, are warranted in the public interest only on the commodities for which relief is included in the majority report.

We should interfere in the management of a railroad only when the reasons for doing so are clear and compelling, as they are here, and only to the extent the public interest actually requires.

MAHAFFIE, *Commissioner*, dissenting in part:

I dissent from the majority report insofar as it fails to find that the existing routes to and from the northwest territory, described in the report, via the Rio Grande through the Ogden gateway are effective through routes and that the failure of the Union Pacific and other defendant railroads to establish joint rates with the Rio Grande via Ogden unjustly discriminates against that carrier. I disagree also because the report does not find that

it is necessary and desirable in the public interest that joint rates on commodities generally, in addition to those specified, should be established over such through routes.

We are not called upon in this proceeding to exercise our authority, under section 15 (4) of the Interstate Commerce Act, to establish new through routes via that gateway. Therefore, the conditions in that paragraph are not applicable. We are free to exercise our power under section 15 (3) to establish joint rates unhampered by those restrictions.

A finding that these routes are open and freely available to shippers today is fully supported by the evidence. It was acknowledged by a freight traffic official of the Union Pacific that a shipper has the right under the act (section 15 (8)), to specify such routes for the carriage of his shipments. That right, it should be noted, can be availed of only when two or more through routes and through rates are actually established and in existence.

The record shows that some joint through rates, as distinguished from combination rates, are in fact now published in a Union Pacific tariff for application through Ogden over the entire length of the Rio Grande to Denver and the Union Pacific beyond. These apply on shipments of sheep or goats originating on the Union Pacific in southern Idaho and eastern Oregon, billed to destinations on the Missouri and Mississippi Rivers and to Chicago and other points. The joint rates are higher than rates on like livestock moved over the direct route of the Union Pacific and, therefore, retard use of the Rio Grande route. But the publication of such joint rates in connection with transportation over the whole length of the Rio Grande is proof of the consent of the Union Pacific for

the use of that rail line as part of a through route at joint rates. And it was further stated by the same witness that the Union Pacific has no objection to publishing the same joint rate arrangement on shipments of cattle.

In 1941-42 mixed military trains with troops in passenger cars and military supplies in freight service were transported over this route on through billing. Four examples of such trains are described in the record. These moved from Fort Sill, Okla., and Camp Claiborne, La., to Fort Lewis, Wash., in December 1941 and February 1942. The trains were routed and moved to Colorado junctions of the Rio Grande, thence over that railroad to Ogden and the Union Pacific beyond. Unlike certain other movements to and from the northwest area via Ogden in the war period in connection with these two lines, the military trains were not routed under service orders issued by us or the Office of Defense Transportation. Arrangements for the through movements were made with the railroads and the rates charged were settled on the basis of the joint rates applicable in connection with the Union Pacific routes through Wyoming.

The existence of the route as an established through route was undoubtedly an important consideration for its use in February 1949, when the line of the Union Pacific was blocked by snow. In that emergency, freight cars, passenger cars, express and mail were promptly diverted by the Union Pacific through Denver over the Rio Grande to Salt Lake City and to Ogden for movement beyond. Of the freight cars diverted, 1,493 were for destinations in Idaho on the Union Pacific and in the northwest area.

Actual and continuous use of the Rio Grande route at through rates made by combinations of separate rate factors via Ogden to and from the Northwest without op-

position or objection by the Union Pacific or other participating railroads is amply shown by the evidence of typical movements of numerous commodities. The calendar year 1948 was used by the Rio Grande as a representative year. In that year 16 carloads of various commodities were shipped from the northwest territory over the Union Pacific to Ogden and the Rio Grande beyond to Denver, Louviers, Pueblo and Trinidad, Colo., over the entire length of the Rio Grande. They originated on the Union Pacific and moved on through bills of lading. Some of the cars were partly unloaded at Rio Grande points and then continued through to their destinations. Seventeen carloads of various commodities moved, from late in December 1947, and in the year 1948, from various eastern points on through bills of lading at through combinations of rates over rail lines east of the Colorado junctions to the Rio Grande at such junctions thence over that line to Salt Lake City or Ogden and the Union Pacific beyond. Some of the cars were stopped for partial unloading at stations on the Rio Grande or the Union Pacific.

The same kinds of movements as those exhibited in 1948 prevailed to about the same extent in years prior to 1948 and continued into 1949 at the time of the hearings.

All of this evidence clearly supports a finding that the routes are existing established through routes over which through rates apply and that the railroads participating therein consent to their use as through routes and freely hold themselves out to shippers as ready and willing to perform transportation service over them. They meet completely the requirements necessary as prerequisites for a finding that they are established through routes announced by the United States Supreme Court in

Thompson v. United States, 343 U. S. 549. In that case, the Court said "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service." However, as stated by the Court, there was no evidence that any through transportation had ever been offered from and to the points involved in the suit and, therefore, no through routes existed between those points.

The situation here is in striking contrast to that in the *Thompson* case. Here there is substantial evidence of a holding out that through transportation will be furnished and of execution of such offers by the issuance of through bills of lading and the performance of through service over many years. We cannot ignore the fact that the joint rates over these routes that were in effect from 1897 to 1906 and 1912 were canceled by the Union Pacific without canceling its participation in the same through routes thereafter at higher through combination rates. That railroad's course of conduct evidenced no more than a desire to discontinue joint rates so as to make the higher combinations applicable. Its action in canceling its participation in joint rates did not, without more, cancel its participation as a carrier in the through routes. The latter were never disestablished but continued to exist. The record taken as a whole inevitably leads to that conclusion. To find under such a state of facts that no through routes exist for commodities generally is directly contrary to the evidence.

Even if a finding that no through routes exist over this line be sustained there is substantial evidence that the rate situation results in undue prejudice and undue

disadvantage to shippers and to districts and localities in Utah and Colorado dependent upon the Rio Grande for rail service, in violation of section 3 (1) of the act. Such violation removes the restrictions imposed in section 15 (4) upon our authority to establish through routes. That undue prejudice and undue disadvantage exist is fully supported by the testimony of numerous witnesses. Briefly, the testimony shows that livestock producers in Utah and Colorado, in areas served by the Rio Grande, are not able, due to the combination through rates via Ogden, to buy on a reasonably competitive basis, cattle and sheep in Idaho, Montana, Oregon and Washington for grazing and feeding in transit on the ranges in Utah and Colorado, in competition with buyers and stock feeders in northern Colorado, Nebraska, and northern Kansas. The same undue prejudice and undue disadvantage is experienced by buyers and feeders in southeastern Colorado east of Pueblo, Colo., and in southwestern Kansas served by the Santa Fe and the Missouri Pacific railroads. Their failure to obtain joint through rates from the producing areas in the Northwest over the Union Pacific to Ogden, Rio Grande to Pueblo and its connections beyond places them at an undue disadvantage.

The record contains convincing evidence by representatives of large groups of shippers that there is undue prejudice and undue disadvantage to wool producers, as well as to livestock operators in Colorado served by the Rio Grande; also to lumber dealers and processors, dealers in farm machinery and other commodities, and to a cold storage warehouse operator in Pueblo. There is substantial evidence from producers and shippers of agricultural commodities in the Northwest, particularly in Idaho, to support findings that the refusal of the defendant railroads to join in joint through rates via Ogden,

and the Rio Grande to and from points beyond the Colorado gateways of that carrier exclude them from additional markets needed for their products. All of that evidence sustains and fully supports the finding that there is a violation of section 3 (1) of the act and justifies a general finding that joint through rates via the Ogden gateway should be established on commodities generally. The findings should not be limited, as are the findings of the majority, to particular commodities as to which evidence was offered but should be broadened to include all commodities.

We are fully warranted in dealing with this situation broadly, in considering what is necessary and desirable in the public interest, with respect to joint rates over these established through routes. We are not limited to consideration of proof as to every rate on every commodity from every origin to every destination. Such a view of our authority is too narrow and is not justified by the law or the evidence.

In other types of proceedings where we found it necessary to deal generally with a comprehensive rate situation, the Supreme Court has held that we may properly make general findings upon typical evidence representative of the situation as a whole.

In exercising authority under section 13 (4) as to the lawfulness of rail rates on intrastate traffic in a State and under section 15 (6) as to divisions of joint rates of rail carriers we may make general findings when the evidence is shown in numerous and representative instances that are typical of the rate situation as a whole. Similarly we need not attempt the impracticable, if not impossible, task of examining every rate on every commodity

and class of commodities, from every origin to every destination in the large areas and territories under scrutiny here. We can adjust the remedy to the evil and make our order as broad as the discrimination and undue prejudice. See *Illinois Central R. Co. v. Public Utilities Commission*, 245 U. S. 493, 507. In *Wisconsin Railroad Comm. v. Chicago, B. & Q. R. Co.*, 257 U. S. 563, 579, a proceeding dealing with intrastate rates on a State-wide basis, the Court stated that "any rule which would require specific proof of discrimination as to each fare or rate and its effect would completely block the remedial purpose of the statute." In *Georgia Public Service Comm. v. United States*, 283 U. S. 765, 774, the Court said that "when an investigation involves shipments from and to many places under varying conditions, typical instances justify general findings." That case also arose under section 13 (4) of the act with respect to intrastate rates. There the order related to a few commodities but the rates prescribed were State-wide in operation and applied to shipments between hundreds of points of origin and destination. Under those circumstances the Court held that "To require specific evidence and separate adjudication in respect to each would be tantamount to denying the possibility of granting relief."

To the same effect is the holding of the Court in *New England Divisions Case*, 261 U. S. 184, 197. There the Court had under consideration contentions with respect to the nature of the evidence in support of our order as to divisions of joint rates between groups of rail carriers. The Court pointed out that our order was based on evidence which we assumed was "typical in character, and ample in quantity, to justify the finding made in respect to each division of each rate of every carrier." That method of proof was found to be our common practice in

adjudicating comprehensively upon substantially all rates in a large territory, and that the actual necessities of procedure and administration had led to the adoption of that method also in passing upon the reasonableness of proposed rate increases. That method was found equally appropriate in passing upon multitudes of divisions of joint rates. That it has similar application in a comprehensive case such as we have here where we are called upon to establish joint rates via a gateway through which substantially all joint rates have been refused, is equally clear. In the case cited, the Court said that there was no constitutional obstacle to the adoption of the method pursued and that only in the way could the task be performed.

The same rule should be applied in the instant case, in order to carry out effectively our authority to prescribe, in the public interest, joint rates by way of the Ogden gateway. The report of the majority finds it necessary in the public interest that joint rates via that gateway be established on particular commodities as specified in the report. The same evidence is, and should be concluded to be typical of the rate situation as a whole. In accordance with our practice in other types of comprehensive proceedings which has been found lawful and necessary under principles announced in the Supreme Court cases cited, that evidence should be found adequate to support an order that joint rates be established via that gateway on commodities generally.

I am authorized to state that COMMISSIONERS SPLAWN and CROSS join in this expression.

COMMISSIONER KNUDSON did not participate in the disposition of this proceeding.

APPENDIX C

Order

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 12th day of January, A. D. 1953.

No. 30297

Denver & Rio Grande Western Railroad Company

v.

Union Pacific Railroad Company, et al.

This proceeding being at issue upon complaint and answers on file and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been made, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which report is hereby referred to and made a part hereof; and the Commission having found in said report (1) that through routes and joint rates on particular commodities from and to specified areas via Ogden or Salt Lake City, Utah, in connection with the complainant herein, are necessary and desirable in the public interest; (2) that the assailed rates on the same commodities and from and to the same points are and will be unreasonable and unduly prejudicial and preferential; and (3) that the maintenance by the defendants of joint rates between points in the northwest area, as described in the report, on the one hand, and points on the Bamberger Railroad south of Ogden, on the other hand, while refusing to participate in like rates to and from the same points on the Rio Grande south of Ogden, subjects the Rio Grande to unlawful discrimination;

It is ordered, That the defendants named in the complaint, according as they participate in the transportation, be and they are hereby notified and required to cease and desist, on or before April 7, 1953, and thereafter to abstain (1) from publishing, demanding, or collecting for the transportation of the commodities and from and to the points named in the next succeeding paragraph hereof, rates which exceed those prescribed in said paragraph, and (2) from practicing the undue prejudice and preference, and the unlawful discrimination, referred to in the next preceding paragraph.

It is further ordered, That said defendants, and the complainant, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain through routes, via Ogden or Salt Lake City, Utah, in connection with the line of the complainant, for the interstate transportation, in carloads, of granite and marble monuments from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as described in the report, and of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the described excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas, thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kans., to Omaha, Nebr., thence immediately north of points on the lines of

the Union Pacific Railroad Company and the Chicago and North Western Railway Company from Omaha to Chicago, Ill., including destinations in the lower peninsula of Michigan and in Oklahoma and Texas; and to apply on such traffic, over such through routes, joint rates the same as those maintained and applied on like traffic from and to the same points over routes embracing the lines of the Union Pacific Railroad Company through Wyoming.

It is further ordered, That said defendants, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before April 7, 1953, upon notice to this Commission and to the general public by not less than 30 days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply, rates, regulations, and practices which will prevent and avoid the undue prejudice and preference, and the unlawful discrimination, referred to in the first paragraph hereof.

And it is further ordered, That this order shall continue in force until the further order of the Commission.

By the Commission.

GEORGE W. LAIRD,
Acting Secretary.

(Seal)

APPENDIX D

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLORADO

No. 4492 Civil

The Denver and Rio Grande Western Railroad Company,
Plaintiff,

v.

United States of America and Interstate Commerce Commission,
Defendants.

Messrs. Dennis McCarthy and Robert E. Quirk (Herbert M. Boyle was with them on the brief) for plaintiff.

Mr. E. Riggs McConnell (Messrs. Stanley N. Barnes, James E. Kilday, and Donald E. Kelley, were with him on the brief) for the United States of America, defendant.

Mr. Samuel R. Howell (Mr. Edward M. Reidy was with him on the brief) for the Interstate Commerce Commission, defendant.

Messrs. Elmer B. Collins, F. O. Steadry, A. E. Torpus, Jr., and Eugene S. Davis (Messrs. F. J. Melia, Warren H. Ploeger, Roland J. Lehman, Carson L. Taylor, E. G. Knowles, W. R. Rouse, Nye F. Morehouse, M. L. Countryman, Jr., Edwin C. Matthias, J. C. Gibson, and Joseph H. Miller were with them on the briefs) for intervening railroad defendants.

Messrs. W. J. Hickey, John R. Barry, and Lee J. Quasey (Messrs. Duke W. Dunbar, Frank W. Wachob, William T. Secor, E. R. Callister, Jr., Peter M. Lowe, Paul M. Hupp, Lowe P. Sicklons, Dennis O'Rourke, and Alden T. Hill were with them on the briefs) for intervening plaintiffs.

Messrs. William E. Doyle, Robert L. Simpson, Howard B. Black and Bert L. Overcash (Messrs. Don Eastvold, C. W. Ferguson, James B. Patten, Clarence S. Beck, and Richard H. Shaw were with them on the briefs) for intervening defendants.

Before PHILLIPS, Chief Circuit Judge, and KNOCH, Chief District Judge, and SAVAGE, District Judge.

Per Curiam.

This action was brought by the Denver and Rio Grande Western Railroad Company against the United States of America and the Interstate Commerce Commission under the Urgent Deficiencies Act to set aside and permanently enjoin, in part, an order of the Interstate Commerce Commission.

In August, 1949, the Rio Grande filed a complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroad defendants. In such complaint the Rio Grande alleged that the defendants have failed and refused to establish and maintain competitive joint rates on freight traffic with the Rio Grande: (a) via its Colorado and Utah gateways between places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and (b) between Utah common points and places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that through routes now exist and have for many years existed for the interchange of traffic by the Rio

Grande with the Union Pacific at Provo, Ogden and Salt Lake City, Utah, and with the Union Pacific and certain other defendants at Denver, Colorado Springs, Pueblo, Walsenburg and Trinidad, Colorado, as to freight traffic

(a) between points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and

(b) as to freight traffic between Utah common points and points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that the rates and charges applicable to such traffic between the points described via such through routes, with minor exceptions, are based upon the combination of the intermediate local or other rates, which rates and charges, in the aggregate, are substantially higher than the joint rates maintained by the defendants on similar competitive traffic between the same origin and destination places and territories which moves via the Union Pacific or via the Union Pacific and the other defendants, and that such combination rates are unjust, unreasonable and discriminatory, as compared with the competitive joint rates maintained by the Union Pacific or via the Union Pacific and the other defendants on like freight traffic via other competitive routes;

And that the failure and refusal of the Union Pacific and other railroad defendants to establish joint competitive through rates and charges applicable to the freight traffic between the points above described re-

sults in combination through rates which are excessive, unjust, unreasonable and constitute violations of §§1, 3 and 15 of the Interstate Commerce Act[1] and was and is contrary to the national transportation policy, since it deprives the public, shippers and the Rio Grande of the use of reasonable and available through routes and rail facilities at just, reasonable and non-discriminatory through joint rates, which were and are necessary and desirable in the public interest.

The Rio Grande prayed that the Commission enter an order requiring the Union Pacific Railroad and the other defendant railroads to establish and maintain for the future, just, reasonable, and non-discriminatory competitive joint rates on the freight traffic via the route of the Rio Grande through its Colorado and Utah gateways between (a) points on the Union Pacific and its connections in Utah, north of Ogden, Utah, and in Idaho, Montana, Oregon, Washington, and British Columbia, and (b) Colorado common points, such as Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad, Colorado, and points east thereof; and between (c) the points designated in (a); and (d) Utah common points.

By the challenged order entered on January 12, 1953, the Commission granted some but not all of the relief sought by the Rio Grande. 287 I. C. C. 611. In this action the Rio Grande seeks to have the court enjoin, set aside, annul and remand, with appropriate directions, that part of the order which denied relief sought by the Rio Grande. Union Pacific and other railroads and other persons have intervened with permission of the Court.

---

1 Hereinafter called the Act.

Section 1, Par. (4) of the Interstate Commerce Act in part provides:

"It shall be the duty of every common carrier * * * to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; * * *. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3, Par. (4) of such Act in part provides:

"All carriers * * * shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper * * *."

Section 13(1) of such Act in part provides:

"That * * * any common carrier, complaining of *anything done or omitted to be done* by any common carrier subject to the provisions of this part, in contravention of the provisions thereof, may apply to said Commission by petition, which shall briefly state the facts; whereupon a statement of the complaint thus made shall be forwarded by the Commission to such common carrier, who shall be called upon to

satisfy the complaint, or to answer the same in writing, within a reasonable time, to be specified by the Commission. If such common carrier within the time specified shall make reparation for the injury alleged to have been done, the common carrier shall be relieved of liability to the complainant only for the particular violation of law thus complained of. If such carrier or carriers shall not satisfy the complaint within the time specified, or there shall appear to be any reasonable ground for investigating said complaint, it shall be the duty of the Commission to investigate the matters complained of in such manner and by such means as it shall deem proper." (Italics ours.)

Section 15(1) of such Act provides:

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, * * * the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall

cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

At the threshhold we are confronted with a motion of the defendants to dismiss on the ground that the Rio Grande is without standing to maintain this suit. We hold that the Rio Grande has such standing. Since we so hold, by reason of our conclusion with respect to the existence of the through routes, the erroneous finding of the Commission on that issue, the erroneous application to the facts by the Commission of certain provisions of the Act, and the rights of the Rio Grande under the provisions of the Act, we shall state in detail our reasons for denying such motion, after a full consideration of the merits.

I.

The Merits

The Rio Grande operates approximately 2400 miles of railroad in Colorado, New Mexico and Utah. From its northern terminus at Ogden, Utah, it runs south to Salt Lake City and Provo, Utah, thence generally east to Dotsero, Colorado, where it divides, one branch going east to Denver, the other southeast to Pueblo. From Denver the line runs south through Colorado Springs to Pueblo and Trinidad. Other lines serving territories in southern Utah, northwest New Mexico and southern Colorado are not of importance in this action.

The Rio Grande has interchange track connections and interchanges traffic with the Union Pacific at Denver,

Colorado, and at Ogden, Salt Lake City and Provo, Utah; with the Southern Pacific at Ogden, and the Western Pacific at Salt Lake City. It has interchange track connections and interchanges traffic at Denver with the Rock Island, the Burlington, Santa Fe and the Colorado & Southern; at Colorado Springs with the Santa Fe and the Rock Island; at Pueblo with the Santa Fe, the Colorado & Southern and the Missouri Pacific; at Walsenburg with the Colorado & Southern, and at Trinidad with the Santa Fe and the Colorado & Southern.

The Union Pacific, with its leased lines, operates as a single system. From Ogden, Utah, one line of the Union Pacific extends in a southwesterly direction through Salt Lake City and Provo and thence to Los Angeles. Another line extends northwest through Utah, Idaho, Oregon, Washington and Montana, serving what is referred to as the northwest territory, or the closed door territory. From Ogden, the Union Pacific runs generally easterly through Cheyenne and Denver, with eastern termini on the Missouri River at Omaha and Kansas City. At various points on its line it connects and interchanges traffic with the other intervening railroads.

The Union Pacific and other intervening railroads and the Rio Grande participate in through routes and joint rates with each other and with other carriers on transcontinental and other traffic, with certain exceptions. Joint rates generally do not apply in connection with the Rio Grande on traffic originating at or destined to points in Utah, north of Ogden, and in Idaho, Montana, Oregon and part of Washington. Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande to and from Ogden,

the higher combination rate, consisting of the aggregate of local rates, applies.

The transcontinental traffic to and from this northwest territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather *[than over the Rio Grande route. This is due in part, to the refusal of Union Pacific to join with Rio Grande in establishing joint rates with respect to such traffic. The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic.

The power of the Commission to establish through routes and joint rates is limited by §15(4) of the Act, which declares that, except as provided in §3 of the Act, a railroad may not be required without its consent to embrace in such route substantially less than the entire length of its railroad which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long, as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed is needed in order to provide "adequate, and more efficient or more economic], transportation." It is further provided that in prescribing through routes the Commission shall, so far as is consistent with the public interest and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier which originates the traffic. The section further provides that no through routes and joint rates applicable thereto shall be established for the purpose of assisting any carrier to meet its financial needs. This section was designed

*APPELLANTS' NOTE: The language included in brackets is modified by substituted page 2 of Appendix E.

to restrict the power of the Commission to establish through routes which would short haul a carrier without its consent.

Rio Grande contended at the hearing before the Commission, and contends here, that the routes over which joint rates are sought were in existence and open to traffic at combination rates, and that the Commission was not called upon to establish through routes and, therefore, limitations on its power to do so, imposed by §15(4), are not applicable and need not be considered. It urged that the principal task of the Commission was to determine whether the through rates resulting from the combination or aggregate of intermediate rates over such existing through routes are unjust, unreasonable or discriminatory, in violation of §§1 and 3 of the Act, and contrary to the national transportation policy.

The Commission recognized that the first question for its determination "is whether or not the present routes by way of the Ogden gateway constitute 'through routes' as that term is used in section 15(3) and (4) of the Act." Only five of the ten participating members of the Commission joined in the report and order of the Commission, wherein it was first determined that through routes were not in existence over the Rio Grande in connection with the Union Pacific through the Ogden gateway. Having reached this conclusion, the Commission proceeded upon the assumption that any order requiring the establishment of such through routes and joint rates over them must be grounded on findings, as specified in §15(3) and (4). Thus limited in its further consideration of the case, the Commission entered its order:

"That it is necessary and desirable in the public interest, in order to provide adequate and more eco-

nomic transportation, that through routes and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established via Ogden or Salt Lake City, in connection with the Rio Grande, on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs, in carloads, from origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary of Kansas thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

In all other material respects the relief requested by the Rio Grande was denied.

This very brief and sketchy statement of the case will suffice, since we rest our decision upon a narrow ground. We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding.

The undisputed evidence bearing upon the crucial question of existing through routes must be summarized. In 1897, the Union Pacific established joint through competitive rates with the Rio Grande to and from points in the northwest area through Ogden. These rates were in effect until canceled by Union Pacific in 1906 from and to some points and in 1912 from and to remaining points. But the through routes were not closed.

Counsel for Union Pacific expressed the opinion at the hearing before the Commission, in response to interrogation by Chairman Alldredge, that the cancellation of the joint rates did not close the through routes and that shippers were free to route via the Rio Grande if they wanted to pay more.

The principal traffic witness of the Union Pacific testified at the hearing that a shipper who was willing to pay the higher combination rate had the right to specify under §15(8) of the Act a route via the Rio Grande. It should be observed that this right exists only when through routes and through rates have been established. This witness further testified that some joint through rates are now published in a Union Pacific tariff for application to shipments of sheep and goats from the northwest area via Ogden and the Rio Grande to points on the Missouri River and east thereof.

A continuous use of the Rio Grande route in the movement of traffic to and from the closed door area at through combination rates, without objection of the Union Pacific or participating railroads, is shown by the evidence, although the volume of traffic involved is comparatively small. In 1948, which was selected as a

representative year, 37 carload shipments were made on through bills of lading from the northwest area to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific or its connections, but none moved to any destination east of Colorado common points. In the same year, 18 carload shipments were made west bound on through bills of lading from points east and southwest over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific to destinations in the northwest area. In addition, 21 carload shipments moved on through bills of lading from various eastern points to destinations in the northwest area, which were routed over the Rio Grande and Union Pacific, were held by Rio Grande at Denver or Pueblo for change of the routing because the joint through rates were not applicable. The traffic movement to and from the northwest area over the Rio Grande through the Ogden gateway on through bills of lading and at through rates was substantially the same in years prior to 1948 and continued into 1949, until the date of the Commission hearings.

From November, 1942, to August, 1945, a number of shipments were diverted under service orders issued by the Commission from the regularly used routes to the Rio Grande route. During World War II mixed trains of troops in passenger cars and of military supplies in freight cars moved from eastern and southern points on through billing over the Rio Grande via Ogden and Union Pacific to the closed door area. These trains were not routed under service orders issued by the Commission. In 1949, when the main line of the Union Pacific in Wyoming was blocked by snow, the traffic was diverted

over the Rio Grande between Denver and junctions with the Union Pacific in Utah. These latter movements were made under emergency conditions and admittedly do not tend to establish an ordinary course of business between the carriers involved, but the Commission did not invoke its authority under § 15(4) of the Act to establish temporary through routes which indicates that the Commission assumed that through routes were already in existence.

It is well settled that a joint rate is not essential to the existence of a through route. The rate which applies over a through route may be the aggregate of separate rates fixed independently by the several carriers participating in the through route. *St. Louis-Southwestern R. Co. v. United States*, 245 U. S. 136, 139; *Thompson v. United States*, 343 U. S. 549, 556. In *Thompson v. United States, supra*, the court defines a through route as follows:

> "* * * The statutory term 'through route,' used throughout the Interstate Commerce Act, has been defined by this Court as follows:
>
> "'A through route' is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a "through rate." This "through rate" is not necessarily a "joint rate." It may be merely an aggregation of separate rates fixed independently by the several carriers forming the "through route"; as where the "through rate" is "the sum of the locals" on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation. Through Routes and Through Rates, 12 I. C. C. 163, 166.'
>
> * * * * *

"In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service."

While the foregoing definition of "through route" compels us to conclude that the through routes contended for by Rio Grande were in existence, the Commission relied on the *Thompson* case in reaching its decision that through routes were not in existence. But the facts in the *Thompson* case are in striking contract with the facts in this case. There, the question was whether a route from Lenora, Kansas, via Missouri-Pacific to Concordia, Kansas, and thence via Burlington to Omaha was a through route. No evidence was presented that any shipment had ever been made from Lenora to Omaha via the Burlington or that the carriers had ever offered through service over that route.

In our case, through routes and joint rates were established in 1897 and the joint rates remained in effect for some fifteen years. While the joint rates were canceled by Union Pacific, nothing was ever done to close the routes and diminished traffic continued to move over the same through routes at the higher through combination rates. Moreover, joint rates were continued in effect as well as through routes in respect to the shipment of sheep and goats from the closed door area through Ogden over the Rio Grande to the Missouri River and beyond. The Union Pacific and other participating railroads have issued through bills of lading, thereby recognizing the through route status. Shipments were diverted from the Union Pacific over the Rio Grande under emergency con-

ditions without having the Commission authorize temporary through routes, which suggest that both the Union Pacific and the Commission assumed the existence of through routes.

The Commission stated in its report and order that "The Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable." Then follows a statement that the establishment of joint competitive rates would result in such routes becoming "effective through routes, a character which they do not now possess." Thus, it appears that the Commission reasoned that the closing of the routes in a commercial sense by applying the higher combination rates terminated the through routes. But, it was held to the contrary in *Virginian Railway Co. v. United States*, 272 U. S. 658. There, of 99 coal mines located on the line of the Virginian, 45 enjoyed through routes and joint rates to the West because of certain trackage arrangements entered into between the Virginian and the Chesapeake & Ohio. As to other complaining mines, the court said, at page 661:

> "* * * But that route is closed commercially, because these two carriers have not established any joint rates to the West from any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive. * * *"

In discussing the attack made on the order of the Commission fixing joint non-discriminatory rates, the court stated, at page 666:

> "* * * The Virginian contends that the order is void because the Commission directed the establish-

ment of through routes and joint rates without finding that they are necessary in the public interest. Such a finding is essential to the validity of an order under § 15(3). But the order here in question was not sought or made under § 15(3) and does not direct the establishment of through routes and joint rates. Through routes to the West were already in existence. And there were through rates by combination. (Citing cases.) The fact that the combination rates were excessive constituted the only obstacle to the movement."

The intervening railroads argue that Rio Grande had the burden of proving, in order to show the existence of the through routes contended for, an actual movement of traffic between every point in the northwest area and every point in the United States on every railroad east of a north and south line drawn roughly along the eastern boundary of Colorado. They point out that there are some 2,900 railroad stations in the northwest area and some 30,000 stations in the area east of Colorado and that there are undoubtedly hundreds of thousands of through routes available in the published tariffs between the thousands of stations in the involved area of which Rio Grande claims to be a part. This question was not considered by the Commission, and we do not reach it here. In our view, the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond. Since the case must be remanded to the Commission for a new hearing, we believe that the Commission should initially pass on the question of whether the burden is on the Rio Grande to show some actual movement of traffic on through billing over each of the possible routes

between the thousands of stations in the involved areas. It might be mentioned in passing that the court in the *Virginian Railway Company* case concluded that "through routes to the west are already in existence," without apparent direct proof of transportation of freight from all points on the Virginian to all points in the west via the Chesapeake & Ohio.

The contention of the intervening railroads that we are not authorized to enter an order remanding the case to the Commission with appropriate instructions is refuted by the recent order entered by the Supreme Court in *Secretary of Agriculture v. United States*, 347 U. S. 645.

II.

The Motion to Dismiss

*[We have concluded that under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law, and that the Commission erred, as a matter of law, in not finding the existence of such through routes.

We have further concluded that the Commission, in determining whether the Union Pacific Railroad and the other defendant railroads should be required to establish and maintain for the future just, reasonable, and nondiscriminatory competitive joint rates, as prayed for by the Rio Grande, erred as a matter of law in failing to apply the provisions of § 1(4) and § 3(4), rather than the provisions of § 15(3).

The duties and powers of the Commission, with respect to the relief sought by the Rio Grande, are clearly provided in § 1(4) and § 3(4) of the Act. The right of

*APPELLANTS' NOTE: The language included in brackets is modified by substituted page 3 of Appendix E.

the Rio Grande to file its complaint with the Commission and seek the relief therein prayed for is clearly given by § 13 of the Act. Under the Act, a carrier is as fully entitled to non-discriminatory treatment as a shipper. See *Chicago Junction* case, 264 U. S. 258, 267, which cites with approval *Pennsylvania Co. v. United States,* 236 U. S. 351, where the complainant sought relief under § 3 of the Act.

The fact that the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief. See *Rochester Telephone Corp. v. United States,* 307 U. S. 125, 135-143; *Mitchell v. United States,* 313 U. S. 80, 92, 93.

The negative portion of the order required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had, and, if considered solely from those points of view, the order caused no pecuniary loss to the Rio Grande.

If the Rio Grande, in the proceeding before the Commission, established its right to the relief prayed for, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and *[equitable divisions thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates, and the denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established.

The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defend-

*APPELLANTS' NOTE: The language included in brackets is modified by substituted pages 4 and 5 of Appendix E.

ants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of § 1(4) and § 3(4) of the Act.

If the Rio Grande, on its showing before the Commission and an application of the provisions of § 1(4) and § 3(4), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the Rio Grande of a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its operating income, and, no doubt, in its net earnings.[2] More succinctly stated, if the Rio Grande, under the facts established by the evidence before the Commission, and the application of the provisions of § 1(4) and § 3(4) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande.

Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order.[3]]

While it is our view that the denial of the relief here challenged will result in pecuniary injury to the

---

2 The Union Pacific asserts that the granting of the relief prayed for would result in a large loss of traffic and a large reduction of earnings by the Union Pacific.

3 The Chicago Junction Case, 264 U. S. 258, 266, 267.

Rio Grande, we do not think such injury is essential to the right of judicial review. In *Mitchell v. United States*, 313 U. S. 80, Mitchell brought a proceeding before the Commission in which he alleged that the Chicago, Rock Island and Pacific Railway Company, in its purported compliance with an Arkansas statute requiring segregation of the races during transportation did not provide as desirable accommodations for colored as for white passengers traveling in Arkansas over its line, which resulted in unreasonable charges and unjust discrimination against and undue prejudice to colored passengers in violation of §§ 1, 2, 3, and 13 of the Act and the Fourteenth Amendment. The only relief sought was the removal and avoidance in the future of the alleged discrimination and prejudice in the furnishing of accommodations. The Commission, while holding that the matters complained of were prohibited by § 3(1) of the Act, denied the relief prayed for. Mitchell then brought an action in the District Court of the United States for the Northern District of Illinois to set aside the Commission's order. In passing on whether Mitchell had standing to maintain the action, the Supreme Court said, at pages 92 and 93:

> "*First.* The Commission challenges the standing of appellant to bring this suit. We find the objection untenable. This question does not touch the merits of the suit, but merely the authority of the District Court to entertain it. The fact that the Commission's order was one of dismissal of appellant's complaint did not foreclose the right of review. Appellant was an aggrieved party and the negative form of the order is not controlling. Rochester Telephone Corp. v. United States, 307 U. S. 125, 143.
>
> "Nor is it determinative that it does not appear that appellant intends to make a similar rail-

road journey. He is an American citizen free to travel, and he is entitled to go by this particular route whenever he chooses to take it and in that event to have facilities for his journey without any discrimination against him which the Interstate Commerce Act forbids. He presents the question whether the Act does forbid the conduct of which he complains.

"The question of appellant's right to seek review of the Commission's order thus involves the primary question of administrative authority, that is, whether appellant took an appropriate course in seeking a ruling of the Commission. The established function of the Commission gives the answer. The determination whether a discrimination by an interstate carrier is unjust and unlawful necessitates an inquiry into particular facts and the practice of the carrier in a particular relation, and this underlying inquiry is precisely that which the Commission is authorized to make. As to the duty to seek a determination by the Commission in such a case, we do not see that a passenger would be in any better situation than a shipper. Texas & Pacific Ry. Co. v. Abilene Cotton Oil Co., 204 U. S. 426; Robinson v. Baltimore & Ohio R. Co., 222 U. S. 506; Mitchell Coal Co. v. Pennsylvania R. Co., 230 U. S. 247; Morrisdale Coal Co. v. Pennsylvania R. Co., 230 U. S. 304; General American Tank Car Corp. v. El Dorado Terminal Co, 308 U. S. 422.

"The District Court had jurisdiction to review the action of the Commission and the question on that review was whether that action was in accordance with the applicable law."

*[There, Mitchell suffered no pecuniary injury, but the court had no difficulty in concluding that he had a right to maintain the proceeding before the Commission,

*APPELLANTS' NOTE: The language included in brackets is modified by substituted page 6 of Appendix E.

that he was an aggrieved party, and that he was entitled to judicial review. See, also, *Henderson v. United States*, 339 U. S. 816, 823.

Here, the Rio Grande sought an order compelling the defendant railroads to perform the duty of establishing just and reasonable joint rates, fares, and charges over through routes, and it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate.

We think the cases relied on by the defendants are distinguishable.

Edward Hines Trustees v. United States, 263 U. S. 143, did hold that in order for the plaintiffs to maintain that action it was necessary for them to show that the order subjected them "to legal injury, actual or threatened," but the complainants there sought the] continuation of a so-called penalty charge of $10 per car per day on lumber held at reconsignment points. The court said that the plaintiffs had no absolute right to require carriers to impose penalty charges and that plaintiffs' right was "limited to protection against unjust discrimination." Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines. In the *Chicago Junction* case, *supra*, the court distinguished between an incident of more effective competition and injury inflicted by denying equality of treatment. Just, reasonable, and non-discriminatory joint rates is the equality of treatment which the Rio Grande here seeks.

In *Alexander Sprunt & Son, Inc. v. United States*, 281 U. S. 249, the Interstate Commerce Commission entered an order directed to the railroads operating in Oklahoma, Arkansas, Texas, and Louisiana, which required them to remove in a prescribed manner, undue prejudice and preference caused by their rates on cotton shipped from interior points to Houston and other ports on the Gulf of Mexico. Two actions were brought, one by Sprunt & Son and one by the Texas & New Orleans Railroad Company and other carriers, to enjoin the enforcement of the order. Upon final hearing, the District Court sustained the validity of the order and entered a decree dismissing the bills. None of the carriers appealed from the decree. Sprunt & Son appealed. The court held that the issue of undue prejudice and unjust preference which had been passed upon by the Commission had become moot, because most of the carriers never sought to annul the order and that the carriers who joined in the suit to set it aside had voluntarily severed themselves from the shipper, who objected to it. With respect to the right of Sprunt & Son to maintain the action, the court at pages 254, 255, said:

> "* * * We are of the opinion that appellants have no standing, in their own right, to make this attack. In so far as the order directs elimination of the rate differential previously existing, it worsened the economic position of the appellants. It deprived them of an advantage over other competitors of almost 3.5 cents per hundred pounds. The enjoyment of this advantage gave them a distinct interest in the proceeding before the Commission under § 3 of the Interstate Commerce Act. For, their competitive advantage was threatened. Having this interest, they were entitled to intervene in that administrative proceeding. * * * But that interest alone did not give

them the right to maintain an independent suit, to vacate and set aside the order. Such a suit can be brought by a shipper only where *a right of his own is alleged to have been violated by the order.* * * * In the case at bar, the appellants have no independent right which is violated by the order to cease and desist. *They are entitled as shippers only to reasonable service at reasonable rates and without unjust discrimination. If such service and rates are accorded them, they cannot complain of the rate or practice enjoyed by their competitors or of the retraction of a competitive advantage to which they are not otherwise entitled.* The advantage which the appellants enjoyed under the former tariff was merely an incident of, and hence was dependent upon, the right, if any, of the carriers to maintain that tariff in force and their continuing desire to do so." (Italics ours.)

Here, again, the court recognized that mere deprivation of a competitive advantage was not enough and that they were only entitled to reasonable service at reasonable rates and without unjust discrimination. Here, the very thing the Rio Grande seeks is not a mere competitive advantage, but the establishment of just and reasonable through rates and the removal of unjust discrimination, which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings.

In *Pittsburgh & West Virginia Railway Co. v. United States*, 281 U. S. 479, the Commission entered an order authorizing the New York Central Railroad and other rail carriers to join in establishing a union passenger station at Cleveland, through a subsidiary, Cleveland Union Terminals Company. The Wheeling & Lake Erie Rail-

way Company had for some years owned and maintained an independent passenger station at Ontario Street, in Cleveland, in the line of the easterly approach to the proposed union terminal. It was apparent that either ownership of or an easement in the Wheeling's site would be indispensable in order to provide the necessary easterly approach to the terminal. Wheeling consented to sell its site and become a tenant in the new terminal. Contracts were made embodying this plan, subject to approval of the Interstate Commerce Commission. Thereupon, Wheeling filed before the Commission two applications for certificates of public convenience and necessity, one permitting it to abandon its Ontario Street station, and the other authorizing it to use the facilities of the union terminal, and pending its completion to use the facilities of the station of the Erie Railroad and the tracks of the Big Four.[4] Pittsburgh & West Virginia Railway, a minority stockholder and connecting carrier of the Wheeling, intervened in opposition to the applications. It opposed them on the ground that the Ontario Street station was ample for both the present and future needs of the Wheeling and that the contracts were disadvantageous to the Wheeling in certain particulars. The Commission found the public convenience and necessity would be served by the granting of both applications and accordingly issued its certificates as prayed for. Pittsburgh & West Virginia Railway then brought an action in the District Court of the United States for the Northern District of Ohio to set aside and annul the order of the Commission. The Supreme Court held that the order did not affect Pittsburgh & West Virginia as a carrier and that the claim that the order threatened Wheeling's

4 Cleveland, Cincinnati, Chicago & St. Louis Ry. Co.

financial stability and Pittsburgh & West Virginia's financial interest as a minority stockholder was not sufficient to show a threat of the legal injury necessary to entitle it to bring a suit to set aside the order. The court, at page 487, said: "* * * The injury feared is the indirect harm which may result to every stockholder from harm to the corporation," and that the interest of Pittsburgh & West Virginia was insufficient to give it standing to bring the action.

In *Moffat Tunnel League v. United States*, 289 U. S. 113, the Commission had entered an order authorizing the Denver and Rio Grande Western Railroad Company by stock purchase to acquire control of the Denver and Salt Lake Railway Company, called the Moffat Road. In the proceeding before the Commission the Moffat Tunnel Improvement District and the Public Utilities Commission of Colorado had intervened and they brought an action in the District Court of the United States for the District of Delaware to set aside the Commission's order. In holding that the plaintiffs did not have standing to maintain the suit, the Supreme Court said, at page 119:

> "* * * the complaint must show that plaintiff has, or represents others having, a legal right or interest that will be injuriously affected by the order. Edward Hines Trustees v. United States, 263 U. S. 143, 148. Sprunt & Son v. United States, 281 U. S. 249, 254. Pittsburgh & W. Va. Ry. v. United States, 281 U. S. 479, 486. Plaintiffs have failed to show that they are so qualified. Their interest is not a legal one. It is no more than a sentiment, such as may be entertained by members of the public in the territory west of Craig, that the improvement of transportation facilities authorized by the Commission will lessen the possibility of construction by a rival of the Rio Grande of an extension of the Moffat to Utah common points."

The *Pittsburgh & West Virginia Railway* case and the *Moffat Tunnel League* case are obviously distinguishable from the instant case.

With respect to cases relied on by the defendants, the statement by the court in *Youngstown Sheet & Tube Co. v. United States*, 295 U. S. 476, is apposite. "* * * The authorities cited by the appellees are to be distinguished on the ground that the plaintiffs either had no legal interest or capacity to sue or failed to allege that the rates under attack were *unreasonable or discriminated against them.*" (Italics ours.) Here, the existing rates are attacked by the Rio Grande on the ground that they are unjust, unreasonable, and discriminatory as against the Rio Grande and shippers on its line, deny them equality of treatment, and cause injury to them.

It is urged that to maintain the action, equitable grounds for relief must be alleged. But, it should be remembered that in the *Rochester Telephone* case, the court, at page 142, said:

> "* * * An action before the Interstate Commerce Commission is akin to an inclusive equity suit in which all relevant claims are adjusted. An order of the Commission dismissing a complaint on the merits and maintaining the *status quo* is an exercise of administrative function, no more and no less, than an order directing some change in status. The nature of the issues foreclosed by the Commission's action and the nature of the issues left open, so far as the reviewing power of courts is concerned, are the same. Refusal to change an existing situation may, of course, itself be a factor in the Commission's allowable exercise of discretion. In the application of relevant canons of judicial review an order of the Commission directing the adoption of a practice might raise.

considerations absent from a situation where the Commission merely allowed such a practice to continue. But this bears on the disposition of a case and should not control jurisdiction. * * *"

Moreover, in overruling *Proctor & Gamble v. United States*, 225 U. S. 282, the court, at page 136, in the *Rochester Telephone* case, *supra*, observed that the shipper in that case "was within the express language of Congress authorizing suits 'to enjoin, set aside, annul, * * * any order of the Interstate Commerce Commission.'"

In the instant case, the Rio Grande, in its complaint, alleges that it was without adequate remedy at law. Clearly, the Rio Grande can maintain no other action which will give it adequate relief or prevent injury to it.

Accordingly, we conclude that the Rio Grande had standing to maintain the action.

The order in so far as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with this opinion.

APPENDIX E

In the United States District Court
For the District of Colorado

Civil Action No. 4492

The Denver and Rio Grande Western Railroad Company,
Plaintiff,

v.

United States of America and Interstate Commerce Commission,
Defendants.

Filed Apr 22 1955

Order

It is ordered by the court that the opinion heretofore filed herein be modified by substituting for pages 14, 29, 31, 32 and 36 thereof the following pages numbered 14, 29, 31, 32 and 36 and by the changes reflected in such last-mentioned pages:

[Substituted Page]

than over the Rio Grande route. This is due, in part to the refusal of Union Pacific to join with Rio Grande in establishing joint rates with respect to such traffic. The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic.

The power of the Commission to establish through routes and joint rates under §15(3) is limited by §15(4) of the Act, which declares that, except as provided in §3 of the Act, a railroad may not be required without its consent to embrace in such route substantially less than the entire length of its railroad which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through rate unreasonably long, as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed is needed in order to provide "adequate, and more efficient or more economic

Appendix E

[Substituted Page]

II.

The Motion to Dismiss

We have concluded that under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law, and that the Commission erred, as a matter of law, in not finding the existence of such through routes.

We further conclude that the Commission erred as a matter of law in applying the limitations of §15(4) with respect to the establishment of through routes, in determining whether the Union Pacific and the other defendant railroads should be required to establish and maintain for the future just, reasonable and non-discriminatory competitive joint rates under the provisions of §14(4), §3(4), §15(1) and §15(3).

The duties and powers of the Commission, with respect to the relief sought by the Rio Grande, are clearly provided in §1(4), §3(4), §15(1) and §15(3) of the Act. The right of the Rio Grande to file its complaint with the Commission and seek the relief therein prayed for is clearly given by

[Substituted Page]

equitable divisions thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates, and the denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established.

The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defendants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of §1(4), §3(4), §15(1), and §15(3) of the Act, free of any of the limitations imposed by §15(4) with respect to establishing through routes.

If the Rio Grande, on its showing before the Commission and an application of the provisions of §1(4), §3(4), §15(1) and §15(3), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the

[Substituted Page]

Rio Grande of a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its operating income, and, no doubt, in its net earnings.[2] More succinctly stated, if the Rio Grande, under the Facts established by the evidence before th Commission, and the application of the provisions of §1(4), §3(4), §15(1) and §15(3) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande.

Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order.[3]

2 The Union Pacific asserts that the granting of the relief prayed for would result in a large loss of traffic and a large reduction of earnings by the Union Pacific.

3 The Chicago Junction Case, 264 U. S. 258, 266, 267.

[Substituted Page]

There, Mitchell suffered no pecuniary injury, but the court had no difficulty in concluding that he had a right to maintain the proceeding before the Commission, that he was an aggrieved party, and that he was entitled to judicial review. See, also, *Henderson v. United States*, 339 U. S. 816, 823.

Here, the Rio Grande sought an order compelling the defendant railroads to perform their statutory duty to establish just and reasonable joint rates, fares, and charges over through routes, and if it was entitled to such an order, then it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate.

We think the cases relied on by the defendants are distinguishable.

Edward Hines Trustees v. United States, 263 U. S. 143, did hold that in order for the plaintiffs to maintain that action it was necessary for them to show that the order subjected them "to legal injury, actual or threatened," but the complainants there sought the

Final Judgment and Decree

The hearing in the above-entitled cause having been held on June 8 and 9, 1953, before Circuit Judge Orie L. Phillips and District Judges Royce H. Savage and William Lee Knous, constituting a District Court of three judges, convened pursuant to Title 28, U. S. C., Sections 2284 and 2325, and all parties being represented by counsel, and the Court having received the evidence offered and heard the arguments of counsel, and the Court being fully advised in the premises and having filed its opinion herein on January 13, 1955, and the Court being of the opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297 is invalid and unlawful insofar as it denied relief to the plaintiff above named;

NOW, THEREFORE, upon the basis of said opinion of this Court dated January 13, 1955, and for the reasons therein set forth, IT IS ORDERED, ADJUDGED AND DECREED that the injunction and other relief prayed for by plaintiff and intervening plaintiffs in the complaint be and the same is hereby granted, and the order of the Interstate Commerce Commission dated January 12, 1953, be and the same is hereby annulled and set aside insofar as it denied and withheld relief to the plaintiff and intervening plaintiffs,

IT IS FURTHER ORDERED, ADJUDGED AND DECREED that this cause, insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief to plaintiff and intervening plaintiffs, be and the same is hereby remanded to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of this Court.

DATED this 1st day of February, 1955.

APPENDIX H

The Pertinent Provisions of the Interstate Commerce Act (United States Code, Title 49) Involved in this Case are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1 (4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to

part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3 (4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15 (1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers sub-

ject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classification, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and mini-

ma, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. * * *"

Section 15 (4)--

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however*, That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

	Page
Opinions Below	1
Jurisdiction	1
Statutes Involved	2
Questions Presented	3
Statement	9
The Commission's Findings and Conclusions	13
Opinion of the District Court	18
Summary of Argument	20
Argument	27
I. The District Court Erred in Failing to Dismiss the Complaint on the Ground That, as the Commission's Failure to Compel Through Routes and Joint Rates for Commodities Not Named in the Order Is Neither an "Order" Nor a Part of the Order Issued, There Is no Jurisdictional Basis for Court Review	27
II. The District Court Erred in Denying the Motion to Dismiss on the Ground That the Rio Grande Has no Legal Right or Standing to Maintain This Suit	35
III. The Court Erred in Holding That the Commission's Finding That "there are at present no through routes, as that term is used in the Act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned" Is Not Supported by Substantial Evidence and Is Erroneous as a Matter of Law, and the Court Further Erred in Its Own Holding That the Evidence Establishes the Existence of Such Through Routes	53
The Fallaciousness of the Lower Court's Decision That Through Routes are Already in Existence via the Rio Grande for the Traffic Concerned is Sharply Illustrated and Emphasized by the Situation With Respect to the Great Northern, Northern Pacific and Milwaukee Railroads	83

INDEX—Continued

Page

IV.

Upon Its Holding That the Commission "erred as a matter of law" in Finding That There Are at Present no Through Routes Via the Rio Grande as Claimed by It, and That This Finding "obviously prejudiced the entire proceeding", the District Court Erred in Concluding That the Commission's Order Should Be Annulled and Set Aside Only "in so far as it denied relief to the Rio Grande", and in Failing to Hold That the Order Requiring Through Routes and Joint Rates for the Articles Therein Named, as Well as the Commission's Failure to Require Joint Rates for All Commodities Should Be Annulled and Set Aside 87

V.

The District Court Erred in Commingling and Confusing the Provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act and in Ignoring the Fact That the Commission Had Already Heard and Adjudicated the Rio Grande's Case.... 93, 9

VI.

The District Court Exceeded Its Power by Usurping Administrative Authority to Make Findings of Fact Favorable to the Rio Grande and Thereupon "remanding" That Part of the Case "with appropriate instructions" to the Commission "for further proceedings in conformity with this opinion" 98

Appellants,

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY.

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

BRIEF FOR ABOVE NAMED APPELLANTS

OPINIONS BELOW

The opinion of the United States District Court for the District of Colorado is reported in 131 F. Supp. 372 (R. 279). The report of the Interstate Commerce Commission is found in 287 I. C. C. 601 (R. 57).

JURISDICTION

This action was brought in the United States District Court for the District of Colorado by The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande") against the United States of

America and the Interstate Commerce Commission, pursuant to 28 U. S. C. 1336, 1398, 2284 and 2321-2325, to enjoin, annul, suspend and set aside "in part" an alleged "order" of January 12, 1953, by the Commission in a proceeding entitled "Docket No. 30297, Denver & Rio Grande Western Railroad Co. v. Union Pacific Railroad Co. et al." These appellants intervened as defendants in the district court.

The final judgment and decree of the district court, dated February 1, 1955, was entered February 14, 1955. On April 22, 1955, the district court entered an order overruling and denying a motion of these appellants and others for new trial or reargument and reconsideration (R. 361-362).

Notice of appeal was filed by these appellants in the United States District Court for the District of Colorado on June 20, 1955 (R. 365).

The jurisdiction of this Court to review the judgment by direct appeal is conferred by 28 U. S. C. 1253 and 2101(b). Probable jurisdiction was noted by this Court on October 24, 1955.

STATUTES INVOLVED

This appeal involves the following provisions of the Interstate Commerce Act, Part I, 49 U. S. C. 1, *et seq.*, which are set out in Appendix B hereto:

National Transportation Policy (preceding Section 1), and Sections 1(4), 3(4), 15(1), 15(3), 15(4), 15(8) and 20(11).

QUESTIONS PRESENTED

The Commission's alleged "order" results from a complaint filed by appellee, The Denver and Rio Grande Western Railroad Company (hereinafter called "Rio Grande"), a chronically bankrupt and "financial needs" short line railroad, for the admitted purpose of improving its financial condition by diverting for a "bridge" haul over its line about 172,000 carloads annually of traffic originated and terminated on through routes of the Union Pacific Railroad Company and other railroads and hauled under joint rates maintained over those routes through Wyoming and Nebraska for 75 years, between points in the northwest area, embracing the States of Oregon, Washington, Montana, Idaho and Utah north of Ogden, and points in the eastern and southern parts of the United States.[1]

The joint rates do not apply via the Rio Grande and they are lower than the combination or sum of the local rates that would have to be charged if the traffic moved over that line.

The only order issued by the Commission (R. 20-22) requires that these appellants and over 200 other railroads establish through routes and joint rates demanded by the Rio Grande "the same" as the joint rates maintained by them on the several commodities named in the order, which comprise about 57,000 carloads, or one-third of the traffic annually that the Rio Grande seeks to divert over its line, short-hauling the Union Pacific and other

1 The lines and termini of the Union Pacific and the Rio Grande (main lines) are indicated on the map attached hereto as Appendix A.

lines at least 925 miles on traffic from which the Union Pacific alone earns about $11,000,000.00 annually.[2]

But the Commission did not order through routes and joint rates on about two-thirds of the traffic, and it is the Commission's *failure to order* through routes and joint rates on the remaining two-thirds of the traffic which the Rio Grande assailed and the lower court annulled and enjoined in this case. Such *failure* is not embraced in the order issued or in any order of the Commission.

The Rio Grande contended before the Commission that through routes at the combination or sum of local rates already existed via its line for the traffic it seeks and demanded that the lower joint rates maintained over existing Union Pacific routes be made applicable via its line and that its line be included at equal joint rates in the many hundreds of thousands of existing through routes between some 39,000 railroad stations in the east and south and some 2,900 stations in the northwest area.

The Commission held that the through routes claimed by the Rio Grande did not exist for the involved traffic within the meaning of Section 15(3) and (4) of the Act, and that if through routes and joint rates were ordered via the Rio Grande they would have to be grounded on findings required by Section 15(4)(b), which permits the Commission to short haul existing routes only if it finds that "the through route *proposed* to be established is needed in order to provide adequate, and more efficient or more economic, transportation". The Commission found that through routes via the Rio Grande were "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" for

2. The validity of the order issued is now before this Court in Nos. 117, 118 and 119, appeals from the final decree of the United States District Court for the District of Nebraska.

certain commodities which comprise about one-third of the total volume of the traffic the Rio Grande seeks to divert to its line. The Commission concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained."

The order does not in terms deny, dismiss or withhold anything, nor does it make any reference to the remaining two-thirds of the traffic the Rio Grande seeks to divert to its line. For the purpose of having the Commission order through routes and joint rates via its line on the remaining two-thirds of the traffic, the Rio Grande brought this suit to enjoin and annul the Commission's *failure* to include that two-thirds of the traffic in its order.

The district court overruled a motion to dismiss the case on the ground that, as the Rio Grande admittedly has no legal or other right to improve its financial position by diverting traffic from other railroads, it has no standing to maintain the suit. The court further held that through routes via the Rio Grande are already in existence for the involved traffic, that the Commission erred as a matter of law and upon the evidence in finding that the claimed routes are not in existence, and that this finding by the Commission "obviously prejudiced the entire proceeding". The court enjoined and annulled the alleged "order" insofar as it "denied and withheld" relief from the Rio Grande, and "remanded" the case to the Commission for further proceedings in conformity with the court's opinion "insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief" to the Rio Grande.

The following questions are presented by this appeal:

(1) Whether the court erred in refusing to dismiss the Rio Grande's complaint and intervening complaints on the ground that, as the Commission's failure to order through routes and joint rates on *all* instead of only a part of the traffic is not an "order" or a part of any order issued by the Commission, there is no jurisdictional basis for judicial review.

(2) Whether the district court erred in holding that plaintiff, the Rio Grande, admittedly lacking any legal or other right to traffic it seeks to divert to its line from other carriers, has standing to maintain this suit, for the purpose of obtaining a "pecuniary profit" from that part of the traffic for which the Commission failed to order through routes and joint rates via the Rio Grande.

(3) Whether the court erred in making its own administrative finding that, "under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines", contrary to the Commission's finding that the evidence did not prove discrimination, and erred further in relying upon its own administrative finding to sustain the standing of the Rio Grande to maintain this suit.

(4) Whether the court erred in holding, in effect, that the Commission's finding that the evidence failed to prove discrimination against the Rio Grande and its failure to order through routes and joint rates on *all* instead of a part of the traffic, amounts to the denial of a right given the Rio Grande by the [Interstate Commerce] Act adversely affecting its traffic and revenues, causing it to suffer pecuniary injury, and giving it "a right to judicial review of the order".

(5) Whether, in resting its decision that the Rio Grande has standing to maintain this suit upon several hypothetical or "if" propositions, the court erred in ignoring or giving no effect to the fact that, after full hearings and thorough consideration of the evidence, the Commission found that, except to the extent indicated in its findings, the evidence failed to prove discrimination against the Rio Grande or that through routes and joint rates by the Rio Grande are necessary in the public interest to provide adequate and more economic transportation, and concluded that, except as indicated in its findings, "the allegations made in the complaint are not sustained".

(6) Whether the court erred in failing to hold that neither the Rio Grande nor intervening plaintiffs had standing to maintain this suit.

(7) Whether the court erred in holding that the Commission's finding that "there are at present no through routes, as that term is used in the Act", over the Rio Grande via Ogden or Salt Lake City "on the traffic here concerned" is not supported by substantial evidence and is erroneous as a matter of law, and whether the court further erred in its own holding that the existence of such through routes is established by the evidence and the law.

(8) Whether, in holding that through routes for the "bridge" traffic here concerned were in existence via the Rio Grande, the court erred in refusing to consider the fact that the evidence showed through movement of only one shipment of non-emergency traffic via the Rio Grande over each of only 17 of the many hundreds of thousands of through routes of which the Rio Grande claims to be a

part between the 2,90 railroad stations in the northwest area and the 39,000 stations in the eastern and southern parts of the country.

(9) Whether, in holding that through routes were in existence via the Rio Grande for the traffic here concerned, the court erred in failing and refusing to indicate or specify the through routes held to be in existence via the Rio Grande or the termini of, or the railroads comprising such through routes, or the commodities for which the court holds that through routes exist via the Rio Grande.

(10) Whether, in view of the fact that the Commission overcame the short haul prohibition in Section 15(4) by ordering through routes and joint rates on all the commodities it considered upon the evidence to be necessary in the public interest, the court erred in holding that the Rio Grande and the "entire proceeding" were "prejudiced" by the Commission's finding that through routes did not already exist via the Rio Grande for the traffic it seeks.

(11) Whether, if the last preceding question is answered negatively, the court erred in annulling and setting aside "the order" *only* "insofar as it denied and withheld relief" to the Rio Grande.

(12) Whether the court erred in holding that the Rio Grande was entitled to have the Commission, in determining whether joint rates via the Rio Grande should be required "apply the provisions of §1(4), §3(4), §15(1) and §15(3) of the Act, free of any of the limitations imposed by §15(4) with respect to establishing through routes".

(13) Whether the court exceeded its powers in making its own finding that the evidence proved discrimination against the Rio Grande, and thereupon in "remanding" the case to the Commission "for further proceedings in conformity with the opinion and judgment of this Court".

(14) Whether the court erred in failing to consider and review the entire record and all the issues tendered in briefs and arguments of the parties.

STATEMENT

The Rio Grande operates a short-line railroad with its eastern termini at Denver, Pueblo and Trinidad, Colorado, and its western terminus at Ogden, Utah, the distance between Denver and Ogden being 607 miles via its main line, and 782 miles via Pueblo. Its history has been essentially one of financial difficulty and of bankruptcy. It has been a "financial needs" railroad throughout most of its existence.[3] Its mountainous location and tortuous physical features have resulted in "operating conditions on the Rio Grande" that are "more onerous than those on the lines of the Union Pacific" or any other transcontinental railroad, and caused the Commission in prior cases to grant the Rio Grande's demands for higher rates, based on its "financial necessities", than rates prescribed for other western railroads.[4]

4 *Commercial Club, Salt Lake City v. A., T. & S. F. Ry. Co.*, 19 I. C. C. 218, 221-222; *W. H. Bintz Co. v. Abilene & S. Ry. Co.*, 216 I. C. C. 481, 486; *Livestock-Western District Rates*, 176 I. C. C. 1, 98 and 190 I. C. C. 175; *Utah Coal Operators Assn. v. Atchison, T. & S. F. Ry. Co.*, 218 I. C. C. 663.

The "Rio Grande was built for the purpose of handling the local business tributary to its line"[5] but its management soon determined to enhance its financial position by diverting traffic from other railroads for a "bridge"[6] haul over its line, including transcontinental Pacific Coast traffic moving over the Union Pacific-Central (now Southern) Pacific route, construction of which had been completed from Council Bluffs, Iowa, through Ogden, Utah, to Oakland, California, in 1869.

Pursuing its purpose to enhance its financial position by diverting traffic and revenues from other railroads, the Rio Grande's revenues from "bridge" traffic increased over 326 per cent in the 15-year period ending with 1948, while traffic originated and terminated on its line increased only 155 per cent and its local traffic originating and terminating at points on its line was less annually throughout that period than during the period 1924-1929.

Further pursuing its "bridge" traffic policy, the Rio Grande filed its complaint with the Commission in this

---

5 *Commercial Club, Salt Lake City v. A., T. & S. F. Ry., supra.*, P. 221.

6 The term "bridge traffic" is used to designate traffic hauled by a carrier on whose line the traffic neither originates nor terminates. A "bridge haul" is the transportation of such "bridge" traffic some part of the distance betweeen its point of origin and its final destination. "Bridge" traffic is most attractive because it is generally least expensive to haul since the "bridge" carrier performs none of the expensive branch line, gathering or switching services required at the point of origin and point of final destination. The Rio Grande's President testified that the reason it is pressing for more "bridge" traffic is that "there is more money in it" than in traffic it originates or terminates.

The traffic the Rio Grande seeks to divert to its line is "bridge" traffic which originates and terminates outside of Rio Grande territory. Joint rates already apply to traffic originated at or destined to points on the Rio Grande.

case on August 1, 1949. Although the complaint alleged violations of Sections 1(4), 3, 15(1) and 15(3) of the Interstate Commerce Act, the Rio Grande's President testified that the complaint was filed for the purpose of improving and enhancing its financial position by diverting for a "bridge" haul over its line so much as it can of about 172,000 carloads annually of transcontinental freight traffic now and for some 75 years moved under joint transcontinental rates over through routes which include lines of the Southern Pacific, Great Northern, Union Pacific, Northern Pacific and Milwaukee railroads (designated herein as "Union Pacific routes") between points in the northwestern states of Oregon, Washington, Montana, Idaho and Utah, north of Ogden (designated herein as "northwest area"), and points in the eastern and southern parts of the United States, generally east of the Missouri and Mississippi rivers, including points on the Atlantic and the Gulf coasts. As noted, these joint rates do not apply via the Rio Grande, except in instances not here involved, and they are lower than the combination or sum of the local rates that would have to be charged if the traffic moved via the Rio Grande.

The Rio Grande demanded before the Commission that its line be included in all of the multitude of through routes of other railroads to and from the northwest area over which the joint rates are applicable, despite the fact it has no trackage and performs no service in that area; that any route via the Rio Grande for movement of the involved traffic would be from 33 to 219 miles longer than the Union Pacific, and would range from 33 per cent to more than 50 per cent longer than routes maintained by the Union Pacific with other railroads; that movement of the traffic over the Rio Grande as a "bridge" line would require at least 24 hours more time

and one or two more terminal interchanges between carriers, and would short haul the Union Pacific and other railroads 925 miles.

Consistent with the protection afforded by Section 15(4) of the Act against short-hauling, and having their own direct and shorter routes, the Union Pacific and other roads serving the northwest area have always insisted, with immaterial exceptions, upon retaining their long hauls on traffic to and from that area.[7]

No complaint has ever been filed by shippers or the public or by any state public service commission demanding the longer through routes and joint rates sought by the Rio Grande.

The order (R. 20) requires the Union Pacific and numerous other railroads, whose connecting lines form through routes extending from the Pacific to the Atlantic and Gulf coasts, to establish through routes with the Rio Grande and "the same" joint rates maintained on Union Pacific routes on westbound carloads of granite and marble monuments from Vermont and Georgia to points in the northwest area and on eastbound carloads of ordinary livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs from points in the northwest area to points in the eastern and southern parts of the country, indicated above. These articles

7. Union Pacific and some of the other railroad appellants have served the northwest for more than 75 years. Union Pacific now owns and operates 5,606.7 miles of railroad in that area, of which 2,913.19 miles, or over 50 per cent, consist of numerous branch lines extending from and serving as "feeders" to its main lines. About 50 per cent of the traffic the Rio Grande wants routed via its line originates and terminates on these branch lines. The Rio Grande demands and the effect of the order is that, all these main and branch lines serve as "feeders" of bridge traffic to its lines.

comprise about 57,000 carloads annually, or a third of the total volume of the traffic the Rio Grande seeks to divert to its line. Diversion of the traffic permitted by the order would result in a potential estimated revenue loss to the Union Pacific alone of more than $11,000,000 annually, and in very large losses to others of the railroad appellants.

The order does not require through routes and joint rates with the Rio Grande on the remaining two-thirds of the traffic, and the Rio Grande's purpose in this suit is to enhance its financial gains still further by forcing the Commission to require that the joint rates over existing Union Pacific routes be made applicable via the Rio Grande on the remaining two-thirds of the traffic.

The Commission's Findings and Conclusions

The Commission made the following statement of the Rio Grande's contention concerning the existence of through routes via its line:

> "The complainant contends that because the routes over which joint rates are sought are in existence and open to traffic at combination rates, we are not called upon to require the establishment of through routes and, therefore, the limitations on our power to do so in section 15(4) are not applicable and need not be considered." (R. 61)

After discussing the decision in *Thompson v. United States*, 343 U. S. 549, in which this Court nullified a Commission order based on the theory that a through route already existed over two connecting railroads because the route was open to traffic at the combination of their local rates, the Commission carefully analyzed the contentions and the testimony concerning the alleged existence of through routes via the Rio Grande in this case, and made the following finding and statements:

"We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic[3] [3 Except on east-bound shipments of sheep or goats, to which reference is made later in this report.] here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation.

"The paramount issue in this proceeding, therefore, is whether the Ogden gateway should be made available to shippers for routing, at joint rates equal to those over competitive routes, of all traffic in connection with the Rio Grande between the areas involved. For the foregoing reasons, that issue falls within the limitations of section 15(3) and (4)." (R. 65)

Other findings by the Commission are:

1. That the proposed new route via the Rio Grande could not be required "unless the existing (Union Pacific) routes can be found not to provide 'adequate' transportation" (R. 101);

2. That the Union Pacific has surplus transportation capacity, is efficiently operated, furnishes good service to shippers over its line, and its "facilities are adequate to move over its own direct routes the present volume of traffic and any additional volume that may be anticipated in the foreseeable future" over routes that are shorter than Rio Grande routes (R. 94);

3. A large number of shippers and representatives of communities served by the Union Pacific, traffic, commercial and civic associations, opposed the Rio Grande's

complaint. These were from localities in Washington, Oregon, Idaho, Montana, Wyoming, Utah, Colorado, Nebraska, and Kansas. They were joined in their opposition by the public utilities commissions of those States, except Idaho, Utah, and Colorado (R. 97);

4. Shippers in opposition to the Rio Grande's complaint testified to the adequacy, efficiency, and satisfactory character of the service which they had received over the Union Pacific routes. They testified that they had never experienced any difficulty in marketing their products by reason of the lack of competitive joint through rates over the Rio Grande, and would not use that carrier in any event (R. 97);

5. That the Rio Grande route is from 33 to 219 miles longer than the Union Pacific, and that routes via the Rio Grande would be from 33 to 50% longer than many of the Union Pacific routes (R. 72, 103).

6. That evidence as to physical characteristics of the two lines shows that the Rio Grande is less favorably situated than the line of the Union Pacific; that traffic routed over the Rio Grande as a bridge line would require at least 24 hours more time in transit than when routed over the Union Pacific and would require one or two more terminal interchange services, and that operating conditions on the Rio Grande are "more onerous than those on the lines of the Union Pacific or any of the other transcontinental" lines (R. 94, 102);

7. That diversion of the traffic over the Rio Grande would deprive the Union Pacific of its long haul and would short haul it at least 925 miles in each instance (R. 73);

8. That the traffic sought by the Rio Grande ordinarily moves over Union Pacific routes through Wyoming because those routes are shorter and they offer lower rates than the Rio Grande (R. 69);

9. Concerning public need for the proposed Rio Grande route and damage to Union Pacific routes by diversion of traffic from them to the Rio Grande, the Commission found that it was impossible to determine or estimate accurately what volume of traffic might be diverted to the Rio Grande if all of the joint rates were made applicable over its line; but that whatever the volume so diverted would be the result of "active solicitation" by the Rio Grande "to persuade" shippers and receivers to use its line as an overhead or "bridge" route, the value of its service to shippers, and the extent to which the Rio Grande can "induce" shippers to route traffic via its line for the purpose of using transit facilities at points on its line and subsequent reshipment beyond at the balance of joint through rates from the point of origin (R. 78);

10. That there are substantial dissimilarities or differences between transportation conditions, operating conditions and lengths of hauls over Union Pacific routes and over the Rio Grande but that the differences in transportation conditions become "relatively insignificant" and "substantially similar" when "spread" over the longer hauls between the northwest area and the eastern and southern parts of the country (R. 103-104);

11. That the evidence failed to prove that the Union Pacific and other lines maintaining present through routes and joint rates discriminate against the Rio Grande (ex-

cept at points on the Bamberger Railroad between Ogden and Salt Lake City) under Section 3(4) of the Act in refusing to include its line in present through routes and joint rates (R. 104);

12. That (notwithstanding the dissimilarities in transportation conditions over the respective routes) the combination rates via the Rio Grande on the articles named in the order from and to the areas therein described are and for the future will be unjust and unreasonable and unduly prejudicial to shippers using, or desiring to use, the Rio Grande routes and unduly preferential of shippers and receivers using the Union Pacific routes, to the extent those rates exceed the joint rates maintained on such commodities from and to the same points over the Union Pacific routes (R. 105-106);

13. That the Rio Grande, a railroad, could not raise in its own behalf an issue of undue prejudice and preference under Section 3(1) against another railroad, but that testimony of intervening shippers raised that issue, and also raised a question as to a need for "more" adequate and economic service than afforded by Union Pacific routes with respect to perishable food articles (R. 65; 101);

14. That the present complex and far-flung marketing system for perishable food articles requires that such articles move to market with expedition and care "over as many routes as possible" to "as many markets and outlets as possible" with "as much flexibility as possible" and without "unnecessary interruptions" (R. 102; 88);

15. That, while through service over Union Pacific routes in general is as satisfactory to shippers as the service which could be provided over routes including

the Rio Grande, this is not true with respect to perishable food articles, and that shippers of those articles from the northwest area "are debarred from effective participation in the widespread system developed for the marketing of such commodities" (apparently, only because, if routed over the longer Rio Grande route to eastern and southern markets, higher rates apply than when routed via Union Pacific routes, for the undisputed evidence shows that those shippers market their products via Union Pacific routes in all 48 states and several foreign countries) (R. 102);

16. That on shipments of perishable food articles reconsigned or accorded transit privileges such as stopoff for partial unloading, storing, or processing in transit, or for feeding or grazing livestock in transit, *at points on the Rio Grande*, "the Union Pacific routes and the joint rates which apply over them are not available, and higher rates apply", and that "on such traffic the defendants' (Union Pacific) routes are inadequate and less economical than are the Rio Grande routes" (R. 102);

17. That through routes via the Rio Grande and joint rates "the same" as apply over Union Pacific routes for the commodities named in the order between points in the areas described therein are "necessary and desirable in the public interest, in order to provide adequate and more economic transportation" (R. 105).

Opinion of the District Court

The district court held:

1. That the Rio Grande has standing to maintain suit to enjoin and annul the Commission's *failure* to include in its order about two-thirds of the "bridge" traf-

fic for which the Rio Grande demanded joint rates via its line (and the court overruled a motion to dismiss the suit for lack of such standing);

2. That the Commission erred as a matter of law and upon the evidence in finding that the through routes claimed by the Rio Grande were not already in existence, that the evidence and law established the existence of the claimed through routes, and that the Commission should have applied the provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act "free of any of the limitations imposed by §15(4) with respect to establishing through routes" (R. 294).

In reaching its conclusion that the Rio Grande has standing to maintain its suit, the court made and apparently relied upon the following administrative finding of fact:

> "Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines." (R. 297)

The court held that the Rio Grande is here seeking rates "which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings" (R. 299) and that "the denial of the relief here challenged will result in pecuniary injury to the Rio Grande", giving it a right to judicial review, but that "we do not think such injury is essential to the right to judicial review" (R. 295).

With respect to the Commission's finding that the claimed through routes via the Rio Grande were not in existence, the court held—

"This erroneous self-imposed restriction upon its authority to establish joint rates obviously prejudiced the entire proceeding." (R. 288)

Nevertheless, the court "remanded" the case to the Commission "with appropriate instructions" for further proceedings in conformity with the opinion *only* insofar as the Commission *failed* to order through routes and joint rates on the traffic not included in the order.

SUMMARY OF ARGUMENT

I. As the Rio Grande's complaint assails only the Commission's failure to compel through routes and joint rates for commodities not named in the order, there is no jurisdictional basis for its suit because such "failure" is neither an "order" nor a part of the order issued. The conclusion in the Commission's report "that except as indicated in the preceding findings, the allegations made in the complaint are not sustained" is not embodied in the order issued and is not subject to judicial review.

The district court erred in treating the Commission's failure to require through routes and joint rates for commodities not named in the order as a "negative" portion of the order issued. That order is entirely affirmative and completely favorable to the Rio Grande, and there is no order or any part of any order which "denied and withheld relief to the Rio Grande". Hence, the court below was without jurisdiction; *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522.

The affirmative order issued granting the Rio Grande's demands for through routes and joint rates on a third of the traffic it seeks may not be used as the jurisdictional basis for its attack upon the Commission's

failure to include more commodities than it did in the order issued, for a plaintiff "may not adopt the [order] as the basis of his suit and then attack it", *Baltimore and Ohio R. Co. v. Brady*, 288 U. S. 448, 458; nor may the Rio Grande misuse the order issued as a jurisdictional basis for obtaining through court proceedings "the same relief it failed to secure from the Commission", *Standard Oil Co. v. United States*, 283 U. S. 235, 241. Any other view "would propel the court into the domain which Congress has set aside exclusively for the administrative agency", *Securities Comm'n v. Chenery Corp.*, 332 U. S. 194, 196.

II. The district court plainly erred in denying the motion to dismiss the complaint on the ground that the Rio Grande has no legal right or standing to maintain the suit, since it admittedly has no semblance of a legal, equitable, statutory or other right to the traffic it seeks to divert to its line for the purpose of enhancing its financial position; nor does the Commission's failure to require through routes and joint rates on commodities not named in its order deprive the Rio Grande of anything it has previously possessed; or disrupt or threaten to disrupt or change the transportation situation of the Rio Grande or cause it any financial or economic loss.

The district court was correct in holding that the Commission's failure to grant the Rio Grande's full demands "required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had" and "caused no pecuniary loss to the Rio Grande", but the court erred in holding that as the Commission's failure to order through routes and joint rates on all commodities would prevent the Rio Grande "from enjoying increased traffic and increased earnings", it

"will result in pecuniary injury to the Rio Grande", giving it a right to maintain its suit.

There is no precedent for the lower court's decision and it is directly contrary to consistent and repeated holdings of this Court that to maintain a suit to enjoin an order of the Commission the complainant must show that the order subjects him to legal injury actual or threatened. *Edward Hines Trustees v. U. S.*, 263 U. S. 143, 148. The Rio Grande's complaint in the lower court fails to allege any ground upon which standing to maintain its suit could be sustained.

The Commission's failure to grant the Rio Grande's full demands was not, as held by the lower court, a denial of a right given the Rio Grande by the Interstate Commerce Act, but was the result of an adjudication and findings by the Commission upon adequate evidence that the Rio Grande had not sustained its case except to the extent indicated in the order. Neither its right to complain to the Commission nor the fact that it was a party to the proceeding gives the Rio Grande a right to maintain a suit to enjoin and set aside the order or the Commission's failure to grant the Rio Grande's full demands. *Sprunt & Son v. United States*, 281 U. S. 249, 255; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 486; *Edward Hines Trustees v. U. S.*, 263 U. S. 143, 147.

III. In finding that there are at present no through routes, as that term is used in the Act, over the Rio Grande via Ogden on the traffic concerned, the Commission correctly applied the test of the existence of a through route, namely "whether the participating carriers hold themselves out as offering through transportation," and the "carriers' course of business" test

laid down by this Court in *Thompson v. United States*, 343 U. S. 549.

Refusing to be guided by those tests, the district court erroneously reversed the Commission's finding and made its own finding that the same evidence considered by the Commission proved that the through routes contended for by the Rio Grande were in existence. Nor did the court specify or indicate what railroads composed what routes, between what points or termini, or on what commodities it thought through routes were in existence via the Rio Grande for the traffic concerned. The court inconsistently and erroneously refused to decide whether the meager evidence was sufficient to prove the existence of through routes via the Rio Grande between each of the 39,000 stations in the eastern and southern parts of the country and the 2,900 stations in the northwest area but remanded that problem to the Commission.

The facts summarized and presumably relied upon by the court were not even a scintilla of proof that the millions of through routes between all the stations in the east and south and all the stations in the northwest area were in existence via the Rio Grande within the meaning of the Act. The evidence showed that through routes and joint rates had existed via the Rio Grande during court receivership of the Union Pacific but were cancelled in 1906 and 1912; that only one shipment from each of 18 origins in the middlewest and east that moved at combination rates via the Rio Grande in 1948 to 9 destinations in the northwest area; that a few shipments moved from the northwest area *to destinations on the Rio Grande*, and that shipments were detoured over the Rio Grande under emergency conditions during World War II and blizzards that blocked the Union Pacific route a few days

in 1949. The Commission correctly held that these few isolated shipments did not prove the existence of through routes via the Rio Grande, and that:

> "Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15(4) made in 1940 (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra.*"

The Commission further and correctly found that "the carriers' course of business" has been and is to use Union Pacific routes, except where called upon to use the Rio Grande routes "by force of shippers' or connecting carriers' routing", that the whole "course of conduct" of Union Pacific "has been for many years and is now to guard jealously its long haul and not to open commercially the Rio Grande routes on this traffic", and that the movement of the few shipments via the Rio Grande in 1948 proved—*not* "the carriers' course of business" but only exceptions to it.

Every relevant or material factor recited in the opinion of the lower court was rejected or held insufficient by this Court in annulling the Commission's order in *Thompson v. United States*, 343 U. S. 549, because the order had the effect of reducing the short-haul prohibition of Section 15(4) to "unnecessary surplusage", and "was without evidentiary support under the accepted tests for determining the existence of a through route".

IV. The lower court erred in holding that the Commission's finding that no through routes existed via the Rio

Grande for the involved traffic "obviously prejudiced the entire proceeding". The Commission, after making that finding, proceeded to require establishment of through routes and joint rates via the Rio Grande for all commodities which the evidence showed to be necessary in the public interest. It was insufficiency of the evidence to prove public interest and not its finding that there were no through routes via the Rio Grande for the involved traffic that caused the Commission to require through routes and joint rates only for the commodities listed in its order.

But if the court were right in holding that the Commission's finding "prejudiced the entire proceeding", then the court clearly erred in annulling and remanding to the Commission only that "part" of the case in which the Commission had failed to require through routes and joint rates on commodities not named in its order, for, if "the entire proceeding" was "prejudiced", the court was powerless to save that part of the administrative action which was favorable to the Rio Grande by refusing to remand that "part" as well as the unfavorable "part" to the Commission, and in attempting to do so the court clearly exceeded its power and usurped administrative authority.

V. The district court erred in confusing and commingling separate and independent provisions of the Act and in treating the case hypothetically, as if the Commission had not already heard and adjudicated the contentions and issues raised by the Rio Grande's complaint. It is clearly illogical and erroneous to hold, as the lower court did, that the Rio Grande was entitled to an order requiring joint rates if the evidence showed that the combination rates via its line were unreasonable, dis-

criminatory or unduly prejudicial, for such findings do *not* involve public interest, whereas, the Commission can order joint rates only after finding them to be necessary "in the public interest". The power to order through routes and joint rates may not be used to remedy rates found unreasonable, discriminatory or unduly prejudicial *Thompson v. United States*, 343 U. S. 549.

VI. The district court usurped administrative authority and exceeded its power by making findings of fact favorable to the Rio Grande and thereupon remanding that "part" of the case "with appropriate instructions" to the Commission for further proceedings "in conformity with this opinion". In making its own finding that the evidence proved discrimination against the Rio Grande and, thereupon, remanding the case for further proceedings in conformity with such findings, the court ties the Commission's hands and destroys its administrative discretion. This error of the court derives from its first error in exceeding its power to review the Commission's failure to grant the Rio Grande's full demands and amounts to a "substitution of judicial for administrative discretion", *Communications Comm'n v. WOKO*, 329 U. S. 223, 229. The statutory power to enjoin, annul, suspend or set aside an order in part "does not permit the court to exercise administrative authority where the Commission has failed or refused to exercise it", *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, 483.

In exercising the power to review an administrative order—"* * * the court must act within the bounds of the statute and without intruding upon the administrative province", *Ford Motor Co. v. Labor Board*, 305 U. S. 364, 373.

ARGUMENT

I.

The District Court Erred in Failing to Dismiss the Complaint on the Ground That, as the Commission's *Failure* to Compel Through Routes and Joint Rates for Commodities not Named in the Order is Neither an "Order" nor a Part of the Order Issued, There is no Jurisdictional Basis for Court Review.

The district court said (R. 281-282):

> "By the challenged order entered on January 12, 1953, the Commission granted some but not all of the relief sought by the Rio Grande. 287 I. C. C. 611. In this action the Rio Grande seeks to have the court enjoin, set aside, annul and remand, with appropriate directions, *that part of the order which denied relief sought by the Rio Grande.*" (Italics added.)

In other words, the matter of which the Rio Grande complained to the court was the Commission's *failure* to order through routes and joint rates on *all* commodities instead of the limited number named in the order.

The final judgment and decree states that the Commission's order dated January 12, 1953, is annulled and set aside "insofar as it denied and withheld relief."

Urgent Deficiencies Act (28 U. S. C. §§ 1336, 1398) confers upon the courts power and jurisdiction to enjoin, set aside, annul or suspend in whole or in part any "order" of the Commission. There is nothing to which a court's jurisdiction can attach unless and until the matter complained of has been followed by and embraced in a formal "order", *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522.

The only order issued by the Commission in this case is the order of January 12, 1953, affirmatively requiring through routes and joint rates for a third of the traffic the Rio Grande seeks to divert to its line. That order directs the railroads to establish through routes and joint rates with the Rio Grande for the articles therein named, prohibits them from charging rates in excess of those prescribed, and requires them to cease and desist from practicing undue prejudice and preference and unlawful discrimination referred to in the first paragraph of the order.

But there is no "part" of that order, nor is there any order or "part" of any order which "denied and withheld relief" to the Rio Grande, or refused to require through routes and joint rates on articles other than those named in the order issued. As that order is silent as to articles not named therein, the matter complained of by the Rio Grande is not embraced or touched upon in the order issued or in any other order.

Upon finding that through routes and joint rates were necessary for the articles specified in its findings, the Commission stated in conclusion "4" (R. 106)—

> "That except as indicated in the preceding findings, the allegations made in the complaint are not sustained."

But that conclusion is not embraced in the order issued or embodied in any order or part of any order. The decree below, therefore, attempts to annul and set aside the Commission's mere *failure to issue an order* with respect to articles not named in the order it did issue.

This Court has expressly held that "matter", conclusions or findings contained in a Commission report,

but not followed by and embraced in a formal "order", are not subject to judicial review. In *United States v. Atlanta, B. & C. R. Co., supra,* the Commission had issued a report at the end of which it stated its final conclusion and said that the carrier "will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report" (p. 524). But the Commission issued no "order". Rejecting the railroad's contention that the language just quoted was "equivalent" to, or "amounts to an order", this Court held, pages 527-528:

> "The action here complained of is not in form an order. It is a part of a report—an opinion as distinguished from a mandate. The distinction between a report and an order has been observed in the practice of the Commission ever since its organization—and for compelling reasons.
>
> * * * * *
>
> "No case has been found in which matter embodied in a report and not followed by a formal order has been held to be subject to judicial review."

The Rio Grande has sought to escape the decision in the *Atlanta* case, *supra,* by arguing that the order issued must be read in the light of the Commission's report which is made a part of the order, citing *Georgia Comm. v. United States,* 283 U. S. 765, 771, and *American Express Co. v. Caldwell,* 244 U. S. 617, 627, and that the Commission's "conclusion" number 4, when so imported into the order, becomes "the equivalent of a dismissal", and, therefore, is an "order".

Those decisions hold that the report may be read in connection with the order for the purpose of clarifying any vagueness, indefiniteness or ambiguity in an order

actually issued. But neither those decisions nor any others hold that the Commission's report must or may be read for the purpose of creating an order or "the equivalent" thereof where conclusions and findings in the report have not actually been embraced in a formal order. No stronger case of "the equivalent" of an order could be imagined than the *Atlanta* case, *supra*, but this Court held that jurisdiction to review was lacking because the action complained of was "not in form an order."

If, in the instant case, the Commission had concluded that *none* of the allegations of the complaint had been sustained and had issued no order, the situation would have been identical to that in the *Atlanta* case. The fact that the Commission issued the affirmative order requiring through routes and joint rates on some articles does not alter the fact that it issued no order embracing its *failure* to include other commodities in its order.

The order issued, being completely favorable to the Rio Grande (and now being defended by it in this Court, No. 117, *The Denver and Rio Grande Western Railroad Company v. Union Pacific Railroad Company, et al.*), may not serve as a jurisdictional basis for its attack upon the Commission's failure to include more commodities than it did in the affirmative order issued, for a plaintiff "may not adopt the [order] as the basis of his suit and then attack it", *Baltimore and Ohio R. Co. v. Brady*, 288 U. S. 448, 458, citing *Mitchell Coal Co. v. Penna. R. R. Co.*, 230 U. S. 247, holding at page 258 that a "plaintiff can not claim under the act and against it".

The favorable order issued may not be misused by the Rio Grande as a jurisdictional basis for obtaining

through court proceedings "the same relief it failed to secure from the Commission", *Standard Oil Co. v. United States*, 283 U. S. 235, 241. Any other view "would propel the court into the domain which Congress has set aside exclusively for the administrative agency", *Securities Comm'n v. Chenery Corp.*, 332 U. S. 194, 196.

The position of the Rio Grande in this case is identical to that of the complainant in *Brady v. Interstate Commerce Commission*, 43 F. 2d 847, affirmed Per Curiam, 283 U. S. 804. In that case Brady asked the Commission for an order awarding him damages exceeding $57,000 because of alleged discrimination against him by failure of two railroads to furnish him coal cars. The Commission did not order the full damages sought. Instead, it issued an order awarding Brady $12,838.31. Brady brought suit under Urgent Deficiencies Act, asking that "certain parts" of the order "be set aside and annulled" (p. 848). The district court held that the suit clearly should be dismissed "for the reason that it seeks not to set aside the order of the Commission, but to correct alleged errors in the findings of the Commission upon which that order is based" (p. 850). Holding that it was without jurisdiction over the matter of which Brady complained, the court said, p. 850:

> "What complainant is asking is not that we set aside the order of the Commission, which directs the payment to him of $12,838.31, but that we set aside the findings upon which his damages were reduced and direct the Commission to reopen the proceeding and make 'corrected findings and a supplemental order.' In other words, he seeks to have us review the findings of the Commission and correct its errors as upon a writ of error or appeal; but this we have no power to do. Western N. Y. & P. R. R. Co. v. Penn. Refining Co. (C. C. A. 3rd), 137 F. 343, 354.

And see I. C. C. v. Waste Merchants' Ass'n, 260 U. S. 32, 43 S. Ct. 6, 67 L. Ed. 112; Bartlesville Zinc Co. v. Interstate Commerce Commission, 58 App. D. C. 316, 30 F. (2d) 479, and Northern Pac. Ry. Co. v. I. C. C., 57 App. D. C. 318, 23 F. (2d) 221, holding that errors of the Commission cannot be corrected by mandamus or certiorari."

Attempting to overcome the absence of an order or any part of an order embracing the matter of which the Rio Grande complained, the court below said that the fact that "the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief", citing *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, and *Mitchell v. United States*, 313 U. S. 80. But clearly the court either confused the abolition of the "negative order doctrine" by the *Rochester* case with the jurisdictional necessity for an actual formal order embracing the matter of which the Rio Grande complained, or attempted to stretch the ruling in that case to include a case in which the Commission has issued no order at all embodying its failure to grant the remaining two-thirds of the Rio Grande's affirmative demands.[8]

8 The order reviewed in *U. S. v. Great Northern R. Co.*, 343 U. S. 562 (No. 151, Oct. Term 1951, Transcript of Record, pages 24-25), "denied" an application to abandon the Montana Western, ordered joint rates in lieu of combination rates and prescribed divisions of the joint rates.

And compare orders granting "in part" and denying "in part", applications for motor carrier operating rights. In such proceedings the Commission's report generally recites the extent to which the evidence justifies the application, and an order is entered, as follows:

"*It is ordered*, That said application, except to the extent granted in said report, be, and it is hereby, denied." (No. MC-61396 (Sub—No. 32) Herman Bros. Inc., Extension—Kansas and Other States, June 30, 1955, unreported.)

Our contention that the jurisdictional basis for review is lacking here is not based on the "negative" character of the Commission's failure to require through routes and joint rates on commodities not included in its order, but upon the fundamental fact that here, as in the *Atlanta* case, there is no order at all, or any part of an order embodying the failure of the Commission to require through routes and joint rates on more articles than those named in the order. To make our position clearer, if possible, we point to the fact that in all of the cases in which judicial review was denied because the Commission's orders were "negative", there were in fact actual "orders", in form, dismissing complaints that had been filed with the Commission. (See cases reviewed and discussed in *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125.) Such "order" dismissing the complaint had actually been issued in *Mitchell v. United States*, 313 U. S. 80, and, adhering to its decision in the *Rochester* case, this Court, upon holding that Mitchell had standing to maintain the suit because the order deprived him of his Constitutional rights, proceeded to review the order, regardless of its negative character. But *there was an order in form and in reality* and not, as here, a complete absence of an order embodying the non-action of the Commission of which the Rio Grande complained to the court.

In *Shannahan v. United States*, 303 U. S. 596, the Commission had issued a report in which it concluded that a certain electric railway was subject to the Interstate Commerce Act, but issued no order. In affirming the district court's dismissal, for want of jurisdiction, of a suit to enjoin and annul the Commission's decision, this Court held at page 599:

> "Its decision is not even in form an order. It had no characteristic of an order, affirmative or negative." (citing cases)

The Court further held that:

> "* * * The determination * * * is clearly not an order enforceable within the meaning of the cases construing and applying the Urgent Deficiencies Act. It is a decision on a controverted matter, comparable to that considered in *United States v. Los Angeles & Salt Lake R. R. Co.*, 273 U. S. 299, in *Great Northern Ry. Co. v. United States*, 277 U. S. 172, in *United States v. Atlanta B. & C. R. Co.*, 282 U. S. 522, and in *United States v. Griffin, ante*, p. 226, which were held not to be subject to review under the Urgent Deficiencies Act."

This Court has explained that where the Commission has failed to grant a part of the "relief" demanded, the courts will not interfere through judicial review because to do so would be to exercise or usurp administrative authority. In *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, the Commission had issued an order requiring certain carriers to establish joint rates, but it declined to comply with the demand of some of the carriers that it also prescribe divisions of the joint rates. This Court reviewed the affirmative order issued but refused to review the Commission's *failure* to fix divisions, holding that in seeking review of the Commission's failure to fix divisions, the appellants were in effect asking the Court to "exercise administrative authority where the Commission has failed or refused to exercise it." In *Chicago Junction Case*, 264 U. S. 258, the Court cited a number of cases at page 264, in which, the Court said, judicial review was refused "not because the order * * * was negative in character," but that this Court declined to interfere "because to do so would have involved exercise by it of the administrative function of granting the relief" which the Commission had failed to grant.

There being no "order" embodying or carrying into effect the Commission's *failure* to include all commodities in the order it issued, the lower court erred in failing to dismiss the Rio Grande's complaint on the ground that there is no order or part of an order giving the court jurisdiction to review the matters of which the Rio Grande complained.

II.

The District Court Erred in Denying the Motion to Dismiss on the Ground That the Rio Grande has no Legal Right or Standing to Maintain This Suit.

The Rio Grande's complaint to the Commission demanded joint rates that would afford it the opportunity to improve its financial position by short-hauling the appellant railroads 925 miles and diverting for a "bridge" haul over its line through traffic from which the Union Pacific alone earns over $49,000,000 annually. The order issued by the Commission grants the demand to the extent of about one-third of the traffic from which the Union Pacific earns over $11,000,000 annually. The Rio Grande filed this suit in the district court for the purpose of obtaining equal joint rates which it "failed to secure from the Commission" on the remaining two-thirds of the traffic (see *Standard Oil Co. v. United States*, 283 U. S. 235, 241).

These appellants filed a motion in the district court to dismiss the suit on the ground that as the Rio Grande has no legal or other right to the traffic it seeks to divert to its line, it has no standing to maintain the suit.

The decisions of this Court hold that a plaintiff has no standing to maintain a suit to enjoin an order of the Commission unless his complaint shows that the order

subjects him to legal injury, actual or threatened, *Edward Hines Trustees v. U. S.*, 263 U. S. 143; *Sprunt & Son v. United States*, 281 U. S. 249, 257; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 486; *Moffat Tunnel League v. U. S.*, 289 U. S. 113, 119; or that the order would deprive him of something he has long and lawfully possessed, or would disrupt or materially change the transportation situation causing him financial or economic *loss*, or that the right to maintain such suit rests upon some express statutory provision, *Western Pacific v. South. Pac. Co.*, 284 U. S. 47; *Claiborne-Annapolis Ferry v. U. S.*, 285 U. S. 382; *Chicago Junction Case*, 264 U. S. 258, 267; *Alton R. Co. v. United States*, 315 U. S. 15, 19.

This Court held in *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 780, that:

> "There is no rule of law or practice which gives to a carrier the right to recapture traffic which it originated."

The district court, though denying the motion to dismiss, conceded that the Commission's failure to grant the full demands "required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had", and from that standpoint "caused no pecuniary loss to the Rio Grande" (R. 293-294), but would, nevertheless, prevent the Rio Grande "from enjoying increased traffic and increased earnings" and, therefore, "will result in pecuniary injury to the Rio Grande", giving it a right to judicial review (R. 299, 295).

Keeping in mind the consistent rulings of this Court, the fact that the "order" does not deprive the Rio Grande of anything it already had and does not disrupt the transportation situation or subject the Rio

Grande to any penalty or adverse economic burden, the fact that the Rio Grande's only purpose in prosecuting this suit is to reap financial gain beyond the extent permitted by the Commission's order, and the fact that the Rio Grande admittedly has no legal or other right to enhance its financial position by diverting "bridge" traffic to its line from other railroads, it is clear beyond doubt that the district court erred in holding that the Rio Grande has standing to maintain this suit.

The purpose of the short-hauling prohibition in Section 15(4) of the Act is "to protect the long haul routes of carriers", *United States v. Mo. Pac. R. Co*, 278 U. S. 269, 277, and it is a distortion of that purpose to contend or suggest that there is any hint of a legislative sanction of a right in the Rio Grande to short haul the railroad appellants 925 miles so that it may improve its financial condition by diverting for a "bridge" haul over its line traffic originated and terminated on the lines of the railroad appellants. Indeed, Section 15(4) requires that in prescribing through routes the Commission shall "give reasonable preference to the carrier by railroad which originates the traffic." And that section contains the further mandate that:

> "No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs."

All of this, we submit, conclusively demonstrates that the Rio Grande has no semblance of a legal or other right to take from Union Pacific routes the traffic it seeks for a "bridge" haul over its line, and, hence, no standing to maintain this suit.

Although the district court refrained from specifying the precise ground or reason for its holding that the Rio Grande has standing to maintain the suit, it did hold that the Rio Grande here seeks rates that "will result in pecuniary profit to the Rio Grande * * * the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings" and that "the denial of the relief here challenged will result in pecuniary injury to the Rio Grande", but that, nevertheless, such injury is not essential to the right to judicial review (R. 299, 295).

The opinion states (R. 284):

> "At the threshhold we are confronted with a motion of the defendants to dismiss on the ground that the Rio Grande is without standing to maintain this suit. We hold that the Rio Grande has such standing. Since we so hold, by reason of our conclusion with respect to the existence of the through routes, the erroneous finding of the Commission on that issue, the erroneous application of the facts by the Commission of certain provisions of the Act, and the rights of the Rio Grande under the provisions of the Act, we shall state in detail our reasons for denying such motion, after a full consideration of the merits."

But nowhere does the opinion assert, nor has the Rio Grande alleged or claimed that it has any legal, equitable or other right to the additional "pecuniary gain" it seeks in this suit from the diversion of traffic to its line from these appellant railroads.[9] Nevertheless, in final

---

9 To the contrary, the Rio Grande argued as follows at page 111 of its original brief in the district court:

"Neither the Union Pacific nor any other railroad has an absolute right to the exclusive occupancy of a particular territory or

(Continued on next page)

analysis, and though lacking in specificity, the court's decision that the Rio Grande has standing to maintain the suit necessarily rests upon the proposition that, regardless of its utter lack of any legal or other right to the traffic it seeks, the Rio Grande has standing to maintain this suit because the Commission failed to grant its demands for an opportunity to reap "pecuniary profit" and enhance its revenues from *all*, instead of a part, of the traffic it seeks to divert for a "bridge" haul over its line.

There is no precedent for the court's holding, and it is directly contrary to the decisions cited above and to the rule laid down by this Court that in order to maintain a suit to enjoin acts of others the complainant must show that he is threatened not only with a "loss" but also a loss against which he is legally or equitably entitled to protection, *Alabama Power Co. v. Ickes*, 302 U. S. 464; *Tennessee Power Co. v. T. V. A.*, 306 U. S. 118. In the *Alabama* case, the Power Company sued to enjoin the Federal Administrator of Public Works from making loans and grants under a federal statute to certain municipalities for construction of electricity distribution systems, the competition of which the Company alleged would result in great and destructive loss and

---

(Continued from preceding page)

to the traffic which terminates or originates in the territory. *Pennsylvania R. Co. v. United States*, 40 Fed. (2) 921; *Indian Valley R. Co. v. United States*, 52 Fed. (2) 485, and *Chesapeake and Ohio Ry. Co., Construction*, 267 I. C. C. 665, 679. In *United States v. American Railway Express Co.*, 265 U. S. 425, 437, the court held that a carrier has no absolute right to the traffic it originates or to its long haul. Such rights as a railroad may have to its long haul on interstate commerce are granted and limited by the Interstate Commerce Act. Moreover, that Act does not give the originating railroad or any railroad the unequivocal right to its long haul in connection with through routes."

injury to its business of producing, distributing and selling electricity. The Court held that the Power Company had no standing to maintain its suit, saying, at page 478:

> "Unless a different conclusion is required from the mere fact that petitioner will sustain financial loss by reason of the lawful competition which will result from the use by the municipalities of the proposed loans and grants, it is clear that petitioner has no such interest and will sustain no such legal injury as enables it to maintain the present suits."

After making it clear that to maintain a suit for an injunction, a party must show that the thing complained of threatens or causes him "direct injury" in a legal sense, meaning "a wrong which directly results in the violation of a legal right", the Court undertook to define or describe, at page 479, the injury essential to the maintenance of a suit for injunctional protection, as follows:

> "'An injury, legally speaking, consists of a wrong done to a person, or, in other words, a violation of his right. It is an ancient maxim that a damage to one, without an injury in this sense, (*damnum absque injuria,*) does not lay the foundation of an action; because, if the act complained of does not violate any of his legal rights, it is obvious, that he has no cause to complain. . . . want of right and want of remedy are justly said to be reciprocal. Where therefore there has been a violation of a right, the person injured is entitled to an action.' *Parker v. Griswold,* 17 Conn. 288, 302-303. The converse is equally true, that where, although there is damage, there is no violation of a right no action can be maintained."

Holding that, since the Power Company had no legal or equitable right to be free of competition of other electric power plants, it had no standing to maintain

its suit to prevent such competition even "if its business be curtailed or destroyed" by such competition. Later on, the Court held that a "legal interest" which qualifies a complainant to sue—

> "* * * is a pecuniary interest in preventing the defendant from doing an act where the injury alleged flows from its quality and character as a breach of some legal or equitable duty."

and that—

> "The only injury of which he can be heard in a judicial tribunal to complain is the invasion of some legal or equitable right."

Since the Rio Grande admits, as it must, that it has no legal right to the traffic it seeks to divert to its line for a "pecuniary gain", and, indeed, that no carrier has an absolute right even "to the traffic which terminates or originates" on its line, it clearly has no standing to maintain suit to enjoin the Commission's failure to grant its full demands even if, as erroneously held by the lower court, its desire for a "pecuniary gain" be treated as a "pecuniary injury", for, as held in the *Alabama* case, such "pecuniary injury", would not be the result of an "invasion of some legal or equitable right" of the Rio Grande.

If, as held in the cases cited, a complainant has no standing to maintain a suit to enjoin acts of others *which threaten even to destroy his business* unless he shows that such acts invade some legal or equitable right of his own, *a fortiori* the Rio Grande having no prior claim to the traffic and no express statutory right to sue, is without standing to maintain suit to enjoin the Commission's failure to grant a part of its demands for "pecuniary profit" to be obtained by diverting to its line traffic to

which it admits that it has no semblance of legal or other right.

Being unable to point to any legal, equitable or other right of the Rio Grande to a "pecuniary profit" by diverting traffic to its line from other railroads, the district court seemed to think it could sustain standing to maintain this suit because the Act gives the Rio Grande a right to complain to the Commission of discrimination against it by other railroads. The opinion states (R. 295):

> "Where an order of the Commission denies a right given to a carrier by the Act and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order."

Continuing to theorize, hypothesize and speculate concerning the Rio Grande's rights under the Act, the opinion says that *if*, before the Commission, the Rio Grande established its right to the relief prayed, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and that "denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established"; and, *if* on the Rio Grande's showing before the Commission and application of Sections 1(4), 3(4), 15(1) and 15(3), the Rio Grande was entitled to an order establishing such joint rates, then the denial of such order "deprived the Rio Grande of a pecuniary gain to which it was entitled" because the granting of the joint rates would have resulted in a large increase in the Rio Grande's traffic and income; and again, *if*, under the facts established by the evidence and the application of Sections 1(4), 3(4), 15(1) and 15(3), of the Act, the Rio Grande was entitled to an order requiring such joint rates, then

the denial of that right resulted in pecuniary injury to the Rio Grande (R. 294).

But all of this theorizing in the opinion completely ignores and gives no effect whatever to the fact that the Commission has heard and adjudicated the Rio Grande's complaint and has found that the evidence failed to prove discrimination against it, and failed to prove that joint rates were necessary in the public interest except upon the commodities named in the order. This part of the opinion below goes extremely far toward holding that, upon the mere exercise of its right to complain to the Commission of discrimination and to submit such evidence as it had in support of its complaint, the Rio Grande had a right under the Act to equal joint rates on all of the traffic it sought, and that the Commission had no alternative but to find that the alleged discrimination was being practiced and to issue an order granting *in toto* the full "relief" demanded by the Rio Grande. Such a view of the Commission's power is not only contrary to the statutory pattern, but is also foreclosed by decisions of this Court, such as *United States v. Merchants &c. Ass'n*, 242 U. S. 178, wherein it was said at pages 186-187:

> "In other words, the Commisson granted a part of the relief asked. The District Court says it had no power to do so. But there is nothing in the act to justify limiting the power of the Commission to either a grant or a denial *in toto* of the precise relief applied for. Such a construction * * * is at variance with the broad discretion vested in the Commission and the prevailing practice of administrative bodies."

In any event, this Court has repeatedly held that neither the right of a party to complain to the Commis-

sion nor the fact that a party participated in the proceeding in which an order was issued affords any standing to maintain a suit to enjoin the order. *Edward Hines Trustees v. U. S.*, 263 U. S. 143, 147; *Sprunt & Son v. United States*, 281 U. S. 249, 255; *Pittsburgh & W. Va. Ry. v. U. S.*, 281 U. S. 479, 486.

If the bare right to complain and present evidence to the Commission affords the Rio Grande standing to maintain this suit, then every litigant before the Commission has standing to maintain suit to enjoin the Commission's failure to grant every bit of administrative "relief" demanded of the Commission, with the result that a right to judicial review is opened up to every disappointed litigant before the Commission.

The opinion below cites the *Chicago Junction Case*, 264 U. S. 258, but the legal right and standing of the complaining railroads to maintain the suit in that case was sustained by this Court—not because the order failed to grant them "pecuniary gain", but, as stated at page 266, because the order resulted in a *loss* to them of $10,000,000 annually by diversion from their lines traffic they had previously enjoyed. Standing to maintain that suit was sustained also because the order denied plaintiffs "equality of treatment" in the joint use the terminal properties, control of which the order transferred to the New York Central, and because the Transportation Act, 1920, had made provision for "securing joint use of terminals", and prohibited acquisition of a railroad by another unless authorized by the Commission. The Court held at page 267:

> "By reason of this legislation, the plaintiffs, being competitors of the New York Central and users of the terminal railroads theretofore neutral, have a special interest in the proposal to transfer the control to that company."

Although the court below held that the Commission's failure to grant all of the "pecuniary gain" demanded by the Rio Grande results in "pecuniary injury" it said "we do not think such injury is essential to the right to judicial review", citing *Mitchell v. United States*, 313 U. S. 80. But the court failed to recognize the real ground upon which this Court held that Mitchell was entitled to judicial review of the order in his case. At page 94 the opinion points out that Mitchell had bought a first-class fare for the entire journey from Chicago to Hot Springs, Arkansas, and had offered to pay the proper charge for a seat which was available in the Pullman car from Memphis to Hot Springs, but he was—

> "* * * compelled, in accordance with custom, to leave that car and to ride in a second class car and was thus denied the standard conveniences and privileges afforded to first-class passengers. This was manifestly a discrimination against him in the course of his interstate journey and admittedly that discrimination was based solely upon the fact that he was a Negro."

After saying that whether this was a discrimination forbidden by the Act was not a question of giving effect to state "segregation" laws but one of "equality of treatment", the Court held at page 94 that the denial of equal accommodations to Mitchell because of his race was "an invasion of a fundamental individual right which is guaranteed against state action by the Fourteenth Amendment" to the Constitution of the United States and that such discrimination was "essentially unjust" and could not be deemed "to lie outside the purview of the sweeping prohibitions" of the Act. At page 97, the Court held:

> "On the facts here presented, there is no room * * * for administrative or expert judgment with

respect to practical difficulties. It is enough that the discrimination shown was palpably unjust and forbidden by the Act."

Thus, Mitchell was entitled to judicial review of the order in that case, because the discriminatory conduct of which he complained violated his Constitutional rights, and he was therefore entitled to the Court's determination of the question whether the Commission committed error of law in holding that Section 3 of the Act did not forbid conduct which the Court found to be so clearly discriminatory as to violate his Constitutional rights.

But the decision in that case is clearly inapposite here because the Rio Grande has no Constitutional, legal, equitable or other semblance of a right to wrest additional "pecuniary gain" from these appellant railroads by diverting traffic they originate and terminate to its line for a "bridge" haul.

The district court also cites *Youngstown Co. v. U. S.*, 295 U. S. 476, in which this Court distinguished other cases, saying that judicial review was refused in those cases because the parties had no legal interest or capacity to sue, "or failed to allege that the rates under attack were unreasonable or discriminated against them". The Rio Grande's amended complaint in this case contains such an allegation, but if it is entitled to judicial review of the order merely because it makes that allegation in its complaint to the court, then, as there is nothing to prevent anyone from making such allegation, everyone has standing to maintain a suit to enjoin the Commission's failure to find rates unreasonable.

The order in the *Youngstown* case was not sustained by any finding of this Court that the rates prescribed by

the Commission's order were in fact just and reasonable, but upon the ground that the prescription of the rates was within the Commission's authority and that its order was adequately supported by its findings and the evidence of record.

And, more important, such allegation attempts to present to courts an administrative question of fact which they are powerless to determine, for every decision of this Court on the point since it decided *Texas and Pac. Ry. v. Abilene Cotton Oil Co.*, 204 U. S. 426, has held without exception that the courts have no power or jurisdiction to determine whether an interstate rate is unreasonable, discriminatory or otherwise in violation of the Act.[10]

Furthermore, the district court ignored the fact that the order in the *Youngstown* case increased the rates of the Youngstown Company as much as 18¢ per net ton, or $9.00 per 50-ton car, and apparently this Court felt that the shipper was entitled to have the court determine whether

---

10 See *Interstate Comm. Comm. v. Ill. Cent. R. R.*, 215 U. S. 452, 470; *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, 481-483; *Assigned Car Cases*, 274 U. S. 564, 581; *Swayne & Hoyt, Ltd. v. U. S.*, 300 U. S. 297, 303-304; and *Montana-Dakota Co. v. Pub. Serv. Co.*, 341 U. S. 246, in which this Court held at pages 251-252:

"Petitioner cannot separate what Congress has joined together. It cannot litigate in a judicial forum its general right to a reasonable rate, ignoring the qualification that it shall be made specific only by exercise of the Commission's judgment, in which there is some considerable element of discretion. It can claim no rate as a legal right that is other than the filed rate, whether fixed or merely accepted by the Commission, and not even a court can authorize commerce in the commodity on other terms.

"We hold that the right to a reasonable rate is the right to the rate which the Commission files or fixes, and that, except for review of the Commission's orders, the courts can assume no right to a different one on the ground that, in its opinion, it is the only or the more reasonable one."

the Commission committed any error of law in issuing an order imposing such a tremendous additional financial burden.

In the instant case the district court sustains the Rio Grande's standing to maintain the suit—not because the "order" subjects it to any additional financial or other burden—but because the Commission failed to grant the additional "pecuniary gain" the Rio Grande seeks in this suit, to which neither the court nor the Rio Grande can claim it has any legal or other right.

The district court also cites *Rochester Tel. Corp. v. U. S.*, 307 U. S. 125, but the standing of the Rochester Company to maintain its suit in that case was clear and unquestioned, as the order "necessarily and immediately carried direction of obedience to previously formulated mandatory orders addressed generally to all carriers amenable to the Commission's authority." Moreover, Mr. Justice Frankfurter, who wrote the opinion in that case, later pointed out (in his dissent in *Columbia System v. U. S.*, 316 U. S. 407, at page 436) that failure or refusal by Rochester to comply with the order would subject it to statutory penalties of $500.00 for each offense and $25.00 for each day of its continuance. The Rochester Company had a right to judicial review because it had a right not to be regulated if it was not within the class of telephone companies embraced within the Commission's authority, and it clearly had a right not to be subjected to the statutory penalties for refusal to obey the order if in making it the Commission had committed error of law in holding it subject to the regulatory provisions of the Act.

In striking contrast, the Commission here has merely held that the Rio Grande's evidence fails to prove that its rights under the Act are being violated, or that

all of the joint rates demanded by it are necessary "in the public interest". Judicial review is sought here because the Commission, without subjecting the Rio Grande to any loss, burden, regulatory process or statutory penalty, merely failed to order joint rates enabling it to reap all of the "pecuniary gain" it seeks by diverting to its line traffic to which the Rio Grande admits it has no legal right whatever.

The Rio Grande's lack of standing to maintain this suit is far clearer than that of the plaintiff railroads in *Atchison, Topeka and Santa Fe Ry. Co. v. United States*, 130 F. Supp. 76, affirmed Per Curiam, 76 S. Ct. 152. There the Commission's order authorized a merger of two large motor carriers. Fearing loss of traffic and revenues through stronger competition than they previously had from the motor carriers individually, the railroads sued to enjoin the order. In sustaining motions to dismiss the suit for lack of standing, the district court stated, page 78:

> "In this case the Complaint fails to allege that the plaintiffs have suffered or been threatened with any damage or financial injury. It does not allege that any definite legal right of the plaintiffs has been violated, nor that the order of the Commission has created any additional motor carrier service, or increased competition for the plaintiffs. The plaintiffs merely allege that they are in competition with the motor carriers, and that they have a direct interest in the enforcement of the Interstate Commerce Act and the National Transportation Policy."

Distinguishing *Western Pacific v. South. Pac. Co.*, 284 U. S. 47; *Chicago Junction Case*, 264 U. S. 258; and *Alton R. Co. v. United States*, 315 U. S. 15, in which the orders affected legal rights or threatened material changes and disruptions in the transportation situation to the detri-

ment and loss of the plaintiffs, and citing *Singer & Sons v. Union Pacific R. Co.*, 311 U. S. 295; *Alabama Power Co. v. Ickes*, 302 U. S. 464, and *Tennessee Power Co. v. T. V. A.*, 306 U. S. 118, the district court held, page 79:

> "Though the motor carriers in the instant case may, as a combination under joint control with adequate financial backing, offer stronger competition to the railroads than they did previously, we conclude that the railroads have no 'definite legal right' to be immune from this competition and, therefore, are not 'parties in interest' who may maintain this suit."

The Rio Grande contended in the district court that it has standing to maintain this suit as a party "adversely affected or aggrieved" within the meaning of Section 1009(a) of the Administrative Procedure Act, 5 U. S. Code § 1009. The court did not discuss the contention. The same contention was made in *Atchison, Topeka and Santa Fe Ry. Co. v. United States, supra,* but the court rejected it, saying at page 78:

> "Plaintiffs also refer to Section 10 of the Administrative Procedure Act, 5 U. S. C. A. § 1009, but it is clear that that Act merely was a declaration of existing law where judicial review is provided. See Transamerica Corp. v. McCabe, D. C., 80 F. Supp. 704.
>
> "Thus the decisions under the Interstate Commerce Act must control the determination of whether the plaintiffs are 'parties in interest' within that Act."

Extensive search discloses no case holding that a party may maintain a suit under that Act or any other when, as in this case, the agency action grants a large part but fails to grant all of the demands for "pecuniary gain", and neither takes nor threatens to take anything from, or to change the position of the complainant.

The word "aggrieved" has been in legal use so long that its meaning could not innocently be misunderstood. Webster's New International Dictionary (1954) carries the following definition:

> "Aggrieved—Troubled or distressed; having a grievance; specif. *Law*, adversely affected in respect of legal rights; suffering from an infringement or denial of legal rights."

The Attorney General's Manual, which is treated as authoritative on the purposes of the Administrative Procedure Act, clearly shows that no new rights to maintain suits to enjoin agency orders, and no enlargement of power of reviewing courts were conferred by that Act. Under the heading "Fundamental Concepts," the Manual states:

> "a. *Basic Purposes of the Administrative Procedure Act*
>
> "The Administrative Procedure Act may be said to have four basic purposes:
>
> "1. To require agencies to keep the public currently informed of their organization, procedures and rules (sec. 3).
>
> "2. To provide for public participation in the rule making process (sec. 4).
>
> "3. To prescribe uniform standards for the conduct of formal rule making (sec. 4(b)) and adjudicatory proceedings (sec. 5), i. e., proceedings which are required by statute to be made on the record after opportunity for an agency hearing (secs. 7 and 8).
>
> "4. To restate the law of judicial review (sec. 10)."[11]

---

11 The Manual further states, under the heading "Section 10(a)—Right of Review":

"Section 10(a) provides that 'Any person suffering legal wrong

(Continued on next page)

The opinion of the district court completely fails to demonstrate that the Rio Grande has any standing to maintain suit in this case, and its judgment clearly should be reversed with direction to dismiss the suit.

(Continued from preceding page)

Because of any agency action, or adversely affected or aggrieved by such action within the meaning of any relevant statute, shall be entitled to judicial review thereof.' This statement of the persons entitled to judicial review has occasioned considerable comment because of the use of the phrase 'any person suffering legal wrong.' This phrase was used as one of limitation and not for the purpose of making judicial review available to anyone adversely affected by governmental action. The delicate problem of the draftsmen was to identify in general terms the persons who are entitled to judicial review. As so used, 'legal wrong' means such wrong as particular statutes and the courts have recognized as constituting ground for judicial review. 'Adversely affected or aggrieved' has frequently been used in statutes to designate the persons who can obtain judicial review of administrative action. The determination of who is 'adversely affected or aggrieved * * * within the meaning of any relevant statute' has 'been marked out largely by the gradual judicial process of inclusion and exclusion, aided at times by the courts' judgment as to the probable legislative intent derived from the spirit of the statutory scheme.' Final Report, p. 83; see also pp. 84-85. The Attorney General advised the Senate Committee on the Judiciary of his understanding that section 10(a) was a restatement of existing law. More specifically he indicated his understanding that section 10(a) preserved the rules developed by the courts in such cases as *Alabama Power Co. v. Ickes*, 302 U. S. 464 (1938); *Massachusetts v. Mellon*, 262 U. S. 447 (1923); *The Chicago Junction Case*, 264 U. S. 258 (1924); *Sprunt & Son v. U. S.*, 281 U. S. 249 (1930); *Perkins v. Lukens Steel Co.*, 310 U. S. 113 (1940); and *Federal Communications Commission v. Sandgrs Brs. Radio Station*, 309 U. S. 470 (1940). Sen. Rep. p. 44 (Sec. Doc. p. 230). This construction of section 10(a) was not questioned or contradicted in the legislative history. Also implied is the continuing role of the courts in determining, in the context of constitutional requirements and the particular statutory pattern, who is entitled to judicial review."

III.

The Court Erred in Holding That the Commission's Finding That "there are at present no through routes, as that term is used in the Act, over the Rio Grande via Ogden or Salt Lake City on the traffic here concerned" is not Supported by Substantial Evidence and is Erroneous as a Matter of law, and the Court Further Erred in its own Holding That the Evidence Establishes the Existence of Such Through Routes.

The Rio Grande demanded an order from the Commission that would require joint rates via its line equal to the joint rates maintained over Union Pacific through routes between some 2,900 railroad stations in the northwest area and some 39,000 stations in that part of the United States lying generally east of a north and south line drawn along the eastern boundary of Colorado (R. 58-61). There are, of course, from one route to thousands of routes between each of the stations in the respective areas, but if there were only one through route between each of the stations, this would make a minimum total of 113,100,000 through routes between the stations in the respective areas.

As its demands would divert the traffic from Union Pacific routes and short haul them at least 925 miles, the Rio Grande sought to avoid the short-haul prohibition of Section 15(4) of the Act by claiming that through routes had existed for many years via its line for the traffic moving between stations in those areas, and contending before the Commission and the lower court either, (1) that its line is physically a part of all of the myriad of through routes now maintained via the Union Pacific between all stations in the respective areas, or, (2) that its line is a part of all routes formed by carriers whose lines connect

between all stations in the respective areas, and which carriers have published local rates between points on their respective lines.[12] So contending, the Rio Grande argued that the short-haul prohibition of Section 15(4) was not applicable and that the Commission should disregard the restrictions of that prohibition.

The Rio Grande undertook to prove its allegation that its line is a part of all these through routes by pointing to the fact that (1) it was a party to through routes and joint rates for traffic to and from the northwest between 1897 and 1912; (2) contending that cancellation of the joint rates did not cancel the through routes since interchange of the traffic with its line is physically

12 The colossal and fantastic extent and scope of the Rio Grande's claim that it is already a part of all through routes for the involved traffic, between the 2900 stations in the northwest and the 39,000 stations in the east is shown in an official Federal document entitled "Through Routes", being a transcript of hearings before the Interstate and Foreign Commerce Committee of the House of Representatives on Senate Bill 1261, December 1937 and April 1938, concerning a proposal of short line railroads and the Interstate Commerce Commission to repeal the short-haul prohibition of Section 15(4) of the Act. It is shown in that document (p. 164) that there were then 12,291 different through routes for movement of traffic under specific tariff publication from Chicago, Ill. to Jacksonville, Fla., and (p. 142) that there were more than 10,000 through routes for so-called merchandise traffic alone between New York, N. Y. and Dallas, Texas, and (p. 141) that there were 2,300 through routes from New York to St. Louis and 2,628 through routes from Boston to St. Louis, and from such smaller places as Butler, Pa. to Burlington, Ia., there were as many as 130 through routes, and from New York to Chicago 445 through routes. While that testimony concerned through routes east of the Missouri River, it illustrates the point we make, particularly since much of the transcontinental traffic here involved moves through such points as St. Louis, Kansas City, Omaha, Chicago, Pittsburgh, and other cities that are served by numerous railroads, nearly all of which doubtless are parties to the existing through routes of which the Rio Grande claims its line is a part, and it is indisputable that the number of such routes would run into many millions.

possible, and that counsel and a witness for Union Pacific "admitted" that the traffic could move via the Rio Grande if shippers wanted to pay the higher combination rates; (3) that 18 shipments of through traffic from 15 of the 39,000 stations in the east moved westbound via its line in 1948 at combination rates to 9 of the 2900 stations in the northwest area (I. C. C. Ex. 1, p. 5); that 37 carloads moved in 1948 from points on the Union Pacific in the northwest to *destinations on the Rio Grande's line;* (4) that through traffic was diverted to and moved over its line under emergency conditions of World War II and the blizzards which blocked the Union Pacific Railroad a few days in 1949.

After carefully analyzing the facts and circumstances upon which the Rio Grande relied to support its contention, and comparing them with those upon which this Court annulled the order in *Thompson v. United States*, 343 U. S. 549, and applying "the accepted tests for determining the existence of a through route" laid down in that decision[13] the Commission rejected the Rio

13 In the *Thompson* case this Court held at pages 557-558 that:
"In short, the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.
"In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such through route. The fact that appellant's line connects with the Burlington at Concordia does not aid the Commission in proving the existence of a through route, since the power to establish through routes under Section 15(3) and (4) also presupposes such physical connection. And the showing that appellant publishes a local rate from Lenora to Concordia and that the Burlington publishes a local rate from Concordia to Omaha proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines."

Grande's contention that the claimed through routes were already established via its line, and its answer to the contention is so clear and logical, and, we submit, so impeccably correct, we adopt it and here quote at some length from it (R. 61-65):

> "As above stated and as testified by numerous shippers in this proceeding, the Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable. Plainly, a finding that such routes should be opened to shippers on a commercial basis by establishing competitive joint rates would result in the establishment of such routes as effective through routes, a character which they do not now possess.
>
> "In *Thompson v. United States*, 343 U. S. 549, decided June 2, 1952, the Supreme Court considered the question of the content of the term "through route" as used in the act, upon an appeal from a decision of a lower court sustaining our order in *Omaha Grain Exc. of Omaha, Nebr. v. Missouri Pac. R. Co.*, 278 I. C. C. 519. Therein, we had affirmed a prior finding of division 2 that a through route on grain from points on the Central branch of the Missouri Pacific Railroad Company in Kansas, Concordia and west thereof (Lenora, Kans., was used as a typical origin), to Omaha, Nebr., and Council Bluffs, Iowa, in connection with the line of the Chicago, Burlington & Quincy Railroad Company beyond Concordia, was already in existence and therefore did not have to be established preliminary to the exercise of our power to prescribe reasonable rates under sections 1 and 15 (1) of the act. The Court held:
>
> > "'In short, the test of the existence of a "through route" is whether the participating carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service.

"'In this case there is no evidence that any through transportation service has ever been offered from Lenora to Omaha via the Burlington. The carriers' course of business negatives the existence of any such through route. * * *Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha * * *. Since there is admittedly no evidence that the Missouri Pacific ever offered through transportation service over the route in question, the Commission's order is without evidentiary support under the accepted tests for determining the existence of a through route.'

"The Court cited with approval *Beaman Elevator Co. v. Chicago & N. W. Ry. Co.*, 155 I. C. C. 313, wherein the Commission held that proof of one shipment on a through bill of lading over a particular route was not sufficient to show the existence of a through route, because, as stated by the Court, 'that one shipment was not representative of the carriers' course of business.' It thus becomes necessary to determine whether the carriers in this proceeding 'hold themselves out as offering through transportation service' from and to points here concerned via the Ogden gateway as indicated by their 'course of business' in respect to traffic over the routes in question.

"The evidence shows that 37 carload shipments were made in 1948, which may be accepted as a representative year, on through bills of lading from origins in Utah, Idaho, Oregon, and Washington to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City. All of these shipments originated on the Union Pacific, except three which originated on its connections in Oregon or Washington. Twenty-three moved to Salt Lake City (via Ogden), Provo, Midvale, Murray, and Springville, Utah, and 14 to Denver, Louviers, Pueblo, and Trinidad, Colo., on the complainant's line from Denver to Trinidad. The commodities shipped were canned

goods, canned salmon, machinery, contractors' equipment, paper bags, lumber, wallboard, flour, roofing, acid, newsprint, and sheep. The shipments of canned goods and canned salmon, 10 in number, were stopped at intermediate points on the Rio Grande for partial unloading. The 37 shipments moved from or to separate points, except that 2 carloads of canned salmon moved from Seattle, Wash., to Provo, 2 carloads of acid from Dupont, Wash., to Louviers, 2 carloads of canned goods from Logan, Utah, to Denver, 2 carloads of sheep from Bellevue, Idaho, to Pueblo, 3 carloads of lumber from McCall, Idaho, to Salt Lake City, 3 carloads of canned goods from Logan to Pueblo, and 6 carloads of lumber from Emmett, Idaho, to Midvale. No through shipments are shown to have moved from the northwest area over the Union Pacific and the Rio Grande via Ogden or Salt Lake City to any destination east of Colorado common points.

"West-bound, in the same year, 18 carload shipments were made on through bills of lading from points in Illinois, Indiana, Michigan, Ohio, Pennsylvania, New Jersey, Arkansas, and Texas over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific beyond to destinations in Utah, Idaho, Montana, Oregon, and Washington. These shipments consisted of tractors, dessert preparations, furniture, canned goods, agricultural implements, soap, cattle, castings, feed, rubber, cottonseed hull brand, and tile. The shipments of tractors, dessert preparations, furniture, canned goods, agricultural implements, and feed were stopped at intermediate points on the Rio Grande or the Union Pacific, or both, for partial unloading. Two of the shipments destined to Idaho points were delivered at Salt Lake City and trucked to destination so as to avoid paying the applicable combination rates on Ogden.

"In that same year, 21 carload shipments moving on through bills of lading from various origins east

of the Rocky Mountains to destinations in Idaho, Oregon, and Washington, which were routed over the Rio Grande and the Union Pacific, were held by the Rio Grande at Denver or Pueblo for correction of the routing because the joint through rates were not applicable over that road via the Ogden gateway. Under service orders issued by us during and subsequent to World War II, a substantial number of shipments were diverted from the regularly used routes to the routes here sought to be opened commercially. For example, in February 1949, when the main line of the Union Pacific in Wyoming was blocked by snowstorms, the traffic was diverted to the route of the Rio Grande between Denver and junctions with the Union Pacific in Utah. During World War II, special combination trains of troops in passenger cars and of military supplies in freight cars from eastern and southern origins to destinations in the northwest area were initially routed and moved over the Rio Grande via Ogden and the Union Pacific. The rates and charges for these freight movements were not filed with us and were adjusted, under the authority of section 22 of the act, on the basis of the joint rates applicable over the Union Pacific routes through Wyoming. These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute 'through routes' within the meaning of that term as used in the act.

"So far as appears, the routes used, or attempted to be used, for the foregoing shipments were those specified by the shippers. There is no indication that any of the defendants has ever solicited any traffic from and to the areas here concerned for routing over a Rio Grande route by which a higher combination rate applied, or has ever used such a Rio Grande route except where called upon to do so by routing specified by the shipper or by a prior con-

necting carrier. *In other words, so far as this record shows, 'the carriers' course of business' has been and is to use the Union Pacific routes except where called upon to use the Rio Grande routes by force of shippers' or connecting carriers' routing. The whole course of conduct of the Union Pacific, so far as revealed, has been for many years and is now to guard jealously its long haul and not open commercially the Rio Grande routes on this traffic.* That this policy has been maintained is amply demonstrated by the fact that in a representative year, as stated, only 37 carloads east-bound, none to destinations east of Colorado common points, and 18 carloads west-bound moved over Rio Grande routes via Ogden or Salt Lake City, as compared with many thousands in both directions in the same year from and to the same points at the joint rates over the Union Pacific routes, the details of which appear later in this report.

"Thus, all of the foregoing shipments made over the Rio Grande routes must be regarded as of an isolated nature and as falling in the same category as the shipment held insufficient to show the existence of a through route in *Beaman Elevator Co. v. Chicago & N. W. Ry. Co., supra,* cited with approval by the Supreme Court in *Thompson v. United States, supra. Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by the Congress, as evidenced by the amendments to section 15(4) made in 1940* (see *D. A. Stickell & Sons, Inc., v. Alton R. Co.,* 255 I. C. C. 333, 339), *and a result clearly not in accord with the decision in Thompson v. United States, supra.* (Italics added.)

"We find that there are at present no through routes, as that term is used in the act, over the Rio Grande via Ogden or Salt Lake City on the traffic.[3]

> [except on east-bound shipments of sheep or goats, to which reference is made later in this report.] here concerned, and that any order requiring the establishment of such routes, and joint rates over them, must be grounded upon findings, as specified in section 15, that the routes sought are necessary or desirable in the public interest, and are needed in order to provide adequate, and more efficient or more economic transportation."

Refusing to adopt or apply the tests laid down in the *Thompson* case, but upon the same facts and circumstances analyzed by the Commission, the district court adopted the opposite conclusion, reversed the Commission's finding that there are no through routes, within the meaning of the Act, over the Rio Grande for the traffic here concerned, and held (R. 292):

> "In our view, the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond."

The court's opinion does not indicate what through routes, or between what points or termini, or the commodities for which, or the railroads that comprise the through routes it holds to be in "existence". This lack of specificity would render it impossible to give any practical effect to the court's decision, for no one can determine from the opinion what routes are in "existence" or on what commodities.

Although the court readily assumed authority to reverse the Commission and to hold that the "uncontradicted evidence" showing that one through or "bridge" shipment moved via the Rio Grande from each of 15 eastern points in 1948 to 9 points in the northwest "clearly

established the existence of through routes" via the Rio Grande, the court is inconsistent, if not self-contradictory, in refusing to decide, but instead, remanding the case for the Commission to decide whether the "uncontradicted evidence" on which it unhesitatingly reversed the Commission is sufficient to prove the existence of through routes via the Rio Grande between each of the 2900 points in the Northwest and the 39,000 points in the east (R. 292). If, upon such remand, the Commission is bound by the court's holding that through routes via the Rio Grande are already in "existence", it will be unable to determine from the opinion what through routes are embraced in the court's holding, and yet will be under the court's direction to decide whether the "uncontradicted evidence" establishes the existence of through routes via the Rio Grande between all of the 2900 points in the northwest and all of the 39,000 points in the east. And this in the face of the Commission's finding already made upon the same "uncontradicted evidence" that there are no through routes via the Rio Grande for the traffic concerned.

As the opinion below merely "summarized" the evidence and arguments on which the Rio Grande relied, but refrained from disclosing the rationale, if any, by which the court reached the conclusion that through routes claimed by the Rio Grande already exist, we are left to guess or speculate upon the facts or circumstances on which it may be assumed that the court relied.

1. If the court believed through routes via the Rio Grande now exist because some of the routes did exist from 1897 to 1912, and because, when the joint rates were cancelled "the through routes were not closed", then its discussion concerning movement of traffic over the Rio Grande at combination rates is unnecessary and ir-

relevant. But, unless the court intended to hold that, in order to close through routes, railroads must erect some physical roadblock or take other measures to prevent physical interchange of traffic, then those old through routes were "closed" with the cancellation of the joint rates. Indeed, the district court itself held (R. 285) that:

> "The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic."

Although most of the through routes and joint rates established in connection with the Rio Grande during the court receiverships had been cancelled by 1912 without protest or proceedings before the Commission, some of them were not cancelled until 1914. In several cases the Commission suspended tariffs filed by the Union Pacific proposing to "close" certain through routes and cancel joint rates over them. Protests against the proposals resulted in hearings and formal reports by the Commission, in which it stated that the Union Pacific's purpose in cancelling the joint rates and closing the routes was to obtain a "longer haul" on the traffic.

In *Lumber Rates, Oregon and Washington to Eastern Points*, 29 I. C. C. 609, the Union Pacific filed tariffs proposing "to close established routes for certain traffic." The Commission permitted the cancellation of the Wallula, Washington, gateway and "the closing" of routes with the Northern Pacific through that gateway (p. 612), but it held that "closing of the Spokane, Silver Bow and Butte gateways" on lumber and that "cancellation of through routes and joint rates by way of the Colorado gateway" upon general traffic was not justified. With respect to the latter the Commission stated at page 614

that the proposed tariffs would result in "cancelling through routes and joint rates by way of the Colorado Gateways" on all traffic both eastbound and westbound originating and terminating at points on the Oregon-Washington Railroad and Navigation Company (a part of the Union Pacific system) in the State of Washington. However, in a supplemental report in the same proceeding, upon Union Pacific agreement to retain through routes and joint rates on fruit and lumber, the Commission permitted the Union Pacific "to close the Colorado gateways for general traffic between exclusive points of that system in the States of Oregon and Washington and points on and east of the Missouri River" (31 I. C. C. 191).

In *The Ogden Gateway Case*, 35 I. C. C. 131, the Commission permitted the "cancellation by the Union Pacific of through routes and joint fares in connection with The Denver and Rio Grande through the Ogden gateway", although in doing so it stated that passengers could, of course, still use the Rio Grande route for through service by paying "the higher charges resulting from application of the intermediate fares". The Commission said (page 132) that publication of the tariffs brought "vigorous protests" from the Rio Grande, the railroad commissions of Idaho and Montana, and communities located on the Rio Grande in Colorado and Utah.

In *United States v. U. P. R. R. Co.*, 28 I. C. C. 518 (decided December 1, 1913, after most of the through routes and joint rates in connection with the Rio Grande had been cancelled in 1906 and 1912), the Commission refused the request of the United States Government to order "establishment of through routes and joint rates" in connection with the Rio Grande at Pueblo or Denver

and at Salt Lake City or Ogden, Utah, on traffic between the same northwest area and points east of Denver that is involved in the instant case. Pointing out that Union Pacific routes were materially shorter than routes demanded by the Government via the Rio Grande, the Commission said at page 524, "we are unable to find on this record any set of facts which would over-shadow the clearly expressed purpose of the Act" to prohibit short-hauling Union Pacific routes by "the establishment of the desired routes" via the Rio Grande.

From the foregoing, it is indisputable that the Commission and everyone concerned regarded the action of the Union Pacific as "closing" the through routes and gateways in connection with the Rio Grande as well as the cancellation of the joint rates even though interchange of traffic between the two railroads was still physically possible and shippers could use the Rio Grande route by paying higher combination of local rates. Contrary to the view of the district court that "the through routes were not closed" by cancellation of the joint rates, the proceedings before the Commission clearly demonstrate that the court now attempts to reverse Commission decisions made nearly 50 years ago on the question whether its approval of tariffs proposing to cancel "through routes and joint rates" effected the closing of the through routes as well as the cancellation of the joint rates.

The filing of the tariffs constituted notice to the public that carriers participating in Union Pacific routes no longer "hold themselves out" as offering through service in connection with the Rio Grande and that their "course of business" thereafter would be to refuse to relinquish their long hauls on the traffic from and to the northwest area, *Thompson* case, *supra*, page 557.

This Court has long since recognized the efficacy of tariff publication in cancelling or closing gateways and through routes. *Atlantic Coast Line R. Co. v. U. S.*, 284 U. S. 288; *A., T. & S. F. Ry. v. United States*, 279 U. S. 768, 775; *Kansas City So. Ry. v. Albers Comm. Co.*, 223 U. S. 573, 596. The Commission also gives appropriate effect to the publication of tariff changes as a means of closing a through route. In *Steinmetz v. Atchison, T. & S. F. Ry. Co.*, 293 I. C. C. 202, a shipper had routed a shipment of cattle from Montana to Kansas via a route over which there were no joint rates. In dismissing a complaint for reparation, the Commission cited this Court's decision in the *Thompson* case, *supra*, and held:

> "Therein the Supreme Court makes plain that a route such as that used for the instant shipment may not be regarded as a through route under section 15(4) of the Interstate Commerce Act. Thus, the route used by this shipment was a 'closed' route, and the complainant was apprised of that fact by the publication of the joint through rate from and to these points for application over routes other than that used. This does not mean that a shipper may not specify routing for a shipment over such a 'closed' route and expect compliance with the routing thus specified, but it does mean that when such routing is specified and complied with, the carriers concerned have a right to charge a combination rate, provided that each of the factors in such combination does not exceed a maximum reasonable rate for a shipment having origin and destination at the points from and to which such rate applies." (pages 203-204)

As alleged in its complaint to the Commission, cancellation of the joint rates so effectively closed the through route via the Rio Grande "as to prevent the movement of freight traffic" over its line; and to deprive the Rio

Grande of "through freight traffic which it might obtain if equal rates applied in connection with it" (V. I, 7, 8).*

So effective was the cancellation of the joint rates in closing the through routes via the Rio Grande that its brief (p. 5) to the Commission argued that refusal of carriers participating in the Union Pacific routes to short haul themselves by including the Rio Grande in the through routes at equal joint rates "actually prevents the movement of traffic from eastern points" via the Rio Grande to Salt Lake City and Ogden; and (p. 98) that the higher combination of local rates, after cancellation of the joint rates, via its line "prevent any regular or substantial movement of the traffic via" the Rio Grande; and again at page 101 of its brief that, "unless the same level of rates is prescribed on the traffic involved via the Ogden Gateway and the Rio Grande no practical or useful purpose will be served"; and (p. 116) that livestock shippers testified that any rates via the Rio Grande higher than livestock rates via Union Pacific routes "would be of no use to them and would not move the livestock" via the Rio Grande.

Admittedly, cancellation of the joint rates was effective to close the through route via the Rio Grande sufficiently to preserve the right guaranteed by Section 15(4) of carriers participating in Union Pacific routes not to be short hauled by the Rio Grande. Indeed, if cancellation of the joint rates had not effectively closed the route via its line, then the Rio Grande would have had no motive in complaining to the Commission or to the court. The Rio Grande clearly stultifies its position in contend-

* Because of duplication in page numbering the printed records in these cases, this abbreviation will be used to refer to pages of Volumes I and II, proceedings before the Interstate Commerce Commission.

ing that cancellation of the joint rates had no effect on the existence of through routes via its line and, in the same breath, contending that cancellation of the joint rates so effectively closed its route "as to prevent the movement of freight traffic" over its line, and the lower court's opinion is likewise inconsistent and erroneous.

That the cancellation nearly 50 years ago of the joint rates established in connection with the Rio Grande by the receivership courts in 1897 fully accomplished the "closing" of the through routes in question, is and has been the understanding of all railroads and shippers generally concerned during that 50-year period. It was the understanding of 137 shipper and public witnesses who opposed the Rio Grande and of some 50 witnesses who supported its complaint before the Commission, and it was the understanding of the Rio Grande's President, who testified that, ever since he became affiliated with the Rio Grande he had looked forward "to the opening of the Ogden Gateway." It was the tacitly admitted position of Rio Grande until after this Court handed down its decision in the *Thompson* case (June 2, 1952). In its publicity campaign, conducted before and after the filing of its complaint, August 1, 1949, the Rio Grande publicly asserted that its purpose was to "restore" to the northwest the "rates and routes" established by the receivership courts in 1897. As a part of its publicity campaign, the Rio Grande printed and widely distributed a pamphlet entitled "20 Questions—An Informative Quiz", (I. C. C. Ex. 30), in which it posed 20 questions and answered them with the arguments it thought would convince shippers to aid it in its efforts to "open" through routes via its line in connection with the Union Pacific to and from the northwest area. Those questions clearly and indisputably show that the Rio Grande itself con-

sidered the prior through routes via its line "closed" by the cancellation of the joint rates by the Union Pacific."[14]

2. If the lower court relied on the statements of the counsel and witness for the Union Pacific (R. 288), that shippers may route such of the involved traffic over the Rio Grande as they desire if they are willing to pay the higher combination rates, the court is clearly erroneous in holding that this obvious fact tends to prove the existence of through routes via the Rio Grande unless the court intends to rest its decision on a theory that this Court flatly rejected in the *Thompson* case, because such a theory would mean that "through routes exist between all points throughout the country wherever physical rail connections are available" (p. 559). The court further errs in holding that a shipper's right under Section 15(8) of the Act to route his traffic "exists only when through routes and through rates have been established"; for there is no provision in the Act preventing a shipper from routing his traffic over any series of connecting railroads

---

14 Among the 20 questions were the following:
" 2 What is Meant by the 'Closed' Gateway at Ogden?"
" 3 What is the Effect of the Closed Gateway?"
" 4 How does the Rio Grande Seek to Open the Ogden Gateway?"
" 5 How Will the Rio Grande Benefit from Opening of the Ogden Gateway?"
" 6 Why Does the Union Pacific Oppose Opening of the Ogden Gateway?"
" 7 Will the Open Ogden Gateway Reduce Freight Rates?"
" 8 Will the Open Gateway Provide Improved Service?"
" 9 With Opening of the Gateway, Will There be More Freight Cars Available for Northwest Shippers?"
"11 Will an Open Gateway at Ogden Benefit Colorado and Utah?"
"12 Will an Open Gateway at Ogden Benefit Shippers Outside of Union Pacific or Rio Grande Territory?"
"13 Will Opening of the Ogden Gateway Reduce Railroad Employment in the Closed-Door Territory?"
"14 Will the Opening of the Ogden Gateway Reduce Taxes Paid in the Closed-Door Territory?"

wherever physical interchange is possible and the carriers have performed their duty of publishing local rates on their respective lines. The right of a shipper under Section 15(8) is to choose between two or more "competing lines of railroad" and he may exercise that right by paying the rates published over the route or routes he chooses, regardless of whether the rates are combinations of local rates or joint rates.

3. If the court relied on the fact that joint rates are published for shipments of sheep and goats via the Rio Grande, the court clearly errs because there is no statutory, judicial or administrative precedent or authority for the proposition that where carriers publish a through route with joint rates for one commodity, then such route becomes a through route within the meaning of Section 15(3) and (4) for every commodity. Such proposition is contrary to the Commission's settled administrative practice and treatment of through routes and carriers' rights under Section 15(4) not to be short hauled. See *Adrian Grain Co. v. Ann Arbor R. Co.*, 276 I. C. C. 331.

4. If the lower court intended to hold that the existence of through routes can be established by proof of "a continuous use of the Rio Grande in the movement of traffic to and from the closed door area at through combination rates", then its ultimate conclusion is wholly erroneous and unsupported because the evidence here is limited to 18 westbound through shipments that moved in 1948; to 37 eastbound shipments that moved *to local destinations on the Rio Grande* in 1948, none of which moved beyond its eastern termini; and to traffic that was diverted to the Rio Grande under war and blizzard emergency conditions, which is clearly within the right of carriers to do by voluntary agreement or, which, in the absence of such agreement, the Commission may require under Section 15(4) of the Act. The court further errs in

saying that movements of the traffic via the Rio Grande "was substantially the same in years prior to 1948 and continued into 1949" for that statement is squarely contrary to the Rio Grande's own assertion at page 98 of its brief to the Commission that the combination rates are so high as to "prevent any regular or substantial movement of the traffic" via its line; and there is no evidence whatever in the record concerning the movement of such traffic via the Rio Grande during any year other than 1948. The Rio Grande's witness who submitted the movement for 1948 did not say that 1948 was a representative year; but that he selected that year because "it was the last full calendar year prior to this proceeding" and, after testifying concerning problems of re-routing arising because shippers had sometimes mis-routed their traffic via the Rio Grande, in ignorance of the fact that the joint rates did not apply via that line, the witness said "the same problems prevailed to about the same extent in prior years, and have continued thus far in 1949" (V. I, 76).

The *Thompson* decision, page 557, footnote 13, makes it plain enough that even if the Rio Grande had proved that one or more isolated or sporadic shipments moved via its lines over each of the innumerable routes of which it claims to be a part, it still would have failed to prove "the carriers' course of business". *A fortiori*, its showing here of 18 shipments routed via its line by shippers over 18 of the millions of existing through routes between the 39,000 railroad stations in the east and south and the 2,900 stations in the northwest area is not even a *scintilla* of proof that the "course of business" of the carriers comprising the myriad of Union Pacific routes is to offer through transportation service in connection

with the Rio Grande between the northwest and the eastern and southern parts of the country.[15]

The "continuous use" theory advanced by the lower court not only lacks any factual basis, but is directly contrary to the testimony of the Rio Grande's own President, who said (V. I, 42):

> "The Dotsero Cutoff had just been completed when I began my tenure as co-trustee of the Rio Grande. While this 'cutoff' provided a *potential* means for the Rio Grande to participate in transcontinental traffic, the physical condition of our company at that time was such that *we were in no position to effectively compete for this extremely competitive business from either a service or cost standpoint.* Because of long depressed earnings, the Rio Grande's trackage and rolling stock were in very poor condition. At that time *faster schedules were neither feasible nor possible.* (Italics added.)
>
> "Therefore, a planned program was immediately progressed with a view towards contributing to a sounder national transportation system by making the Rio Grande a vital link in transcontinental traffic. This embraced strengthening of the personnel, a revamping of the financial structure, and complete modernization of the physical plant."

5. The lower court's statement that shipments diverted from the Union Pacific via the Rio Grande under emergency conditions without the Union Pacific having

15 At page 559, the *Thompson* decision holds:
"Through service to points short of Omaha cannot be used as evidence of the existence of a through route to Omaha unless we are to hold that compliance with Section 1(4) causes the Missouri Pacific to lose its right to serve Omaha via its own lines, *a right guaranteed by Section* 15(4). We reject the Commission's argument that the existence of through routes from Lenora to points on the Burlington line short of Omaha proves the existence of a through route to Omaha via the Burlington as requiring an unwarranted distortion of the statutory pattern." (Italics added.)

asked the Commission to authorize temporary through routes via the Rio Grande and without the Commission invoking its authority under Section 15(4) to establish temporary through routes though "admittedly do not tend to establish an ordinary course of business", but do indicate "that both the Union Pacific and the Commission assumed the existence of through routes" (R. 289) via the Rio Grande, is untenable and illogical, and rests upon a misconception or a distortion of the statutory pattern. Section 1(15) of the Act authorizes the Commission to issue "service orders" whenever it is "of opinion that shortage of equipment, congestion of traffic, or other emergency requiring immediate action exists in any section of the country" and Section 15(4) authorizes the Commission, under the same type of emergency conditions, to "establish temporarily such through routes as in its opinion are necessary or desirable in the public interest". But no provision of the Act prohibits carriers from acting voluntarily among themselves in such emergencies without invoking the authority of the Commission under either of these statutory provisions and it is wholly illogical and erroneous to hold that, because the Union Pacific and the Rio Grande acted voluntarily in these emergencies, instead of invoking or waiting for an exercise of the Commission's emergency powers on its own initiative, indicates or suggests that the Union Pacific and the Commission assumed that through routes via the Rio Grande were already in existence, within the meaning of Section 15(3) and (4), for the traffic involved in this suit. It was testified by an experienced railroad witness in this case (V. I, 583) that:

> "There is nothing unusual about such diversion of traffic among railroads under emergency conditions. It is the rule and not the exception.

"Detour movements of trains and traffic via other lines in the event of interruptions is an accepted principle in American railroading, and hundreds of agreements are on file today stipulating the terms and conditions governing such movements. It is the device under which traffic of the Nation is kept fluid regardless of the temporary stoppage or incapacity of one line to function."

As well stated by the Commission in holding that these few isolated shipments do not prove the "carriers' course of business", but rather the exception to it, and are clearly insufficient to show the existence of a through route:

"Any other holding would constitute an open invitation to any shipper to set aside the provisions of section 15(3) and (4) of the act simply by preliminarily making a shipment or two over the route sought to be opened commercially, a result plainly not intended by Congress, as evidenced by the amendments to section 15(4) made in 1940 (see *D. A. Stickell & Sons, Inc. v. Alton R. Co.*, 255 I. C. C. 333, 339), and a result clearly not in accord with the decision in *Thompson v. United States, supra.*" (R. 65)

And, as to the emergency movements:

"These movements, as well as those under service orders, were made under emergency conditions and not in the ordinary course of the carriers' business. They show only that the Rio Grande routes were physically practicable, and have no bearing upon the issue of whether or not those routes constitute 'through routes' within the meaning of that term as used in the act." (R. 64)

6. The district court said the Union Pacific and other participating railroads "have issued through bills of lading, thereby recognizing the through route status" of the Rio Grande. Although the court did not indicate

what more, in addition to cancellation of the joint rates, the Union Pacific could or should have done to "close" the through routes via the Rio Grande, the latter asserted in the district court that through routes can be closed "legally and factually by simply publishing in their tariffs that particular railroads will not thereafter issue a bill of lading or accept shipments which are routed by shippers via such routes". This is but to say that, in order to close an existing through route, a carrier must go so far as to commit a direct violation of Section 20(11) of the Act; which provides:

> "That any common carrier, railroad, or transportation company subject to the provisions of this part receiving property for transportation * * * shall issue a receipt or bill of lading therefor, and shall be liable to the lawful holder thereof * * *."

Thus, the lower court would leave the Union Pacific or any other railroad in the perilous, illogical and untenable position of either losing its "right guaranteed by Section 15(4)" to its long haul, *Thompson* case, *supra*, page 559, or violating its plain statutory duty to accept property tendered for shipment and issue a "bill of lading therefor". The court's view that the Union Pacific could protect itself against being short hauled by the simple expedient of refusing to accept and issue a bill of lading for property tendered for shipment is directly contrary to the holding of this Court in *Southern Ry. Co. v. Reid*, 222 U. S. 424, 435, that "it is undoubtedly the duty of a railway company to receive freight when tendered for transportation". In *N. Y. Central R. Co. v. The Talisman*, 288 U. S. 239, this Court rejected the contention that a railroad could "by its own act relieve itself of any duty imposed upon it by law or arising out of the nature of its undertaking" as a public servant, and held that a railroad is "powerless by mere announcement to fix the terms

on which it would participate" in effecting interchange of traffic with other carriers (p. 242). Citing numerous cases, the Court said at page 241:

> "Petitioner and respondent were connecting carriers. As such, each, in the discharge of its duties to the public, owed to shippers of freight in its possession destined to points on or routed over the railway of the other the duty to deliver to the connecting line for further transportation; and each was correspondingly bound to receive and carry."

The assertion that a carrier must violate its plain duty under one provsion of the Act in order to retain the benefit of its rights under another provision of the same Act is wholly untenable. See *Atchison & Topeka Ry. v. Harold*, 241 U. S. 371, 378; *Norfolk & W. Ry. Co. v. Dixie Tobacco Co.*, 228 U. S. 593, 595.

7. The lower court's opinion states that "a joint rate is not essential to the existence of a through route" and that "the rate which applies over a through route may be the aggregate of separate rates fixed independently by the several carriers participating in the through route." The opinion then cites *St. Louis S. W. Ry. Co. v. United States*, 245 U. S. 136, 139, which defines the term "through route", and *Thompson v. United States, supra*, quoting from the latter decision the definition of a "through route" as there given at page 556.

The opinion refrains from indicating what there is in the definitions of a through route in the *St. Louis* case and the *Thompson* case that "compels us to conclude that the through routes contended for by Rio Grande were in existence", so we are again left to guess what the Court means in this part of its opinion. The decision in the *St. Louis* case clearly is against the lower court's conclu-

sion and the Rio Grande's position here, as shown at page 143:

> "The order entered does not require any complaining carriers to substitute the route via Memphis for that via Cairo; nor does it require any to establish an additional route via Memphis. Carriers are left free to furnish the through transportation either via Cairo or via Memphis. The order merely compels a through route and a joint rate of 16 cents to Paducah. If they elect to continue the existing through route via Cairo, the order operates merely to introduce reduced joint rates. If they elect to discontinue the through routes via Cairo, the order operate to establish through routes and joint rates via Memphis, which the findings of the Commission fully justify."

In the instant case the Rio Grande's sole purpose is to "substitute" its line for lines of the Union Pacific and other roads so it can haul the traffic part way as a "bridge" line.

If the lower court means that the part of the definition in the *Thompson* case that "compels" the conclusion that through routes exist via the Rio Grande is that part which says that a through route may exist where a "through rate" has been published and that such rate "may be merely an aggregate of separate rates fixed independently by the several carriers forming the 'through route'", then the court's conclusion that the definition compels it to hold that through routes exist via the Rio Grande is clearly erroneous because it flies in the face of the fact that this very theory was urged by the Commission but flatly rejected by this Court in the *Thompson* case in the following language (p. 558):

> "The fact that appellant's line connects with the Burlington at Concordia does not aid the Commission in proving the existence of a through route since

the power to establish through routes under Sections 15(3) and (4) also presupposes such physical connection. And the showing that appellant publishes a local rate from Lenora to Concordia and that the Burlington publishes a local rate from Concordia to Omaha proves only that each carrier complies with the statutory duty to publish rates for transportation service between points on its own lines."

And, at pages 559-560, the Court further explained that:

"The Commission continues to support its order, but the logical conclusion of the theory advanced by the Commission is that through routes exist between all points throughout the country wherever physical rail connections are available. If there is no through carriage over any combination of connecting carriers, the Commission under its present theory would never have to establish through routes under Section 15(3) and (4) but could divert traffic to any route between two points by ordering reduction of the sum of the local rates over that route. Acceptance of this argument would mean that Congress' insistence on protecting carriers from being required to short haul themselves could be evaded whenever the Commission chose to alter the form of its order. The Commission, by using the form of order employed in this case, could also divert traffic from existing through routes to the lines of a weak carrier solely to assist that carrier to meet its financial needs, thereby evading completely the applicable prohibition of Section 15(4), before the Court in *United States v. Great Northern R. Co.*, 343 U. S. 562 (decided this day). In short, acceptance of the Commission's argument would mean that the acts of Congress since 1906 granting the Commission only a carefully restricted power to establish through routes have been unnecessary surplusage."

If the lower court's view is that through routes claimed by the Rio Grande exist on the theory that by

publishing their own independent local rates the connecting carriers "hold themselves out as offering through transportation service" via the Rio Grande, then again, its conclusion is clearly erroneous and foreclosed by the language just quoted from the *Thompson case*.

8. If the lower court rests its decision that through routes are in existence as claimed by the Rio Grande, upon that part of the definition in the *Thompson* case which says that "through carriage implies the existence of a through route whatever the form of the rates charged for the through service", then there is no basis whatever for the court's conclusion here, because there is no evidence whatever in this case, and indeed the Rio Grande made no effort to prove, and does not contend that there has been "through carriage" via its line between the termini of the millions of transcontinental routes, of which it claims to be a part. The complete absence of any such evidence becomes more fatal to the lower court's conclusion in view of its apparent reliance upon the fact that in the *Thompson* case there was no evidence showing that any shipment had ever moved from Lenora to Omaha via the Burlington, and in view of this Court's holding that the evidence upon which the Commission relied of shipments moving from Lenora to points on the Burlington short of Omaha:

> "* * * cannot be used as evidence of the existence of a through route to Omaha unless we are to hold that compliance with Section 1(4) causes the Missouri Pacific to lose its right to serve Omaha via its own lines, a right guaranteed by Section 15(4). We reject the Commission's argument that the existence of through routes from Lenora to points on the Burlington line short of Omaha proves the existence of a through route to Omaha via the Burlington as requiring an unwarranted distortion of the statutory pattern." (p. 559)

9. If, as the lower court erroneously seems to hold, that under the *Thompson* decision the existence of a through route can be proved by evidence showing actual movement of traffic over the entire lines of the connecting carriers "between the termini" (Section 15(4)) of the claimed through route, then the court is clearly wrong in holding that the meager token of evidence offered by the Rio Grande and summarized in the opinion, establishes the Rio Grande's claim that its line is a part of the millions of Union Pacific routes published in the tariffs for the transcontinental traffic involved in this case.

The lower court is further inconsistent and erroneous in attempting to throw back to the Commission for decision the question whether the "burden is on the Rio Grande to show some actual movement of traffic on through billing over each of the possible routes between the thousands of stations in the involved areas", for the court readily assumed authority to make its own decision and to reverse the Commission upon the very facts and circumstances on which the Commission held that through routes via the Rio Grande did not exist. If the court correctly construed the *Thompson* decision as holding that proof of actual movement "between the termini" of a claimed through route is essential to establish the existence of the route, then the court was bound by that decision to hold that the burden is on the Rio Grande to make such proof of the "carriers' course of business" by showing actual movement over each of the millions of routes of which it claims to be a part, and having failed to do so it had not proved the existence of the claimed through routes.

The lower court's citation of *Virginian Ry. v. United States*, 272 U. S. 658, lends no support to its views for no

question of actual movement of traffic was raised in that case, and the dictum of that decision that there were "through routes by combination" rates, has necessarily been overruled by the very pointed decision in the *Thompson* case, page 558.

The opinion below says it appears that the Commission "reasoned" that cancellation of the joint rates in 1906 and 1912 closed the through routes in a "commercial sense" by applying the higher combination rates and that this "terminated the through routes", but that "it was held to the contrary" in the *Virginian* case. But it was not there "held to the contrary" for that case could not have involved cancellation of previous joint rates because this Court said "these two carriers have not established any joint rates to the west" (p. 661).

Moreover, in footnote 18 at page 560 of the *Thompson* case, this Court says that the *Virginian* case "is inapposite", and it is clearly inapposite here, for the opinion in that case states at page 666 that "the order here in question was not sought or made under § 15(3) and does not direct the establishment of through routes and joint rates". Instead, as stated at page 662, the Commission ordered the carriers to "cease and desist" from collecting rates from the 54 complaining mines to western destinations in excess of the rates enjoyed by the 45 mines and others in the district having the lower rates. Thus, neither the Commission nor the Court in the *Virginian* case faced any problem of establishing joint rates under Section 15(3) or any new through route with joint rates. In that case, there was no railroad claiming that its line was a part of millions of existing through routes, nor any demand, such as the Rio Grande makes here, that the Commission require that the joint rates via existing Union Pacific routes be made applicable via the Rio

Grande for the purpose of its "pecuniary gain" from a "bridge" haul over its line of traffic diverted from existing routes. Furthermore, there was no question of short-hauling the Virginian in that case for the traffic involved was originated at the 54 mines located on its line and it hauled the coal from the mines to its junction with the Chesapeake and Ohio.[16] And, as the Virginian's line did not extend farther west, it had obtained its long haul on the westbound traffic there involved.

If the lower court had accepted and applied, as did the Commission, the "test of the existence" of a through route, namely, whether the participating carriers "hold themselves out as offering through transportation service" and "the carriers' course of business", as laid down in the *Thompson* case, page 557, it could have reached no other conclusion than that through routes and joint rates via the Rio Grande do not presently exist for the traffic concerned and it clearly erred in failing to do so.

---

16 That haul averaged only 64.7 miles, as shown in Commissioner Cox's dissenting opinion, 98 I. C. C. 498, and included all of the Virginian's line "which lies between the termini" of the route over which the coal moved from the 54 mines to the western destinations and, since it obtained its longest possible haul on such coal to the west, there was no short-hauling within the meaning of Section 15(4). As shown in the decisions of the Commission and this Court, the western terminus of the Virginian was at Deepwater, W. Va., and from there it "extends only eastward to tidewater", meaning Norfolk, Va., and other ports along the Atlantic Coast. The Virginian's purpose in refusing to reduce its local rates from the 54 mines to junctions with the Chesapeake and Ohio was to discourage shipments from those mines to the west and thereby retain or increase the volume of coal traffic over its line to the east which gave it the benefit of a maximum haul of 450 miles (98 I. C. C. 498).

The Fallaciousness of the Lower Court's Decision That Through Routes are Already in Existence via the Rio Grande for the Traffic Concerned is Sharply Illustrated and Emphasized by the Situation With Respect to the Great Northern, Northern Pacific and Milwaukee Railroads.

The Rio Grande's complaint to the Commission demanded that it order "joint through rates" equal to those maintained by the defendants therein named on traffic "between points on or via the Union Pacific in Utah north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof". (V. 1, 9). It further alleged that through routes now exist and have for many years existed for the interchange of traffic between those points with the Union Pacific at Ogden and certain other carriers at Denver and other Colorado points. In other words it claimed that through routes were already in existence between all points as to which it demanded prescription of joint rates, or as stated by the lower court, "that the routes over which joint rates are sought were in existence and open to traffic at combination rates" (R. 286). This, of course, included all points located on the Union Pacific and all points located on other railroads with which the Union Pacific has joint rates in Idaho, Montana, Oregon, Washington and British Columbia and all points on the hundreds of railroads with which the Union Pacific has joint rates to the thousands of points east of Colorado common points and the Missouri River.

The principal lines with which the Union Pacific has joint rates for interchange of traffic at junctions in Idaho, Montana, Oregon and Washington are the Great Northern, Northern Pacific and the Milwaukee Railroads. Neither of these lines connects with the Rio Grande and,

indeed, their lines are located and traverse territory several hundred miles distant from Ogden, the northernmost point reached by the Rio Grande. For example, Spokane, Washington, where the Great Northern interchanges traffic with the Union Pacific, is 859 miles from the Rio Grande's nearest trackage at Ogden.

At one place in its opinion the lower court concludes that "under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law", thus, apparently, agreeing with and adopting the Rio Grande's contention that through routes via its line were in existence between points in the northwest area located not only on the Union Pacific but also points located on the Great Northern, Northern Pacific and Milwaukee with which the Union Pacific has joint rates for interchange of part of the traffic the Rio Grande seeks. But at another place in its opinion the lower court refuses to say whether it intends to hold that through routes via the Rio Grande exist between each of the 39,000 stations in the area east of Colorado and the 2,900 stations in the northwest area and, though refusing to indicate or specify what through routes over the lines of what carriers, between what points or termini or on what commodities, are in existence via the Rio Grande. However, in the following statement (R. 292) the court seems to narrow its decision as to through routes to and from points on the Union Pacific in the northwest area:

> "In our view the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond."

Aside from the fact that no one can ascertain from the court's decision just what through routes, between what points or termini, or for what commodities, the court holds to be in existence via the Rio Grande, its loose and untenable treatment of this question is illustrated by the situation of the Great Northern, Northern Pacific and Milwaukee. Among the factors recited in the court's opinion and upon which it presumably relied are:

(1) That through routes and joint rates had been established via the Rio Grande during court receivership of the Union Pacific, Oregon Short Line and Oregon Washington Railroad and Navigation Company in 1897, and the joint rates but not the through routes were cancelled in 1906 and 1912. But, there is no showing on this record that the Great Northern, Northern Pacific or Milwaukee were parties to those old joint rates, and the Commission's report makes it clear that those old joint rates were established in connection with the Rio Grande by the Oregon Short Line and the Oregon Washington Railroad and Navigation Company—not by the Great Northern, Northern Pacific or Milwaukee (R. 67).

(2) That a few shipments moved west via the Rio Grande and the Union Pacific in 1948. But there is not a shred of evidence that a single one of those shipments moved to or from a point on either the Great Northern, the Northern Pacific or Milwaukee (original I. C. C. Ex. 1, pp. 4 and 5). That evidence shows that all of the westbound "bridge" shipments cited moved to points on the Union Pacific in Idaho, Washington, Utah and Montana and it further shows that the eastbound shipments, which were not "bridge traffic" involved here but local traffic for delivery at points on the Rio Grande, originated at points on the Union Pacific except one shipment from St.

Helens, Oregon, on the Spokane, Portland and Seattle railroad, one shipment from Trentwood, Washington, on the Spokane International Railroad, and one shipment from Port Angeles, Washington, on the Milwaukee Railroad. But, as stated, these were not shipments of "bridge" traffic and they have no bearing upon the question whether the Rio Grande had been used as a part of a route for such traffic.

(3) That eastbound joint rates on sheep and goats apply via the Rio Grande. But the Commission's report shows that these rates are from "Union Pacific origins in the excluded territory to Missouri River markets and points east thereof" (R. 85), and not from points on the Great Northern, Northern Pacific or Milwaukee.

Thus, at least three of the factors which the lower court apparently considered important in reaching its conclusion as to the existence of through routes via the Rio Grande are absent with respect to the Great Northern, Northern Pacific and Milwaukee. The court, nevertheless, makes no distinction or differentiation as to those lines, or any other of the numerous lines concerning which the record is completely devoid of evidential facts or elements of the sort recited by the court as justifying its conclusion that through routes via the Rio Grande were already in existence.

IV.

Upon its holding that the Commission "erred as a matter of law" in Finding That There are at Present no Through Routes via the Rio Grande as Claimed by it, and That This Finding "obviously prejudiced the entire proceeding", the District Court Erred in Concluding That the Commission's Order Should be Annulled and set Aside Only "in so far as it denied relief to the Rio Grande", and in Failing to Hold That the Order Requiring Through Routes and Joint Rates for the Articles Therein Named, as Well as the Commission's Failure to Require Joint Rates for all Commodities Should be Annulled and set Aside.

The district court held:

> "We are of the opinion that the finding of the Commission that there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence. It is our view that the Commission erred as a matter of law in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority to establish joint rates *obviously prejudiced the entire proceeding.*" (Italics added; R. 287-288.)

After reversing the Commission and making its own finding that through routes via the Rio Grande had been established, the court said the Rio Grande was entitled, as a matter of law, "to have the Commission apply the provisions of §§ 1(4), 3(4), 15(1), and 15(3) of the Act, free of any of the limitations imposed by § 15(4) with respect to establishing through routes" (R. 294).

The court refers to the Commission's finding that through routes via the Rio Grande do not exist as a "self imposed restriction upon its authority to establish

joint rates". The court seemed to think that but for its finding that through routes were not in existence via the Rio Grande the Commission would have made an order more favorable or entirely favorable to the Rio Grande by including all, instead of a part, of the traffic in its order. Such a view is clearly illogical and erroneous, for the Commission's finding of the non-existence of through routes via the Rio Grande manifestly did not serve as a "restriction" or a deterrent to its giving the Rio Grande the benefit of through routes and joint rates on a third of the traffic.

A finding of "public interest" is essential to the prescription of joint rates, regardless of whether through routes already exist, and since the Commission unhesitatingly ordered through routes on all of the traffic for which it thought the evidence sufficient to prove that joint rates were necessary in the public interest, it results that it was not the "limitations imposed by § 15(4) with respect to establishing through routes", but an insufficiency of evidence of public interest in joint rates on traffic not included in the order that prevented the Commission from making an order more favorable to the Rio Grande.

The chief examiner in his proposed report also found, as did the Commission, that the through routes claimed by the Rio Grande were not in existence, but nevertheless proceeded to recommend that the Commission order through routes and joint rates on all commodities, because he thought the evidence proved necessity for them in the public interest. Thus, the short-haul limitation in Section 15(4) operated as no restriction whatever upon the chief examiner, nor upon the Commission to the extent that it thought the evidence proved that joint rates were necessary in the public interest.

While we submit that as shown above the Commission correctly found that no through routes presently exist as claimed by the Rio Grande, but even if it committed error of law in so finding, the error is irrelevant to the validity of the order and is of no consequence unless it is a "distinct and dominant proposition of law * * * the exact influence of which, in its [the Commission's] decision, could be estimated", *Illinois Cent. &c. R. R. v. Inter. Com. Comm.*, 206 U. S. 441, 457. The lower court does not, and no one can demonstrate that the Commission's finding that through routes via the Rio Grande do not presently exist "prejudiced" or had any effect or influence upon its ultimate conclusions or its failure to grant the Rio Grande's full demands. That neither the proceeding before the Commission nor the Rio Grande was "prejudiced" by that finding is clearly demonstrated by the fact that the Rio Grande made no objection, exception or claim that the same finding made by the chief examiner influenced or prejudiced his conclusions and recommendation that the Commission require through routes and joint rates on all commodities.

However, if we are wrong, and if the court was correct in its view that the Commission's finding of the non-existence of through routes via the Rio Grande was an error of law which "prejudiced the entire proceeding", it is inescapable, we submit, that the *whole proceeding* before the Commission, including its order requiring through routes and joint rates for the articles therein named as well as its failure to require joint rates on still more or all commodities, was by that finding vitiated and completely nullified, and that the court patently errs in decreeing that the order will be annulled, set aside and remanded to the Commission *only* "in so far as it denied relief to the Rio Grande".

An error of law so fundamental and having such pervading consequential effect that it "obviously prejudiced the entire proceeding" necessarily nullifies *all* action flowing from such error of law, and the court plainly exceeds its power in attempting to save that part of the "prejudiced" proceeding which confers benefits upon the Rio Grande, while condemning the part of the same "prejudiced" proceeding which failed to benefit the Rio Grande. In other words, though holding that the *entire* proceeding was prejudiced, the court nullifies and would permit the Commission to reconsider only that part which fails to benefit the Rio Grande, while withholding from the Commission's reconsideration that part of the prejudiced proceeding which resulted in substantial financial gain to the Rio Grande.

The inevitable and unavoidable effect of the court's holding that the Commission's finding that through routes do not presently exist as claimed by the Rio Grande is an error of law which "obviously prejudiced the entire proceeding", like a blight which kills a tree and all of its roots and branches, is completely destructive and nullifying of all and not merely a part of the action flowing from the error. There can be no "unprejudiced" or lawful part of the action flowing from an error which "obviously prejudiced the entire proceeding". No case can be found in which such incongruous action has been undertaken by a court under such circumstances. Instead, the courts have invariably completely, and not partly, annulled and set aside orders held to have resulted from fundamental errors of law, or from the Commission's misinterpretation of its authority or from its arbitrary action. For example, in *Ann Arbor R. Co. v. United States*, 281 U. S. 658, this Court held that the Commission had committed error of law by misconstruing a Joint

Resolution of Congress in issuing the order there considered, but the Court did not undertake to save any part of the order. Instead, at page 669, it held:

> "Our conclusion is that the order of the Commission was based upon an erroneous construction of the Joint Resolution, and therefore should have been set aside by the Court below".

In *Atchison, etc. Ry. Co. v. U. S.*, 284 U. S. 248, the Commission had issued an order prescribing rates on grain and grain products throughout most of the United States. After the order was issued, several western railroads petitioned the Commission to reopen the proceedings and receive further evidence which would disclose drastically changed conditions resulting from the early effect of the great "Depression", and the consequent inability of the railroads to withstand the rate reductions required by the order. The Commission denied the petition. This Court held that the Commission's refusal of further hearings and reconsideration in the light of the facts which the petition offered to prove was an arbitrary denial of right. The court did not attempt to save any part of the order or to remand the case to the Commission. Instead, at page 263, the opinion concludes:

> "The order of the District Court refusing an interlocutory injunction is reversed, and the cause is remanded with direction to grant the injunction as prayed".

Even in cases where the courts have found that the Commission acted lawfully in granting *a part* of motor carrier operating rights but acted upon an error of law or misinterpretation of the Act in denying other parts of the rights sought by the applicant, the courts, upon holding that the Commission's denial of a part of the rights sought resulted from its error of law, have not

tried to save the rights lawfully granted but have annulled and set aside the entire order. Such a case is *Carolina Freight Carriers Corp. v. United States*, 38 F. Supp. 549, in which the district court, though "remanding" the case to the Commission, said at page 556:

> "For the reasons stated the order of the Commission will be set aside."

The decree of the district court was affirmed by this Court without suggesting that the order be annulled and set aside only insofar as it refused operating rights as a result of its error of law. *U. S. v. Carolina Carriers Corp.*, 315 U. S. 475, 490.

In *E. Brooke Matlack, Inc. v. United States*, 119 F. Supp. 617, the Commission issued an order granting a part and denying a part of the operating rights sought by the motor carrier's application. The court held that the denial of part of the rights was the result of erroneous and unlawful action by the Commission, but it decreed that the Commission's whole order be set aside, without suggesting that the rights lawfully granted by the order be withheld from reconsideration by the Commission.

For the foregoing reasons, the lower court, upon its holding that the "entire proceeding" was prejudiced by the Commission's finding that no through routes presently exist as claimed by the Rio Grande, could only decree that the entire order be annulled and set aside, for it has no power to save that part of the Commission's "prejudiced" action which is beneficial to the Rio Grande while annulling and setting aside the part of the same "prejudiced" action which is unfavorable to the Rio Grande.

V.

The District Court Erred in Commingling and Confusing the Provisions of Sections 1(4), 3(4), 15(1) and 15(3) of the Act and in Ignoring the Fact That the Commission had Already Heard and Adjudicated the Rio Grande's Case.

The district court so wrote its opinion as to make it impossible to follow its reasoning, but it is clear that the court thought the Rio Grande was entitled to a more favorable order than had been given it by the Commission, and sought to remand the case to the Commission in such way as to accomplish that result. In doing so the court has confused and commingled separate and independent provisions of the Act and refused to review the Commission's action upon the record made before the Commission and introduced in the court.

The opinion says:

> "If the Rio Grande, in the proceeding before the Commission, established its right to the relief prayed for, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and equitable divisions thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates * * *." (R. 294)

The opinion then states that the Rio Grande was entitled "as a matter of law, to have the Commission find that such through routes had been established" and in passing on the allegations of its complaint "to have the Commission apply the provisions of §§ 1(4), 3(4), 15(1) and 15(3) of the Act, free of any of the limitations imposed by § 15(4) with respect to establishing through routes" (R. 294). The opinion then says:

> "If the Rio Grande, on its showing before the Commission and an application of the provisions of §§ 1(4), 3(4), 15(1) and 15(3), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the Rio Grande of a pecuniary gain to which it was entitled." (R. 294)

The first difficulty with the court's theorizing with respect to what the Rio Grande might have been entitled to receive under various "if" propositions is that it ignores the fact that the Commission fully heard and thoroughly adjudicated the Rio Grande's complaint and its allegations of violations of each of the provisions mentioned by the court. The second difficulty with the court's treatment of the case is its apparent assumption that the Commission necessarily would have given the Rio Grande a more favorable order if it had dealt with the case "free of any of the limitations imposed by § 15(4) with respect to establishing through routes", the error of which assumption we have already demonstrated.

The admitted and undeniable purpose of the Rio Grande's complaint to the Commission was to short haul Union Pacific routes and divert their traffic to its line in the hope of improving its own financial position. The crux of its complaint was that, although the traffic could move over its line at present combination rates, those rates were so much higher than rates via Union Pacific routes, it could not persuade shippers to short haul Union Pacific routes by diverting the traffic to its line. To accomplish the short-hauling purpose it demanded joint rates exactly equal to those maintained by Union Pacific

routes. In other words, it was solely because of the higher rates via its line that the Rio Grande could not succeed in its purpose to divert traffic from Union Pacific routes. This was clearly recognized by the Commission in its statement that "[t]he higher rates and charges act as deterrents to shippers and, in effect, close the Ogden gateway in a commercial sense", and that it was asked by the Rio Grande "to exercise our authority under Section 15(3) of the Act by requiring the establishment of joint rates through that gateway upon findings that such rates are necessary or desirable in the public interest": (R. 60-61).

Obviously, since the traffic could move via that route if shippers were willing to pay the higher combination rates, the "establishment" of through routes without equal rates via the Rio Grande was a futility. In short, through routes via the Rio Grande with rates any higher than those maintained over Union Pacific routes were useless because only with equal rates could the Rio Grande succeed in its purpose to divert the traffic to its line. Clearly, the obstacle in the Rio Grande's path to its realization of additional pecuniary profit by diverting traffic from Union Pacific routes was its higher rates and not that the traffic could not physically move over its line.

The language quoted above from the court's opinion indicates the view that if the Commission had found that through routes already existed via the Rio Grande it would have made findings under Sections 1(4), 3(4), 15(1) and 15(3) more favorable to the Rio Grande than the findings it made. But the Commission found the combination rates unreasonable and unduly prejudicial to the extent they exceeded the joint rates of Union Pacific routes; found that upon the evidence no discrimination

was being practiced by other carriers against the Rio Grande; and ordered establishment of joint rates which it found necessary in the public interest for the specified commodities via the Rio Grande "the same" as rates over Union Pacific routes.

Thus, the court falsely assumed that but for its holding that through routes did not exist via the Rio Grande the Commission would have made findings more favorable or that would necessarily have given the Rio Grande equal joint rates it demanded on all of the traffic, for, it was not a failure or refusal by the Commission to make the findings demanded by the Rio Grande or the nature of the findings made, but the insufficiency of the evidence, which was the Commission's exclusive duty to evaluate, to prove that public interest required through routes and joint rates on more commodities that limited the Rio Grande's benefits to those named in the order. There is no room for assuming that the Commission would have ordered rates on additional commodities if it had felt free of the limitations of Section 15(4), for it still was limited by the "public interest" standard of Section 15(3), and, applying that standard, it has given the Rio Grande all it thought the evidence justified.

The district court apparently did not understand that short-hauling Union Pacific routes by establishment of equal rates with the Rio Grande is clearly forbidden unless that is "necessary or desirable in the public interest", regardless of whether through routes physically exist via that line over which the traffic can be moved at higher rates, *Thompson* case, *supra*.

It is the equalization of rates and not the existence of through routes that would enable the Rio Grande to

divert the traffic and short haul Union Pacific routes. Therefore, since the purpose of the Act is to forbid short-hauling existing routes, it necessarily results that the very root of the short-haul prohibition is equalization of rates that divert traffic from existing routes, and not the mere establishment of a "through route". Indeed, if this were not true the Rio Grande would not have complained, for obviously it would have no motive or purpose in complaining if it had been able to divert to its line all the traffic it wanted at the higher combination rates which, of course, would give it more revenue than a division of the lower joint rates.

Realistically, and from a practical standpoint, what the short-haul prohibition actually forbids is the ordering of joint rates that would enable the Rio Grande to divert traffic to its line from Union Pacific routes, for, as illustrated by this case, it is unequal rates that prevent short-hauling and equal rates that permit it.

The district court's inept lumping of Sections 1(4), 3(4), 15(1) and 15(3), and its statement that the Commission should have applied those provisions without reference to the limitations in Section 15(4) leaves its opinion confusing and incomprehensible as usually is the case when separate and independent provisions of an act are commingled and their separate and different purposes are disregarded. If, as indicated by its opinion, the court thought that the Rio Grande would have been entitled to the joint rates it demanded if the Commission had applied Sections 1(4), 3(4) and 15(1) "free of the limitations" in Section 15(4), then the court clearly erred, first, in assuming that, so applying the provisions of those three sections, the Commission had power to order joint rates and, second, in ignoring the fact that the Commission plainly did not apply those provisions subject to

the short-haul limitations in Section 15(4), but as clearly shown in its report (R. 65), it proceeded upon the correct view that an order requiring the joint rates demanded by the Rio Grande must be grounded upon findings in Section 15(3) as limited by Section 15(4).

The power to deal with reasonableness of rates and discrimination under Sections 1(4) and 3(4) is separate and distinct from the power to require joint rates, which can be exercised only upon a finding of public interest. That finding is not a prerequisite to exercise of the power under Section 15(1) to prescribe reasonable and nondiscriminatory rates. While the power to require joint rates in lieu of combination rates may, upon a valid finding that joint rates are necessary "in the public interest", be exercised separately from the power to require through routes where through routes already exist, and requiring the same joint rates over the same through route would not divert traffic from other routes, but the joint rate power clearly may not be exercised separately from the limitations upon it where, as here, the very purpose is to divert traffic to the Rio Grande from Union Pacific routes, or for the purpose of curing violations of Section 1(4) or Section 3(4), *U. S. v. Great Northern R. Co.*, 343 U. S. 562.

VI.

The District Court Exceeded its Power by Usurping Administrative Authority to Make Findings of Fact Favorable to the Rio Grande and Thereupon "remanding" That Part of the Case "with appropriate instructions" to the Commission "for further proceedings in conformity with this opinion".

The court's opinion reflects a strong tendency to control the exercise of the Commission's exclusive adminis-

trative power in its "further proceedings" pursuant to the court's "remand" of *only* that part of the case which is unfavorable to the Rio Grande. The court even goes so far as to make its own administrative findings of fact. For example, the opinion finds:

> "Here, the Rio Grande sought an order compelling the defendant railroads to perform their statutory duty to establish just and reasonable joint rates, fares, and charges over through routes, and if it was entitled to such an order, then it was immediately and directly affected and *suffered discrimination* by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate." (R. 297)
>
> * * * * *
>
> "Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines." (R. 297)
>
> * * * * *
>
> "Here, the very thing the Rio Grande seeks is not a mere competitive advantage, but the establishment of just and reasonable through rates and the removal of unjust discrimination, which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings." (R. 299)

These are plain findings of fact and in making them the court ignores the settled rule laid down in this Court's decisions that in reviewing orders of the Commission the courts may not "usurp merely administrative functions", *Interstate Comm. Comm. v. Ill. Cent. R. R.*, 215 U. S. 452, 470. Having usurped administrative authority to make these findings, the lower court then would further exceed its powers and make its findings binding

upon the Commission by "remanding" the case to the Commission "for further proceedings in conformity with this opinion". If the "remand" were within the court's power, which we think it is not, the Commission in such "further proceedings" would be bound to adopt the administrative findings of fact which the court has made even though they would compel a decision completely favorable to the Rio Grande and are contrary to the Commission's own findings already made in its report.

Fortunately, the Commission's exclusive administrative discretion may not be so easily pre-empted or controlled, for the court has no authority to make administrative findings of fact and it has no power to "remand" a case to the Commission with direction to proceed further in conformity with the court's unauthorized administrative findings of fact.

The statute (28 U. S. Code, Sec. 1336) authorizing review of the Commission's orders gives the courts no power to "remand" a case to the Commission. Under the specific language of the statute, the courts are given power only to "enjoin, set aside, annul or suspend in whole or in part, any order" of the Commission. In view of the exact statutory specification and limitation of what the courts may do upon reviewing an order of the Commission, and the failure of Congress to empower the courts to "remand" cases to that legislative and administrative agency, there is no express power in the courts to "remand" cases to the Commission.

An appropriate federal court has power to compel the Commission *to act* only in a mandamus suit, but this is not such a suit, and no court in any type of proceeding has power to compel the Commission to decide a case as a court might think it should be decided.

The district court said that this Court's decision in *Sec'y of Agriculture v. United States*, 347 U. S. 645, is its authority "to enter an order remanding the case to the Commission with appropriate instructions" (R. 293). But, regardless of whether the courts have power to remand cases to the Commission in the sense that it remands them to lower courts, this Court did not remand the *Agriculture* case "with appropriate instructions" nor upon findings of fact made by this Court, but merely "for further proceedings not inconsistent with this opinion", and the opinion at pages 653-655 clearly shows that the purpose of the "remand" was not for the Commission to conform its own decision to findings of fact or other suggestions made by the Court but to give the Commission a chance to make its decision understandable to the Court by explaining "its departure from prior norms" and spelling out "the legal basis of its decision", and to "make more explicit findings as to the differences and similarities in the treatment accorded other commodities unloaded at these same points." Certainly there is no manifestation in such a "remand" to control the Commission's administrative judgment as there clearly is in the instant case.

In *Manufacturers Ry. Co. v. United States*, 246 U. S. 457, this Court held at page 483 that jurisdiction to review orders of the Commission "does not permit the court to exercise administrative authority where the Commission has failed or refused to exercise it". And in *Standard Oil Co. v. United States*, 283 U. S. 235, at page 241, it is held that the courts are without jurisdiction to aid a plaintiff to obtain indirectly through a court decision "the same relief it failed to secure from the Commission". This Court said in *Ford Motor Co. v. Labor*

Board, 305 U. S. 364, at page 373, that in exercising the power to review an administrative order—

> "* * * the court must act within the bounds of the statute and without intruding upon the administrative province."

Contrary to this Court's principles, the decision below would effect a "substitution of judicial for administrative discretion", *Communications Comm'n v. WOKO*, 329 U. S. 223, 229, and destroy the "wide discretion" and "wide latitude" which Congress has delegated to the Commission, *Siegel Co. v. Trade Comm'n*, 327 U. S. 608, 611-613. The decision below is at war with the holding of this Court in *Radio Comm'n v. Nelson Bros. Co.*, 289 U. S. 266, 276, that it is not within the province of a court "to revise the Commission's decision and to enter such judgment as the court may think just."

The usurpation by the lower court of administrative authority to make important and controlling findings of fact and remanding the case for further proceedings in conformity with those findings and the views expressed in the court's opinion not only nullifies the Commission's independent administrative functions but also contravenes the fundamental division of authority between administrative commissions and the courts. The court's action must be rejected because it runs afoul this Court's pronouncement in *Humphrey's Executor v. U. S.*, 295 U. S. 602, 629, that:

> "The fundamental necessity of maintaining each of the three general departments of government entirely free from the control or coercive influence, direct or indirect, of either of the others, has often been stressed and is hardly open to serious question".

CONCLUSION

For the foregoing reasons, the judgment of the district court should be reversed and the case remanded to it with direction to dismiss the complaint.

Respectfully submitted,

ELMER B. COLLINS,
Counsel of Record,
1416 Dodge Street,
Omaha, Nebraska.

PROOF OF SERVICE

I, ELMER B. COLLINS, counsel of record for appellants herein, and a member of the bar of the Supreme Court of the United States, hereby certify that on the 15th day of March, 1956, I served, on behalf of all Appellants herein, copies of the foregoing brief on the several adverse parties in Nos. 117, 118, 119, 332, 333 and 334, as follows:

1. On the United States of America by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Honorable Simon E. Sobeloff
Solicitor General of the United States
Department of Justice
Washington 25, D. C.

Stanley N. Barnes, Esq.
Assistant Attorney General
Department of Justice
Washington 25, D. C.

Donald E. Kelley, Esq.
United States Attorney
Post Office Building
Denver 1, Colorado

and with first-class postage prepaid to:

Donald R. Ross, Esq.
United States Attorney
306 Post Office Building
Omaha, Nebraska

2. On the Interstate Commerce Commission by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Samuel R. Howell, Esq.
Assistant General Counsel
Interstate Commerce Commission
Washington 25, D. C.

3. On the United States Department of Agriculture by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Neil Brooks, Esq.
Assistant General Counsel
United States Department of Agriculture
Washington 25, D. C.

4. On The Denver and Rio Grande Western Railroad Company by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Robert E. Quirk, Esq.
1116 Investment Building
Washington 5, D. C.

Dennis McCarthy, Esq.
Walker Bank Building
Salt Lake City 1, Utah

Frank E. Holman, Esq.
1006 Hoge Building
Seattle 4, Washington

Ernest Porter, Esq.
603 Rio Grande Building
Denver 2, Colorado

and with first-class postage prepaid to:

Harry L. Welch, Esq.
730 Farm Credit Building
206 South 19th Street
Omaha 2, Nebraska

5. On Idaho Farm Bureau; Public Service Commission of Utah; Committees of Railroad Brotherhoods who work for The Denver and Rio Grande Western R. R. Co.; National Live Stock Producers Association; Pueblo Chamber of Commerce; Arkansas Valley Stock Feeders Association; Colorado Wool Growers Association; Western Forest Industries Association; Koppers Company,

Inc.; Utah Growers Cooperative, Inc.; Knudsen Builders Supply Company, Inc.; and Structural Steel and Forging Company, by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Barry & Hupp
738 Majestic Building
Denver 2, Colorado

Lee J. Quasey, Esq.
139 N. Clark Street
Chicago 2, Illinois

Alden T. Hill, Esq.
Woolworth Building
Fort Collins, Colorado

and with first-class postage prepaid to:

Ray McGrath, Esq.
First National Bank Building
Omaha, Nebraska

6. On The Public Utilities Commission of Colorado by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

William T. Secor, Esq.
Asst. Attorney General
State of Colorado
Denver, Colorado

7. On Holly Sugar Corporation by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

Lowe P. Siddons, Esq.
Dennis O'Rourke, Esq.
Attorneys for Holly Sugar Corporation
Holly Sugar Building
Colorado Springs, Colorado

8. On The American Short Line Railroad Association by mailing a copy in a duly addressed envelope with air mail postage prepaid to:

W. J. Hickey, Esq.
Vice President and General Counsel
The American Short Line Railroad Association
2000 Massachusetts Avenue, N. W.
Washington 6, D. C.

APPENDIX B

The Pertinent Provisions of the Interstate Commerce Act (United States Code, Title 49), Involved in this Case are as Follows:

National Transportation Policy—

"It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several states and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy."

Section 1(4)—

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to

part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3(4)—

"All carriers subject to the provisions of this part shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and shall not discriminate in their rates, fares, and charges between connecting lines, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. As used in this paragraph the term 'connecting line' means the connecting line of any carrier subject to the provisions of this part or any common carrier by water subject to part III."

Section 15(1)—

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of the opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers sub-

ject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportaton other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

Section 15(3)—

"The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classification, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and mini-

ma, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. * * *"

Section 15(4)—

"In establishing any such through route the Commission shall not (except as provided in section 3, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation: *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b), give reasonable preference to the carrier by railroad which originates the traffic. No through route and point rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest."

Section 15(8)—

"In all cases where at the time of delivery of property to any railroad corporation being a common carrier, for transportation subject to the provisions of this part to any point of destination, between which and the point of such delivery for shipment two or more through routes and through rates shall have been established as in this part provided to which through routes and through rates such carrier is a party, the person, firm, or corporation making such shipment, subject to such reasonable exceptions and regulations as the Interstate Commerce Commission shall from time to time prescribe, shall have the right to designate in writing by which of such through routes such property shall be transported to destination, and it shall thereupon be the duty of the initial carrier to route said property and issue a through bill of lading therefor as so directed, and to transport said property over its own line or lines and deliver the same to a connecting line or lines according to such through route, and it shall be the duty of each of said connecting carriers to receive said property and transport it over the said line or lines and deliver the same to the next succeeding carrier or consignee according to the routing instructions in said bill of lading: *Provided, however,* That the shipper shall in all instances have the right to determine, where competing lines of railroad constitute portions of a through line or route, over which of said competing lines so constituting a portion of said through line or route his freight shall be transported."

Section 20(11)—(in part)

"That any common carrier, railroad, or transportation company subject to the provisions of this part receiving property for transportation from a point in one State or Territory or the District of Columbia to a point in another State, Territory, Dis-

trict of Columbia, or from any point in the United States to a point in an adjacent foreign country shall issue a receipt or bill of lading therefor, and shall be liable to the lawful holder thereof for any loss, damage, or injury to such property caused by it or by any common carrier, railroad, or transportation company to which such property may be delivered or over whose line or lines such property may pass within the United States or within an adjacent foreign country when transported on a through bill of lading, and no contract, receipt, rule, regulation, or other limitation of any character whatsoever shall exempt such common carrier, railroad, or transportation company from the liability hereby imposed; * * *".

October Term, 1955

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, APPELLANTS

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

JURISDICTIONAL STATEMENT

In the Supreme Court of the United States

OCTOBER TERM, 1955.

No. —

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, APPELLANTS

v.

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLORADO

JURISDICTIONAL STATEMENT

OPINION BELOW

The opinion of the United States District Court for the District of Colorado is reported in 131 F. Supp. 372. The report of the Interstate Commerce Commission is reported in 287 I. C. C. 611. The court's opinion, final judgment and decree, and order denying motion for new trial or reargument and reconsideration, are set forth in the Appendix, *infra*, pp. 11-48.

JURISDICTION

The suit was brought under 28 U. S. C. 1336 to set aside an order of the Interstate Commerce Commission. The judgment of the district court (dated February 1, 1955) was entered on February 14, 1955, and a timely motion for new trial or reargument and reconsideration was denied on April 22, 1955. The notice of appeal was filed in that court by appellants on June 20, 1955. The jurisdiction of this Court is conferred by 28 U. S. C. 1253 and 2101(b). The following decisions sustain the jurisdiction of this Court to review the judgment on direct appeal in this case: *United States* v. *Pennsylvania R. Co.*, 323 U. S. 612; *United States* v. *Capital Transit Co.*, 325 U. S. 357; *United States* v. *Great Northern R. Co.*, 343 U. S. 562.

STATUTE INVOLVED

Sections 15(3) and 15(4) of the Interstate Commerce Act, 24 Stat 379, as amended, 49 U. S. C. 15(3) and 15(4), provide in pertinent part:

> § 15. * * * (3) *Establishment of through routes, joint classifications, joint rates, fares, etc.*
>
> The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this chap-

ter * * * or the maxima or minima, or maxima and minima, to be charged, and divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. * * *

(4) *Through routes to embrace entire length of railroad; temporary through routes.*

In establishing any such through route the Commission shall not (except as provided in section 3 of this title, and except where one of the carriers is a water line) require any carrier by railroad, without its consent, to embrace in such route substantially less than the entire length of its railroad and of any intermediate railroad operated in conjunction and under a common management or control therewith, which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through route unreasonably long as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed to be established is needed in order to provide adequate, and more efficient or more economic, transportation; *Provided, however,* That in prescribing through routes the Commission shall, so far as is consistent with the public interest, and subject to the foregoing limitations in clauses (a) and (b) of this paragraph,

give reasonable preference to the carrier by railroad which originates the traffic. No through route and joint rates applicable thereto shall be established by the Commission for the purpose of assisting any carrier that would participate therein to meet its financial needs. In time of shortage of equipment, congestion of traffic, or other emergency declared by the Commission, it may (either upon complaint or upon its own initiative without complaint, at once, if it so orders, without answer or other formal pleadings by the interested carrier or carriers, and with or without notice, hearing, or the making or filing of a report, according as the Commission may determine) establish temporarily such through routes as in its opinion are necessary or desirable in the public interest.

QUESTION PRESENTED

Whether the district court, in setting aside the Commission's order establishing new through routes (and joint rates) on the ground that the "uncontradicted evidence" showed that through routes were already in existence, applied an erroneous standard for determining the existence of a through route.

STATEMENT

This appeal involves the same order of the Interstate Commerce Commission which is before this Court in Nos. 117-119, this Term. The facts relat-

ing to the Commission's proceedings are set forth fully in our Jurisdictional Statement in No. 119, and we shall not repeat them here. Briefly, they are that the Denver and Rio Grande Western Railroad Company ("Rio Grande") petitioned the Commission to prescribe joint rates covering all commodities moving via the Ogden, Utah, gateway over through routes which allegedly already existed with The Union Pacific Railroad Company ("Union Pacific"). The Commission held that such through routes were not in existence but, acting under Sections 15(3) and 15(4) of the Interstate Commerce Act, ordered the Union Pacific to establish new through routes (and joint rates) on certain of the commodities involved. *Denver & Rio Grande Western Railroad Company* v. *Union Pacific Railroad Company*, 287 I. C. C. 611.

The carriers filed separate complaints attacking the Commission's order. In the proceeding instituted by the Union Pacific, the District Court for the District of Nebraska upheld the Commission's finding that through routes were not in existence, but modified the Commission's order to limit the new through routes and joint rates to certain categories of traffic.[1] In the instant case, involving the proceeding instituted by the Rio Grande, the District Court for the District of Colorado set aside the order in its entirety on the ground that the "uncontradicted evidence" established that

[1] The order of the Nebraska Court is the subject of the appeals in Nos. 117-119.

through routes were already in existence, and remanded the case to the Commission for further proceedings.

In holding that through routes were not in existence, the Commission applied the rule of *Thompson* v. *United States*, 343 U. S. 549, 557, that "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service." The Commission stated (287 I. C. C. at 618) that there was no evidence that the Union Pacific ever had solicited any traffic for routing over the Rio Grande, or ever had routed traffic over that line except when called upon to do so by a shipper or a connecting carrier. It pointed out (*ibid.*) that for many years the Union Pacific's "whole course of conduct" had been "to guard jealously its long haul" and that "numerous shippers" had testified that the Ogden gateway routes are not considered as "open or through routes commercially, but as routes that are closed to shippers" (*ibid.* p. 616). The Commission noted (p. 617) that in 1948 (a typical year) there were 37 east-bound and 18 west-bound carload shipments made on through bills of lading at combination rates over the routes in question,[2] but it held (pp. 618-619) that these shipments —representing approximately 1/20th of 1% of the Union Pacific's more than 100,000 carloads annu-

[2] The Commission further noted (pp. 617, 618) that in the same year an additional 21 west-bound carload shipments routed on through bills over the Rio Grande were held by the latter for correction of routing because joint rates were not applicable via the Ogden gateway.

ally to and from the area (pp. 630-631)—were of "an isolated nature" and insufficient to show the existence of through routes.[3]

THE QUESTIONS ARE SUBSTANTIAL

1. In *Thompson* v. *United States*, 343 U. S. 549, 557, this Court stated that "the test of the existence of a 'through route' is whether the participating carriers hold themselves out as offering through transportation service." We submit that the Commission correctly applied that test in concluding that through routes were not in existence, and that the district court misapplied the test in reaching the opposite conclusion.

In the *Thompson* case, this Court held that the Commission had erred in concluding that there was a through route between Lenora, Kansas and Omaha, Nebraska. The Court held that, absent a showing that any traffic had moved over the routes, evidence that the carriers' tracks were interconnected and that they had offered through service to points short of Omaha was insufficient to show that they had offered "any through transportation service" between Lenora and Omaha (343 U. S. at 557). But the fact that through routes do not exist where *no* traffic has moved over the routes does not establish the converse proposi-

[3] The Commission further stated (p. 618) that the fact that traffic had been diverted to the Rio Grande when the main line of the Union Pacific was blocked by a snowstorm in 1949 showed only that the Rio Grande routes were physically practical, and had no bearing upon whether through routes exist.

Section 15(4)	3, 8

tion that through routes do exist whenever there is some slight movement of traffic.

Whether a through route exists is a question of fact. As we have noted (*supra*, pp. 6-7), the Commission found that the Union Pacific had never solicited traffic for routing over the Rio Grande or routed traffic over that line except upon instructions of a shipper or connecting carrier; that the Union Pacific had "guard[ed] jealously" its long haul via its own routes; and that the small number of shipments which actually moved over the route (at the higher combination rates)—constituting only 1/20 of 1% of the Union Pacific's total annual carload shipments to and from the area—were of an "isolated nature." We submit that, in the light of these facts, it was reasonable for the Commission to conclude that the carriers do not "hold themselves out as offering through transportation service," and that through routes therefore were not in existence.

In Section 15(4) of the Interstate Commerce Act, Congress has given the Commission "only a carefully restricted power to establish through routes" (*Thompson* case, p. 560) which result in short-hauling a carrier,[4] namely, if it finds that the existing route is unreasonably long, or that the proposed route is needed to provide adequate, and more efficient or more economic, transportation.

---

[4] A carrier is short-hauled when it is required "without its consent, to embrace in such [through] route substantially less than the entire length of its railroad * * * which lies between the termini of such proposed through route * * *." Section 15(4).

Since the existence of a through route permits the Commission to require short-hauling without making those findings by establishing joint rates,[5] a through route should be found to exist only upon a strong evidentiary showing. Otherwise, the Congressional policy of "protecting carriers from being required to short haul themselves" (*Id.*, p. 559) might be thwarted.

The standard for determining the existence of a through route is an important question in the administration of the Interstate Commerce Act. The *Thompson* case held only that through routes do not exist if no traffic moves over the routes. It did not hold—as the district court apparently read it—that movement of a slight volume of traffic under the circumstances of this case necessarily establishes that through routes do exist. The Commission's expert factual judgment on whether through routes exist is entitled to great weight. In overturning the exercise of that judgment in this case, the district court departed from the principle of the *Thompson* case that a through route exists only if "the participating carriers hold themselves out as offering through transportation service."

2. There is an additional reason why this Court should hear this appeal (as well as the appeals in Nos. 117-119). As we have pointed out in our jurisdictional Statement in No. 119 (pp. 12-13), two

---

[5] The Commission can establish joint rates over an *existing* through route whenever it deems such action "necessary or desirable in the public interest." Cf. *United States v. Great Northern Railway Co.*, 343 U.S. 562, 569, 573.

district courts are in direct conflict as to the proper scope of the Commission's order. Although the Nebraska court upheld the Commission's finding that through routes do not exist, and then modified the order on other grounds, the court below concluded that through routes do exist and set aside the order in its entirety. Only this Court can dissipate the confusion which has resulted from those conflicting holdings.

CONCLUSION

The questions presented by this appeal are substantial and of public importance. There is also a serious conflict of decisions. It is respectfully submitted that probable jurisdiction should be noted, and it is further suggested that this case should be consolidated for argument with Nos. 117-119.[6]

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLORADO

No. 4492 Civil

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, PLAINTIFF

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, DEFENDANTS

Before PHILLIPS, Chief Circuit Judge, and KNOUS, Chief District Judge, and SAVAGE, District Judge

Per CURIAM:

This action was brought by the Denver and Rio Grande Western Railroad Company against the United States of America and the Interstate Commerce Commission under the Urgent Deficiencies Act to set aside and permanently enjoin, in part, an order of the Interstate Commerce Commission.

In August, 1949, the Rio Grande filed a complaint with the Interstate Commerce Commission against the Union Pacific and more than 200 other railroad defendants. In such complaint the Rio Grande alleged that the defendants have failed and re-

fused to establish and maintain *competitive joint rates* on freight traffic with the Rio Grande: (a) via its *Colorado* and *Utah gateways* between places on or via the *Union Pacific in Utah*, north of *Ogden, Idaho, Montana, Oregon, Washington and British Columbia* and Colorado common points and points east thereof; and (b) between Utah common points and places on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that *through routes now exist* and have *for many years* existed for the interchange of traffic by the Rio Grande with the Union Pacific at *Provo, Ogden* and *Salt Lake City, Utah*, and with the *Union Pacific* and certain other defendants at *Denver, Colorado Springs, Pueblo, Walsenburg* and *Trinidad*, Colorado, as to freight traffic:

(a) between points on or via the *Union Pacific* in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia and Colorado common points and points east thereof; and

(b) as to freight traffic between Utah common points and points on or via the Union Pacific in Utah, north of Ogden, Idaho, Montana, Oregon, Washington and British Columbia;

And that the rates and charges applicable to such traffic between the points described via such through routes, with minor exceptions, are based upon the combination of the intermediate local or other rates, which rates and charges, in the aggregate, are substantially higher than the joint rates main-

tained by the defendants on similar competitive traffic between the same origin and destination places and territories which moves via the Union Pacific or via the Union Pacific and the other defendants, and that such combination rates are unjust, unreasonable and discriminatory, as compared with the competitive joint rates maintained by the Union Pacific or via the Union Pacific and the other defendants on like freight traffic via other competitive routes;

And that the failure and refusal of the Union Pacific and other railroad defendants to establish joint competitive through rates and charges applicable to the freight traffic between the points above described results in combination through rates which are excessive, unjust, unreasonable and constitute violations of §§ 1, 3 and 15 of the Interstate Commerce Act [1] and was and is contrary to the national transportation policy, since it deprives the public, shippers and the Rio Grande of the use of reasonable and available through routes and rail facilities at just, reasonable and non-discriminatory through joint rates, which were and are necessary and desirable in the public interest.

The Rio Grande prayed that the Commission enter an order requiring the Union Pacific Railroad and the other defendant railroads to establish and maintain for the future, just, reasonable, and non-discriminatory competitive joint rates on the freight traffic via the route of the Rio Grande

[1] Hereinafter called the Act.

through its Colorado and Utah gateways between (a) points on the *Union Pacific* and its *connections in Utah, north of Ogden, Utah, and in Idaho, Montana, Oregon, Washington, and British Columbia,* and (b) *Colorado common points,* such as Denver, Colorado Springs, Pueblo, Walsenburg, and Trinidad, Colorado, and points east thereof; and between (c) the points designated in (a); and (d) Utah common points.

By the challenged order entered on January 12, 1953, the Commission granted some but not all of the relief sought by the Rio Grande. 287 I. C. C. 611. In this action the Rio Grande seeks to have the court enjoin, set aside, annul and remand, with appropriate directions, that part of the order *which denied relief* sought by the Rio Grande. Union Pacific and other railroads and other persons have intervened with permission of the Court.

Section 1, Par. (4) of the Interstate Commerce Act in part provides:

> "It shall be the duty of every common carrier * * * to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; * * *. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled

thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

Section 3, Par. (4) of such Act in part provides:

"All carriers * * * shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the *interchange* of traffic between their respective lines and connecting lines, and for the receiving, forwarding, and delivering of passengers or property to and from connecting lines; and *shall not discriminate* in their rates, fares, and charges *between connecting lines*, or unduly prejudice any connecting line in the distribution of traffic that is not specifically routed by the shipper. * * *."

Section 13(1) of such Act in part provides:

"That * * * any common carrier, complaining of *anything done or omitted to be done* by any common carrier subject to the provisions of this part, in contravention of the provisions thereof, may apply to said Commission by petition, which shall briefly state the facts; whereupon a statement of the complaint thus made shall be forwarded by the Commission to such common carrier, who shall be called upon to satisfy the complaint, or to answer the same in writing, within a reason-

able time, to be specified by the Commission. If such common carrier within the time specified shall make reparation for the injury alleged to have been done, the common carrier shall be relieved of liability to the complainant only for the particular violation of law thus complained of. If such carrier or carriers shall not satisfy the complaint within the time specified, or there shall appear to be any reasonable ground for investigating said complaint, it shall be the duty of the Commission to investigate the matters complained of in such manner and by such means as it shall deem proper." (Italics ours.)

Section 15(1) of such Act provides:

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, * * * the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby author-

ized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

At the threshhold we are confronted with a motion of the defendants to dismiss on the ground that the Rio Grande is without standing to maintain this suit. We hold that the Rio Grande has such standing. Since we so hold, by reason of our conclusion with respect to the existence of the through routes, the erroneous finding of the Commission on that issue, the erroneous application to the facts by the Commission of certain provisions of the Act, and the rights of the Rio Grande under the provisions

of the Act, we shall state in detail our reasons for denying such motion, after a full consideration of the merits.

I.

The Merits

The Rio Grande operates approximately 2400 miles of railroad in *Colorado, New Mexico* and *Utah.* From its northern terminus at *Ogden, Utah,* it runs south to *Salt Lake City* and *Provo,* Utah, thence generally east to *Dotsero, Colorado,* where it divides, *one branch going east to Denver,* the other southeast to *Pueblo.* From Denver the line *runs south through Colorado Springs to Pueblo* and *Trinidad.* Other lines serving territories in *southern Utah, northwest New Mexico* and southern Colorado are not of *importance in this action.*

The Rio Grande has *interchange track connections and interchanges traffic with the Union Pacific at Denver,* Colorado, and at *Ogden, Salt Lake City* and *Provo,* Utah; with the *Southern Pacific* at *Ogden,* and the *Western Pacific* at *Salt Lake City.* It has interchange track connections and interchanges traffic at *Denver* with the *Rock Island,* the *Burlington, Santa Fe* and the *Colorado & Southern;* at *Colorado Springs with the Santa Fe and the Rock Island;* at Pueblo with the Santa Fe, the Colorado & Southern and the Missouri Pacific; at Walsenburg with the Colorado & Southern and at Trinidad with the Santa Fe and the Colorado & Southern.

The Union Pacific, with its leased lines, operates as a single system. From Ogden, Utah, one line of the Union Pacific extends in a southwesterly direction through *Salt Lake City* and *Provo* and thence to *Los Angeles*. Another line extends *northwest through Utah, Idaho, Oregon, Washington and Montana,* serving what is referred to as the *northwest territory,* or the *closed door territory.* From Ogden, the *Union Pacific runs generally easterly through Cheyenne and Denver,* with eastern *termini on the Missouri River at Omaha and Kansas City.* At various points on its line it connects and interchanges traffic with the other intervening railroads.

The Union Pacific and other intervening railroads and the Rio Grande participate in *through routes* and *joint rates* with each other and with *other carriers* on transcontinental and other traffic, with certain exceptions. Joint rates generally do not apply in connection with the Rio Grande on traffic originating at or destined to points in *Utah,* north of *Ogden,* and in *Idaho, Montana, Oregon* and part of *Washington.* Joint rates apply on such traffic over the Union Pacific through Wyoming, but if routed over the Rio Grande to and from Ogden, the higher combination rate, consisting of the aggregate of local rates, applies.

The transcontinental traffic to and from this northwest territory ordinarily moves over the Union Pacific from or to Colorado or Missouri River gateways, rather than over the Rio Grande route. This is due, in part to the refusal of Union Pacific

to join with Rio Grande in establishing joint rates with respect to such traffic. The higher rates effectually close the Ogden gateway commercially and enable the Union Pacific to obtain the long haul on such traffic.

The power of the Commission to establish through routes and joint rates under §15(3) is limited by § 15(4) of the Act, which declares that, except as provided in §3 of the Act, a railroad may not be required without its consent to embrace in such route substantially less than the entire length of its railroad which lies between the termini of such proposed through route, (a) unless such inclusion of lines would make the through rate unreasonably long, as compared with another practicable through route which could otherwise be established, or (b) unless the Commission finds that the through route proposed is needed in order to provide "adequate, and more efficient or more economic *transportation.*" It is further provided that in prescribing through routes the Commission shall, so far as is *consistent with the public interest* and subject to the foregoing limitations in clauses (a) and (b), give *reasonable preference to the carrier which originates the traffic.* The section further provides that *no through routes and joint rates applicable thereto shall be established for the purpose of assisting any carrier to meet its financial needs.* This section was designed to restrict the power of the Commission to establish *through routes* which would short haul a carrier without its consent.

Rio Grande contended at the hearing before the Commission, and contends here, that the routes over which joint rates are sought *were in existence and open to traffic at combination rates*, and that *the Commission was not called upon to establish through routes* and, therefore, *limitations on its power to do so*, imposed by §15(4), are *not applicable and need not be considered*. It urged that the principal task of the Commission was to determine whether the *through rates* resulting from the combination or aggregate of intermediate rates over such existing through routes are unjust, unreasonable or discriminatory, in violation of §§ 1 and 3 of the Act, and contrary to the national transportation policy.

The Commission recognized that the first question for its determination "is whether or not the present routes by way of the Ogden gateway constitute 'through routes' as that term is used in section 15(3) and (4) of the Act." Only five of the ten participating members of the Commission joined in the report and order of the Commission, wherein it was first determined that *through routes were not in existence over the Rio Grande in connection with the Union Pacific through the Ogden gateway*. Having reached this conclusion, the Commission proceeded upon the assumption that any order requiring the establishment of such through routes and joint rates over them must be grounded on findings, as specified in §15(3) and (4). Thus limited in its further consideration of the case, the Commission entered its order:

"That it is necessary and desirable in the public interest, in order to provide adequate and more economic transportation, that through routes, and joint rates over such routes the same as apply over the Union Pacific and its connecting lines, defendants herein, be established *via Ogden or Salt Lake City, in connection with the Rio Grande,* on granite and marble monuments, in carloads, from origins in Vermont and Georgia to destinations in the excluded territory in the northwest area, as previously described herein, and on ordinary *livestock, fresh fruits and vegetables, dried beans, frozen poultry, frozen foods, butter, and eggs,* in carloads, from *origins in the excluded territory to destinations in the United States south and east of a line drawn along the southern boundary* of Kansas thence the eastern boundary of Kansas to but not including Kansas City, thence immediately west of points on the Missouri River from Kansas City, Kansas, to Omaha, thence immediately north of points on the route of the Union Pacific and the Chicago & North Western from Omaha to Chicago, including destinations in the Lower Peninsula of Michigan and in Oklahoma and Texas."

In all other material respects the relief requested by the Rio Grande was denied.

This very brief and sketchy statement of the case will suffice, since we rest our decision upon a *narrow ground.* We are of the opinion that the finding of the Commission that *there are at present no through routes over the Rio Grande via the Ogden gateway is not supported by substantial evidence.* It is our view that the Commission erred *as a matter of law* in reaching the conclusion, upon a consideration of undisputed facts, that such through routes are not in existence. This erroneous, self-imposed restriction upon its authority *to establish joint rates obviously prejudiced the entire proceeding.*

The undisputed evidence bearing upon the crucial question of existing *through routes must be summarized.* In 1897, the Union Pacific established *joint through competitive rates with the Rio Grande* to and from points in the northwest area through Ogden. These rates were in effect *until canceled by Union Pacific in 1906* from and to some points and in *1912 from and to remaining points.* But the through routes were not closed.

Counsel for Union Pacific expressed the opinion at the hearing before the Commission, in response to interrogation by Chairman Alldredge, that *the cancellation of the joint rates* did not close the *through routes* and that shippers *were free to route via the Rio Grande if they wanted to pay more.*

The principal traffic witness of the Union Pacific testified at the hearing that a shipper who was

willing *to pay the higher combination rate had the right to specify under § 15(8) of the Act a route via the Rio Grande.* It should be observed that this right exists only when through routes and through rates have been established. This witness further testified that some joint through rates are now published in a Union Pacific tariff for application to shipments of *sheep and goats* from the northwest area via Ogden and the Rio Grande to points on the Missouri River and east thereof.

A continuous use of the Rio Grande route in the movement of traffic to and from the closed door area *at through combination rates,* without objection of the Union Pacific or participating railroads, is shown by the evidence, although the volume of traffic involved is comparatively small. In 1948, which was selected as a representative year, 37 carload shipments were made *on through bills of lading from the northwest area to destinations on the Rio Grande in Utah and Colorado via Ogden or Salt Lake City.* All of these shipments originated on the Union Pacific or its connections, but none moved to any destination east of Colorado common points. In the same year, *18 carload shipments* were made west bound on through bills of lading from points east and southwest over connecting lines and the Rio Grande to Salt Lake City or Ogden and the Union Pacific to destinations in the northwest area. In addition, *21 carload shipments moved on through bills of lading* from various eastern points to destinations in the

northwest area, which were routed over the Rio Grande and Union Pacific, were held by Rio Grande at Denver or Pueblo for change of the routing *because the joint through rates* were not applicable. The traffic movement to and from the northwest area over the Rio Grande through the Ogden gateway on through bills of lading and at through rates was substantially the same in years prior to 1948 and continued into 1949, until the date of the Commission hearings.

From November, 1942, to August, 1945, a number of shipments were diverted under service orders issued by the Commission from the regularly used routes to the Rio Grande route. During World War II mixed trains of troops in passenger cars and of military supplies in freight cars moved from eastern and southern points on through billing over the Rio Grande via Ogden and Union Pacific to the closed door area. These trains were not routed under service orders issued by the Commission. In 1949, when the main line of the Union Pacific in Wyoming was blocked by snow, the traffic was diverted over the Rio Grande between Denver and junctions with the Union Pacific in Utah. These latter movements were made under emergency conditions and admittedly do not tend to establish an ordinary course of business between the carriers involved, but the Commission did not invoke its authority under § 15(4) of the Act to establish temporary through routes which indicates that the Commission assumed that through routes were already in existence.

It is well settled that a joint rate is not essential to the existence of a through route. The rate which applies over a through route may be the aggregate of separate rates fixed independently by the several carriers participating in the through route. St. Louis-Southwestern R. Co. v. United States, 245 U. S. 136, 139; Thompson v. United States, 343 U. S. 549, 556. In Thompson v. United States, supra, the court defines a through route as follows:

> "* * * The statutory term 'through route,' used throughout the Interstate Commerce Act, has been defined by this Court as follows:
>
> "'A "through route" is an arrangement, express or implied, between connecting railroads for the continuous carriage of goods from the originating point on the line of one carrier to destination on the line of another. Through carriage implies a "through rate." This "through rate" is not necessarily a "joint rate." It may be merely an aggregation of separate rates fixed independently by the several carriers forming the "through route"; as where the "through rate" is "the sum of the locals" on the several connecting lines or is the sum of lower rates otherwise separately established by them for through transportation. Through Routes and Through Rates, 12 I. C. C. 163, 166.'
>
> * * * * *
>
> "In short, the test of the existence of a 'through route' is whether the participating

carriers hold themselves out as offering through transportation service. Through carriage implies the existence of a through route whatever the form of the rates charged for the through service."

While the foregoing definition of "through route" compels us to conclude that the through routes contended for by Rio Grande were in existence, the Commission relied on the Thompson Case in reaching its decision that through routes were not in existence. But the facts in the Thompson Case are in striking contrast with the facts in this case. There, the question was whether a route from Lenora, Kansas, via Missouri-Pacific to Concordia, Kansas, and thence via Burlington to Omaha was a through route. No evidence was presented that any shipment had ever been made from Lenora to Omaha via the Burlington or that the carriers had ever offered through service over that route.

In our case, through routes and joint rates were established in 1897 and the joint rates remained in effect for some fifteen years. While the joint rates were canceled by Union Pacific, nothing was ever done to close the routes and diminished traffic continued to move over the same through routes at the higher through combination rates. Moreover, joint rates were continued in effect as well as through routes in respect to the shipment of sheep and goats from the closed door area through Ogden over the Rio Grande to the Missouri River and beyond. The Union Pacific and other participat-

ing railroads have issued through bills of lading, thereby recognizing the through route status. Shipments were diverted from the Union Pacific over the Rio Grande under emergency conditions without having the Commission authorize temporary through routes, which suggest that both the Union Pacific and the Commission assumed the existence of through routes.

The Commission stated in its report and order that "The Ogden gateway routes are not considered as open or through routes commercially, but as routes that are closed to shippers because of the higher rates applicable." Then follows a statement that the establishment of joint competitive rates would result in such routes becoming "effective through routes, a character which they do not now possess." Thus, it appears that the Commission reasoned that the closing of the routes in a commercial sense by applying the higher combination rates terminated the through routes. But, it was held to the contrary in Virginian Railway Co. v. United States, 272 U. S. 658. There, of 99 coal mines located on the line of the Virginian, 45 enjoyed through routes and joint rates to the West because of certain trackage arrangements entered into between the Virginian and the Chesapeake & Ohio. As to other complaining mines, the court said, at page 661:

> "* * * But that route is closed commercially, because these two carriers have not established any joint rates to the West from

> any of these 54 mines; and the combination of the Virginian's local rate from the mines to the junction with the Chesapeake & Ohio's rates from the junction to the West, results in charges so high as to be prohibitive. * * *"

In discussing the attack made on the order of the Commission fixing joint non-discriminatory rates, the court stated, at page 666:

> "* * * The Virginian contends that the order is void because the Commission directed the establishment of through routes and joint rates without finding that they are necessary in the public interest. Such a finding is essential to the validity of an order under § 15(3). But the order here in question was not sought or made under § 15(3) and does not direct the establishment of through routes and joint rates. Through routes to the West were already in existence. And there were through rates by combination. (citing cases.) The fact that the combination rates were excessive constituted the only obstacle to the movement."

The intervening railroads argue that Rio Grande had the burden of proving, in order to show the existence of the through routes contended for, an actual movement of traffic between every point in the northwest area and every point in the United States on every railroad east of a north and south line drawn roughly along the eastern

boundary of Colorado. They point out that there are some 2900 railroad stations in the northwest area and some 30,000 stations in the area east of Colorado and that there are undoubtedly hundreds of thousands of through routes available in the published tariffs between the thousands of stations in the involved area of which Rio Grande claims to be a part. This question was not considered by the Commission, and we do no reach it here. In our view, the uncontradicted evidence clearly established the existence of through routes to and from points on the Union Pacific in the northwest area and the Rio Grande via the Ogden gateway to and from Colorado common points, the Missouri River gateways and beyond. Since the case must be remanded to the Commission for a new hearing, we believe that the Commission should initially pass on the question of whether the burden is on the Rio Grande to show some actual movement of traffic on through billing over each of the possible routes between the thousands of stations in the involved areas. It might be mentioned in passing that the court in the Virginian Railway Company Case concluded that "through routes to the west are already in existence," without apparent direct proof of transportation of freight from all points on the Virginian to all points in the west via the Chesapeake & Ohio.

The contention of the intervening railroads that we are not authorized to enter an order remanding the case to the Commission with appropriate instructions is refuted by the recent order entered

by the Supreme Court in Secertary of Agriculture v. United States, 347 U. S. 645.

II

The Motion to Dismiss

We have concluded that under the evidence before the Commission the existence of through routes via the Rio Grande was clearly established, as a matter of law, and that the Commission erred, as a matter of law, in not finding the existence of such through routes.

We further conclude that the Commission erred as a matter of law in applying the limitations of § 15(4) with respect to the establishment of through routes, in determining whether the Union Pacific and the other defendant railroads should be required to establish and maintain for the future just, reasonable and non-discriminatory competitive joint rates under the provisions of § 14(4), § 3(4), § 15(1) and § 15(3).

The duties and powers of the Commission, with respect to the relief sought by the Rio Grande, are clearly provided in § 1(4), § 3(4), § 15(1) and § 15(3) of the Act. The right of the Rio Grande to file its complaint with the Commission and seek the relief therein prayed for is clearly given by § 13 of the Act. Under the Act, a carrier is as fully entitled to non-discriminatory treatment as a shipper. See Chicago Junction Case, 264 U. S. 258, 267, which cites with approval Pennsylvania Co. v. United States, 236 U. S. 351, where the complainant sought relief under § 3 of the Act.

The fact that the portion of the order here assailed was negative in character no longer affords a ground for the denial of judicial relief. See Rochester Telephone Corp. v. United States, 307 U. S. 125, 135-143; Mitchell v. United States, 313 U. S. 80, 92, 93.

The negative portion of the order required no affirmative action by the Rio Grande and took nothing away from the Rio Grande which it already had, and, if considered solely from those points of view, the order caused no pecuniary loss to the Rio Grande.

If the Rio Grande, in the proceeding before the Commission, established its right to the relief prayed for, it was entitled to an order establishing just and reasonable and non-discriminatory through rates and equitable divisions thereof, and a removal of the discrimination resulting from the existing through rates, which were a combination of intermediate or local rates, and the denial of such relief was the denial of a right given by the Act to have such just and reasonable through rates established.

The Rio Grande was entitled, as a matter of law, to have the Commission find that such through routes had been established, and, in passing on whether the defendants should be required to establish and maintain future just, reasonable and non-discriminatory competitive joint rates, to have the Commission apply the provisions of § 1(4), § 3(4), § 15(1) and § 15(3) of the Act, free of any of the limitations imposed by § 15(4) with respect to establishing through routes.

If the Rio Grande, on its showing before the Commission and an application of the provisions of § 1(4), § 3(4), § 15(1) and § 15(3), was entitled to an order requiring the establishment and maintenance of such joint rates for the through routes which we hold had been established, then necessarily the denial of the order prayed for deprived the Rio Grande of a pecuniary gain to which it was entitled. This, because the granting of the relief undoubtedly would have resulted in a large increase of traffic via the Rio Grande and in its operating income, and, no doubt, in its net earnings.[2] More succinctly stated; if the Rio Grande under the Facts established by the evidence before the Commission, and the application of the provisions of § 1(4), § 3(4), § 15(1) and § 15(3) of the Act, was entitled to an order requiring the defendant railroads to establish such joint rates, the denial of that right resulted in pecuniary injury to the Rio Grande.

Where an order of the Commission denies a right given to a carrier by the Act, and the denial of such right adversely affects the revenues of the carrier, causing it to suffer pecuniary injury, such carrier has a right to a judicial review of the order.[3]

While it is our view that the denial of the relief here challenged will result in pecuniary injury to the Rio Grande, we do not think such injury is

---

[2] The Union Pacific asserts that the granting of the relief prayed for would result in a large loss of traffic and a large reduction of earnings by the Union Pacific.

[3] The Chicago Junction Case, 264 U.S. 258, 266, 267.

essential to the right to judicial review. In Mitchell v. United States, 313 U. S. 80, Mitchell brought a proceeding before the Commission in which he alleged that the Chicago, Rock Island and Pacific Railway Company, in its purported compliance with an Arkansas statute requiring segregation of the races during transportation did not provide as desirable accommodations for colored as for white passengers traveling in Arkansas over its line, which resulted in unreasonable charges and unjust discrimination against and undue prejudice to colored passengers in violation of §§ 1, 2, 3, and 13 of the Act and the Fourteenth Amendment. The only relief sought was the removal and avoidance in the future of the alleged discrimination and prejudice in the furnishing of accommodations. The Commission, while holding that the matters complained of were prohibited by § 3(1) of the Act, denied the relief prayed for. Mitchell then brought an action in the District Court of the United States for the Northern District of Illinois to set aside the Commission's order. In passing on whether Mitchell had standing to maintain the action, the Supreme Court said, at pages 92 and 93:

> "*First.* The Commission challenges the standing of appellant to bring this suit. We find the objection untenable. This question does not touch the merits of the suit, but merely the authority of the District Court to entertain it. The fact that the Commission's order was one of dismissal of appellant's complaint did

not foreclose the right of review. Appellant was an aggrieved party and the negative form of the order is not controlling. Rochester Telephone Corp. v. United States, 307 U. S. 125, 143.

"Nor is it determinative that it does not appear that appellant intends to make a similar railroad journey. He is an American citizen free to travel, and he is entitled to go by this particular route whenever he chooses to take it and in that event to have facilities for his journey without any discrimination against him which the Interstate Commerce Act forbids. He presents the question whether the Act does forbid the conduct of which he complains.

"The question of appellant's right to seek review of the Commission's order thus involves the primary question of administrative authority, that is, whether appellant took an appropriate course in seeking a ruling of the Commission. The established function of the Commission gives the answer. The determination whether a discrimination by an interstate carrier is unjust and unlawful necessitates an inquiry into particular facts and the practice of the carrier in a particular relation, and this underlying inquiry is precisely that which the Commission is authorized to make. As to the duty to seek a determination by the Commission in such a case, we do not see that a

passenger would be in any better situation than a shipper. Texas & Pacific Ry. Co. v. Abilene Cotton Oil Co., 204 U. S. 426; Robinson v. Baltimore & Ohio R. Co., 222 U. S. 506; Mitchell Coal Co. v. Pennsylvania R. Co., 230 U. S. 247; Morrisdale Coal Co. v. Pennsylvania R. Co., 230 U. S. 304; General American Tank Car Corp. v. El Dorado Terminal Co., 308 U. S. 422.

"The District Court had jurisdiction to review the action of the Commission and the question on that review was whether that action was in accordance with the applicable law."

There, Mitchell suffered no pecuniary injury, but the court had no difficulty in concluding that he had a right to maintain the proceeding before the Commission, that he was an aggrieved party, and that he was entitled to judicial review. See, also, Henderson v. United States, 339 U. S. 816, 823.

Here, the Rio Grande sought an order compelling the defendant railroads to perform their statutory duty to establish just and reasonable joint rates, fares, and charges over through routes, and if it was entitled to such an order, then it was immediately and directly affected and suffered discrimination by the refusal of the Commission to direct the defendant railroads to comply with the statutory mandate.

We think the cases relied on by the defendants are distinguishable.

Edward Hines Trustees v. United States, 263 U.S. 143, did hold that in order for the plaintiffs to maintain that action it was necessary for them to show that the order subjected them "to legal injury, actual or threatened," but the complainants there sought the continuation of a so-called penalty charge of $10 per car per day on lumber held at reconsignment points. The court said that the plaintiffs had no absolute right to require carriers to impose penalty charges and that plaintiffs' right was "limited to protection against unjust discrimination." Here, under the facts alleged and the proof before the Commission, the continuance of existing rates and charges over the through routes results in discrimination adversely affecting the Rio Grande and shippers over its lines. In the Chicago Junction Case, supra, the court distinguished between an incident of more effective competition and injury inflicted by denying equality of treatment. Just, reasonable, and non-discriminatory joint rates is the equality of treatment which the Rio Grande here seeks.

In Alexander Sprunt & Son, Inc. v. United States, 281 U.S. 249, the Interstate Commerce Commission entered an order directed to the railroads operating in Oklahoma, Arkansas, Texas, and Louisiana, which required them to remove in a prescribed manner, undue prejudice and preference caused by their rates on cotton shipped from interior points to Houston and other ports on the Gulf of Mexico. Two actions were brought, one by Sprunt & Son and one by the Texas & New Orleans

Railroad Company and other carriers, to enjoin the enforcement of the order. Upon final hearing, the District Court sustained the validity of the order and entered a decree dismissing the bills. None of the carriers appealed from the decree. Sprunt & Son appealed. The court held that the issue of undue prejudice and unjust preference which had been passed upon by the Commission had become moot, because most of the carriers never sought to annul the order and that the carriers who joined in the suit to set it aside had voluntarily severed themselves from the shipper, who objected to it. With respect to the right of Sprunt & Son to maintain the action, the court at pages 254, 255 said:

> "* * * We are of opinion that appellants have no standing, in their own right, to make this attack. In so far as the order directs elimination of the rate differential previously existing, it worsened the economic position of the appellants. It deprived them of an advantage over other competitors of almost 3.5 cents per hundred pounds. The enjoyment of this advantage gave them a distinct interest in the proceeding before the Commission under § 3 of the Interstate Commerce Act. For, their competitive advantage was threatened. Having this interest, they were entitled to intervene in that administrative proceeding. * * * But that interest alone did not give them the right to maintain an independent suit, to vacate and set aside the order. Such a suit can be brought by a shipper only where *a right of*

his own is alleged to have been violated by the order. * * In the case at bar, the appellants have no independent right which is violated by the order to cease and desist. They are entitled as shippers only to reasonable service at reasonable rates and without unjust discrimination. If such service and rates are accorded them, they cannot complain of the rate or practice enjoyed by their competitors or of the retraction of a competitive advantage to which they are not otherwise entitled.* The advantage which the appellants enjoyed under the former tariff was merely an incident of, and hence was dependent upon, the right, if any, of the carriers to maintain that tariff in force and their continuing desire to do so." (Italics ours.).

Here, again, the court recognized that mere deprivation of a competitive advantage was not enough and that they were only entitled to reasonable service at reasonable rates and without unjust discrimination. Here, the very thing the Rio Grande seeks is not a mere competitive advantage, but the establishment of just and reasonable through rates and the removal of unjust discrimination, which will result in pecuniary profit to the Rio Grande and the deprivation of which would prevent the Rio Grande from enjoying increased traffic and increased earnings.

In Pittsburgh & West Virginia Railway Co. v. United States, 281 U.S. 479, the Commission entered an order authorizing the New York Central

Railroad and other rail carriers to join in establishing a union passenger station at Cleveland, through a subsidiary, Cleveland Union Terminals Company. The Wheeling & Lake Erie Railway Company had for some years owned and maintained an independent passenger station at Ontario Street, in Cleveland, in the line of the easterly approach to the proposed union terminal. It was apparent that either ownership of or an easement in the Wheeling's site would be indispensable in order to provide the necessary easterly approach to the terminal. Wheeling consented to sell its site and become a tenant in the new terminal. Contracts were made embodying this plan, subject to approval of the Interstate Commerce Commission. Thereupon, Wheeling filed before the Commission two applications for certificates of public convenience and necessity, one permitting it to abandon its Ontario Street station, and the other authorizing it to use the facilities of the union terminal, and pending its completion to use the facilities of the station of the Erie Railroad and the tracks of the Big Four.[4] Pittsburgh & West Virginia Railway, a minority stockholder and connecting carrier of the Wheeling, intervened in opposition to the applications. It opposed them on the ground that the Ontario Street station was ample for both the present and future needs of the Wheeling and that the contracts were disadvantageous to the Wheeling in certain particulars. The Commission found the public convenience and necessity would be served by the

[4] Cleveland, Cincinnati, Chicago & St. Louis Ry. Co.

granting of both applications and accordingly issued its certificates as prayed for. Pittsburgh & West Virginia Railway then brought an action in the District Court of the United States for the Northern District of Ohio to set aside and annul the order of the Commission. The Supreme Court held that the order did not affect Pittsburgh & West Virginia as a carrier and that the claim that the order threatened Wheeling's financial stability and Pittsburgh & West Virginia's financial interest as a minority stockholder was not sufficient to show a threat of the legal injury necessary to entitle it to bring a suit to set aside the order. The Court, at page 487, said: "* * * The injury feared is the indirect harm which may result to every stockholder from harm to the corporation," and that the interest of Pittsburgh & West Virginia was insufficient to give it standing to bring the action.

In Moffat Tunnel League v. United States, 289 U. S. 113, the Commission had entered an order authorizing the Denver and Rio Grande Western Railroad Company by stock purchase to acquire control of the Denver and Salt Lake Railway Company, called the Moffat Road. In the proceeding before the Commission the Moffat Tunnel Improvement District and the Public Utilities Commission of Colorado had intervened and they brought an action in the District Court of the United States for the District of Delaware to set aside the Commission's order. In holding that the plaintiffs did not have standing to maintain the suit, the Supreme Court said, at page 119:

"* * * the complaint must show that plaintiff has, or represents others having, a legal right or interest that will be injuriously affected by the order. Edward Hines Trustees v. United States, 263 U. S. 143, 148. Sprunt & Son v. United States, 281 U. S. 249, 254. Pittsburgh & W. Va. Ry. v. United States, 281 U. S. 479, 486. Plaintiffs have failed to show that they are so qualified. Their interest is not a legal one. It is no more than a sentiment, such as may be entertained by members of the public in the territory west of Craig, that the improvement of transportation facilities authorized by the Commission will lessen the possibility of construction by a rival of the Rio Grande of an extension of the Moffat to Utah common points."

The Pittsburgh & West Virginia Railway case and the Moffat Tunnel League case are obviously distinguishable from the instant case.

With respect to cases relied on by the defendants, the statement by the court in Youngstown Sheet & Tube Co. v. United States, 295 U. S. 476, is apposite. "* * * The authorities cited by the appellees are to be distinguished on the ground that the plaintiffs either had no legal interest or capacity to sue or failed to allege that the rates under attack were *unreasonable or discriminated against them.*" (Italics ours.) Here, the existing rates are attacked by the Rio Grande on the ground that they are unjust, unreasonable, and discriminatory as against the Rio Grande and shippers on

its line, deny them equality of treatment, and cause injury to them.

It is urged that to maintain the action, equitable grounds for relief must be alleged. But, it should be remembered that in the Rochester Telephone Case, the court, at page 142, said:

> "* * * An action before the Interstate Commerce Commission is akin to an inclusive equity suit in which all relevant claims are adjusted. An order of the Commission dismissing a complaint on the merits and maintaining the *status quo* is an exercise of administrative function, no more and no less, than an order directing some change in status. The nature of the issues foreclosed by the Commission's action and the nature of the issues left open, so far as the reviewing power of courts is concerned, are the same. Refusal to change an existing situation may, of course, itself be a factor in the Commission's allowable exercise of discretion. In the application of relevant canons of judicial review an order of the Commission directing the adoption of a practice might raise considerations absent from a situation where the Commission merely allowed such a practice to continue. But this bears on the disposition of a case and should not control jurisdiction. * * *"

Moreover, in overruling Proctor & Gamble v. United States, 225 U. S. 282, the court, at page 136, in the Rochester Telephone Case, supra, observed

that the shipper in that case "was within the express language of Congress authorizing suits 'to enjoin, set aside, annul, * * * any order of the Interstate Commerce Commission.'"

In the instant case, the Rio Grande, in its complaint, alleges that it was without adequate remedy at law. Clearly, the Rio Grande can maintain no other action which will give it adequate relief or prevent injury to it.

Accordingly, we conclude that the Rio Grande had standing to maintain the action.

The order in so far as it denied relief to the Rio Grande will be annulled and set aside and the cause remanded to the Commission for further proceedings in conformity with this opinion.

DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLORADO

Civil Action No. 4492

THE DENVER AND RIO GRANDE WESTERN RAILROAD COMPANY, PLAINTIFF

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, DEFENDANTS,

UNION PACIFIC RAILROAD COMPANY, ET AL., INTERVENING DEFENDANTS

FINAL JUDGMENT AND DECREE

The hearing in the above-entitled cause having been held on June 8 and 9, 1953, before Circuit Judge Orie L. Phillips and District Judges Royce H. Savage and William Lee Knous, constituting a District Court of three judges, convened pursuant to Title 28 U.S.C., Sections 2284 and 2325, and all parties being represented by counsel, and the Court having received the evidence offered and heard the arguments of counsel, and the Court being fully adv ed in the premises and having filed its opinion herein on January 13, 1955, and the Court being of the opinion that the order of the Interstate Commerce Commission dated January 12, 1953, in its Docket No. 30297 is invalid and unlawful insofar as it denied relief to the plaintiff above named;

NOW, THEREFORE, upon the basis of said opinion of this Court dated January 13, 1955, and for the reasons therein set forth, IT IS ORDERED, ADJUDGED AND DECREED that the injunction and other relief prayed for by plaintiff and intervening plaintiffs in the complaint be and the same is hereby granted, and the order of the Interstate Commerce Commission dated January 12, 1953, be and the same is hereby annulled and set aside insofar as it

denied and withheld relief to the plaintiff and intervening plaintiffs.

IT IS FURTHER ORDERED, ADJUDGED AND DECREED that this cause, insofar as the aforesaid order of the Interstate Commerce Commission denied and withheld relief to plaintiff and intervening plaintiffs, be and the same is hereby remanded to the Interstate Commerce Commission for further proceedings in conformity with the opinion and judgment of this Court.

Dated this 1st day of February, 1955.
